HISTORY OF MODERN ELEMENTARY EDUCATION

By **Samuel Chester Parker**, Dean of the College of Education, The University of Chicago.

8vo, cloth, xxiv+505 pages, illustrated.

$1.50

This carefully prepared "History of Modern Elementary Education" deals primarily with institutional development. It emphasizes typical movements, institutions and individuals, thus showing the student elementary school problems from the Middle Ages to the present time.

Enough material for one hundred hours of class work is provided in this book. If a longer course is desired, the text may be supplemented with Rousseau's "Emile," Pestalozzi's "Leonard and Gertrude," and Spencer's "Education."

The publishers present this book with the firm belief that it is the best one that has yet been written for the student of education and the prospective teacher.

FOOD
IN HEALTH AND DISEASE
By N. S. DAVIS, Jr., M.A., M.D.
Northwestern University, Chicago.
Octavo. Cloth $3.50 Postpaid.

The first part of this book reviews the underlying principles concerning the nutritive and other qualities of different kinds of foods, discusses briefly their relation to the digestive organs, and traces the changes that food must undergo before it can be appropriated to the needs of the human system. This is followed by detailed consideration of the proper diet indicated for the various conditions of health and disease, each condition being taken up seriatim with concise, plain directions, and diet lists.

A descriptive circular with list of contents will be sent upon request.

Readings in American Constitutional History

Selected and edited by ALLEN JOHNSON, Larned Professor of American History in Yale University. $2.50 *net*. Postpaid.

"The political campaign which recently closed was remarkable for the ignorance and contempt widely exhibited of and for the principles of constitutional government. Until the people of the United States are led back to a new study of the fundamental principles of human liberty which underlie their government and to new belief in their wisdom and permanence, there is no hope for genuine political progress. We, therefore, welcome with double warmth READINGS IN AMERICAN CONSTITUTIONAL HISTORY, edited by Professor Allen Johnson, of Yale University, and we wish that its contents might become familiar not only to students of law and politics, but to the great body of American citizenship."—*Educational Review.*

School Advertising in The Nation

THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

SPECIAL RATE—Ten Cents a line net for thirteen times

(Minimum space three lines)

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 20 Vesey Street, N. Y.

The Nation

NEW YORK, THURSDAY, JANUARY 2, 1913.

The Week

President Taft's acceptance of the offer of a professorship from Yale University is another answer to the question: "What shall we do with our ex-Presidents?" As in the case of Mr. Cleveland at Princeton, it is an altogether satisfactory one. Nothing could be more dignified than such a professorship, and certainly no one who has been through the hurly-burly of a White House term could fail to find the quiet and the opportunity for contemplation and study afforded by a university as delightful and refreshing a contrast as he could wish. Mr. Taft will have, as did Mr. Cleveland, a much larger audience than that which comes to hear him at New Haven, and opportunities for public service will not be lacking, should he desire them. This is far better than that Mr. Taft should retire on a pension, whether provided by Congress or Mr. Carnegie or anybody else. At least, so it would have been felt till lately. But times are changing, and every one is coming to believe that somebody else owes him a pension by the time he reaches seventy. Certainly, the sight of Mr. Taft engaged in vigorous intellectual effort and earning adequate financial support thereby is in every way a better example for the country than would be his settling down at his ease somewhere on $25,000 a year.

Complete returns of the Presidential election are now available. Instead of a falling off of about 400,000 in the total vote, there was a gain of about 150,000 as compared with the vote of 1908, the totals being (in round numbers) 15,040,000 and 14,890,000, respectively. If allowance be made, however, for the women added to the voting population in California and Washington, and for the addition of Arizona and New Mexico to the list of States, we must deduct a round half million or more from the vote of 1912, leaving it fully 350,000 below the vote of four years ago; whereas if the total had grown in a measure corresponding to the advance in population, there would have been an increase of something like a million instead of this decrease of 350,000. This is a curious showing, and opens up large possibilities for conjectural explanation. But any one who may essay such a task must go behind the immediate comparison, for the course of the Presidential vote is very peculiar. Thus, the total in 1892 was 12,000,000, in 1896 it rose to 14,000,000, in 1900 it was the same, in 1904 it fell to 13,500,000, and then in 1908 reached the high mark of 14,900,000. But after all is said and done, the fact stands out that, allowance made for the new woman voters, the vote in 1912 is only 3 or 4 per cent. greater than it was sixteen years ago, whereas the population has increased about 35 per cent. However, it must be remembered that the election of 1896 was quite abnormal in intensity of interest.

Of the two prominent minor parties, the Socialists fared very well and the Prohibitionists ill. Time was when, in a situation in which either of the great parties—and especially the Republican—was in a condition of demoralization, the Prohibitionists expected to profit perceptibly by the disaffection; but their vote this year was 50,000 below that of four years ago—203,000, as against 253,000—in spite of a gain of 17,000 in California and Washington. As for the Debs vote, which went up from 421,000 to 898,000, it owes no less than 76,000 of this increase of 477,000 to its gain in California and Washington, where the Socialist vote of 1908 was almost trebled in 1912. In Illinois, Ohio, and Pennsylvania the Debs vote was much more than doubled, and its increase in these States was 46,000, 56,000, and 47,000, respectively. In New York, the increase was only 65 per cent., and amounted to 25,000; while Massachusetts and Rhode Island, where a striking increase might have been expected, show only a very slight increase, and indeed a very small total—13,000 and 2,000, respectively, being the poll made by Debs this year in these two intensely industrial States.

The conviction of 38 out of the 40 men accused of participation in the great dynamiting conspiracy is an event whose importance, as affecting the future of organized labor, hardly requires setting forth. When the true nature of the connection between a number of big labor-union men and the Los Angeles outrage was first brought to light, there followed a curious oscillation of opinion, both among the great labor leaders and among the devotees of humanitarianism and social service. In neither case do we mean to include all of the class in question; in both cases we do mean to include a very considerable proportion. What happened was first an outburst of indignation and resentment that charges of such atrocious conduct should be made against men high in the councils of labor; but when it became pretty evident that the charges were true, the ground was shifted to the position that though these things may have been done, yet they must not be regarded as ordinary crimes, but as the natural manifestation of social discontent. We were solemnly adjured not to exact punishment from the offenders, but rather to profit by the lesson they had taught, and set our house in order. All this now has a very far-away sound. The processes of justice went on quietly, in their ancient ways; they dealt with this crude and barbarous conspiracy just as they would have dealt with an ordinary case of burglary or assault or arson; they have come to their destined end, and the foundations of society remain unshaken by so much as the faintest tremor.

The contemplation of this extraordinary case cannot fail to present to the mind an impressive vindication of the jury system. Not because the trial resulted in a conviction rather than an acquittal; but because this conviction, recorded as the unanimous judgment of twelve men taken out of the general mass of citizens by a process carefully designed to insure fairness and impartiality, carries weight of a sort which no other method yet suggested could supply. It is impossible to suppose that these thirty-eight men would have been declared guilty by the united judgment of those twelve plain Americans unless the evidence of their guilt had been conclusive. The judgment of no judge, nor of any group of judges, would be accept-

ed by all classes with the same confidence in its freedom from bias or animus. Still plainer is it that if the law required anything less than a unanimous verdict, the moral effect of the conviction would be disastrously impaired. There are evils connected with the jury system, there are often exasperating consequences from the requirement of unanimity; but in the things which count most, in the things which affect profoundly the whole relation of the community to the law, the benefits of the trial of criminal cases by jury, and of the requirement of unanimity for a verdict in them, vastly outweigh any disadvantages.

Pennsylvania politics these days is enough to make Senator Quay turn in his grave. Instead of a caucus at Harrisburg, in which ambitions to be Speaker may conveniently be killed in accordance with the will of the boss, the fight this time is likely to go to the floor of the House, and nobody will venture a prediction of the result. Distressing as it is to all patriotic citizens, the erstwhile reform partners, Flinn and Magee, differ as to who should be Speaker, and it is even said that Magee may throw his strength to a third candidate, who comes from Philadelphia and is put forward by the Vare brothers, those famous representatives of the contractor-politician type of public man. Any one of the various rival groups is ready to stay out of the caucus if its ends will be served by such a course. The situation is further complicated by the fact that many Representatives run upon both Washington party and Republican tickets, and so are in a position to be independent of any of the would-be dictators. To the triple division of the Republicans, the Democrats oppose a united front, and will fight for a legislative programme of their own. The net result of these divisions should be to make the attitude of Gov. Tener unusually important, and he has already announced his determination to use his veto unsparingly.

Gov. Wilson's commendation of the Court of Pardons as an institution will carry weight. He has just been wrestling with what is undeniably one of the most trying, if not quite the most trying, of all the responsibilities with which a Governor is charged, the decision of the question of life or death, of freedom or confinement, in scores of individual cases pressed upon his attention for the most diverse possible reasons. He feels that, in the exercise of this most delicate function, the conclusions arrived at by the Court of Pardons are of the greatest public use, these being based, he says, on conscientious and capable inquiry by the members of the court. There are considerations that can be urged on the other side, but the *prima facie* case in favor of the creation of some body charged with the duty of systematic inquiry into the merits of applications for pardon is very strong.

In aid of the bill to pay the National Guard of the several States out of the Federal Treasury, the Adjutant-General of New York has officially issued to the Guard of this State a pamphlet explaining the bill, giving in twenty-six pages all the reasons why it should become a law. This is characteristic of the thoroughness with which sentiment for the measure is worked up. It is done in the name of patriotism and efficiency. Do you not want an effective militia? Then, if you do, keep quiet and let us get our hands into Uncle Sam's pocketbook to the tune, at first, of eight to eleven millions of dollars, and, of course, a much larger sum later. It is surely a trifling price to pay for a real army reserve. So runs the argument. Thus it appears that, by simply paying the soldiers for attending drills, to which they now come voluntarily without pay, we shall make our militia efficient overnight.

Now, if all the troubles of the National Guard were due to a poor attendance at drills, something might be said for this reasoning. But every one familiar with the militia knows that non-attendance at drills is not the chief evil to correct; he knows, moreover, that even if the men were paid, some of the conditions which make for non-attendance would still remain. Of the militia's many weaknesses, perhaps the two greatest are the selection and election of officers by the men in the ranks and political interference with the Guard. Is there the slightest belief anywhere that the paying of the troops by the Federal Government will remove politics from the militia? It is much more likely to intensify the struggle for the places of importance. So long, moreover, as the election of officers continues, a chief source of inefficiency will remain intensified by the desire of an officer, who may be in pecuniary need or pecuniarily ambitious, to succeed his captain or his major. Again, it is asserted that pay would attract "well-educated young men" and a "better class of men." We have no mean opinion of our present citizen soldiers; on the contrary, we cannot see how one dollar a week would be an inducement to any more young collegians or high-school graduates to join. A man goes into the militia either because of a patriotic desire to serve the State, or because he desires a club, regular exercise, and the fun of wearing a uniform and going to camp.

The indictment of President Mellen of the New Haven and Messrs. Chamberlin and Smithers of the Grand Trunk, under the conspiracy clause of the Anti-Trust law, brings up some peculiar and novel questions—in addition to the fact that the prosecution will be of persons on a criminal charge. It is undoubtedly true that if a "combination or conspiracy in restraint of trade" was carried out by the managers of these competing railways, the offence was committed after the law had been defined, interpreted, and applied by the highest court, and not, as in the Northern Securities and the Southern Pacific cases, for instance, when its interpretation was in doubt. On the other hand, the present case is not on all fours with any case previously adjudicated. The Grand Trunk was not bought up by the New Haven, and, on the basis of the final agreement, not even the Grand Trunk's Vermont extension was to be sold to the New Haven—though that seems originally to have been contemplated. The formal basis of the agreement affected the joint interchange of business by each of the two companies over the lines of the other, including the New Haven's promise "to protect Grand Trunk, in every way in its power, in its present differential rates from New England points and such new territory as it is proposed to open up to it."

The Government will presumably contend, first, that the real purpose of the companies was indicated in the original

agreement, whereby the Grand Trunk was to sell its New England lines to the New Haven; secondly, that the admitted abandonment of the Grand Trunk's work on the proposed competing extensions in New England was the real condition for the final understanding. But as regards the latter consideration, the case will differ materially from previous anti-Trust cases, in that the New Haven's competitor merely ceased to extend its facilities for competition. If the Grand Trunk officers testify that their company's financial condition had not warranted continuance of the expenditure on the new extensions, or that the money market was such that the requisite capital could not be raised, then the argument that abandonment of the new extensions was a result of conspiracy will not be so easy to maintain. As it happens, there is ground for both the above contentions in the known situation of the day. In the absence of any documentary evidence that the extensions were abandoned because of counter-offers from the New Haven, the Government's case would be limited in scope to the nature of the agreement as to rates and division of traffic, made after the Grand Trunk's decision to stop its new construction. Much more than any of the recent leading anti-Trust cases, therefore, this case will have to be settled on the basis of the evidence. Popular disapproval of the New Haven's methods, and popular agitation over the conduct of that road, must not prevent the general public from giving full and fair consideration to such evidence—especially when, as on this occasion, the criminal clauses of the law have been distinctly invoked.

Little by little, scholarship is picking up courage to defend itself against the pretensions of athletics. It now advances the claim that its representatives outlive those of its great rival activity. The *Harvard Graduates' Magazine* has compiled the vital statistics of the classes from 1860 to 1884, and it finds that in 1910 the percentage of deaths among these 3,500 individuals was 30.41. But the percentage for the elected members of Phi Beta Kappa was only 27.51. Moreover, since the 3,500 include the 719 "first scholars," the real advantage of the latter in respect of longevity is not shown until we get the percentage for these classes exclusive of their Phi Beta Kappa members. This is 31.69, and thus it appears that the expectation of life for a Phi Beta Kappa man, at Harvard at least, is markedly greater than that of his unkeyed classmate. To complete the triumph, the *Magazine* goes on to point out that it is gained in spite of the fact that very few Phi Beta Kappa men were athletes during their undergraduate days, and that in after life they have won something more than longevity. "The list bears the names of a President and Vice-President of the United States; of several Governors, Ambassadors, and Cabinet officers; of half a dozen college and university presidents . . .; of financiers, bankers, and heads of railroads and other corporations . . .; of judges of the United States and other Supreme Courts; of lawyers, physicians, and surgeons of national reputation; of many professors and deans; of many authors and editors; of the leading American engineer of his time; and of theologians, preachers, and philanthropists."

No valid reason exists why Edward F. Mylius should be refused admission to this country because of his conviction in England of having published a libel against the King. If the story of George V's rumored secret marriage had been brought forward by Mylius with a view to blackmail, his conviction would undoubtedly have involved the element of moral turpitude, on the basis of which he might be deported from our shores. But it seems plain that the publication of the story was in the nature of a political act. It was done avowedly to discredit the British monarchy, and was printed in a British anti-monarchical paper published in Paris. This attack on the King was in execrable taste and, as the evidence adduced tended to show, baseless. But, after all, the violation of good taste in political fighting is not a crime. The English people are themselves jealous enough of the right of political asylum not to interpret the admission of Mylius into this country in any but the proper light.

The secret of long life has been revealed by Admiral Dewey: Join the navy, force your way into a mine-protected harbor, and attack the enemy's ships at their moorings, and keep away from public banquets. The 12-inch gun has slain its thousands, but the ill-cooked lobster has rendered *hors de combat* its tens of thousands, thus showing that peace, too, hath her heroes and her victims. It is not given to all of us to die in behalf of a great cause, but every citizen is privileged to incur indigestion in defence of his principles, a privilege which he hastens to put into use with remarkable persistence. Yet the fatalities which mark the history of public feeding do not constitute its worst reproach. The greater harm consists in the undigested ideas, in the wild-eyed pronunciamentos, in the hitherto unsuspected "truths," which every well-regulated public dinner is bound to liberate, thereby endangering the education of the young and destroying the reputation for sobriety of many respectable citizens. Bad food and poor talk are a combination fatal to the soundest human system. It has been written.

> Avoid the groaning board, my son,
> The devilled crab, the Melbaed peach,
> But, deadliest of all, avoid
> The after-dinner speech.

The territorial demands formulated by the representatives of the Balkan states in the London peace conference would restrict Turkey in Europe to the triangle included between a base line drawn from Midia, on the Black Sea, to Rodosto, on the Sea of Marmora, and the Bosphorus. The Sultan's European possessions would be reduced from more than 65,000 square miles to a pittance of less than 2,000 square miles. Worse, however, than this severe amputation is the fact that, under such an arrangement, Constantinople would be absolutely at the mercy of the Bulgarians established at Rodosto. If Bulgaria is kept outside of the Dardanelles, there might be, in the case of a future war, something of a chance for the Turks, guarded as they would be on the land side by the Tchatalja fortifications, and on the sea by the Bosphorus and the Dardanelles. To accept the allies' demand would be to leave Constantinople to exist entirely on sufferance. It is not to be supposed that the allies will insist on getting all they have asked for in the first breath. They are simply following the traditional form of diplomatic haggling. It is also premature to speak of a failure of negotiations. The difference between 65,000 square miles and 2,000 square miles is large enough to permit bargaining and concessions.

BRYAN ON SENIORITY.

We think that the rumors of Mr. Bryan already opening war on President Wilson are, as Mark Twain said of the report of his death, "much exaggerated." The *Commoner* editorial calling upon the Democrats in Congress to "struggle" against reactionaries, was probably written before the editor's interview with Mr. Wilson. If after, it is conceivable that he was expressing views in which the President-elect shares. The latter knows something about government by committees in Congress, as witness his early book on that subject, and possibly may feel as strongly as Mr. Bryan that the men placed in leading positions in the new Congress should not be there simply because they have long years of public service behind them. Why do not some of the ingenious commentators on Mr. Bryan's declaration against the rule of seniority see in it a purpose to relieve Wilson of trouble? Mr. Bryan himself is now a senior, and if all seniors are to be made to take a back seat, may we not conclude that he, far from seeking a Cabinet portfolio, will decide not to linger superfluous on the stage? If it is a question of interpretations too clever by half, this is as well worth considering as the others.

The real question which Mr. Bryan has raised respecting the organization of Congress deserves serious consideration. It has both its general and its individual aspects. For many years the rule of seniority has prevailed in Congress. Men longest there get the best committee assignments. This used to be pointed out as the chief reason for the extraordinary influence of the Maine Congressional delegation. That State kept sending the same Senators and Representatives, term after term; and time did the rest. Nor is this mere routine or rule of thumb. There is sound reason for the preference, in general, of the experienced man. All other business goes on that principle, and why should not the public business? Of course, there must be limits to its application, even when we are dealing with the matter abstractly. Lord Rosebery speaks somewhere, referring to men in office, of "that seniority which often spells senility." Against that, whatever system is adopted has always to be on its guard. The cases of difficulty are not very frequent, but are admittedly perplexing. It must have been very hard, for example, for his colleagues on the bench of the Supreme Court of the United States to sign a letter, as they did years ago, notifying a brother-judge of great age that his powers had obviously failed and that he ought to resign.

It is, however, the particular situation in Congress that is at present debated. The objection is not so much to old men as to wrong-headed men. It is not merely new blood that is desired, but new ideas. The point is made that the Democratic party is committed to certain policies, borne in on the tide of recent popular sentiment, and that some of the older Democrats in Congress are not sufficiently in sympathy with them. Only on that ground is the demand made that the rule of seniority shall be no longer left supreme. There is undeniably force in this, so far as a few special cases are concerned. Look, for instance, at the existing Committee on Finance in the Senate. This is the committee which will have most to do with shaping bills for revising the tariff. The ranking Democratic Senator is Bailey, but he is shortly to retire. Next to him comes Senator Simmons, of North Carolina. Under the old plan, he would be made chairman, when the Senate becomes Democratic. But he is known as a half-protectionist. He would fight tooth and nail—in committee room, at least—in favor of keeping every grain of protection which North Carolina industries think they enjoy. Plainly, he is not the ideal chairman for a committee entrusted with carrying out Democratic tariff pledges. Farther down the list stands the name of Senator Williams. All impartial men must agree that he would be a far better chairman than Simmons; and if the rule of seniority prevents it, so much the worse for the rule.

In the House, seniority has not been so absolutely dominant as in the Senate. Moreover, under the reformed procedure, committee chairmen are not appointed by the Speaker, but elected by the party caucus. Yet it is curious to observe how, even in such a choice, seniority prevails. Mr. Underwood holds the most important chairmanship; he has been continuously in Congress for eighteen years. The chairman of the Judiciary Committee, Mr. Clayton, has been a Congressman for sixteen years. Mr. Sulzer, at the head of the Foreign Affairs Committee, had eighteen years of service in Congress behind him. It has often been said that it is ridiculous to have a man of his kind in charge of such an important committee. But glance down the list of his Democratic colleagues, and find a fitter chairman if you can. Would it be Mr. Garner, of Texas, or Mr. Difenderfer, of Pennsylvania? Who would dare to say? Even a party caucus, even Mr. Bryan himself, with a perfectly free hand, could not make bricks without straw.

That truth will be very evident in the next House. The large and unwieldy Democratic majority will contain great numbers of untried men. In the nature of the case, they will not be pushed to the front. Call it seniority or what you will, something will dictate placing in the most influential positions members who are familiar with the procedure, who have gone through the mill, who know what to do and how to do it. Viewed in that light, seniority means common sense. It is also to be remembered that a man of real force is not long overlooked in Congress. Senator O'Gorman, though a "new man" in the Senate, was soon charged with important committee assignments. And there are other ways of making talent and power felt. It was long a just reproach to the Republicans, before they lost the House, that they had organized it without brains at the top. Cannon and Payne and Dalzell undertook to lead, but they were not the men whom the House heard gladly, or recognized as the real intellect of the party. That is the task of all successful party management—to get to the front the men who ought to be there. Merit is often connoted by seniority, and when that is the case, the rule of seniority is a good one; but if it implies keeping in high positions men of Bourbonish mind, who have ceased to think or to grow, there ought to be a way of making the rule more honored in the breach than in the observance.

UNCLE SAM AND HIS COMPETITORS.

"Loeb Quitting to Go with the Guggenheims"—that was an interesting bit of news to relieve the noiseless tenor of the Christmas morning newspaper headlines. The plain prose of the matter is, doubtless, simply that Mr. Loeb is going to take hold of his new work for the same reason that led him to take

hold of the New York Collectorship—that he feels the place will give him a chance for the exercise of great abilities as an organizer and administrator. But there is poetry in the thing, too—tragic or comic, as you will. For here is Mr. Roosevelt's pupil and right-hand man, his trusty and well-beloved personal aide in the White House, passing directly from the service of the people to the service of the arch-enemy of the people. There are malefactors and malefactors, but Guggenheim is a magic name that spells more kinds of malefactor of great wealth than any other that can be produced. In his recent campaign the Colonel used the word as a sort of handy abridgment of his whole vocabulary of condemnation. Lorimer was good for some purposes, Penrose for some, Archbold for some, but Guggenheim was always in order. From stealing of lands to stealing of conventions, there was nothing rotten in the country or in the Republican party but Guggenheim was its crowning embodiment. One does not know whether to laugh or to weep at the thought that the man who for seven years was in the closest possible association with the apostle of righteousness should have selected for his future work, out of all the possibilities before him, the serving of the Guggenheim interests.

But, except for this singular conjuncture of personalities, Mr. Loeb's transfer of activities is far from exceptional. Indeed, it is the very thing that one expects in the case of any servant of the national Government who has successfully filled a difficult post. High Treasury officials have, in recent years, been pretty steadily gravitating towards the great places in the business world; and even in the case of men whose administrative power, or skill in dealing with men, has been displayed in fields having no relation to finance or commerce, openings in high financial or business capacities have been found awaiting them when, either of their own motion or because of a change in the Presidency, they were ready to relinquish their official posts. That there are instances in which the attraction of great pecuniary emoluments has of itself drawn away from the public service men whose abilities it was unfortunate that the country could not continue to command, is undeniable; but there is no way in which, as a matter of practical fact, this can be avoided. The Government should offer salaries that do not too grossly fall short of those that can be commanded by men of ability in private enterprises; but it cannot undertake to compete, upon a purely pecuniary basis, with the great rewards which, in these days of gigantic interests, special ability can command in the world of business. It must rely in large part on the attraction which the idea of public service presents, reinforced, as this has so strikingly been in a number of instances, by the extraordinary advantage, in the way of general recognition and consequent advancement either in public office or in private undertakings, offered by the possibilities of effective work in the Government service. Of course, as regards the highest posts in that service—Cabinet offices, judgeships, and others—the appeal to honorable ambition and to patriotic feeling must ever be thought of as the dominant factor.

There is one aspect of this steady stream of able public officers going back into private life which deserves special consideration from a very practical standpoint. While a considerable part of the movement is inevitable, there is another large part which could be avoided, to the great gain of the public service. If all the highest posts except those that involve questions of policy affected by a change of the national Administration were held upon a permanent tenure, there would be an attraction in the Government service, all the way down the line, which at present it does not at all hold out for men of ability and ambition. The beneficial result of such a change would be many-sided. Men in the lower ranks in a given department of work would feel that it was worth while to train for mastery of that field. Those who had reached the top would feel far less disposed than at present to cast about for a private opening. And, what would in many cases be the most important of all, the accumulated experience and special skill of these permanent officers would be ever at the call of the Government when difficult questions came up for consideration.

In retiring from the Collectorship of the port of New York, Mr. Loeb can look back upon four years of hard work ably done. The distinguishing feature of his administration of the office has been the rigorous enforcement of the law without distinction of wealth, or social or political position. There are features connected with the collection of customs duties from travellers which are offensive in the highest degree and a standing humiliation to Americans coming back to their native land; and it is possible that Mr. Loeb has not done all that could be done to keep this nuisance within bounds. But the nuisance is essentially in the law itself; and as for cases of actual smuggling, whether by persons in business or by wealthy travellers, Mr. Loeb deserves the highest praise for his persistent and vigorous enforcement of the law.

THE MASSACHUSETTS SENATORSHIP.

The coming election of a successor to Senator Crane is rousing great interest in Massachusetts. For this there is good reason. The Senatorship was all that the Republicans were able to save in the November election. They lost the Governorship again, and had the mortification of seeing the electoral vote of their State go to a Democratic Presidential candidate for the first time in more than fifty years. And it is obvious that with all these signs of demoralization thick upon the party, its way of filling the Senatorship still at its disposal will be of great significance. One thing that broke the power of the Republicans in Massachusetts was the arrogance of their party machine. Will it now endeavor to dictate the naming of a Senator? There is also the acute controversy over the question whether a Senatorial caucus is to be called to decide the matter. This plan is vigorously denounced by many Republicans, especially those from western Massachusetts. All told, the campaign is agitating the State to almost as great a degree as did Lodge's fight for reëlection a year ago. A sign of the widespread interest in the result is the open letter, on the Senatorial situation, written by Mr. Charles Francis Adams to Mr. Frederick W. Eaton, Representative in the Legislature from the town in which Mr. Adams lives.

Mr. Adams naturally adopts the honorable Massachusetts tradition respecting her Senators. It is not for him a question of party control or machine politics, but of worthily representing

the State at Washington. He also dwells on the value of legislative experience and of prestige acquired at the capital; and for theso reasons, in combination with the argument from ability and character, strongly favors the election of Congressman McCall. Mr. McCall does, indeed, more nearly than any of his competitors avowedly in the field, measure up to the best names on the historic roster of Massachusetts Senators. He has served longer than Congressman Weeks, and has gained a higher repute than he for breadth of view and courage of convictions. As between Mr. McCall and Mr. Walker, defeated for the Governorship, or Mr. Plunkett, of Adams, known chiefly as a rich manufacturer and party committeeman and contributor, or the as yet unnamed "business man" whom the machine is expected to produce as its candidate, there is really no comparison. If the election were to be decided in accordance with the old Massachusetts standards, there is little doubt that Samuel W. McCall would be the choice of the State.

Since Senator Hoar's death, Massachusetts has been badly off for Senators of the former type. Senator Crane has played a highly influential rôle in party management and in the inner politics of the Senate, but has done it as one in the background. No one would ever know that he had enlightened views or was able to defend them by tongue or pen. Senator Lodge can both speak and write. And by seniority he has risen to a considerable position in the Senate. But his reputation there and in Massachusetts is what it is. In his own State he has made himself thoroughly disliked; his party machine has fallen into extreme odium; he was reelected against strong protests, and it is generally believed that his present term in the Senate will be the last. He himself seems to be of that mind, for he has begun to publish his reminiscences. Yet so well-read a man as he must be aware of the saying of Henri Rochefort, when asked to write *his* reminiscences, that a public man is never approached with that request until people think he is no longer good for anything else.

There is a special reason why Congressman McCall should at this time be particularly favored for the Massachusetts Senatorship. In addition to personal dignity and independence, a cultivated mind, ability as a debater and speaker, and a long legislative experience, he deserves recognition as one of the earliest Republicans in Congress to distrust and oppose Theodore Roosevelt. In the heyday of the latter's power, Mr. McCall showed that he did this. And it nettled President Roosevelt intensely. He did not like it that the Representative in Congress whom Harvard and Cambridge were steadily reëlecting should let it be known that he had confidence neither in the motives nor in the policies of the son of Harvard. President Roosevelt betrayed his exasperation with Congressman McCall on many occasions, sometimes humorously. He once said to the late Vice-President Sherman, "Jim, do you want to do me a favor?" "Certainly, Mr. President." "Then go and kill Sam McCall, and I will grant you a full pardon, as I have power to do in the District of Columbia." In all seriousness, however, Mr. McCall anticipated many in finding Mr. Roosevelt out. No one has brought a sharper criticism to bear upon his dangerous notions and unsettling practices. And if the great Republican struggle in Massachusetts this year was—as it undoubtedly was—to beat off the assaults of Roosevelt, to save the party from being trampled under the hoofs of the Bull Moose, what man could it more fittingly put forward now than the one who began the fight before the party did—Congressman McCall?

The Senatorial contest in Massachusetts will attract attention from all parts of the country. There is much talk of Republican reorganization. Offensive machine leaders are to be sent to the rear. Old intriguings are to be dropped. The party will let the nation see the kind of man it delights to honor. Such is the theory of the reorganizers; what their practice is to be, Massachusetts will have an early opportunity to show. She can elect a party hack or a business lay figure; or she can choose a Senator capable of maintaining at Washington the ancient repute of the State. Her final decision will be watched for as an indication of what Massachusetts may do to purge and to restore the Republican party.

THE COLLEGE ATHLETE.

However it may be with the poet, the college athlete is made as well as born. Indeed, the columns of gossip from every important football field during the autumn months might give one the impression that this precious personage is mainly the product of his coaches. A substratum of brawn is doubtless welcomed; but is not the essential thing the ability to comprehend, to remember, and to put into execution the plan of battle laid down by the great coaching strategists? Of what avail is it to be able to kick the ball for sixty yards at whatever angle one chooses, if one cannot follow the mathematics of the head coach as he delivers his chalk-talks? What does one gain by outrunning his fellows on the field, if he falls behind them at the desk? And yet, if the college athlete were altogether the work of his trainers, why should we hear disturbing reports now and then of "inducements" offered by colleges and universities to some promising preparatory student? Why should there be the problem of the athlete who stands higher with his coaches than with the Faculty? If success in this department of academic activity were conditioned upon nothing more than the obtaining and drilling of willing youths, it would now scarcely be necessary for representatives of scores of educational institutions to gather, as they gathered in New York last week, to determine ways and means for more effectively controlling college athletics.

One is forced to conclude that the college athlete is not altogether the handiwork of his coaches. Even for him, natural ability is a desirable ingredient. It may be better to have no ability except the ability to follow their instructions than to have everything else and lack that, but as things stand, there are a multitude of players who have the requisite physique, and who may quite possibly be taught the rest. Why should our college not get some of these for its team next year? Well, our college, if it is up to snuff, sees no reason why it should fly in the face of Providence in this matter, and it proceeds to do all that may become an institution of learning in the laudable endeavor to "land" its share of these husky young fellows. The ways of achieving this end are as numerous as are those who are bent

upon achieving it. One notable coach at a famous Eastern university a dozen years ago was so fortunate as to have a brother who was teaching in a Middle Western college, attended by sinewy farmer boys. Is it any wonder that for a long period the teams of the university were built around stocky lads who came out of the West? A better known instance is that of the most famed preparatory school athlete of his day, who, as the time drew near for going to college, kept more than one university in more than one State in hot water. In the end, he went to the university whose location would naturally have been thought sufficient to decide the point, and gave it four years of brilliant achievement upon which it looks back with pride, and an occasional sigh, to this day.

It is as difficult to draw the line between proper and improper inducements to a promising athlete to go to a certain university, as it is to define the difference between speculation and gambling. Dean Briggs put his finger upon the sore spot in his opening address at the convention of the National Collegiate Athletic Association, when he urged the elimination of the professional spirit from college athletics. For the existence of this spirit, many causes may be responsible, but the outstanding one is the attitude of alumni. A graduate goes back to his university once a year, perhaps, meanwhile keeping track of its progress by what he finds about it in the newspapers. Now, what he is likely to see in the newspapers is either the procuring of a handsome addition to the endowment or the winning or losing of athletic contests, and what he desires to see when he makes his periodical visit to the scholastic shades of his alma mater is a new building and an athletic victory.

It is one thing for a Board of Trustees and Faculty to stand out against undergraduates; it is quite another to take a position against what seems the united voice of the alumni. Even a President of the United States has been known to forget his favorite doctrine of the square deal long enough to write the president of his university, requesting the strengthening of a crew by the restoration to it of a student who had violated a rule relating to scholastic work. The way out has for some time been seen to lie in coöperation. What one college can attempt only with difficulty, a group of colleges can do with ease—if they really wish to do it. There's the rub. Every suggestion for purifying college athletics raises the unspoken query, how will this affect my team? If those in whose hands are the reins of athletic direction could be sure that the alumni would support them in the policy of seeking genuine amateur sport first, and victory second, they would often be more inclined towards the drastic measures that are now and then needed. But the alumni should do much more than this. They should not merely set the seal of their approval upon honorable athletics, but they should be the first and most insistent in demanding that nothing else should be tolerated.

THE MODERN LANGUAGE ASSOCIATION.

The thirtieth annual meeting of the Modern Language Association, which was held on Thursday, Friday, and Saturday of last week, at the University of Pennsylvania, was largely attended and was generally pronounced a success. Houston Hall, where the papers were read, furnished a pleasant auditorium, with numerous lounging rooms for those informal conferences at which the destinies of past writers, as well as of oncoming scholars, are partially decided. The Local Committee had also arranged two smokers, one at the Franklin Inn, the other at the Hotel Normandie. The latter was enlivened by songs of Goethe and Heine and the old academic standbys—"Mihi est Propositum" and "Gaudeamus Igitur"; and Prof. John A. Lomax, whose specialty places him almost in the class of professional entertainers, sang some of his cowboy songs.

Many of the papers, because of their very particular interest and bearing, may be passed over. Prof. A. H. Upham, of Bryn Mawr, showed the existence in England, during the last thirty years of the seventeenth century, of a large, clearly defined reaction against the idea of woman which had been fostered by courtly immorality in England and France. Mary Astell, to whom the "Essay in Defence of the Female Sex" is doubtfully attributed, was only one of many advocates of woman's right to equal privilege in literature and learning, rather than in affairs; and the phases of the agitation ran parallel, in every case, to those of the woman movement in France.

On Thursday evening the president of the Association, Prof. C. H. Grandgent, read an address on "The Dark Ages" which enjoyed a *succès de scandale*. For at his hands the Dark Ages proved to be, not the period usually so-called, but the present day. With Charlemagne's great capacity for interest and knowledge, and his contempt for any persons not so constituted, Professor Grandgent contrasted modern tendencies. "Ours is the first age," he said, "to belie Aristotle's statement, 'all men desire to know.'" So far have we departed from that condition that few, especially in politics, can bear up under the suspicion of knowing something. A student crammed full of mere knowledge! cries the world. "In the absence of a living specimen of this sort," retorted Professor Grandgent, "let us assume one." In the literature, painting, and music of to-day he pointed out the lack of standards, due to self-confident ignorance and to total disregard of the thought of past ages. The one aim in art, as in life, is to "shock one's grandmother." Not knowledge, but power, is the slogan to-day. And as it is easier to create a stench than a sweet savor, the stronger the stench the louder is the approving cry: "How strong!" For those who desire painless methods of teaching, who insist no longer upon a robust cultivation of the memory, the speaker had the old but still serviceable warning, "In the sweat of thy face shalt thou eat bread," and charged them with being educational cubists striving for the ideal of "four square with nothing inside." Words like these from one in Professor Grandgent's position cannot fail to have a good effect, and we may suppose that they will be reiterated by their author at certain other meetings during the year.

Supplementary to Professor Grandgent's paper was one given the following day by Prof. J. W. Cunliffe, of Columbia. He made a plea for the study of contemporary writers, and uttered a wholesome caveat against the spirit of antiquarianism. He would not neglect the work of preceding ages, but believes that in Hardy and Shaw and Kipling the student would find matter of great interest. Scholarly concentration upon men who are holding the public to-day would also furnish people with sound standards of criticism, and thus might forestall absurd literary vogues. We can imagine, too, that the machinery with which the investigation of, say, the Middle Ages is often lumbered up would experience speedy correction if it were applied to living writers.

Though not greeted in the Philadelphia press by the startling headlines which confronted Professor Cunliffe's suggestions, Dr. Percy Long's paper was almost as revolutionary. He attempted to demolish the tradition which has set up a friendship of the greatest intimacy between Sidney and Spenser. Courthope regards this friendship as the mainspring of Sidney's literary interests, Mackail traces to it, in large

part, the flowering of Elizabethan poetry. But in point of fact no evidence of intimacy exists. When all the court mourned Sidney, Spenser remained silent; and when years later he wrote of him, he omitted any allusion to a personal relation existing between them.

Another loose tradition received the attention of Prof. C. Gauss, of Princeton, who furnished his reasons for moving the date of Rousseau's "Discours sur l'économie politique" from 1750, or a year or two later, to 1755. According to him, it was not written until after Rousseau's return from Geneva, October 10, 1754, and since it appears to be an integral part of the volume of the Encyclopædia in which it is contained, making reference to several of the other articles, Professor Gauss maintains that Rousseau's intellectual intimacy with Diderot must have lasted longer than is usually supposed. Other results of his thesis, some of them sweeping, will doubtless be worked out in due time.

Prof. F. E. Schelling took "Some Recent Applications of Demi-Science to Shakespeare" severely to task. Prof. E. S. Meyer, of Western Reserve, had an instructive paper on the employment of *Leitmotif* by writers of literature, among them Fontane, Ibsen, and Sudermann. The word itself, though usually ascribed to Wagner, was coined by Hans von Wolzogen. The paper of most popular interest was that with which the Conference concluded—Professor Lomax's on the secular songs, or "reels," of the negro, most of them having sprung directly from work on the plantation. Their naïveté, genuine pathos, and often their lyric beauty were to many in the audience a revelation. The love of the light-colored skin, self-pity because of not having enough to eat, and of not being able to get money when due—

> Nigger and a white man playing seven up,
> Nigger wins the money, white man takes it up——

are eloquent of the negro's sociological position, while the pervading humor witnesses to his capacity to be somehow happy, even on very little.

We should have been glad for a word from the Editorial Committee explaining the spelling employed in the programme. To the layman it is awful, and we doubt if the scientist would dare to call it either phonetic or reformed. By the side of "servis" we note "treatise"; "cud" has now become an auxiliary verb; why so many "e"s in "therefore"? The following officers were elected for the present year: president, Prof. A. R. Hohlfeld; vice-presidents, Profs. H. Collitz, A. H. Thorndike, and Kenneth McKenzie. In a few weeks the Council will decide upon a place for the next meeting, the chances favoring Cambridge.

NEWS FOR BIBLIOPHILES.

Under the title of "The Fascination of Books" (Putnam), Joseph Shaylor has collected a series of papers, on book-publishing and book-selling topics, contributed by him to the *Nineteenth Century, Fortnightly Review, Publishers' Circular*, and other English periodicals. Some of his subjects are "Early Victorian Bookselling," "The Christmas Book," "The Evolution of the Bookseller," "Booksellers' Trade Dinner Sales," "The Use and Abuse of Book Titles," and "Bookselling and the Public."

In "The Christmas Book" he gives an account of the Annuals, which were so numerous and so successful for a long period, beginning about 1820. "Friendship's Offering," "The Keepsake," "The Book of Beauty," "The Gem," and the "Literary Souvenir" were among the most popular. Steel engravings by the best artists and "fugitive" poetry by forgotten writers make up the contents of these one-time favorites.

The paper on trade-dinner sales is, perhaps, the most interesting one in the volume. The publishers used to issue catalogues which were distributed among "a select number of booksellers of London and Westminster" (as the titles of some of them read), and the dinner was "on the table at half-past two o'clock precisely." After the dinner the books enumerated in the catalogue were sold to the highest bidder. Often important books were included, and thousands of copies of more popular volumes were sold. On one occasion above 19,000 copies of one book were disposed of in ten minutes, and at one of Murray's sales Thomas Tegg bought the stock of his "Family Library," 100,000, at one shilling per copy.

The essays seem, some of them, to have been written many years since, his quotations of prices obtained at auction for rare first editions being old records of ten or twenty years ago.

The Almanacs printed in Massachusetts from 1639 to 1850 are the subject of an important and careful essay and bibliography by Dr. Charles L. Nichols, of Worcester, Mass., printed by the American Antiquarian Society. Gov. John Winthrop in his diary, under date of March, 1639, chronicled the beginnings of printing in the United States in the following words:

> A printing house was begun at Cambridge by one Daye, at the charge of Mr. Glover, who died on sea hitherward. The first thing which was printed was the freeman's oath; the next was an almanac made for New England by Mr. William Peirce, Mariner; the next was the Psalmes newly turned into metre.

Of that first almanac "made for New England" no copy is now known, though it should seem from an entry in the manuscript catalogue given by Dr. Nichols ("Isaiah Thomas states that this issue and that of 1640 began with the month of March") that a copy of the little book had been seen by Thomas about a hundred years ago, and also that, although an almanac was issued from the Cambridge Press each year for the first twenty years, only seven issues are known, and each one unique. These are for the years 1646, 1647, 1648, 1649, 1650, 1656, and 1657. The first five of these are the copies which belonged to the Rev. Samuel Hough, of Reading, Mass., by whom they were interleaved, serving him for diaries. They later passed into the possession of Samuel Sewall and remained in the Sewall family until some forty years ago, when they were acquired by George Brinley, of Hartford. At the sale of his great library the almanacs for 1646, 1647, 1648, and 1650 were purchased by the late John Boyd Thacher, of Albany, the Lenox Library being the buyer of the issue for 1649. From Mr. Thacher the four almanacs passed into the library of the late E. Dwight Church, and now belong to Mr. Henry E. Huntington. Unique copies of the almanacs for 1656 and 1657 are in the American Antiquarian Society's collection, the richest of the kind anywhere. Up to 1700 Dr. Nichols locates copies of sixty-eight different issues, of which the Society possesses forty-three; 479 issues are recorded from 1700 to 1800, of which the Society possesses 367, and 513 issues from 1800 to 1850, of which the Society has 477.

According to Isaiah Thomas, the almanac for 1639 "began with the month of March," and this was a peculiarity of all the New England almanacs until 1687. In all existing copies for this period March is given as the first month and February as the twelfth. Although the month of March was the legal beginning of the year in England until 1752, nearly all other almanacs give January as the first month and March as the third. Dr. Nichols surmises that this may have been "an effort towards absolute truthfulness of expression," or that it may have been one more proof of the desire of the people to "separate themselves, even in these ways, from those whom they left in England, for the sake of religious and personal freedom." In the earlier years of Franklin's "Poor Richard" January is put first but is called "XI Mon.," February "XII Mon.," and then comes March as "I Mon."

The astronomical calculations in these early almanacs were for the most part prepared by graduates of Harvard. Of forty-four almanacs issued before 1687, forty-one were prepared by twenty-six graduates, ten of whom were tutors in the institution. Dr. Nichols is of the opinion that the making of these calculations was a part of the preparation for the post-graduate degree of Master of Arts.

The earliest known American almanac to contain the illustration of "the man of signs" was that of 1678. This was published by John Foster, the first printer in Boston, and the cut was engraved by him. Many other interesting facts are to be learned in Dr. Nichols's essay, while his list, filling nearly one hundred pages, will be found useful for reference.

Correspondence

RAILWAY SAFETY AND DISCIPLINE.

To the Editor of The Nation:

Sir: With your permission, I should like to call the attention of your readers to a criticism of my opinions on management and the safety problem on railroads which you have recently printed. It is an interesting criticism, absolutely sound in its ethics and its logic. As I look at it, however, it is a challenge for information, as well as an all-around judgment or conclu-

sion on the subject. The passage I refer to is as follows (*Nation*, December 19, 1912):

If the coercion of railway managements for the benefit of unfit employees is as bad as Mr. Fagan represents it—and we do not deny that it is—the railways are not compelled to wait for an investigation by the Interstate Commerce Commission to disclose it. A plain statement of the case would quickly bring the influence of public sentiment to bear in favor of whatever disciplinary measures are necessary to make life and limb safe for travellers.

Now, there is just one slip of the mind or of the pen in this passage. As a matter of fact, public sentiment is not and never has been *quick* to move in supporting the superintendent and his authority on the railroads, even after "a plain statement of the case" has been widely published for the information of the American people. Public sentiment will move, and must move, in this matter before long, but it seems to be a slow process, and in my opinion a score of plain statements such as that which I now propose to make will be necessary before the railroad business in this country, especially the operating department, can be conducted on a reasonably fair and safe basis.

Take, for instance, the situation on the Pennsylvania Railroad in the years 1908 and 1909. At that time the system was threatened with a strike of large bodies of employees which promised to lead to a general "tie-up." The position and contention of the railroad in the matter can best be given in the words of W. W. Atterbury, who at the time was general manager of the lines east of Pittsburgh. His statement to the public was as follows:

There is no question of wages, hours of employment, or conditions of service at issue between the company and its men. The men are demanding, however, that when grievances or demands of a general nature are to be presented to the management, they shall have the right to go straight to the general manager, ignoring the division superintendent and the general superintendent. To agree to such a proceeding would be subversive of that discipline upon which the company relies to protect the safety of the lives and property of its patrons.

This statement and others of a similar nature were widely published at the time, without the slightest response from public sentiment.

But we need not go back to the year 1909 for illustrations and points. In the month of June, 1912, a strike vote of employees on the same railroad, that is, on the Pennsylvania, was threatened to enforce six demands, the most important of which was the following:

That engineman X be paid for time lost on account of suspension of ninety days, imposed upon him on the charge of low water in his engine.

Now, of course, if management is to be held responsible for the efficiency of the service, its authority must be recognized and supported. But in the cases I have mentioned, and in others of a similar nature, not a particle of assistance did the railroad receive either from the press or from public sentiment. Far from "quickly" bringing its influence to bear in favor of necessary measures of discipline, public opinion at the time shuffled the issues, politically tinctured, on to the board of mediators, under the Erdman act. Just what the public got for its money, so to speak, in the case of the Pennsylvania Railroad, can be understood from the following telephone dialogue, which almost to the letter is an exact reproduction or rehearsal of the proceedings:

Mediator at Washington, D. C.—Hello, Pennsylvania Railroad, is that you? Well, why don't you offer these men some kind of an "olive branch"? You know there is bound to be trouble if you don't.

Pennsylvania Railroad, at Philadelphia, Pa.—I understand that, Mr. Mediator, but look here, this is simply a question of right and wrong management, and to tell you the truth, I am sick and tired of "olive branch" settlements in such matters. That's flat, you understand, and there is nothing more to it.

Mediator—That's all very well, Pennsylvania Railroad, but you must bear in mind that, as mediator under the Erdman act, and in the interests of the people, as we think, we have absolutely nothing to do with the right or wrong in this controversy; our business is simply to keep the wheels moving.

I now hasten to say that I acquired information of this nature simply by pushing my way into the headquarters of the Interstate Commerce Commission, the Bureau of Labor, and into the offices of the railroads from one end of the country to another. I asked plain questions and had no difficulty whatever in getting truthful and significant replies. The reporters for newspapers have had the same privilege, but they are not looking for this kind of information.

But now the situation, as I have described it, is surely pretty hard for a manager when you ask him to be responsible for the safety of the travelling public. And yet this is exactly what arbitration of every description means and has meant to the railroads for the past ten years. So far as the railroads are concerned, arbitration in this country has always had a "weather eye," and the sooner public sentiment understands this the better it will be for the safety of the people at large. At the same time, I am aware that an ethical awakening in this direction has been the distinguishing feature of the activities of the public conscience during the past year. For the future, as it seems to me, the prospect is tremendously hopeful. The people now want to know the truth about the railroads, and especially about the accident situation. The principle of keeping wheels moving regardless of right and wrong will not satisfy American public sentiment in 1913.

JAMES O. FAGAN.

Waltham, Mass., December 26.

A LETTER OF DR. FURNESS.

TO THE EDITOR OF THE NATION:

SIR: The following, I think, will be of interest to the friends and admirers of the late Horace Howard Furness. It is a quotation faithfully transcribed from a letter in my possession, written by Dr. Furness to another great English scholar, the late Francis James Child, and is an acknowledgment of a letter of encouragement that had just come to him from Professor Child.

Wholly apart from its interest as a record of friendship that existed between these kindred spirits, it gives one some idea of the patience and toil that may precede the brief and modest comment of a great scholar. The letter is dated March 22, 1880, and therefore was written soon after the publication of "Lear." Dr. Furness says:

No one has ever yet said to me such an appreciative word anent the labor and the time that lie hidden sometimes in a fraction of a line. Not infrequently I have spent a whole evening in hunting down a single quotation. I remember that I once went through every page of Ben Jonson, and there are nine volumes in Gifford's edition, in search of a single line—and I got it. I spent nearly a whole night, till cockcrow, in search of "queasie" in the Paston Letters, and four or five words absorbed the whole of it. So too in Latimer's Sermons after "flibbergibe." And sometimes, as you truly say, after all the time and trouble is spent the note is struck out.

That the same editor knew when a long note was required and acted accordingly, the curious may see by referring to his edition of "Lear," II, iv, 207, where Collier's reading, "howls," is defended; or again, III, vii, 64, the note on "all cruels else subscribe." G. C. SCOGGIN.

The University of Missouri, December 27.

A FRENCH GUIDE TO FRENCH NOVELS.

TO THE EDITOR OF THE NATION:

SIR: In spite of the analytical French mind, with its rage for classification, the French have never been leaders in bibliography, and their unindexed books and uncatalogued magazines have ever been a stumbling block to scholars. It is interesting, therefore, to see what the race can do when once it puts a hand to the plough. The five-year-old review, called *Romans-Revue*, is a valuable monthly contribution to the bibliography of French novels, as well as a guide to the new books of France. It is published at Lille, in northern France, and the spirit of the Roman Catholic Church pervades every sentence. The church militant has a very scornful index for most of the modern plays and novels, but the indomitable Gallic flavor is ever behind the black frock, and keeps the ecclesiastical point of view from becoming irritating, and often makes it entertaining to any outsiders who may possess a tinge of the spirit of Anatole France.

Although primarily devoted to fiction and the theatre, the review now and then condescends to notice science and philosophy. Last May it praised the rich contributions of Fabre to the study of insects, but regretted that he never mentions the name of God; though he does refer to a "sovereign pilot," he unfortunately declares in the same breath that this pilot does not bother himself either with us or with our consciences.

The review divides the new novels into four classes, those which are dangerous, those for young girls, those for older people, and those for everybody. Just as you pay for your seat in church according to your pocket-book, the church expects you to select your novels according to your age, sex, and morals. Thus translations of "Ann Veronica" by Wells and "La Horde" by Blasco-Ibañez are dangerous in their French dress. We have known maiden and married aunts who felt the same about the English version of the first. Older people will find such books as Tristan Bernard's "Mathilde et ses Mitaines" very *convenable*. For the young girls there are mainly translations from the English, such as Henri de la Pasture's "La Solitaire," and, finally, all may revel in "Un drame au Maroc," by Valréas, and the translation of Selma Lagerlof's "Marvellous Voyage of Nils Holgersson,"

BURLINGAME PUBLIC LIBRARY

Travellers in France know how numerous are the cheap editions of popular novels. They range in price from 20 centimes to a franc, and form a most tempting array at the railway news-stands. No matter how well you know your Daudet or Marcel Prévost, if you are starting on a long trip by rail you are sure to be tempted by one of these cheap volumes before getting into the train. And some people would almost as soon have a novel of Daudet as an old friend with them to while away the hours. The books are all on good paper, but with rather sensational illustrations. Such a rose-water book as Prévost's "Lettres à Françoise" has illustrations that would not be out of place in an American edition of "Sapho." It is one of the merits of the *Romans-Revue* that it keeps you advised as to these cheap publications, always telling you whether the book is *scabreux*, whether there are dangerous passages, and reminding you whenever an old favorite, such as "Les Misérables" or "Notre Dame de Paris," has been put on the Index. The best of these editions are the Modern-Bibliothèque, the Collection Flammarion, and the Collection Nelson, and they are so good that I have met with them several times in the college libraries of the Middle West.

As regards the theatre, the review gives a faithful list of all plays that have been published the preceding month, and follows this with a brief summary or word of warning about each. Thus, Bernhardt's last play, "Queen Elizabeth," is characterized as a "brutal tragedy, brutally developed." Maurice Donnay's play on Molière contains five acts of misunderstanding between the actor-playwriter-manager and his young wife, with a reconciliation on his death-bed. "Excessive" is the word with which the critic dismisses the play. As for the "Zigoteau Sisters," a Cluny vaudeville, the critic tells us that the sisters are aunts who wish to marry their niece to Lefolichon, who prefers his mistress. "No, that is not for you," is the sage final comment of the critic to his readers.

It is easy to see that so many prohibitions might develop a whole orchard of most alluring forbidden fruit, but, whether you like the guardianship of the church or not in the selection of your French novels and plays, you are thankful to find a complete monthly list to keep you informed.

FRANK R. ARNOLD.

Logan, Utah, December 23.

Literature

EXPLORATIONS ON THE RIVERS OF SOUTH AMERICA.

The Flowing Road: Adventuring on the Great Rivers of South America. By Caspar Whitney. With maps and photographs by the author. Philadelphia: The J. B. Lippincott Co. $3 net.

Under the quaint title of "The Flowing Road," *i. e.*, the stream that bears the traveller's boat, Mr. Caspar Whitney gives us a lively narrative of several journeys, most of them by water, in one of the least known parts of the world, viz., that densely wooded and thinly peopled region which lies between the mighty Amazon on the south and the Llanos (grassy plains) which border the middle course of the Orinoco in Eastern Venezuela. So thick are the forests that there is no means of traversing this region except by water, and transit is extremely slow and difficult. The southern part of the region belongs to Brazil, the northern part to Venezuela; its few inhabitants, whether speaking Spanish in the former country or Portuguese in the latter, are half-breeds and Indians. The latter, though far more numerous than the former, are few in proportion to the vast area of the country, and nearly all live in primitive savagery. Most of their tribes are, however, so feeble and so much afraid of the white man that their presence does not greatly add to the difficulties which nature throws in the way of the adventurous traveller.

Mr. Whitney is an explorer for the sake of exploration. He is something of a sportsman and something of a naturalist. But his main motive for wandering is the desire to be in wild places and lead a wild, which is likely to be also an often imperilled, life, in the presence of untouched nature. It would be hard to find a better country in which to gratify this passion than the central wilderness of South America, some of whose woods have never been traversed, some of whose tribes hardly ever seen by civilized man. He describes these regions with freshness and spirit, giving enough detail to make the readers understand what are the conditions of travel, and what the daily incidents that mark it, but not wearying us with a repetition of trivial matters. Like other travellers in the thickly wooded regions of the tropics, he is struck by the fact that wild creatures, and especially quadrupeds and snakes, are comparatively seldom seen:

> Of course, there is life in the deep forest, plenty of it, but it is sly and noiseless, in keeping with the huge solitude it calls home. You find here the many varieties of rodent family, the sly tapir, the clumsy-appearing but surprisingly active ant-eater; a wild dog—a grayish coyote-like animal with a dog tail—of which I shot one; several of the cats, though they (including the jaguar, head of the family) keep closer to the jungle edges or near the breaks in the forest where birds and streams and peccaries are more frequent, and the hunting is better.
>
> How awesome is the deep equatorial forest in its immensity, and how disappointing! It is not at all the picture of your untutored imagination—brilliant in flaming foliage and gay with the chatter of wild life. On the contrary, it is sombre, forbidding, and silent. Here is no frog chorus or hum of insect or hoarse croaking bird: even the harassing voice of the parrot is silent—'tis a vast desert where you may not venture without compass, for neither landmarks nor the stars attend you: there is only the canopy of the trees above and the tangle of underbrush below and around. Where indeed is there a desert to equal this forest desert? But the trees are wonderfully impressive with their huge smooth trunks from four to six feet in diameter; limbless for forty to sixty feet. Some are supported by buttresses which stand out at their base three or four feet like great flanges, and all share their burden of the marvellous parasitic life which may express itself in flower-like decorations or in festooning, entwining pendant vines, innumerable and of every character and dimension.

A striking description of the parasitic growths of the forest may be found on page 50, and there are many interesting remarks on each of the wild creatures, from the great jaguar downward. Though our author is not a skilled zoölogist, and even less of a botanist, he has a first-rate traveller's eye, and is able to catch and describe the details, as well as to present the general effect of the scenery through which he passes. The account given in the above quotation of the sort of impression a vast tropical forest makes is perfectly correct. Such a forest is almost terrible in its silence and in the sense which it gives of the abounding power and energy of nature; and it seems more terrible when, either on foot or in a small boat, the traveller makes his way through one of these level tracts than when he is climbing up and down wooded mountainsides. There, as for instance in the maritime parts of Brazil or among the hills of Guiana or Colombia, there is variety, for the sun breaks in upon a cliff and streams sparkle over the rocks. In the vast Amazonian woodlands one is depressed by the same sombre monotony for many hundreds of miles.

There was only one part of his journey in which Mr. Whitney penetrated what seems to have been a virtually unexplored country. This was the upper part of the Orinoco, beyond the great reef of rocks and huge loose stones called by him the Barrier, which extends across the river about latitude 3° north and 65° west. Here dwell small tribes of Indians entirely unmolested by the Venezuelans to the west of them and the Brazilians to the east of them, absolutely unaffected by civilization. These *Indios bravos*, as the whites call them, live in a half-nomadic way in small groups, and support existence by fishing with the bow and arrow and by killing birds either with arrows or with darts from the blow-pipe some seven feet long. Here our author had quite the most thrilling adventures of all his journeys, first in stalking these Indians and watching them from perches in the trees, and afterwards in saving himself from the attempt of his only companion, a half-negro, half-Indian Venezuelan, to decamp with the canoe and the provisions, leaving him to perish alone in the wilderness. This part of the story is told with a graphic skill in the han-

dling of its details which the writer of a novelette of adventure might envy.

Although these devious courses along the upper tributaries of the Rio Negro and the Orinoco are the most interesting parts of Mr. Whitney's book, his record of a hunting trip in Western Venezuela and his account of a similar excursion up the Paraná River in Northern Argentina, may also be read with pleasure. He is a good observer of men as well as of beasts, and gives a life-like notion of the sorts of people, nearly all half-breeds of some kind or other, whom the traveller meets in the out-of-the-way parts of South America. Some useful hints on the equipments needed by the hunter or explorer in wild regions wind up a pleasant and agreeable book. It is not without interest that we find him saying, as not a few mighty hunters, including Lancelot Sanderson and Selous, have said, that he has ceased to find any pleasure in killing, and now shoots only for the sake of adding a new specimen to his collection.

CURRENT FICTION.

Atlantis: A Novel. By Gerhart Hauptmann. Translated by Adele and Thomas Seltzer. New York: B. W. Huebsch.

Gerhart Hauptmann's new novel, like almost all of his other productions, is concerned with a hero who can suffer, but not do, act, construct. From "Sonnenaufgang" (1889) to "Emanuel Quint" (1910), "Die Ratten" (1911), and "Gabriel Schillings Flucht" (1912), Hauptmann's leading characters do not "lead." In his dramas this fault is even more serious. The lack of defensive or constructive will, and the pessimistic philosophy that goes with such a lack, are well expressed in Hauptmann's play "Das Friedensfest" (1890), one of whose characters says: "The will is a straw! . . . The will, the will, get out with your will! I know better! One may will and will a hundred times, and everything remains as it was!"

In the present novel a German physician, deserting his family to follow a young *danseuse* named Ingigerd to New York, narrowly escapes a shipwreck much like that of the Titanic. In America he learns that his lady love is already at heart of the *demi-monde;* he escapes to Connecticut to regain his balance, is nursed through typhoid fever by Eva Burns, a young artist, and then returns to Germany. In the course of the story the hero wrongs both the *danseuse* and a Russian steerage passenger.

Throughout the story the reader gets the effect of tremendous forces in combat, but upon careful examination sees that this impression comes from the masterly literary treatment of gigantic physical forces in action rather than from any spiritual struggle. Hauptmann's hero fails, because he does not conquer himself: the temptation is removed, is made no temptation, because Ingigerd sinks to the depths. Nor can the humdrum ending of the novel, in which Eva Burns nurses Frederick through typhoid fever, and after the death of his poor insane wife goes to Europe with him to be a mother to his children and with him to live a life of devotion to art, disguise this failure one whit.

The underlying theme of "Atlantis" is neither great nor unusual. The book's strength lies in its external form, its wonderful descriptions, its equally marvellous characterization, its vivid imagery, its record of accurate observation of men and things, its striking figures, in short, in its brilliant style. It is quite remarkable how even as skilful an artist as Hauptmann could paint the picture of storm and shipwreck (both moral and physical) and the hair-breadth rescue (also both moral and physical) without having gone through some such dreadful experience himself. He sees everything, he hears everything—even the sense of smell is alert and its experience recorded.

The condiment of satire on America and the Americans sprinkled upon this literary dish is rather flat. We have heard before of the worship of the dollar, of the depreciation of art, of haste, gross ignorance, unrest, etc., etc., as specifically American virtues.

Autobiographical elements appear in the hero's interest in art, and especially in sculpture—Hauptmann is said even now to do good modelling in his wonderful house at Agnetendorf—and Dr. von Kammacher's early biological studies perhaps hark back to Hauptmann's student days in the Jena of Haeckel.

The translation by Adele and Thomas Seltzer is with few exceptions well done.

The Antagonists. By E. Temple Thurston. New York: D. Appleton & Co.

There is nothing in the least unusual in the general situation from which this story is developed. A genius is born of two quite ordinary people in an English village. The father is an ex-butler, a miller, an excellent man, who reads "Sartor Resartus" and walks the strait and narrow way. The mother is an ex-governess, a sweet and understanding woman. But "Dicky," the child of unusual powers, finds plenty of antagonism in his world—the antagonism of age, of environment, of sex. Very early his mind is set upon becoming a painter. The mother would yield, but the father sees no reason why the business of a successful miller should not be a better prospect than a dream of success in art. So the filial relation is a battle for Dicky from the start. All this, we say, is commonplace enough. The strife between boy and man, between ambition and caution, the final determination of the boy to burn his bridges and run away to London, so that he may somehow win the education in art his soul craves—these have been the motives of a hundred novels.

The new matter in the book is its study of sexual awakening. At eleven Dicky begins to be troubled by the consciousness of sex, and is presently half-enlightened by a disillusioned woman of thirty. From that time his instinct for art and his instinct of sex develop side by side. At seventeen, he determines to become a painter—and falls in love with his old playmate Dorothy. She then, also, becomes in a sense his antagonist. His ambition points to London. Her love holds him at the mill. Ambition wins the day, and he prepares to set out for London and fame. But, of course, there is a final meeting, and here Mr. Thurston, in a passage of extraordinary quiet and simplicity, describes the eternal sacrifice womanhood is ready to make as a last resort, in order to bind to itself the flitting desires of man. This is not a book for children, but in that one scene at least it is on a high plane of imaginative realism.

The Closing Net. By Henry C. Rowland. New York: Dodd, Mead & Co.

The crook continues to be a popular hero of romance—as popular almost as his natural enemy, the detective. Here we have a gentleman of the best (American) blood, chiefly known to the world as "Wall Street Frank," or "the Tidewater Clam." Being illegitimate, he has early developed that grudge against society which is the most cherished possession of his kind, in fiction; and in due course becomes an expert criminal. Burglary is his specialty, but he is skilful at all the tricks of the trade, from picking a pocket to working a confidence game on a big scale. When the exigencies of the present story take him to Paris, he is readily received into the inner circles of the profession. His first demonstration of the American method, however, unexpectedly involves him in virtue, to his great subsequent embarrassment. We have thereafter the exciting spectacle of our distinguished fellow-countryman opposed, single-handed, to the powerful and organized class of Paris. He has his narrow escapes, but they are escapes, and of course, in the end, his virtue confirmed and his valor rewarded, he marries the fair companion of many of his adventures, who, being veritable countess and professional taxi-driver, deserves credit as a new compound in the chemistry of romantic fiction. The story is better in manner than in substance: it is told with a good deal of vigor and some humor.

ESSAYS OF MAETERLINCK.

On Emerson and Other Essays. By Maurice Maeterlinck. Translated by Montrose J. Moses. New York: Dodd, Mead & Co. $1.25 net.

The three essays on Emerson (1891), Novalis (1895), and Ruysbroeck (1891) which compose this slender volume are, in the original French, introductions to translations from those writers, two of which, the Novalis and Ruysbroeck, are the work of Maeterlinck himself.

The American translator often reveals a sympathy with his original in the delicacy and smoothness of his phrasing, but his work has grave faults. The English is often, so to speak, dusted with French idioms, and there are other deviations from established usage for which the French is clearly not responsible. Between laxity in manuscript and negligence in proof-reading, Mr. Moses incurs the suspicion of ignorance from which even his censors must defend him. We refuse, for instance, to accept the author's own testimony to the effect that he actually believes that the French word *éternel* means "external" (p. 154), that *spéciaux* means "spacious" (p. 142), that *réfection* means "reflection" (p. 194), that *éprouve l'exigence* means "establishes the existence" (p. 194), that *ingénue* means "ingenious" (p. 214), that *nulle part* means "no part" (p. 218), that *inhabitable* means "inhabitable" (p. 125). Sometimes, indeed, the right translation of these words appears in other contexts, and the author's knowledge is absolved at the expense of his vigilance. Often, however, the meaning has not been grasped. Specification is the least impolite mode of characterizing these errors, and we subjoin an extreme but instructive example. The French (Maeterlinck translating Ruysbroeck) reads thus: "De même que nous ouvrons nos yeux matériels, que nous voyons, et que nous les refermons si rapidement que nous ne nous en apercevons pas; de même nous mourons en Dieu, nous vivons hors de Dieu et nous demeurons toujours un avec lui." The meaning of this neither very obvious nor very recondite passage is as follows: Just as we open our bodily eyes, as we (then) see, and close them again so quickly that we are unaware of (the change); even so we die in God, we live outside of God, and we remain always one with him. This is what the translator makes of the passage: "Just as we open our material eyes, so do we see; and just as we close them rapidly, so do we not see; just as we die in God, we live outside of Him, and we dwell one with him forever" (p. 210).

These three essays will neither raise nor depress nor modify the reputation of Maeterlinck with English readers. They are pleasingly disinterested, leisurely but never loitering, thrifty but never niggardly of thought, admiring, almost devotional, in tone, but with just that touch of reserve which gives an effect of discretion to homage. They reveal familiar traits in the lissome and willowy style, and in the serene gusto, the placid self-regalement, which suggest the transfigured epicure. Maeterlinck's expertness in the technique of introductions is not remarkable. The essay on Emerson flutters round Emerson, or rather uses him as a perch or resting-place between flights into the empyrean. The range, the virility, the self-trust, the homely shrewdness of Emerson, have, pardonably enough, escaped Maeterlinck: what he sees is a pious brother, Fra Rodolfo as it were, holding his taper in the fraternal procession of the mystics. The essay on Novalis lacks an effective unity; it makes several trips rather than one voyage. The critique of Ruysbroeck is the least dithyrambic and the most serviceable of the three; it is effectively ordered, is packed with quotations, and really clarifies an unfamiliar subject.

The assignment of space to Emerson, Novalis, and Ruysbroeck is represented by the ratios 1, 3, and 5; it may or may not be just to associate these proportions with the facts that Emerson's was a mind of many windows with various outlooks upward and outward, that in Novalis this many-sidedness was only a promise, while in Ruysbroeck we seem to see a man lying on the floor of a cell and watching a strip of exquisite sky through the single orifice in the quaintly panelled ceiling. We may note also, without insisting on the fact, that in the Ruysbroeck essay passages that are mere curiosities and passages aglow with a real if cabined and confined spirituality are quoted without any manifest sense of the enormous difference in their values. For the rest, the mysticism is sunny, airy, and inviting, a little provoking now and then because apparently a little wilful in its suave insistence on the supernatural clairvoyance of the most commonplace people in the most ordinary situations—a theory surely not bound up, either as support or consequence, with the soundness of the mystic principle.

Things I Can Tell. By Lord Rossmore. New York: George H. Doran Co. $3.50 net.

The things Lord Rossmore can tell are so many and varied, the leeway he permits himself in point of taste (not to say morals) is so generous, that we find ourselves wondering a little what the things are he can *not* tell. His anecdotes have an eighteenth-century flavor; his jokes are of a sort which our ancestors, even in America (witness Poor Richard's Almanac) did not hesitate to put in print, but which are now relegated to the smoking-room. The experiences he records with greatest gusto are less edifying than amusing. For a parallel one would have to go back to the bland confessions of some imaginary person of quality in Defoe or Smollett.

His father he mentions with an accent of apology as "a charming man," but strangely insensible to the family passions for racing and other robust sports. He admits that there may have been excuse for this limitation, as his grandfather had practiced "racing, electioneering, hunting, and cock-fighting" to the serious damage of the family fortunes. It was this grandfather who is gleefully handed down to posterity in these pages, sitting on a Dublin pavement embracing a lamp-post, and refusing to budge on the ground that, as the houses were all going round and round, he might as well wait for his lodgings to arrive, and then "just pop in." Luckily, his second wife was of a managing turn, and contrived to save something for later Lords Rossmore to enjoy life with. The present incumbent was born sixty years ago into a jolly world. "I have lived an amusing life, but a happy one, notwithstanding," he says. Is this a pure Hibernian touch, or in rebuttal of the Puritan theory which connects strict virtue and happiness? This writer is capable of either turn of humor. "I am fortunate in possessing a charming wife, and the best children in the world. I have many friends, and I hope few enemies; and if I haven't done much good in the world, at any rate I do not think I have done much harm either." One thing he is sure of—that he has had a good time from first to last. It is true there is an elegiac note in his memories of boyhood. After telling how his brother and he were wont to hunt by moonlight—"and as this happened after dinner, reckless riding was more likely than not"—he sums up with, "We were up to all kinds of devilment in which boys delight, and looking backward I can only say that I think there is nothing in life to compare with its springtime." But the ensuing narrative does not make clear just where the devilment is supposed to have ceased: the inconsequent airs of springtime exhale from the last of these pages as from the first.

The family estate of Rossmore is considered, its master believes, to be "one of the beauty spots of Ireland," and he himself ventures to think it "one of the prettiest places in the world." Planting and replanting is a mania which he confesses to sharing with Louis XIV, and his pride in his home is as pleasant and ingenuous as his pride in his horsemanship, or his ability to stay above table: "The claret was a bit full-bodied for them, but I finished what was left, and thoroughly enjoyed it." A human being capable of thoroughly enjoying everything life has brought him for sixty years (including, but merely including, his drink), has a strong appeal for the

natural man in all of us. Among other things, he enjoyed shooing a woodcock from his own gun to that of his friend, the late King Edward's:

> I quite thought my action had been unobserved, but a friend came up to me when the beat was over, and said, "Derry, old man, that about the woodcock was the smartest done thing I've ever seen."
>
> "Good heavens!" I exclaimed. "You don't say you saw it. On no account let the King know."
>
> "Yes, I saw it all right," rejoined my friend, "and in my opinion many a man has been made a Duke for less."

He enjoyed his companions, whom he recalls fondly from their drunkards' graves by fond nicknames, such as "Cootie" and "Old Joe" and "Sugar" and "Chicken"—titles which Dickens would have attached to bibulous persons at the other end of the social scale. If other gratification than that provided by its impudent good cheer were to be desired of this narrative, it is surely afforded by the spectacle of inherent and perfectly unconscious vulgarity here offered by a noble lord for the jeering contemplation of democracy.

The Last Legitimate King of France: Louis XVII. By Phoebe Allen. New York: E. P. Dutton & Co. $5 net.

Did "Louis XVII" escape from the Temple Prison? Were Josephine, Barras, and Robespierre privy to his evasion? Did Louis XVII subsequently assume the name of Naundorff, and are the Naundorff claimants therefore deserving of our credence and sympathy? These questions the author answers in the affirmative with the fine feminine conviction of a devotee of a lost cause. And hers is not the only voice crying in a wilderness of unbelief. Books supporting the Naundorff claim have become increasingly numerous lately. A monthly periodical in Paris is devoted to its defence. In March, 1911, the French Senate, at the ardent insistence of M. Boissy d'Anglas, appointed a committee to hear the petition of Naundorff's descendants for legal recognition as citizens of France.

That a sickly child died in the Temple on June 8, 1795, as asserted by the existing death certificate, there is virtually no doubt. That this child was a substitute for Louis XVI's son is possible, but, as it seems to us after reading the evidence, not probable. The theories of the substitution of a wooden figure, of a dumb child, or of a scrofulous weakling scarcely rise to a matter of conviction in the mind of the reviewer. The contemporary evidence is so meagre that it is impossible to come to a well-founded historical judgment as to whether Louis XVII perished in the Temple in 1795 or not.

Granting for the moment, however, that the Dauphin may have escaped, did he survive in the person of Naundorff? It is well known that the belief in his escape gave the basis for the appearance, after Napoleon's fall, of some forty persons who claimed to be the real Louis XVII. Thirty-nine of them, at any rate, must have been impudent impostors. There was, for instance, Eleazar Williams, whom Louis Philippe's son found in an Indian family in New York State, and whom he tried in vain to persuade to sign a document abdicating his alleged rights to the French throne. Partisans of the *survivance* are now generally agreed that the only claimant not an impostor was Naundorff. The author therefore traces in detail Naundorff's chequered career from his first emergence in Berlin until he came to Paris in person in 1833 to prove his case before the French courts; and she describes his vicissitudes in England and Holland after his expulsion from France until his death at Delft in 1845. To establish her case she quotes largely from Naundorff's own allegations and from sworn depositions by old servants and royalists who might have known him before the fall of the monarchy. Unfortunately, she does not sufficiently realize the historical untrustworthiness of statements made from memory thirty or forty years after the event, even when made by the most honest and well-intentioned persons. Nor could she have accepted so unquestioningly Naundorff's assertions if she had read the recent critical study by Tschirch in the *Historische Zeitschrift* (1910; CVI, 535-599), made with German thoroughness from material in the Prussian archives. He disposes effectually of all Naundorff's complaints of "persecution" in Germany. By noting the different dates at which Naundorff composed his different statements, he is able to show that they grow full as Naundorff had successive opportunities for learning more details about the French Revolution—details which Naundorff then proceeded to exploit as his own personal recollections. His conclusion is that Naundorff also is an impostor, and one of the most impudent, because he kept up the imposture throughout his life and probably tried to bolster it up and acquire sympathy by instigating apparent attempts at his own assassination.

In short, this biography of a would-be prince is interesting and not without pathos. But its composition must be regarded as an act of devotion rather than as an historical investigation.

The Ulm Campaign, 1805. By Col. F. N. Maude, C.B., late of the Royal Engineers. Special Campaign Series, No. 12. With maps. New York: The Macmillan Co. $1.60 net.

Col. Maude has contributed, besides the present book, two very interesting studies to the Special Campaign Series: "The Leipzig Campaign, 1813," and "The Jena Campaign, 1806." His researches having convinced him that Napoleon during his later years possessed a fixed method of strategy which he invariably followed whenever topographical conditions allowed, he sought in his study on 1813 to demonstrate that the Emperor's strategic object—the concentration of superior numbers at the decisive point—was uniformly achieved, and by the simplest means possible. In his work on Jena, Col. Maude demonstrated that Napoleon's uncertain leading gave proof of the novelty of the weapon he was learning to wield; and his latest study depicts the Emperor in his first essay in the conduct of a great army organized into divisions and corps. In these three studies the fundamental purpose is to establish the fact that Napoleon's strategy was not born full-grown, but was rather "the outcome of his experience, developed logically and step by step" (p. vi).

"The Ulm Campaign" fully maintains the standard set by Col. Maude's other works, and is undoubtedly the best summary of the sort thus far published in English. A brief account of the Austrian and French armies up to 1805 more admirable than that contained in his first two chapters cannot be found in any language. The author announces that he had originally intended merely to translate the introduction to the French Official History, by Colin and Alombert, but, upon finding that his own opinion regarding the ability of Gen. Mack and the conduct of the Archduke Ferdinand differed so widely from that of the compilers, he abandoned the idea and decided to "unravel as far as possible the fundamental causes which lay at the root of the whole series of defeats the Austrians endured at the hands of the French, from the very inception of the French Revolution" (p. vii). The French Official History is a colossal work in four huge volumes, numbering 3,684 pages and accompanied by a smaller volume containing documents, annexes, and maps, compiled by Capt. J. Colin, of the Historical Section of the General Staff, and P. C. Alombert, the Controller of the Administration of the French army. The former has also written "L'Education militaire de Napoléon," which has been deservedly crowned by the French Academy, and the latter, "Le Corps d'armée aux ordres du Maréchal Mortier; Combat de Dürrenstein," a work of the utmost thoroughness, dealing with the operations of the Grand Army during the march from the Traun to Vienna after Mack's capitulation at Ulm. The French Official History—the title of which is "La Campagne de 1805 en Allemagne"—terminates on November 11, three weeks before the battle of Austerlitz. Although by all odds the most comprehensive and authentic history of this campaign yet published, it is both unfinished and far

from the last word on the subject; and contains many inexcusable errors. Innumerable orders and reports are inaccurate or incomplete copies of the originals, and documents of the utmost importance have either been omitted intentionally, or, what is much more likely, have wholly escaped Colin and Alombert. Aside from this, dozens of important orders and reports in the Austrian Kriegs-Archivs and in the archives of the Russian General Staff ought, most assuredly, to have been at their disposal had any attempt been made to procure them. The reviewer, for instance, who has spent many months of research at Paris, Vienna, and St. Petersburg, was able to obtain accurate and complete copies of nearly every document given by them, in addition to a great number omitted from their history. Since Col. Maude has depended so largely upon Colin and Alombert, it is obvious that his narrative must partake of their shortcomings.

The author declares that he has "never been able to share the views of those who imagine that every defeated general is necessarily either an imbecile or a traitor" (p. vii)—a very praiseworthy standpoint—and takes up the cudgels vigorously in behalf of Mack (pp. 22-36). He very rightly disagrees with the bias shown by Colin and Alombert in favor of the Archduke Ferdinand, the nominal commander of the Austrian army at Ulm, as against Mack (p. 182), but, on the other hand, he places far too much credence in Mack's "Mémoires justificatifs," from which he quotes frequently and at considerable length. This document constituted the defeated general's principal defence at his court-martial; ingenious and plausible though it be, not unfrequently it is wholly at variance with the orders actually issued.

Col. Maude's strictures on Napoleon's persistency in regarding Augsburg "as the key to the whole situation" (p. 254) are scarcely well founded, in view of the reports the Emperor received respecting the number of Austrian troops in front of the First Corps and the expected arrival of the Russian army in that direction on October 13 (p. 222), and the imperative necessity in consequence of establishing the eastern group of the French army—*i. e.*, Bernadotte, the Bavarians, and Davout—so firmly on the Isar as to banish all possible apprehension on the score of Kienmayer and Kutusoff until he had finished with Mack. Subsequent events demonstrated that this wise precaution thwarted the very object which Mack sought to effect, namely, to crush the French between the anvil represented by the army on the Iller and the hammering of the Russian and Austrian main armies on the east (pp. 254-255). Like every other historian before him, Col. Maude fails to put the blame for the isolation of Dupont's division, the exposing of the French line of communications, and the escape of Werneck's corps and the Austrian Reserve Artillery from Ulm on the 13th, where it rightly belongs.

More careful proofreading would have eliminated a number of errors in dates and spelling. A book so full of "meat" will certainly warrant a subsequent edition in which these defects can readily be corrected. Meanwhile it will supply a long-felt want on the part of the general reader and the military student who do not demand absolute historical accuracy.

Railroad Finance. By Frederick A. Cleveland and Fred Wilbur Powell. New York: D. Appleton & Co. $2.50 net.

That effective public regulation of railways is only to be attained through an intimate knowledge of the accounting features of railway operation has long been realized by close students of the problem. It is therefore to the public's interest that these highly technical matters should be explained and their bearing on the problem of regulation clearly established. This book is the first important attempt to treat in a systematic fashion the financial and accounting development of railways during the last three or four decades.

The work has been admirably done. Its method is to follow chronologically the stages in a railway corporation's experience—through promotion, underwriting, capitalization, construction, equipment, organization, and the various problems of operation and management, and then to lead one on the downhill road through insolvency and receivership to reorganization. Concluding chapters relate to consolidation and overcapitalization. The newly established accounting system of the Interstate Commerce Commission receives extended treatment, and its significant features are indicated. On this technical side the authors find the greatest defect to be the failure to adopt what is termed the "double balance sheet," by means of which the confusion between capital and current resources and liabilities is removed. This makes possible the setting up of the separate fund reserved for the permanent use of the corporation directly against the obligations creating it. Thereby the fact that capital is a *trust fund* becomes clearly recognized on the books.

The authors recognize the tendency for expenses of railway operation to increase, and state flatly that reductions in wages are impracticable. They would apparently look for a solution of this financial difficulty in greater economies of one kind and another, but in what fashion the reasonable margin between income and outgo is to be preserved does not appear. In fact, it is in the discussion of just such controverted questions as these that the book will probably prove disappointing to many readers. Whether the principles of "scientific management" are applicable to the railway industry is a much debated question. The arguments on both sides are presented in this book, but no attempt is made to test their validity or to reach any conclusion, notwithstanding the fact that the senior author is peculiarly fitted by experience to express an opinion of value.

Again, the discussion of over-capitalization contains an exhaustive treatment of the various considerations that have been offered from time to time as aids in the solution of the vexed problem, but beyond learning that valuation for taxation should be based on income and valuation for rate-making on investment, the reader gets no answer to his question. What elements specifically should be included in the valuation and what method should be adopted for its determination are questions left for the inquirer to decide. Nevertheless, the book has fulfilled with great success the purpose laid down in the preface, "to describe the methods of financing railroads in the United States."

Notes

Frederick Warne & Co., New York, will issue at once "Rights of Citizenship," a survey by various hands of the safeguards for the preservation of the rights of the people, with a preface by the Marquess of Lansdowne.

"Nogi: A Man against the Background of a War" is announced by Henry Holt. The author, Stanley Washburn, was one of the newspaper correspondents who were with this Japanese general through most of the campaigns with Russia.

The Century Co. will publish early in the new year "The Shadow," a tale of detective adventure, by Arthur Stringer, and a book of short stories by Anne Douglas Sedgwick.

Three new novels will be brought out this month by Little, Brown & Co.—"Joyful Heatherby," by Payne Erskine; "The Little Gray Shoe," by Percy Brebner, and "The Happy Warrior," by A. S. M. Hutchinson.

A phototype reproduction of Montaigne's "Essais," with more than a thousand plates and an introduction by Pro'. Fortunat Strowski, is among the announcements of the Librairie Hachette & Cie. The manuscript employed is that of 1588, belonging to Bordeaux, which has corrections in the author's own hand.

The automobile is responsible for a number of things, evil and the contrary, and among them is the development of a new branch of literature, not to be classified either as travel or as romance, but a sort of combination of the two, with a motor-car as the hero. The Williamsons started the vogue for this type of reading, and their disciples increase and multiply.

Louise Closser Hale is one of the band, and in "Motor Journeys" (McClurg) has collected a series of light articles dealing with European travels *en auto* that have already appeared in various periodicals. In the words of Lincoln, when asked to criticise a poetic effusion, "if you like this sort of thing, why, this is just the sort of thing you like." A word of praise must be said for the excellent pen-and-ink sketches by Walter Hale which illustrate the book.

"The Romance of a Favourite" (Appleton), from the French of Frédéric Loliée, purports to be a biography of the Countess of Castiglione, the most beautiful woman of the Second Empire. It was popularly supposed that Cavour hoped, through her fascinations, to win Napoleon III to the Italian cause; but of this the book contains nothing authentic. Indeed, it has no value to the historian, except as it throws side-lights on the gilded dissipations of the Court of the Tuileries. The matchless Countess had many admirers, including the Orleanist princes, at her feet, and she had many secrets confided to her; why does M. Loliée tell us so little, if, as he assures us, he possesses, or has seen, thousands of her letters? The Castiglione, who died some ten years ago, at the age of sixty, was a mystery even to her intimates, and her present biographer does not really lift the veil. Still, the tragedy of her career is sufficiently apparent. The book is translated by W. M. Fullerton, who, though a Harvard graduate and long the Paris correspondent of the London *Times*, seems occasionally to forget his native idiom.

In "Walking Essays" (Longmans), Arthur Hugh Sidgwick rides his hobby with a mock solemnity that is quietly amusing. He rises to the height of his great argument by a series of paradoxes: such as that Wordsworth was not a good walker, because he did not become intimate enough with nature. The most entertaining essay is on "Walking in Literature." Therein he soars no middle flight in pursuing things unattempted yet in prose or rhyme. Walking assumes its appropriate dignity in the scheme of the universe, and other subjects sink to their proper insignificance. The high seriousness of the undertaking may be judged from Appendix A to the essay, which contains calculations "On the Rates of Walking of Various Persons in the Egoist, Chapters 25 sqq." The scientific spirit of the investigation appears in the concluding sentences:

> A frivolous observer might suggest that the author was not very careful in his timing; but, apart from the hideous blasphemy, this would invalidate most of the previous argument. We therefore shut our eyes once more, and affirm that De Craye's watch went wrong.

In "An Original Canto of Spencer, Design'd as Part of his Fairy Queen, but never Printed. Now made Publick, by Nestor Ironside, Esq.," the author and publisher, Arthur H. Nason, has given us a photographic reproduction (without annotation) of Samuel Croxall's political allegory in Spenserian stanzas, published in 1714, which is known as one of the earliest manifestations of the eighteenth century revival of interest in the poet. The imitation of Spenser's style is, on the whole, rather a happy one. The publisher has reproduced the text (thirty pages) with a view to "Graduate School instructors who desire to drill their students in the mysteries of external and internal criticism." In our judgment, it would be a waste of time to make this use of the poem, but the new edition is welcome, since the text in its original form is not readily accessible. To judge from Mr. Nason's circular, which accompanies his reproduction, he does not seem aware of a second imitation of Spenser by Croxall published shortly after this one and entitled "Another original canto of Spencer."

The besetting sin of Wordsworth in his hours of weakness was a prosaic solemnity, and the same defect attaches to "Wordsworth, Poet of Nature and Poet of Man" (Ginn), the work of his latest critic, E. Hershey Sneath. Even the dullest portions of "The Excursion" are not more unrelieved by any touches of vivacity. The essay has a kinship with this particular poem in other ways also, for, despite Matthew Arnold's warning, it is the philosophical side of Wordsworth's poetry that especially attracts Mr. Sneath, and so the consideration of the poet as a literary artist is virtually excluded from the plan of the book. The author first discusses the supposed influences of heredity and of physical and social environment in the early life of Wordsworth, and then proceeds to trace the evolution of his poetic and philosophic creed through the stages of growth and maturity. If any value can be claimed for the book, it will be on the score of the chronological method here indicated. But there was no need of burdening the pages with so large a number of detailed analyses of the poems. Apart from the repetition involved, no one who requires such analyses is likely to read an essay on Wordsworth with profit, and, on the other hand, it betrays a want of skill in the critic to be so dependent on this method of interpretation. Worst of all, however, the criticism is not distinguished either by novelty of thought or by charm of style. New readers are not likely to be won for Wordsworth's poetry by language like the following (applied to the "Ode: Intimations of Immortality"): "The personal psychology and philosophy of mind presented, with their epistemological and ontological implications, are exceedingly interesting." We can imagine the poet's feelings, too, should any one have told him that he had "located" at Grasmere.

Generally speaking, the interpretation is orthodox, but the author, in our judgment, sets too high a value on Wordsworth's philosophical views. His philosophy of nature is so manifestly one-sided that it possesses no importance save as a source of lyrical inspiration to the poet himself. Furthermore, only in a very limited sense was Wordsworth the Poet of Man. His point of view was too exclusively moral. For him, as for his contemporaries, the French Revolutionists, Man is too largely the abstraction which, as a recent writer on the political aspects of the period has observed, is no more like the real creature than extract of beef is like the living ox. As regards the poet's philosophy of nature, Mr. Sneath is right, when he points out Lord Morley's misapprehension of Wordsworth's meaning in taking as a half-playful sally the lines:

> One impulse from a vernal wood
> May teach you more of man,
> Of moral evil and of good
> Than all the sages can.

But surely misapprehension here is a kindness to the poet. On the other hand, it seems to us mere quibbling to deny the pantheism of the "Tintern Abbey" passage. Is there really any essential difference between the conception of this passage and that which underlies the most famous expression of pantheism in ancient literature, viz., the eloquent lines in the Ninth Book of Lucan's "Pharsalia"?

> Estque dei sedes, nisi terra et pontus et aer
> Et cælum et virtus? Superos quid quærimus ultra?
> Iuppiter est, quodcumque vides, quodcumque moveris.

"The Literary Hearthstones of Dixie" (Lippincott), by La Salle Corbell Pickett, has two purposes. The minor one is to record somewhat incompletely the successive places of residence of "The Poet of the Night," "The Flame-Born Poet," and half a score of other Southern writers, and also to note incidentally where some of the productions of each were penned. For the dull and prosaic a key is supplied which shows that Poe, Timrod, and the like are meant. The major purpose is to exhibit the full glories of the sophomoric or Asiatic style. Much moist sentiment and pseudo-poetic conjecture are poured out after the manner of this: "So Virginia claims her poet son, the tragedy of whose life is a gloomy, though brilliant, page in the history of American literature."

It is difficult to understand what place Mr. A. Wyatt Tilby intended to fill with his volumes on "The English People Overseas": Vol. I, "The American Colonies, 1583-1763"; Vol. II, "British India, 1600-1828"; Vol. III, "British North America, 1763-1867"; Vol. IV, "Britain in the Tropics, 1527-1910" (Houghton Mifflin). They are not intended to serve as textbooks; they are much too long for use in any high-school course; and they are useless for more advanced students, because they contain neither indexes, bibliographies, nor any list of authorities and sources. They bear no trace of original research. They add nothing to the sum of our knowledge of British Colonial history. They are not interesting reading. The style is lacking in force and distinction, and the paragraphing is sometimes provokingly bad and ill-balanced. A work in four volumes which covers only a small part of British Colonial history certainly needs some *raison d'être;* but there is nothing in the general preface to the first volume, nor in the prefaces to the succeeding volumes to indicate the purpose Mr. Tilby had in view when he undertook the quite arduous task of writing this history.

It is possible that Mr. Tilby contemplates the completion of the work of writing the whole Colonial history of Great Britain. If so, much still remains to be done; for in only one volume is the story brought down to modern times. How little balance there is in this history even here may be seen from the fact that in a volume of only 450 pages, which must cover the whole of British adventure in the tropics of three continents, he devotes sixteen pages to the picturesque career of Rajah Brooke of Sarawak, who, though a typical adventurer of the old British type, was but an incident in the long story of British conquest and

British government. Of the other volumes, the first, on the American colonies, ends with the Peace of Paris in 1763, though many pages are given to dissertations about the British love of liberty which was later to bring about the establishment of the United States. The story of what is now the Dominion of Canada, which occupies the third volume, stops at Confederation in 1867; and the second volume, on British India, goes no farther than 1828. Bound up with this volume, though not closely related to the rest of it, is a section on the End of the World Struggle—1789-1815—which covers very briefly the Revolutionary war in America and the Napoleonic struggle in Europe. This section was apparently added in order to give an opportunity of describing the acquisition of a large number of minor possessions, ranging from Gibraltar to the desolate regions of South Georgia in the Antarctic Ocean.

In "Italian Travel Sketches" Prof. James Sully, LL.D.—it seems odd to display the academic tag in the title of a work of this kind—prints thirteen essays on Italy most of which were originally contributed to magazines. Dr. Sully is no mere impressionist. When he settles in a place for a month, he visits its sights systematically, reads the books about it conscientiously, and writes a sketch in which information is mixed with personal opinions. At no point does he speak exhaustively, nor are any of his descriptions very striking; but the book as a whole has value, especially for readers who, although no specialists, desire something more than the guide-books offer. Dr. Sully includes in his list of places Viterbo, Clitumnus, Terracina, Viareggio, Baveno, and the obscure village Rovio—places not much written about by English travellers. The introductory history of travel in Italy, from the days of the earliest pilgrims to the present time, would be still more interesting if he had amplified it. His book may be commended to those to whom Italy means more than a passing emotion. (Scribner.)

We find the second series of George W. Smalley's "Anglo-American Memories" (Putnam) in general more interesting than the first. In the course of them he talks about nearly two-score persons, including several of the leaders of British policy during the past quarter of a century, besides such men as T. B. Reed, Col. Roosevelt, Whitelaw Reid, and Count Witte. Mr. Smalley practices to perfection the arts of the fashionable correspondent. He makes you infer that of each of these celebrities he was the chosen confidant. He discloses, indeed, little of real importance, but he keeps up the semblance of hiding portentous secrets which only his sense of honor forces him to withhold. He alludes, by the way, and quite familiarly, to trivial details of dress, furniture, or habits of the grandees who were forever pressing their friendship and confidences upon him. This supplies the local color which predisposes you to regard the revelations as probably true. Perhaps his account of the trick by which Lord Pauncefote was led to father the remonstrance of the European Powers when the United States attacked Spain in 1898, is as important as any; but it is not the state secrets, it is the gossip that makes the book entertaining. At times, Mr. Smalley has a happy knack of sketching a life-like pen portrait: as becomes a correspondent who took the fine arts, as well as politics, for his province. He has papers on Whistler, Gilbert, Irving, and Bernhardt, and, best of all, on the wonderful French tragedienne, now forgotten except for her passionate letters, Aimée Desclée. He also writes up Mr. J. P. Morgan and Mr. Carnegie. For unalloyed fulsomeness his tribute to W. W. Astor recalls Bishop Newman's ten-thousand dollar panegyric of Leland Stanford, jr. Until we read Mr. Smalley we did not suspect what an irreparable loss the United States suffered when Mr. Astor deserted his native land in order to become a British subject. On the whole, we wonder whether *enlightened* public opinion was, or ever could be, influenced by a writer of Mr. Smalley's characteristics, even though he had the advantage of speaking through such megaphones as the London *Times* and the New York *Tribune*. As a text for his volume he quotes a sentence from Machiavelli; so far as many of his stories go the Italian proverb—*Se non è vero, è ben trovato*—would make a better motto.

"The Witnesses to the Historicity of Jesus" (Open Court) is an English version of the second part of Arthur Drews's "Die Christusmythe." The translator, Joseph McCabe, abbreviates the preface of the German edition, omits altogether Smith's reply to Weinel, and makes some other changes; but the plot of the original remains the same. Since for Drews the basal principle of all deep religious life is idealistic monism, and since personality does not have an independent and unique significance in the world-process, the question of the historical existence of Jesus is for him in the main not an historical but a philosophical question. In fact, he urges frankly that the "belief in the historical reality of Jesus is the chief obstacle to religious progress." With this feeling, it is not surprising that Drews the basal principle of all deep historical Jesus. He begins the discussion of the witnesses to the historical existence of Jesus with an examination of early non-Christian documents. By neglecting the consideration that the possible evidence is meagre, owing to the paucity of extant sources, and by assuming that these sources must have referred to the man Jesus had He really existed, Drews is able to reduce the actual evidence to zero. He is aided at times by a method of procedure of which the treatment of the famous passage in the "Annals" of Tacitus is a notable instance. Here he proposes alternative hypotheses, including that of interpolation, to explain away the force of the evidence, all the while refusing to entertain seriously the only theory that has hitherto seemed obvious.

With reference to the witness of Paul, he observes that we should never have found the historical Jesus in the Pauline epistles had we not previously determined to find Him there; and he contends that if Paul did know of an historical Jesus, it remains the most insoluble of problems why he made no use of the knowledge. The truth is that the discerning reader, the one, namely, who shares the philosophical presuppositions of Drews, recognizes instantly that the person referred to in Paul is not a real, that is to say, an historical, man, but the idea of a God-Redeemer who becomes man. Passages which should seem to point to an opposite conclusion are obviously glosses; for example, "If I Cor. xi, 23, is not an interpolation in the text, there are no interpolations at all in the New Testament." Thus it appears that there is "no other source of the belief in an historical Jesus but the gospels." Since, however, the method of interpretation commonly employed by liberal theologians has gone into bankruptcy, a new method must be used, to wit, the "mythic-symbolic." The application of this method to the gospels leads not unexpectedly to the conclusion that Jesus is not an historical, but a mythical personage. Jesus is thus reduced to an idea, and the chief obstacle to religious progress removed. Like the "Ecce Deus" of W. B. Smith, to whom, with J. M. Robertson, acknowledgment of indebtedness is made, the present volume is controversial rather than constructive, its special concern being the demolition of the historical or, as Drews prefers to word it, theological method of German liberal scholarship.

After an interval of fifteen years since the second part of Prof. Ernesto Monaci's "Crestomazia Italiana dei primi secoli" was noticed in these columns, the third and final part of this important work has at last appeared (Città di Castello: S. Lapi). The first two parts (1889 and 1897) have already rendered immense service, both as a textbook for students of the early Italian language, and as a collection of texts, many of which were otherwise difficult to find; but the need of the promised glossary and grammatical summary was keenly felt. Many scholars, including at one time Professor Monaci himself, began to fear that they should never see the work completed; fortunately, however, the concluding part, now before us, is no mere perfunctory ending, but more than fulfils the promise made at the beginning. Additional texts, representing types not previously included, together with notes, corrections, and the exhaustive grammar and glossary, bring the whole book to more than seven hundred large octavo pages. The texts are both numerous and varied enough to make the grammar and glossary which are based on them comprehensive, and the competence of Professor Monaci for the task is unquestioned. The completed "Crestomazia" now becomes the most important work available for the study of early Italian; and if it does not entirely supersede previous works of the kind, it makes them seem elementary in comparison.

In his works on the life and writings of Cortes and Las Casas, Francis Augustus MacNutt had shown us what to expect of his specially numbered edition, just published, of "De Orbe Novo, the Eight Decades of Peter Martyr D'Anghera" (Putnam), translated from the Latin with Notes and Introductions. Peter Martyr was one of the most notable of the many Italians who took up their residence in Spain in the sixteenth century. He played a very important part at the courts of Ferdinand and Charles V. He was a priest, finally an Abbot, a courtier, a diplomatist and ambassador, a soldier, a man of letters, and a scholar. Although not an eye-witness to the Spanish conquest, Martyr had abundant opportunity

to interview many of the Conquistadores on their return to Spain. He obtained first-hand information of the new country and of its inhabitants. His writings therefore are among the very first in importance on the early history of Spanish America, especially Yucatan. He was the first to give to the world detailed accounts of the discovery of a new continent. His writings are usually most accurate, as, for example, his description in the Fifth Decade of the form of the books used by the natives of the new country. Considering the difficulties of the original Latin, which is sadly mixed with Italian and Spanish forms, the editor has been most successful in his translation. It is a free rendering and is most readable. Frequent notes at the bottom of the pages and a careful index increase its usefulness. A few omissions have been noted in the bibliography of Martyr's writings. The first French edition of the first three Decades published in Paris in 1532 and the late editions in Spanish in 1892 and French in 1897 should be mentioned. It is to be hoped that the editor and translator will continue to bring out further editions of the writings on Spanish America of the sixteenth and seventeenth centuries. Gomara, Oviedo, Remesal, Cogolludo, and Villagutierre are only a few of those whose works might with profit be presented to the general reader.

Science

The Depths of the Ocean. By Sir John Murray and Dr. Johan Hjort. With contributions from Prof. A. Appellof, Prof. H. H. Gran, and Dr. B. Hellend-Hasen. New York: The Macmillan Co. $7.50 net.

The mysteries of the ocean, its physical and biological conditions, have long attracted the attention of scientists, but it is only in the last forty years, beginning with the famous Challenger expedition of 1872-76, that extensive and systematic attempts have been made to explore this unknown world. Now many organizations are engaged in the development of the modern science of oceanography.

Foremost among these organizations has been the International Commission for the Scientific Investigation of the North Sea, which was inaugurated in 1899, largely through the activity of Sir John Murray, who had been connected with the Challenger expedition. In 1909, convinced that systematic observations on the Atlantic might throw much light on some of the problems then studied in the more northern seas, he proposed that if the Norwegian Government would lend the exploring ship Michael Sars and her scientific staff for a four months' summer cruise in the North Atlantic, he would pay all the other expenses. The proposal was favorably received, and by the first of April, 1910, the ship was fully equipped and started to sea in charge of Dr. Johan Hjort, Director of Norwegian Fisheries. The book before us, though based largely on the scientific researches of this expedition, is nevertheless a thorough account of modern work along these lines, and will be welcomed by general readers as well as by students of oceanography.

Sir John Murray gives a succinct historical review of oceanographical investigations, from the middle of the fifteenth century, when Cardinal Nicolaus Cusanus attempted deep-sea soundings with his spherical bathometer, down to the present. The prominent part which our Government and semi-private organizations in this country have played in this work may justly be a matter of pride to us. Dr. Hjort points out that the progress of oceanography depends to a great extent upon the development of mechanical aids, meaning not only the scientific instruments employed, but also the whole arrangement of the ship itself. In a non-technical manner he therefore discusses the ship and its equipment, comparing modern aids and methods with those of the Challenger expedition. He then takes up in some detail the work and the cruises of the Michael Sars in the ten years that she has been engaged in the oceanographical research and fishery problems in the Norwegian seas.

General chapters on the depths and deposits of the ocean and on physical oceanography are followed by a more detailed discussion of pelagic plant life —the primary source of fish food—and by chapters on fishes from the sea bottom, invertebrate bottom-fauna of the Norwegian Sea and North Atlantic, and on pelagic animal life. Dr. Hjort's final chapter on general biology is a valuable consideration of the adaptation of marine organisms to their environment and an attempt to analyze the distribution of species in relation to their various external conditions.

Nearly six hundred charts and figures, the latter mainly of collecting apparatus and of characteristic animal and plant organisms discussed, will greatly aid the general reader to an understanding of the text. The tables for converting metres into fathoms and for converting degrees of Fahrenheit into degrees of Centigrade will likewise prove helpful. Not only does the book present in a preliminary manner many new and valuable data, but it is to be commended as a trustworthy contemporary epitome of work in an important field of scientific research.

The Geological Survey has just completed a remeasurement of the heights of mountains within the boundaries of the forty-eight States of the Union. Mount Whitney, in California, with its 14,501 feet, is the highest in the United States, exclusive of Alaska. In Colorado, Mount Massive and Mount Elbert have been found to be 14,402 feet each, or only 99 less than Mount Whitney. Mount Ranier, in Washington, is 14,363 feet, or 138 lower than Mount Whitney and 39 feet lower than its two rivals in Colorado. In Wyoming, Utah, New Mexico, and Nevada a number of peaks exceeding 13,000 feet in height have been found.

Drama and Music

NOTES ON GERMAN DRAMA.

Gerhart Hauptmann has been deservedly called the poet-voice of contemporary Germany. For no other writer reflects with like directness and intensity the conflicting currents in the emotional and intellectual life of his generation. Every one of that long line of his works, briefly labelled problem plays, deals with questions and situations confronting people whose ethical standards have been unsettled by a new philosophy and whose attempts at living a new life end in hopeless tragedy. He lays bare the network of contradictory motives in which their will is entangled, with an understanding born of personal experience. He himself is the poetic incarnation of a transition type. All his plans lend themselves to speculation concerning the slender thread of actuality that underlies the author's imaginings, and his new drama of the artist temperament, "Gabriel Schillings Flucht" (Berlin: S. Fischer Verlag), is no exception. The plot itself is old, the deserted wife and the discarded mistress furnishing no new situation. The audience is supposed to be moved by the fact that Schilling should be lost to the world as man and as artist, because he is being ruined by these women. But somehow the phrase "am Weibe zu Grunde gegangen" has been heard too often of recent years, and succeeds only in suggesting the pitiful weakness of these popular heroes of modern German drama and fiction. In fact, the Achilles heel of this masculine type is almost ludicrously revealed in the scene where the sturdy and stalwart Maurer, Schilling's sculptor friend, who has just invited his musician sweetheart Lucie to go with him to Greece, suddenly transfers his interest to a new arrival—a change which the sensible girl takes as a matter of course. Sonorous phrases about the Hellenic spirit and Hellenic manhood are current coin to-day. But, surely, Hellenic poets did not set up human weather-vanes as heroes of serious drama. Would that Schilling's tragic words, "Wir sind keine Griechen, mein lieber Junge!" were heeded.

Hermann Bahr, the author of "The Concert," has written another delightful comedy, "Das Tänzchen" (S. Fischer Verlag). It deals with the difficulties brought upon an elderly Junker and member of the German Diet by his embarrassing alliance with a shrewd adventuress who has been admitted into his family as piano teacher of his

daughter. The Junker, whose name, Joachim von Biest-Zeser, has just been identified with the "lex Biest," providing something like a moral censorship in matters of art, very nearly becomes the victim of extortion and blackmail, when the woman's husband threatens him with exposure. But for the wise council of Lavin, the Jewish millionaire whose son is engaged to Biest-Zeser's daughter, he might have lost his seat in the Diet. The dénouement takes place in the final scene, which is a unique duel of words between the Junker and the blackmailer. But the former issues from it as victor, convincing the other man that he has, after all, more to lose than Joachim von Biest-Zeser, Rittergutsbesitzer, M.D.R. The Junker bribes him by recommending him to Lavin as an unsually shrewd and capable fellow, and thus settles the dangerous claim. The characters are superbly sketched types of certain classes of German society. The Berlin dialect spoken in familiar conversation adds an effective local flavor.

Ludwig Fulda's latest work is a four-act comedy in verse, "Der Seeräuber" (Stuttgart: J. G. Cotta). The scene is a country town of Andalusia in the seventeenth century, and the plot hinges upon the romantic hero-worship of a young woman married to Pedro, a wealthy man of staid and commonplace habits. An elderly neighbor of dubious reputation upholds the heroine in her notions, and both women engage in a desperate flirtation with an itinerary mountebank who in his booth on the marketplace parades as a notorious pirate supposed to have perished at sea. But through a beggar who has arrived at the same time, the populace learns that Pedro is the dreaded pirate. To win back his wife, who has eloped with the actor-pretender, the reformed villain, who had settled in this town to enjoy at leisure the spoils of his career of crime, makes a confession, but is arrested, while the elopers are married by the Governor himself. The picturesque setting and the amusing situations furnish an evening of light and charming entertainment.

Wilhelm Weigand's "Könige" (Leipzig: Insel-Verlag) is a five-act drama of distinct poetical merit. The scene is Cyprus in the fourteenth century and the hero a monarch, dreaming of beauty and listening to music and poetry, oblivious of the danger menacing the kingdom through the approach of the Saracens. His great-uncle, a famous mystic and magician, conjures a vision calculated to rouse the royal conscience. This vision forms a dream-play within the play, in the course of which a peasant pretender wrests the crown from the hero and is about to be proclaimed his successor when the dreamer awakens through the announcement of the Saracens' arrival. He suddenly realizes his neglected responsibilities, summons his warriors, and vows to lead them to victory. The play is a dignified and thoughtful piece of work, but did not at the performances in the spring prove a valuable acquisition of the theatrical repertory.

No less than three works by Max Dauthendey, that one-time weaver of elusive poetical arabesques, have been published and played within the year. The extraordinary circumstance, however, is explained by the success of his play, "Spielereien einer Kaiserin," which so effectively handled the personality of Catherine of Russia. "Der Drache Grauli" (Munich: Albert Langen) is a romantic drama in three acts which, through the part that fate plays in the action, harks back to the "Schicksalsdramen" of the old school, though it presents some original features. The scene is a remote corner of Sweden, the atmosphere of which would make the most improbable incidents plausible. A young man has been driven to suicide by his love for an unscrupulous woman: his friend, with whom this woman is in love, avenges his death. These two, and the old lighthouse-keeper who tells them the grewsome tale of the sea-dragon Grauli, are the sole actors in the drama, the bloody end of which roused the audience to protest. But the work has unusual dramatic strength and some rare poetical touches.

Franz Dülberg's "Cardenio" (Berlin: Egon Fleischel & Co.) is a five-act drama in verse, in which the university milieu of Bolcgna at the beginning of the seventeenth century forms the interesting background for a passionate tragedy of student love. The author tells in the preface that the plot, which is originally that of a Spanish story, had been previously exploited in drama by Andreas Gryphius, Achim von Arnim, and Immermann, but there is an intensity of feeling in the work which proves that the subject had taken an unusually strong hold of the author. He has made his hero something of a modernized Don Quixote, an incarnation of chivalrous righteousness and romantic love. The cosmopolitan student crowd lends itself to an abundance of characters, some of which are very skilfully drawn.

A curious little one-act piece by Robert Scheu is entitled "Der letzte Abend" (Albert Langen). It presents the end of a friendship between two artists, the younger having outgrown the power which the elder wielded over him, and exulting in the breaking of this bond. That friendship meant for him the dawn of a new life, and it had brought him the message of the great, wild, pagan life. When he upbraids the master with having raised in his works the cross, which denies his former aspirations, there is a remote suggestion of the Wagner-Nietzsche case. The development of the conflict is rapid and clear, and the three characters, the master, his wife Cornelia, and Angelus, the seceding disciple, are well drawn.

A. von Ende.

"Years of Discretion," by Frederick Hatton and Fanny Locke Hatton, which has just been produced in the Belasco Theatre, is a piece of very uneven quality. In parts it is excellent light comedy, but occasionally it degenerates into thin and not too decorous farce. Founded upon a valuable theatrical idea, it misses its legitimate effect for lack of a little discretion and good taste. This is a pity, for many of the scenes are written in a vein of pleasant and pertinent satirical humor. The heroine, a rich and comely widow of forty-eight, suddenly revolts against the dulness of a humdrum but useful and honorable existence in a somewhat Puritanical New England atmosphere. She hankers after the excitements and pleasures of the gay world, and resolves to taste them once more before the zest for them is dead in her forever. A life-long friend, a New York society woman, enables her to enter the social lists and provides a selected band of eligible bachelors to meet her. With the expert aid of beauty doctors, hair-dresser, and costumers she is transformed into a vision of youthful loveliness, and is quickly besieged by an anarchistical free lover, an ardent Irishman, and a cosmopolitan clubman, who has long been the envy and despair of the gentle sex. Her flighty conduct strikes dismay into the heart of her strait-laced son, a youth of twenty-four, who is made the butt of his mother and her lovers. It is in the scenes in which this young man is introduced that violence is done to nature, proper feeling, and refinement. She captures the clubman, after an admirably humorous scene in which she confesses to her female confederate that she shall not be able to endure much longer the physical torture—of tight boots, tight lacing, etc.—inseparable from the imposition she is practicing. When the clubman, a great traveller, proposes a journey round the world for a honeymoon, she realizes that she is unequal to the enterprise, and in another excellent scene, which gives the play most of its value and brings it to a fresh and impressive close, makes full confession to her husband, before whom she presently appears in all the comfortable charm of ripe maturity. Thereupon he admits that he, too, has been simulating more youthful energy than he really possesses, and declares his perfect readiness to pursue with her the peaceful joys of middle age. Apart from its more trivial or melodramatic moments, which are inconsistent with the general scheme of the composition, the piece is true comedy, and applies the lash smartly to many current fashionable follies. If the authors had been less eager after cheap laughter and applause, they might have achieved something much more worth while. As it is, the representation owes most of its success to the capital acting of Lyn Harding, Bruce McRae, and Herbert Kelcey among the men, and, especially, of Effie Shannon, who enacted the heroine delightfully. The scenic setting was perfect. No manager knows better than Mr. Belasco how to distract attention from inherent

dramatic defects by the arts of the producer.

From the purely dramatic point of view, Rutherford Mayne's comedy, "The Drone," performed in Daly's Theatre on Monday afternoon, is not of much importance, for it is somewhat crudely constructed along conventional lines, and is almost devoid of action or effective incident. But it nevertheless has its significance as another brick in the rapidly rising structure of the Irish National Theatre. In characterization and atmosphere it is thoroughly representative of life on a small country farm. If the framework is rickety, the personages, with the single exception of an interpolated Scot, are absolutely lifelike, and all the minor details of their domestic manners and habits extraordinarily veracious. As a bit of genuine Irishry, the whole performance was more convincing, perhaps, than anything done here by the Abbey Theatre players of Lady Gregory, though the representations of the latter were, as a rule, far superior in imaginative quality. The acting of the company, imported by W. A. Brady, was notable for its level excellence and intelligent coöperation.

Charles Hawtrey will begin operations at the London Apollo Theatre on the evening of Thursday, January 9. He will then present George Birmingham's comedy, "General John Regan," in which he plays the part of a genial Irish doctor whose chief mission in life is to settle the affairs of his neighbors. His company, although still incomplete, will include Cathleen Nesbitt, Vane Tempest, H. Winman, and G. W. Fay. Mr. Hawtrey is also in negotiation with Leonard Boyne.

Henry Arthur Jones is writing a series of essays on the subject of the British National Theatre, about which he has definite ideas.

The latest biography of Wagner, just issued in Leipzig by F. E. C. Leuckart, is by the Norwegian composer, Gerhart Schjelderup, who a few years ago wrote a book on Grieg. It is averred by the publishers that this is the first biography which describes certain episodes in Wagner's life without bias.

One of the principal events of the opera season in Paris is to be the production of Massenet's "Panurge" at the Théâtre de la Gaieté.

Novelties are the order of the day at the Opéra Comique, in Paris. No fewer than eighteen first performances are scheduled for this season, most of them the first anywhere. Among the composers on the list are Rabaud, Tiarko, Pugno, Boulanger, Erlanger, Doret, Morel, Ropartz, Trépard, Laurens, Noguès, Lattès, Ratès, and Bruneau, whose "Les Bacchantes" seems to have scored little more than a *succès d'estime*. Dancing plays a prominent rôle in most of these operas.

After an absence from the concert stage of a number of years, Eugen d'Albert has once more reappeared before the public, and though during that time he devoted his attention exclusively to composition, his technical facility seems in no way to have forsaken him. The revelation of his skill at the piano given in the Liszt and Brahms concerts, which he played recently in Vienna, was such that it comes in the nature of a sensation for the younger generation of concert goers.

The centennial of the Gesellschaft der Musikfreunde, in Vienna, has brought once more to the fore the names of the various conductors who have at one time or another had the famous choral society under their charge. Composers as distinguished as Brahms and Rubinstein are among the number, and for some years Hans Richter directed the concerts. But the name best known to American audiences is that of Wilhelm Gericke, whose conscientious zeal and catholic musicianship were evident in his management of the Boston Symphony Society.

Fritz Kreisler has returned to Europe. He gave 200 recitals last season, and 50 more than that the previous year. Next year he will be back in America, with Paderewski, and it is not unlikely that the two may be heard together in a joint recital. Last summer, at Ragatz, in Switzerland, they played sonatas together daily for several weeks.

Art

THE CORCORAN EXHIBIT.

Once in two years the Corcoran Art Gallery in Washington removes its permanent collection of paintings to make place for an exhibition of contemporary American art. A particular effort has been made this year by the hanging committee to space each picture, and, with few rare exceptions, to hang only one line of pictures.

Among the pictures which stand out in the exhibition there is one which no visitor will fail to see. Size and position, aside from its quality, give it prominence. It is a full-length portrait of a fencing master, by Gari Melchers. The gloveless hand shows labor, and the high lights on the nose and forehead diminish somewhat the effect of breadth. But these are details insufficient to destroy the total effect of surprising bigness and poise. The same painter shows also a church interior, in which there are fine spontaneity and an altogether delightful realization of light, though success in attaining color is not so marked.

In the same gallery with Melchers's Church Interior is E. C. Tarbell's Children Going to Ride, a rather inadequate picture for Tarbell and not as well composed as another picture, Portrait of a Young Lady, which might have been a preliminary study for it. It the latter a young girl is sitting on the steps of a porch, arranging flowers, her face seen in profile and cut out a little too sharply against the sunlit lawn behind. It is not Tarbell at his greatest, but it is fresh and agreeable in color and is in every respect American. It has refinement and native character.

Among the portraits of the present exhibition those by Cecilia Beaux take a high position. One of these is a portrait of Sereno E. Payne, good, living work, able in character. The other is a portrait of a lady standing in evening cloak and dress. Again the artist has achieved character, this time of a more subtle and elusive kind. The dress and cloak are brilliantly painted. The mass of light color somewhat overpowers the head, and one is not certain of the solidity of the body. The canvas, too, is a little crowded, but America is not overburdened with painters capable of such generally able work.

In the same gallery with Cecilia Beaux's portrait of Sereno E. Payne two other noteworthy portraits are hung. Both are by W. M. Chase, one of his daughter, the other of "Mrs. C." They are highly accomplished work if not such as makes an especially fine or deep appeal. Passages of vivacious painting are in each, yet it cannot be said that the artist has shown his usual good taste. His exhibit also includes one of his celebrated still-life pictures of fish.

The Corcoran Art Gallery is fortunate in having purchased one of the three examples of Frank Benson's work in the present exhibition, a portrait of his daughter seen in a light that radiates upward, a serious piece of work which marks distinctly another phase of the American school. The spectator may quarrel a little with a light that throws the features into such strong relief that he is as conscious of eyes and nose and mouth separately as of the whole head. And yet, when all is said, the picture is representative of the painter, though not indicating the full extent of his vitality.

Since the American note has been a little insisted upon in the present review, to follow it leads naturally to such work as the landscape of Ben Foster, which could not be anything but native work. His Litchfield Hills is as true as it can be, and it gives out a sense of "the good brown earth" in a pensive mood. In his Late Autumn Moonrise the masses of brown fern and dark trees are well composed, and the mystery and melancholy of the moment are felt without being sentimentalized. This is another picture which the Gallery has bought for its permanent collection.

One must be in an adaptable mood to see a true interpretation of nature in the work of Ben Foster and Ernest Lawson at the same time in the same room. The two temperaments are widely different, and yet there is a sensitive spirit in each. Mr. Lawson's landscape is fine in light and color, the clouds not as sure in handling as the earth.

No painter in America to-day deserves more fully the distinguished position which he has won for himself than Alden Weir. It would be impossible for

a painter to be less gifted with superficial tricks of handling. Clever painting has apparently never made the slightest invasion upon his own methods. One feels in all his work an instinctive dislike of cleverness, a certain antipathy towards the mere suggestion of a false attitude. He is one of the strongest antidotes to the bombastic tendency one is obliged to notice in certain superficial energetic workers. And he has developed a style of painting that is absolutely personal.

His autumn landscape in the present exhibition has simplicity and depth of tone, the reproduction in the catalogue not beginning to do it justice. In his other canvas he has carried his style to the point of mannerism, though here again is the sense of reticent refinement so characteristic of this painter's work.

Before facing a picture by Arthur B. Davies, we have to divest the mind of the idea that painting is necessarily a matter of representation. He uses the human figure and the land and sea, even the glow of moonlight; but it is not the object seen that is to be considered, rather the interpretation of an abstract idea, as nearly akin to music as the limitations of paint will allow. This painter, who employs suggestively primitive, almost archaic terms, is one of our most modern painters. Yet it is hard to find a kindred spirit this side of Botticelli.

E. W. Redfield presents two night pictures, both done in dark-blue tones and both too heavy handed for so subtle a problem. Much better than his night pictures and seen through his own eyes is Mr. Redfield's winter landscape.

The French schools have had an immeasurable effect on modern painting, and from their good and bad influence American art has not escaped. Most of our ablest painters have native quality. Mary Cassatt is a striking exception. She will probably take her place in the history of art as a French impressionist, under which classification she has already been ranked by Camille Mauclair. Miss Cassatt makes no pretence whatever of disguising the sources of her development. A pupil of Degas, she has passed most of her life in France, and her painting has very little in common with other American work.

The point could not be more strikingly brought out than it has been by placing her picture, Children Playing with a Cat, beside a child's portrait by Lydia Emmet. In Miss Cassatt's picture a nude child is sitting on its mother's lap and playing with a cat held by a young girl at her side. The color problem is frankly attacked with a legitimate painter interest that never fails to save these mother-and-baby subjects, so often presented by Miss Cassatt, from being sentimental. In comparison with this canvas, Miss Emmet's picture of a golden-haired girl standing with a bonnet hanging down over her shoulders seems tame and undistinguished—a pretty picture-book child.

Many more justapositions might be cited for the sake of comparison. But it would be difficult to pass by without remark three pictures in Gallery F. Between George Bellows's Polo Crowd and his Beach at Coney hangs John Alexander's The Gossip. The facile elegance of Mr. Alexander's art is not seen to advantage in such close proximity to George Bellows's crude vitality. In the exciting Polo Crowd everything is exaggerated. The work is that of a young painter not yet fully equipped, nor yet near his ultimate goal. Yet every obvious defect seems justified by the extremely exhilarating effect achieved.

In the same gallery hang the two exhibits of Frederick Frieseke, one a characteristic garden scene with two ladies, a Japanese umbrella, and the patterns of sunlight and flowers. His more interesting picture shows a woman standing by an open window hanging a birdcage, the window box and the effect of a conservatory within giving the artist a typical subject. It is a joyous and charming canvas, the woman at the window in a most amusing dress.

A landscape by Willard Metcalf, The Red Bridge, is full of observation, not exactly big in treatment, but delicate, and with more atmosphere than this artist generally attains. Compare it, for example, with his other landscape, which, like so many pictures in the present exhibition, has been seen before in New York. Two autumn-toned trees make a note of warm color at the foot of a hill. The hillside surface is well felt, but the picture lacks air and the shadows of the trees seem colored.

Near The Red Bridge is a typical work by T. W. Dewing. Long ago this artist learned to paint delicate, fragile, minute, beautifully colored *genre* pictures. And if he has repeated himself until his art seems a rather limited specialty this fact should not close the mind to the genuine quality in those pictures which are more than dry methodical repetitions. The present painting, done on a wood panel, is one of that kind, painted apparently with charms and incantations beautiful, elusive, and suggestive, but never frank or vigorous.

To progress so far without mention of the prize-winning pictures at least prevents giving them undue prominence. Childe Hassam won the first prize and the Corcoran gold medal with his New York Window. In addition to this beautiful picture the same artist has here The Bowl of Goldfish, in which color is unusually fresh and luminous. It is a fine specimen of his most felicitous work. The second prize was awarded to Daniel Garber for his Wilderness, a characteristically decorative picture. The artist has used nature rather freely to carry out a design somewhat tritely "idealized." Gardiner Symons has won the third prize with a spacious landscape showing a river with ice breaking, that leads away to hilly country, a good example of his work. The fourth prize went to Carl Nordell for a nude seated figure. The artist is not afraid to attack a difficult problem, though his success with this canvas is only half complete. The figure does not detach well from the background, partly because the local color in the hair is not enough affected by the light that flows over the rest of the figure.

Tapestries, long neglected, are to-day sought so enthusiastically for museums and private collections that welcome will be given to the encyclopædic "Tapestries, Their Origin, History, and Renaissance" (Lane), by George Leland Hunter. The author, a Harvard graduate, a trained weaver, and experienced writer for an upholstery journal, has studied tapestries in American and foreign collections. Among his previous original contributions is a description of the Metropolitan Museum's Burgundian Seven Sacraments published in the *Burlington Magazine* in 1907. His scholarship is such as to enable him to present an apparently strong case against M. Guiffrey's explanation of the *tapissiers sarrazinois* who made trouble for Parisian workers on the *haute lisse* in 1302, the American writer urging that these "Saracen weavers" were not weavers of other textiles than tapestries, but early practitioners of the low warp weaving that became characteristic of Renaissance tapestry weaving. Lack of literary finish and lucid arrangement makes Mr. Hunter's book hard reading, despite its profusion of alluring information and tempting illustrations. The non-technical reader is confused at the start by frequent reference to technical processes, an explanation of which begins on page 232. Considerable repetition occurs. Thus the nature of the transition from Gothic to Renaissance is touched upon in set phrases in each of several chapters. One seems, in brief, to read a series of magazine articles which, under more liberal use of scissors and blue pencil, might have become a consistent book. This sense is heightened by so obvious a slip as that of referring to M. Jules Guiffrey as if he were still administrator of the Gobelins; whereas he resigned that office several years ago. Important tapestries have lately been acquired at the Boston Museum of Fine Arts of which there is no mention, though older possessions are described. These and other minor defects, due presumably to preparing sections of the book at different periods, should be corrected in a later edition.

The merits, meantime, of a work comprehending what is worth knowing about ancient and modern tapestries transcend all limitations of style and make-up. The writer is hopeful for the future of tapestry weaving. He describes the founding and continued success of the first tapestry works in America at Williamsbridge and the subsequent starting of the Herter looms; also

in New York city. Of the most celebrated of present-day European tapestry manufacturers the statement is made: "I believe it is possible at the Gobelins to revive the art in its pristine vigor if they will deliberately forsake seventeenth and eighteenth-century precedents, and return to sixteenth-century texture and method." With English tapestries produced during and since the nineteenth-century revival of arts and crafts Mr. Hunter is sympathetic. He says of the foremost producer of these tapestries (and the citation fairly illustrates the literary form of the book): "William Morris (1834-96), who founded the tapestry works at Merton, near London, in 1881, was a genius. He had more influence on the industrial arts, I believe, than any other man in the world's history. He actually made the blind see and the lame walk. He changed the whole point of view of thousands who buy art objects, and the methods of many who produce them." The Merton processes, as still continued, are commended to American craftsmen for imitation in preference to those of Paris and Aubusson. "If we ever get down in earnest to the weaving of modern tapestries in arras texture, we shall, like William Morris, go back to the high warp loom and once more compose line drawings in wool and gold and silver, with little silk or none at all." In general, he fully appreciates Gothic tapestries and has no very high opinion of the Renaissance productions.

More "atmospheric" than Mr. Hunter's work is "The Tapestry Book" (Stokes), by Helen Churchill Candee. Its sprightly manner is seen in the dedication "to two certain Byzantine Madonnas and their owners." The author develops many literary relationships which give the reader a sense of the place of tapestries among the arts and their importance as historical documents. "The tale of tapestry," she writes, "is like a vine hanging on a frame of history." Following for the most part facts set forth in French by Michel, Jubinal, Guiffrey, and other writers, she tells a straightaway story, with passing references to social and economic conditions, as well as to the personal influence of monarchs and of such great artists as Memling, the Van Eycks, Raphael, Rubens, and Watteau. Venice and Genoa receive full credit as centres for distributing Renaissance tapestries. There is an amusing description of the patronage of Francis I, "an overdressed, ever-ambitious figure, at the beginning of things modern in French art." The rise and decadence of the Gobelins are traced fluently. Of their possible regeneration Mrs. Candee is apparently skeptical, writing: "Men who have worked in the deadening influence of the Gobelins declare that the factory cannot last much longer. But it is improbable that France —republican France that holds with bourgeois tenacity to aristocratic evidences— will abandon this, her expensive tax, her inheritance of the line of Kings." The Merton, Baumgarten, Herter, and other modern products are commended highly.

Robert Lee MacCameron, an artist known specially for his portraits, died in New York Sunday morning at the age of forty-six. He was born in Chicago, and after various experiences studied painting in Paris under Gérôme. Of late years he has maintained studios in London, Paris, and New York. Among those who have sat to him are President Taft and President McKinley.

D. Jerome Elwell, an American painter, died in Naples on Friday, aged sixty-five. When he was twenty-five years old he went to Antwerp to continue his study of art, and during this period produced two of his best-known works, a View of Antwerp and Dunes of Domberg. After exhibiting his pictures in this country, he went to Venice and since then has lived much of his life abroad.

Jean-Baptiste-Edouard Detaille, probably the best known of modern battle painters, is dead in Paris. He was born in that city in 1848, and, after completing his education in the Paris schools, entered the studio of Meissonier. He first exhibited in the Salon of 1867, his picture representing a corner of Meissonier's studio. To him, military life was, from the first, a principal attraction. At the Salon of 1868 he exhibited the Halt of Infantry, which Edmond About described in the *Revue des Deux Mondes* as a "jewel." In 1869 the Repose During the Drill, Camp St. Maur, firmly established his reputation, and he received more commissions than he could execute. During the Franco-Prussian War, Detaille was secretary to Gen. Appert, and did good service in making topographical plans. The Conquerors, exhibited in 1872, and depicting German soldiers carting off furniture from Paris houses, won him a medal, and the following year he received for The Retrait the decoration of chevalier in the Legion of Honor. Among his other notable works are the following: The Passing Regiment, A Reconnoitre, Salute to the Wounded, Bonaparte in Egypt, and French Cavalryman.

Finance

THE STOCK EXCHANGE AND THE LEGISLATURE.

It can hardly be doubted that the matter of legislation in regard to the Stock Exchange will be brought up in the Legislature of New York State this coming session; with what result, it would be premature to predict. Angry criticism of Stock Exchange methods and practices had become very general, even before the report of Gov. Hughes's committee of 1909 on speculation and the stock exchanges. The bitterness of this criticism is to be explained through various causes. It began with numerous incidents on the Stock Exchange, during the decade past, which caused some extremely indignant comment on Wall Street itself, and even in the Exchange's own membership.

It was intensified by such mixtures of fact and fiction, seasoned high for the general public's palate, as Mr. Lawson's "Frenzied Finance." It naturally interwove itself with the prevalent talk about the "Money Trust," and was stirred up to a pitch of undoubted excitement by the hearings of the Pujo Committee of the House of Representatives, whose examination of witnesses, last spring, was directed largely to both real and fancied abuses of the New York Stock Exchange, and which more lately, at Washington, drew forth some rather extraordinary testimony from the chairman of the Stock Exchange's own law committee.

All this, taken along with highly denunciatory articles in many portions of the press, has virtually insured the consideration of possible Stock Exchange regulation and reform through the new State Legislature which convenes at Albany this month. The unfortunate part of the whole pending criticism of financial practices and institutions—not excepting that which has been excited by the "Money Trust" investigation—is that it has been so impregnated with ignorance and misapprehension that, by attacking imaginary evils, it has frequently missed the real evils altogether.

What those real evils are, every intelligent man who has observed the trend of things, in the decade past, is perfectly well aware. Chief among them is the gross manipulation of certain stocks by men with a maximum of financial resources and a minimum of common sense or moral scruple, whose sole purpose has been, on the occasions of their activity, to create a false appearance of heavy, bona-fide buying, and to fix a false level of prices, at which outsiders may be deluded into buying. This abuse, on numerous occasions in recent years, reached proportions which were disgraceful and intolerable, and no doubt exists, in the minds of intelligent thinking men, that it and its kindred evils must be dealt with in a way that will mean real reform. Gov Hughes's committee reported formally in 1909 that it was "convinced that the Exchange can prevent the worst forms of this evil by exercising its influence and authority over the members to prevent them." But, if the Stock Exchange does not fulfil that duty, it will manifestly have put a legitimate weapon into the hands of the advocates of drastic public regulation.

The pity of it is that the pending discussions of the problem, instead of directing its attention to the things that can be and should be reformed, should beat the air with all sorts of haphazard suggestions, based on a superficial glance at the whole Stock Exchange problem. In one of last week's recitals of the necessary basis for dealing with Stock Exchange reform, what were described as the three "monumental facts" were set forth—that the Exchange is unincorporated, that "it is permitted by law to practice usury," and that it is the only place in New York where gambling contracts can be enforced by law. One may easily perceive how this indictment would appeal to the minds of the uninformed; yet nothing could be more spe-

cious and nothing could more utterly have ignored the path to correction of the real abuses.

The Exchange is unincorporated, and so virtually all other exchanges are and have always been; for although the Paris Bourse is a quasi-governmental institution, and although it is styled the "company of agents de change," the power to discipline members is lodged with the elected governors as in the case of other stock exchanges. The report of Gov. Hughes's committee, even while intimating the possible future necessity for requiring incorporation, pointed out that the resultant submission to the courts of cases of wrongdoing in the membership of our own Stock Exchange "would involve delays and technical obstacles which would impair discipline without securing any greater measure of substantial justice."

One is tempted to inquire how much consideration has been given to this important fact by the cocksure advocates of overnight reform. To say that the Stock Exchange "is permitted to practice usury" not only puts the cart effectively before the horse, but makes no account whatever either of reason for the exemption of demand loans from the 6 per cent. restriction or of its practical effect. That the exemption applies to all sorts of negotiable instruments, as well as to Stock Exchange collateral; that, in a money market emergency, it favors the borrower as much as it does the lender; that nobody, in or out of the Stock Exchange, is compelled to borrow on such a basis; that the borrower adopts this recourse because he can pay off his loan at will to-morrow, instead of paying interest during a month or more, and that the system of call loans flourishes on the Stock Exchange primarily because of the system of daily settlement of accounts—these are treated as wholly immaterial considerations.

As for the enforcement of "gambling contracts," it will hardly be disputed that plenty of Stock Exchange operations fall morally under such category. But exactly the same thing may be said of any speculative market and of every other industry. Whether the buying of real estate for a rise on borrowed money, or the contracting to deliver at a future date grain or building material which the contractor does not to-day possess, but which he believes he will be able to get at a lower price than to-day's, does or does not differ in morality from similar undertakings with investment securities, is surely a question worthy of sane consideration.

The problem, in other words, is not whether certain admitted practices and tendencies on the Stock Exchange do not need correction, but whether the way to correct them is to conduct a campaign of so blind and sweeping a character as to miss all the genuine points at issue. Perhaps, in the subsequent course of the discussion, some intelligent suggestion will emerge as to how the known and recognized evils, which were part of the rank and unwholesome growth of financial exploitation in the past dozen years, can be dealt with by themselves.

Immigration and Labor

The Economic Aspects of European Immigration to the United States

By ISAAC A. HOURWICH, Ph.D.

8vo. *With numerous diagrams and maps.* $2.50 *net; by mail,* $2.75.

An exhaustive treatise tracing the causes of immigration to the United States and its effect upon the condition of American labor. The author concludes that the most drastic restriction of immigration would not facilitate the solution of any of the labor problems engaging the attention of the public, whereas the proposed literary test would prove futile even as a measure of restriction.

Development of Religion and Thought in Ancient Egypt

By James H. Breasted, Ph.D.

Professor of Egyptology and Semitic Languages, University of Chicago.

"This is the most notable contribution to the history of religions recently made, and it is the most valuable ever made to the history of the religion of Egypt. It embodies the most exact scholarship of the type commonly regarded as German; and it is characterized by the brilliancy which is usually ascribed to the French."—*N. Y. Evening Post.*

The Last Frontier

The White Man's War for Civilization in Africa

By E. Alexander Powell, F.R.G.S.

"One of the most vividly interesting and valuable books of the year. . . . It is a graphic discussion of the development of Africa from the standpoint of world politics. Seldom has any author been able so successfully to lay out in the pages of a book a great stretch of the earth's surface for which the powers are contending, or have contended, with a clarity such that the whole affair becomes as real as a chess-board, on which the pawns are moved as one watches the game. Aside from this, Mr. Powell has sketched with remarkably quick strokes the main characteristics of the different parts into which Africa is divided by natural and artificial lines, their natural resources and the distinguishing qualities of their inhabitants. There are a great number of excellently chosen photographs which are reproduced, not merely because they are picturesque or beautiful, but in some cases because they are truly significant of movements now in progress."—*Springfield Republican.*

$3.00 *net; by mail* $3.28.

Byron

By Ethel Mayne

"Miss Mayne has written a book for which she deserves the hearty gratitude of all lovers of the poet. She is sincere, well-balanced, accurate, and often acute. . . . As it is, we should unhesitatingly call it the best of modern works on the subject. One of her merits is that she has the gift of presenting us with brilliant little character-sketches of the men and women who crossed the poet's path, so that her book is not a life of Byron only, but a history of his times."—*London Spectator.*

REPRESENTATIVE ESSAYS IN MODERN THOUGHT

A BASIS FOR COMPOSITION

Edited by **Harrison Ross Steeves,** A.M., Instructor in English, Columbia University, and **Frank Humphrey Ristine,** Ph.D., Acting Professor of English Literature, Hamilton College, sometime Instructor in Columbia University.

This volume includes nineteen well-written, intelligible, and authoritative essays by leading authors upon subjects which grip the intelligent interest of the average college freshman. Each essay is preceded by a brief introduction dealing with the author and his point of view. In most cases where there are two sides to the problem that has been presented, two typical essays, showing both points of view, are offered. One selection is to be assigned for reading each week, followed by the writing of impromptu themes in the classroom upon topics which suggest the salient points of the work under consideration. Every effort is made to encourage the student to think for himself, to form his own opinions upon proper evidence, and state his own position on the questions involved.

AMERICAN BOOK COMPANY
NEW YORK CINCINNATI CHICAGO

JUST PUBLISHED

HISTORY OF MODERN ELEMENTARY EDUCATION

By **Samuel Chester Parker,** Dean of the College of Education, The University of Chicago.

8vo, cloth, xxiv+505 pages, illustrated.
$1.50

This carefully prepared "History of Modern Elementary Education" deals primarily with institutional development. It emphasizes typical movements, institutions and individuals, thus showing the student elementary school problems from the Middle Ages to the present time.

Enough material for one hundred hours of class work is provided in this book. If a longer course is desired, the text may be supplemented with Rousseau's "Emile," Pestalozzi's "Leonard and Gertrude," and Spencer's "Education."

The publishers present this book with the firm belief that it is the best one that has yet been written for the student of education and the prospective teacher.

LETTERS AND MEMORIALS
OF
Wendell Phillips Garrison
Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 *net postpaid.*

FOOD
IN HEALTH AND DISEASE
By N. S. DAVIS, Jr., M.A., M.D.
Northwestern University, Chicago.
Octavo. Cloth $3.50 Postpaid.
The first part of this book reviews the underlying principles concerning the nutritive and other qualities of different kinds of foods, discusses briefly their relation to the digestive organs, and traces the changes that food must undergo before it can be appropriated to the needs of the human system. This is followed by detailed consideration of the proper diet indicated for the various conditions of health and disease, each condition being taken up seriatim with concise, plain directions, and diet lists.
A descriptive circular with list of contents will be sent upon request.

NEW MACMILLAN BOOKS

BIOGRAPHY

THE WRITINGS OF JOHN QUINCY ADAMS

Edited by Worthington C. Ford

A collection of permanent historical value to students of our early democracy and of the social customs of the period. Vol. I. $3.50 *net.*

HISTORY

LECTURES ON THE AMERICAN CIVIL WAR

Delivered at Oxford by James Ford Rhodes

Critical studies of the great men and great events of the troubled period of our Civil War. $1.75 *net.*

COMMERCE

INDUSTRIAL COMBINATIONS AND TRUSTS

Edited by William S. Stevens

Traces the historical development of the Trust movement in the United States and discusses the problems emanating therefrom. $2.25 *net.*

PHILOSOPHY

THE FITNESS OF THE ENVIRONMENT

By Laurence J. Henderson

Discussions of the physical and chemical characteristics of life and cosmogony, and of the properties of matter in their biological relations. $1.50 *net.*

SOCIOLOGY

SOCIAL RELIGION

By Scott Nearing

A searching examination of the more deplorable elements in the modern social and industrial world analyzed in the light of a practical Christianity.

$1.50 *net.*

ARBORICULTURE

TREES IN WINTER

By A. F. Blakeslee and C. D. Jarvis

Gives the needed information for the selection, location and planting of trees for different purposes, and the means to protect them from insects, fungi and other injuries. Illustrated.

$2.00 *net.*

EDUCATION

TEACHING IN SCHOOL AND COLLEGE

By William Lyon Phelps

This book is intensely personal and confessional, abounding in reminiscences of the class-room. It is a discussion of the *art of teaching*, not of the science of pedagogy, and contains no technical terms. $1.00 *net.*

PROSODY

THE VERSE OF GREEK COMEDY

By John Williams White, Ph.D., Hon. Litt.D., Hon.LL.D., Professor of Greek Emeritus, Harvard University

A complete and lucid analysis of the development and structure of Greek poetry, with special application to Comedy. $4.00 *net.*

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. N. Y.

The Nation

NEW YORK, THURSDAY, JANUARY 9, 1913.

The Week

In deciding not to send to the Senate the nomination of Col. Goethals as Governor of the Canal Zone, President Taft is doubtless influenced largely by the wishes of that officer himself. It is known that he has little ambition to be Governor; and it is understood that he would not consent to be nominated for the position if his confirmation was to be opposed. But some of the Democratic Senators, for reasons of their own—not unconnected, we fear, with a desire for office—have announced that they will stand out against setting up a civil government at Panama for the present, and so the President drops the whole plan. It is a sordid piece of business as it stands, and where does it leave the great argument for driving the Canal Bill through in haste at the last session of Congress? When the strong objection to the shipping clauses of that act was made, and the danger of international complications, such as have since resulted, was pointed out, there was a demand for more time for consideration. Why not let the bill go over to the next session? Ah, it was replied, that would be impossible, for it is imperative to make provision at once for a civil government. We must lose no time in empowering President Taft to appoint Col. Goethals as Governor. Well, we have not got him in office, and we have got the international trouble. So much for hair-trigger legislation.

Senator Bacon's introduction of a joint resolution recognizing the Chinese Republic will, it is said, be vetoed by Mr. Taft if it passes both Houses. That may or may not take place; Mr. Taft's opposition to so many matters has vanished before sufficient pressure that it need surprise no one if he should undergo a sea-change on this one, too. It is hard, indeed, to see why recognition should be longer withheld. As Ching Chun-Wang points out in the current *Atlantic*, the dynasty is dead. Prince Regent and Dowager Empress have forsaken it. As for the republic, it has existed ten months, nobody is contesting it; and as for disorder, there is not so very much more, if any, than there was under the empire. Indeed, so well thought of is the republic that the leading European nations and the United States are fairly forcing their money upon it, which hardly looks as if anarchy were expected to-morrow. The burden of the proof why the republic should not be recognized is plainly, as Mr. Ching points out, upon those who would deny it acceptance among the nations of the earth.

Gov. Wilson has recently declared that the one great basic truth which underlies political discussion to-day is "that singular fact that nothing is done in this country as it was done twenty years ago." Mr. Wilson will need to glance over this statement of his and reassure himself of its validity, when he reads of the pretty little patronage schemes that are cherished in a number of Democratic bosoms at Washington. Nothing may be done to-day as it was done twenty years ago, but the heart of man has not changed completely in that period. Old passions, old greed, old evil habits of thought, and evil instincts do not die so quickly. In spite of the lesson of nearly twenty years of adversity, Democratic leaders are still possessed with the spoilsman ideal. The plan of a general ripper bill which shall throw open the civil service to the Democrats sounds so utterly out of date, so much a part of the old order that has changed, that one finds it almost impossible to believe that such a plan could be seriously discussed. And yet it is discussed. In spite of the plain warning of what will happen to the Democratic party if it prove false to the opportunity which has been finally granted it, there are Democrats who seem willing to take a chance. Mr. Wilson's duty under the circumstances is perfectly clear. When the squealing round the public trough becomes insistent, he will only have to recall that things are not done now as they were done twenty years ago.

The business of Cabinet prophecy has at last been put upon a scientific basis by friends of the Democratic Governor of Montana, who confidently predict his appointment as Secretary of the Interior in the Wilson Cabinet, because his hair is red. That kind of equipment necessarily carries with it a robust and aggressive honesty which is the highest qualification one can demand in a servant of the people. Militant progressivism to-day requires that its champions shall be well-thatched, and if the color be of the sunset, so much the better. Mr. Victor Murdock bore under his hat the oriflamme round which the original group of Republican insurgents in Congress rallied. Mr. La Follette's hair is not red, but makes up for that deficiency by a defiant erectness that suggests the Spartans at Thermopylæ. Mr. Sulzer faces the enemies of the commonweal with locks hanging menacingly over the brow. Here, then, is a capillary test which should make the work of future Presidents as easy as lying. Give so many points for the amount of hair and so many for the tint, and in crucial cases let the spectroscope decide. What Mr. Bryan's chances would be under such conditions is obvious.

The Colonel breaks his silence with shouts about another "infamy." This shows that he is well and happy. Unless somebody were "outraging" his feelings they would not be normal. People, however, who do not live at high pressure as he does, and who wish somehow to adjust their emotions to the facts, will ask what the truth is about the action of the Idaho Supreme Court which Mr. Roosevelt so furiously denounces. His chief complaint is that, by a judicial interpretation of the State election laws, the people of Idaho were not permitted to have an official ballot with his name on it. But the California courts made a similar decision keeping Taft's name off the ballot, and about that infamy the Colonel has had never a word to say. We suppose he was restrained, in that case, by his profound respect for the judiciary! Anyhow, he ought to see that he cannot make fish of one decision and fowl of the other without impairing his reputation for high impartiality. And what is really needed is a clear statement of the text and intricacies of the Idaho law, under which the judges felt constrained to decide as they did. This the Colonel has never made a pretence of

giving. It is so much easier to hurl epithets, from a safe distance, and to affirm that this case "proves" that judges ought to be kicked off the bench whenever "the people" don't like the way in which they declare what the law is.

Mr. Gompers, as an individual citizen, might hold what opinion he pleased about the labor-union dynamiters and their conviction, and might orate on the subject to his heart's content. The only reason any sensible man pays attention to what he says is that he is at the head of the American Federation of Labor; and for him, in that capacity, to emit such utterances as he did before a Senate committee on Monday is a serious business. In what he said there was not one hearty word in condemnation of crime; on the contrary, the whole drift of his remarks was that it was no wonder laboring men had been driven to dynamiting and murder as the only means left them of resistance to the "tyranny" of their employers. Such thinly-veiled apologies for assassination would be monstrous, even if the facts were as stated by Mr. Gompers. But the truth has been clearly established that the main purpose of the explosions was to strike terror into the hearts of non-union men and those who hired them, and to compel both men and masters to submit in all things to the labor organization. Tyranny for tyranny, where could there be one more intolerable than this? Yet murder in its name is explained as devotion to the sacred cause of labor!

Fresh evidence of the aggressive way in which Boston is going to work to rehabilitate its port appears from the fact that its "port directors" have decided to build a drydock 1,180 feet long with a width of 100 feet at the sill. This will be the largest drydock in the country, and the enterprise is supported by all the leading transatlantic lines, which have agreed to pay something for it each year, so that they may have a dock on this side of the Atlantic available in case of accident. As is well known, there is not a single drydock now on our shores which can take in the Olympic or the new Imperator of the Hamburg-American Line, or any of the other giants of the ocean. The largest drydock of the navy is the one now building in Seattle, which is to be 827 feet long, while the second largest, in this city, is only 694 feet in length, so that the navy, too, will welcome the new Boston enterprise. But the port directors of that city are not going to stop there. A smaller dock, 900 feet long, is also contemplated, and huge piers near both docks, in order to accommodate ships while awaiting their turn or in port for commercial reasons. The port directors believe that there will shortly be as many as twenty-one steamers, plying between Europe and North American ports, which will be compelled to use this dock or none at all. They feel that if ever steamers can be induced to come to Boston to dock for repairs, there will be hope of getting them to run there regularly. The promise of the Hamburg-American Line to send ships to Boston beginning next May has greatly encouraged the city's boomers. They are leaving no stone unturned to have other lines follow this example.

Chicago's Bureau of Public Efficiency has begun to win victories. About a year ago, it recommended a material reduction in the number of officials and employees in various departments. The recommendation came too late, however, to affect these appointments for the following year. But when they came up in 1912, as they did recently, the conclusions of the Bureau had sufficient weight to result in the lopping off of more than fifty places. Only in the sheriff's office were the recommendations disregarded, and there apparently for reasons which might be honestly presented. Now, the Bureau has won a partial victory in the matter of distribution of appropriations to the several wards. It made a scientific estimate of the percentage of this money that should go to each. In nineteen of the thirty-five the estimate of the City Controller was increased by the Bureau, on the ground that these wards had never received sufficient funds under the old system of each Alderman grabbing all that he could for his ward. In the other sixteen, the Bureau cut the Controller's estimates. The finance committee of the City Council at first rejected the Bureau's recommendations *in toto*, but at a full meeting of the committee later a compromise was adopted, the principle, but not all of the practice, being accepted. This ought to pave the way for a complete triumph for the Bureau's programme in this field next year.

At last the "Jim Crow" laws are to be tested in the United States Supreme Court. A white woman, having bought a berth in a Pullman sleeper from Vicksburg to New York, protested against negroes being permitted to travel in the same car, and later sued the Alabama & Vicksburg Railway Company for damages. She obtained judgments against the railway in the Circuit Court of Warren County, Miss., in the sum of $25,000. The case was appealed to the State Supreme Court, which held that the company was presumed, under the "Jim Crow" law, to provide separate accommodations for the races within the State of Mississippi, and affirmed the judgment of the lower court. The record is now being prepared for transmission on a writ of error to the United States Supreme Court. The "separate coach acts" were not enacted without opposition from the whites in the South. It was not difficult to foresee that they would be productive of much litigation, and it was feared that they would increase race antagonism. Thus, when the measure was under consideration in Kentucky, Gen. Cassius Marcellus Clay opposed it in an address to both houses of the Legislature. A negro orator from Lexington, who had lost a leg while serving the Confederacy, moved his audience to tears, but the bill was passed as a strict party measure. Most of the evils predicted followed this wave of legislation throughout the South, the least being that the coaches set apart for negroes were and are older, shabbier, and dirtier than those reserved for whites at the same tariff.

Registration figures of our universities are interesting, among other reasons, for showing the proportion of students in what used to be the "main tent," namely, the undergraduate department of the College of Arts and Sciences. As tabulated in *Science*, these statistics put Columbia at the head, wherever grand totals are concerned. That institution has a registration of 9,000, followed by California with 6,500, Chicago with 6,400, Harvard with 5,700, and Michigan with 5,600. It also has the largest gain over last year, the figures being 1,100 for Columbia, 700 for California,

500 for Minnesota, and so on. But when we leave out the Summer School, the order is radically changed. Then it is Indiana that has the largest gain, with 1,000 students, followed by Chicago with 700, California with 700, and Columbia with 500. The same omission affects the totals of registration by reducing Columbia to 6,000, although this still leaves her at the head of the list, and gives Michigan second place with 4,900, Harvard third with 4,800, California fourth with 4,700, and Cornell fifth with 4,600. The college undergraduates are far below these impressive numbers. Harvard leads in this respect with 2,300 men and 500 women, counting Radcliffe, and is followed in order by Indiana, with 1,400 men and 900 women; California, with 900 men and 1,400 women; Michigan, with 1,550 men and 700 women, and Chicago, with 900 men and 700 women. Columbia is ninth, with 800 men and 600 women, but is closely pressed by Princeton, with its 1,400 men. These figures reveal the overshadowing numerical prominence of professional or summer schools, or both, at the present-day American university.

One business that is seriously threatened by the march of civilization is that of the musical comedy librettist. His field is rapidly shrinking as the backward nations of Asia and southeastern Europe succumb to the spirit of progress. Gilbert and Sullivan would have found it very difficult to write the "Mikado" after Port Arthur and Mukden. Constitutional China is spoiled for the purposes of comic opera. Now the Balkan peninsula, so fertile in musical-comedy kingdoms and principalities, has become impossible. The authors of "The Chocolate Soldier" were just in time. There is no trouble, of course, in inventing mythical Balkan countries with names ending in "ia," but Balkan countries must be inhabited by Balkan peasants, and you cannot saddle a pony ballet, a couple of waltz tunes, and a comedian with a papier-maché nose painted green, on the men who fought at Lule Burgas and Monastir. Most of the small islands of the world, Zanzibar, Sulu, and the East Indian archipelago have already been exploited. Perhaps there is still a "show" or two in Morocco. But after that the librettist will have to go either to the North Pole or back to Montmartre.

Assuming that the dissensions which have fallen upon the Unionist party in Great Britain have been exaggerated in the newspapers, the presence of a very acute crisis cannot be explained away. The most puzzling feature of the situation is the suddenness with which the conflict within Unionist ranks has broken out. Here were the Liberals fighting hard to account for an unfavorable succession of bye-elections. Rumors of dissension in the Ministerial ranks received credence. The recent snap-vote in which the Liberals were caught in a minority was received in many quarters as an omen. How long could Mr. Asquith keep on driving Home Rule, Welsh Disestablishment, franchise legislation, three abreast, without coming to grief? Behind him was a heterogeneous mass of supporters, against him was the united Conservative party, in fighting spirit, almost counting the days to a general election. That was the picture frequently drawn in the press. To-day the Conservative leader is in the unhappy position of advocating a cause that has been emphatically repudiated by the great mass of his party, and the Liberals seem comfortably certain of a lease of power long enough to put their legislative programme into law over the head of the House of Lords.

It is one of our patriotic axioms that the nation from which we won our independence is essentially and unchangeably "slow." How, then, are we to account for the very enterprising action of an English railway in suspending an engine-driver for running past signals? Perhaps the explanation is simply that such a procedure is in line with another absurdity with which we credit our British cousins, that, namely, of care for human life. In this more enlightened land, an engineer who runs past signals is not an individual to be lightly treated. For one thing, his act, if by good luck it does not result in an accident, may enable him to land his passengers at their destination on time or a little better than on time. This is regarded as a fine achievement by his superiors, who insist that the travelling public also is pleased by it. Then there is his union to be taken into account. It will not "stand for" unfair treatment of any one of its members, and suspension for any reason is *prima facie* unfair treatment. The consequence of this set of conditions is our record-breaking accident statistics. The Interstate Commerce Commission is compelled to devote a large amount of time to investigating the causes of the numerous injuries and deaths on certain of our railways. Its recommendations will be awaited with interest, and are likely to receive greater support from the public than either the roads or the unions seem to realize.

War in the Balkans can hardly have been waged in a more savage spirit than marked the recent struggle in Paris over the election of a "prince of poets" and a "prince of story-tellers." The contest, naturally, was wholly among the "jeunes." That any writer who had "arrived" might carry off the honor, was not to be thought of. One impassioned orator was heard to exclaim: "It cannot be that you will inflict upon us the disgrace of an Academician prince." Happily, that shame was spared French letters. No one had the hardihood to propose Rostand. The princely honor was finally conferred upon Paul Fort. He was the candidate of the left bank of the Seine, though the right bank did not fail to put forward a favorite. In fact, it was a war, not merely of literary champions, but of the two banks of the river. The Seine was the line of cleavage between ideas. The beaten right-bankers at once began to denounce M. Fort as an obscure decadent, who could by no possibility get himself accepted by the great public. To this the fiery dwellers on the left bank naturally rejoined that those on the other side of the Seine were wholly insensitive to true literary merit, and cared for nothing except commercialized art and success at any price. Before the prince of story-tellers could be elected—the rival candidates were Messrs. Ryner and Duvernois—there was many a passage at arms, physical as well as intellectual. The peace of the city was seriously endangered. To crown all, the honesty of the electoral methods of the left bank was impeached by the right. One can imagine how the Boulevard Saint-Michel boiled at this. There is a ballad of Coppée's—who, of course, is now hopelessly antiquated to the young on both banks—of which the refrain used to be popular:

La rive gauche est du côté du cœur.

THE SHORT WAY OUT.

President Taft's declaration that he is ready and willing to arbitrate the Panama dispute with Great Britain has met with instant response, both there and here. It must be peculiarly gratifying to Englishmen, because the whole drift of Sir Edward Grey's note of protest was a request for arbitration. The British Government did not propose to stand stiffly on what it believed to be its rights, but was prepared to leave all the matters in question to the decision of competent and impartial arbitrators. Mr. Taft evidently hopes that this may not be necessary. He speaks of the possibility of the controversy being settled by diplomatic negotiations. But they are inevitably slow, and it is hardly to be expected that an adjustment in that way can be reached in the remainder of President Taft's term. In view of this fact he said squarely that, so far as he is concerned, he should not hesitate to agree to arbitration, whether we won or lost. This is a manly clinging to the principle which he has stoutly advocated, and fully deserves the applause bestowed upon it. That the promise may not be brought to the test of performance does not lessen its value. If President Taft is not called upon to carry out his pledge, President Wilson will have the same difficulty to confront, and will be helped in meeting it by the large utterance of his predecessor.

There is one place, however, where Mr. Taft's words in behalf of standing up to our national agreements, even if to our own hurt, find no echo. That place is Congress. Enough Senators have been interviewed and have given their opinions to make it plain—what was, indeed, made plain in the debates at the time the Canal Bill was passed—that two-thirds of the Senate could not be got for a treaty providing for arbitrating the question of canal tolls. The opponents rest the thing on brute power. They do not deny that the matter involves the interpretation of a treaty, and that this nation has solemnly bound itself to submit such questions to arbitration. As one Senator bluntly puts it, the same vote that tore up the Hay-Pauncefote treaty can tear up the arbitration treaty. Of course, a show of reason is attempted. It is said that the exemption of our coastwise vessels from tolls at Panama is purely a "domestic question," which this country could never submit to arbitration. It is added, with great innocence, that we should be certain to lose our case if it went before an arbitration tribunal, which is naturally a powerful argument against letting it go there.

These not very exalted outgivings by Senators are yet accompanied by statements which indicate a way of escape. Some of the most extreme opponents of arbitrating the tolls dispute say that, rather than be forced to take up such a proposal, they should prefer to repeal the one clause in the Canal Bill that has made all the trouble. There seems, in fact, to be a growing opinion in both Houses that the original exemption of our coastwise trade was a mistake. This is admitted not merely because it has precipitated a needless and unpleasant international controversy and has given us a bad name abroad. In addition, it is felt that the favor shown to coasting ships was really favor shown to a monopoly. In that trade, there can be, under our laws, no competition by foreigners. It is shut up as a preserve for certain classes of our own citizens. And now, as many Congressmen seem to be discovering for the first time with mortification, it is proposed to grant a subsidy where we have already conferred a monopoly. For there cannot be a particle of doubt that the exempting of coastwise vessels from tolls is exactly the same thing, in effect, as handing to them that amount of money from the Treasury of the United States. The attempt was at first made to extend this form of subsidy to our ships engaged in the foreign trade, if they used the Panama Canal. But that was found to be too "raw." It was both too plainly a violation of the treaty and too obviously a voting of public money to private shipowners. So that part of the bill was dropped; but the subvention to coastwise vessels was retained.

For Congress to repeal this now, before it has gone or can go into effect, would be the shortest way out of the muddle. Why should it not be done? The time seems favorable to strike for such a measure. Several influential Congressmen are convinced that the legislation was a blunder from the start. It was merely a pampering of an already pampered monopoly. It was a form of ship-subsidy certain to whet the appetite for more. Moreover, for a petty cause, it has embroiled us with the nation that is most friendly to us in all the world, and that is our best customer. What better course than frankly to admit the error in the framing of the law, and to save a deal of time and trouble by taking it out? That there are any really thoroughgoing champions of the exemption clause, outside of those pecuniarily interested, no evidence is adduced to show. There was, to be sure, an early blustering cry about an American Canal being for Americans, but that has mostly died out. It was promptly abandoned, as respects ships in the foreign trade, and it would be a small step to abandon it also in regard to coastwise vessels. We hope to see a movement speedily begun in Congress to repeal the clause of the Canal Bill which now so obviously lies in the nation's path as a rock of offence and stone of stumbling.

THE EMANCIPATION JUBILEE.

The celebrations last week of the fiftieth anniversary of the final Emancipation Proclamation have recalled to many survivors of the events of 1863 the thrill with which the nation received that immortal document. The earlier September proclamation had established the fact that slavery was in its death-throes; no one could fail to see that the end could not be deferred much longer. But, nevertheless, the race about to be freed, and those once despised reformers and agitators to whom the chief credit for this act of national justice must be ascribed, waited as with bated breath for the consummation of their hopes. Few who were not a part of the abolition movement can, we suppose, appreciate to-day all that it meant. But it is gratifying to know that there has been a widespread celebration of the semi-centennial; for a nation which could be dead to so momentous an event as the freeing of a race, would be suspected of not knowing the grand things of its own history.

Yet it is not upon the events of 1863 that we would dwell to-day. Many have seen the hand of fate in all the defeats prior to the Emancipation Proclamation, believing that the canker at the nation's heart would not have been cut out had the North had an easy march to Richmond. Perhaps all that terrible blood-letting in 1861 and 1862 was necessary as a means of convincing Lincoln

and his Cabinet that the slaves must be set free as a blow at the Confederacy and in order that they might be used as troops of the North. But neither that nor the bloodshed that followed caused the nation to think very seriously about the future of the beneficiaries of the Emancipation Proclamation. Carl Schurz wrote in the latter years of his life that the problem confronting the Johnson Government in 1865-66 was one of which no complete solution was possible. And the fact is that, aside from the spasmodic efforts of the Washington authorities as evidenced by the Freedman's Aid movement and of the several carpet-bag State governments, the freed men and women were chiefly left to shift for themselves. They were unlearned, often half naked, and all without property. Yet they have stumbled "up from slavery" in the most wonderful way, as each census shows—without national guidance, with almost insignificant Federal aid, and none from the States.

They have fought their way onward against odds great enough to discourage any race. Their material welfare and progress, their contributions to the wealth of the nation, Mr. Washington and other leaders have dwelt upon times without number; these things would by themselves justify emancipation, did nothing else. Their contributions to the intellectual and spiritual life of the nation are less referred to. It was a Southern professor who declared a few years ago that Booker Washington and Dr. Du Bois had produced the two greatest books written in the South since the Civil War. Any college might be proud to have Prof. Kelly Miller on its faculty. The lyrics of the elevator boy, Paul Laurence Dunbar, are as much read as ever. Musicians everywhere admit their debt to the men and women of dark skin. The Philharmonic Orchestra last week played, in commemoration of the Proclamation, the New World Symphony of Dvorák, which owes much of its inspiration to the songs of the colored people; and a stirring, brilliant rhapsodic dance of the British negro composer, Coleridge-Taylor, whose premature death has been regarded in England as a national loss. In Will Marion Cook and J. Rosamund Johnson, of New York, two colored composers have been found whose promise is very great. In the field of painting, an American negro, W. O. Tanner, has won eminent honors, here and abroad. Only the other day a young boy, Richard Brown, astonished artists here and elsewhere by the skill of his untaught brush. Who can estimate what fifty years hence will be the contribution of this often poetic and ever musical people to the intellectual wealth of the nation?

Long before the next half-century shall have passed the country will, we trust, have awakened to the resources it has in this still lowly race. As they have made the best soldiers in our regular army, so the South may yet realize that, by kindness, by the abolition of lynching, peonage, and the horrible chain-gangs, by reasonable wages, and by the inspiration of civic and political rewards, its negroes may be made into thoroughly efficient labor. Common sense alone will urge a different course from that of to-day in the fields and factories where negro labor is abundant. In the North negroes will be valued as a bulwark against union-labor tyranny and labor anarchy, and as an asset of the Protestant Church. As they are encouraged and helped forward and aided in freeing themselves from the conditions of life which make for inefficiency and immorality, our colored Americans will repay, even in a purely material way, those who aid them upward. Just as their gratitude for the Emancipation Proclamation is measured to-day not by the meetings they hold, but by their material and intellectual advance, so the nation can best express its gratitude to Lincoln and his generation by taking hold of this so-called negro problem as a whole and hastening its solution in accordance with the dictates of democracy and of justice.

THE NEW GOVERNOR.

Gov. Sulzer, of New York, takes office with a somewhat amusing byplay of being just "plain Bill," but we do not think that this, or anything else in his past career, will prevent the people of the State from giving him fair play. He protests that he is the same man he always has been, and this may readily be believed. He has still at command those minor political arts which the judicious smile at rather than condemn; his little affectations, his conscious poses, at Albany are only what he has long accustomed us to at Washington; and they are among those rather comic "devices of popularity" which, Burke said, "diffuse occasional gayety over the severe brow of moral freedom." But by none of these things, nor even by his political antecedents, will the new Governor of New York be finally judged. His mannerisms and his boastings will all easily be passed by, provided that he shows real capacity and vigorous honesty, both personal and political, in administering the affairs of the State. No one will begrudge him, and every one will wish him, success.

His beginnings are plainly significant of good intentions, though neither in his inaugural address nor in his message to the Legislature did he get much beyond the region of large but vague promises. But it would be premature to form a complete judgment from this, because Mr. Sulzer himself admits the need of being more specific in future messages, and implies that he shall be. It is well to preach economy, and to hold out the hope that by retrenchment the need of a direct tax may be avoided; but somebody is bound to show what are the definite savings that can be effected, what particular offices may be abolished, and what public appropriations can be cut down. So of many other recommendations made by Gov. Sulzer. They are nearly all in general terms. But they will have to be made precise, if they are not to add to the number of New Year's resolutions, made only to be forgotten. And the incidental evils of a plan that sounds promising will also have to be fully considered by some one. Thus Mr. Sulzer favors a scheme of wages boards, to fix the minimum rates in given industries, and to allow no one to work for less. On this subject Professor Seager read a paper—generally favorable to the project—before the American Economic Association, in which he admitted that a necessary part of this plan seems to be that the State would have to assume the support of those whom it forbids to work at less than the minimum wage. Has Gov. Sulzer ever thought of this?

All that he has so far given us to go upon is evidence of his general attitude towards legislation and towards administrative work. As regards the former, it is evident that he intends to favor policies that he thinks are "popular" and that in general are along the line of what has come to be called progressive legislation. In all this we do not ques-

tion his sincerity, nor do we doubt that he will be able to accomplish something. We are content to wait for the proof of the pudding in the eating. But in addition to planning, there is always the difficulty of execution. It is one thing to devise changes in the law, and another to get the right men to carry out the law. The danger of a breakdown on the administrative side is one that ever besets a Governor, and it is evident that Mr. Sulzer is peculiarly exposed to it.

Proof of this is seen in his remanning of the State Civil Service Commission. On the general subject, he expressed in his message admirable sentiments. He was for maintaining and extending the law establishing the merit system; and he wished the Commission to coöperate freely with county and municipal authorities. That was promise; what is the performance? That was a theory on paper; who are the men selected to give it concrete embodiment? Men utterly unknown to the reform. They have no record except as regular party politicians, and no evidence is given, with their appointment, that they have ever had any interest in civil-service reform, or any comprehension of it. They may turn out to be better than any one now believes them to be; but it is plain that the Democratic spoilsmen do not think so. The latter are now chuckling over the new Commission as one that "will not need to be watched." Now, our point is that Gov. Sulzer might have named men whose appointment would everywhere have been recognized as meaning the rigid upholding of the civil-service laws. The Governor might have followed up high professions by high selections. And there was the more reason for doing so in that the Civil Service Commission had been brought under suspicion and under fire during the past two years. A really intelligent and determined civil-service reformer would, in Gov. Sulzer's place, have seen the necessity of striking hard at the beginning, and of getting Commissioners whose names would speak of knowledge of what was needed, and of resolution to see that it was done.

Gov. Sulzer plainly desires it to be understood that he is his own master, and independent of Tammany. But the facts will speak louder even than his loud words about this. The story is current that a kind of theatric encounter is to take place between Sulzer and Murphy, the former to chase the latter with "the cheap numerosity of a stage army," and strike at him with a tin sword, the two thereafter to get together and "do business" amicably. But this could impose upon nobody. If Gov. Sulzer is honestly to fight Tammany there must be real weapons and real blood, and at the end a real corpse.

PATRONS FOR GENIUS.

The *Independent* recently printed a letter from an aspiring youth who was in search of a patron. None has yet appeared, at least openly, and now the same magazine publishes a letter from an older and wiser man who also was once in quest of a Mæcenas. Ten years ago, he writes, he had an idea for a great romance. He knew it to be original. No story had been written even suggesting the plot or the treatment he had in mind. This, by the way, might have been sufficient to put him on his guard. The extreme of the unfamiliar could hardly be much better than the extreme of the familiar. But he was wrapped up in his glorious dream. He piously believed that God had granted him the theme he had prayed for. He was confident of his ability to handle it. All that he lacked was time, and for that he begged, he says, in words not unlike those of the letter that has brought his own struggle back to him. What was the result? "I didn't get the help, and I am heartily glad that I did not." What an anti-climax this will be to those who cannot look down upon it from the calm vantage-point of ten years later! How it will seem to them but one more illustration of that fearful, yet seemingly inevitable, chilling of the noble flame that burns so brightly as one starts out to conquer the world! That at twenty-five this correspondent should not have succeeded in finding a Mæcenas is natural enough—only too natural, they will think; but at thirty-five to be heartily glad that he didn't—is not this treason to the spirit of Youth?

Superficially, it might seem so, but the correspondent himself has a further word about it. The romance, he still thinks, was a worthy theme. It was himself that was wanting. "I was not ready to write it," he says. "I was striving for self-glorification. I wanted time and ease in which to make people lionize me." Now, if the story ever comes to paper, it will be better for the years in which he has carried it in his heart. But here again the youthful enthusiast will demur. Is success incompatible with any except the highest motives? Do all poets write purely for the joy of the writing, and without ever a thought of self-glory? Are there no mixed motives in the turning out of novels, even novels with a purpose? Why should no admixture of selfishness be allowed the ambitious youth without a patron? There was Horace himself, the man who made Mæcenas famous. Did he write with no eye for posterity? Or did he make use of the generous assistance of the Father of Patrons all the more gladly because it enabled him, as he sang, with charming candor and superb self-confidence, to build an enduring monument to his name? Practically, it does not matter. One seeking a patron would naturally take care to put the best motive foremost, if it were not the glorious distinction of youth to be conscious of no motives but the best. And patrons have a way of scattering their favors that seems to take no account of motive, and to be guided by no rule but chance.

It would ordinarily be as idle as cruel to ask the attention of a Mæcenas-seeker to the point of view of Mæcenas. Now and then a patron arises who is apparently gifted with power to gaze upon the seeds of time, and say which of them will grow, and which will not. Horace, for instance, turned out to be very good fruit. But how was the Earl of Chesterfield to know that the awkward figure whom he had encouraged and who was now threatening ruin to his fine carpets, as well as to his reputation as an associate of the well-bred, was to develop into the petted bear, if not the lion, of London society? Being a Mæcenas is very much like being a gold-hunter: it is so easy to spend a fortune in hunting one. Thus the fallibility of the judgment of the patron combines with the fallibility of the judgment of the patron-seeker in reference to himself to make the path of the aspirant difficult and lonely. His loneliness, too, is usually increased by the conviction that no one was ever in his position before. The talent, as he believes, which has been committed to him, he keeps in a napkin, not from choice, but from necessity.

His case is made worse by the apparently unlimited supply of Mæcenases for certain kinds of activities. The man who is curious about the habits of a hitherto misunderstood earthworm; his fellow who takes an equal interest in the proceedings of the town meeting of Penobscot in the winter of 1784; and their associate who is fired with enthusiasm for the bibliography of literary criticism in Polynesia prior to the explorations of Captain Cook—for these men there is a patron in almost any street. For them Institutions and Foundations are created, college chairs are endowed, and travelling fellowships scattered. But the man or woman with an unsung poem or an untold tale, a painting or a statue that exists only in the imagination, must dream in solitude. The unlit lamp and the ungirt loins of these draw no sympathy from the more fortunate. Occasionally, one can get revenge on one's own unappreciative generation by leaving behind a treasure that posterity will place among the masterpieces, but this is at best a somewhat unsatisfactory method, particularly since one can never be quite sure what posterity will do. And even this does not meet the problem of the word that waits forever for the moment of leisure in which alone it may be made worthy to be uttered.

"A CERTAIN WITTY FRENCHMAN."

"A certain witty Frenchman, on one occasion, said," etc. Not that he always said the same thing at this one supreme moment. But we don't expect consistency from any one so clever as he. It is enough that we feel gratitude for all the poor jokes which, recounted in his name, have somehow been spared the fate of falling flat. He is in a class with "a London specialist," flitting nameless through the press, at whose prescription bachelors cheerfully try to raise hair and young women to grow thin. With most people the reputations of both men are firmly established, and it is only a question of deciding whether the Frenchman was wittier than the London specialist is scientific. The tenses of the verb applied to them are important. For the one thing known about our two benefactors is that the Londoner still lives, while the Frenchman belongs to the past. The former is invariably quoted as *saying*, the latter as *having said*. There's the rub for the modernists, who are just now having things much their way—to see their witticisms passed by for those of a dead Frenchman! What consolation they can get from the situation comes from sometimes recognizing their own words in those said to have issued from lips long sealed.

But this is not enough. The modernists have lately broadened the question. They ask, Is the humor of bygone days really as good as that of Broadway in this present year of grace? Are the jokes in "The Rivals" as "snappy" as those of a certain (not nameless) pair of living comedians? Far be it from us to give an answer on compulsion, for it is perfectly evident what one is expected to reply. But in a narrower form we have been attracted to the discussion by a volume come to our notice from the middle of the eighteenth century, entitled "The Oxford Sausage, or Select Poetical Pieces, Written by the Most Celebrated Wits of the University of Oxford." It is perhaps possible to make some comparison of the college humor of a century and a half ago with that of to-day. As might be expected, academic fun still clings to some of the old lines. Corresponding to certain well-known Harvard tributes to John the Orangeman is the following ode to one Tyrrell, a famous Oxford cook:

> How I congratulate fair Isis,
> That such the taste for mutton pies is!
> Hail glorious Ben! whose genius high
> First plann'd a genuine mutton pie!
> Born to combine with matchless taste
> The charms of pepper and of paste!
> Was but the motion of my pen
> Quick as thy rolling-pin, O Ben!
> O, could my thoughts thy pastry ape,
> And slide, like yielding dough, to shape;
> My genius, like thy oven glow,
> My numbers, like thy gravy flow;
> Or, in the twinkling of an eye,
> I cook an ode, as you a pie, etc.

And one is reminded also of Milton's mock seriousness in memory of Hobson, the Cambridge postman.

Quite as profane as the Yale student's caricature of Wordsworth's reverence for the commonplace, in the form of "Meditations of a Banana-Peel on Being Run Over by a Dump Cart," is the Oxford man's fling at Gray's "Elegy":

> The curfew tolls the Hour of closing Gates,
> With jarring Sound the Porter turns the Key,
> Then in his dreary Mansion slumb'ring waits,
> And slowly, sternly quits it—tho' for me.

"Integer vitæ" proves, at the hands of another Oxonian, to be "the man who not a farthing owes." Most of the selections have to do with the reading to which a boy in those days would naturally be attracted—Pope, Swift, Young, Thomson, though all of the life which came under his eye was perfectly good grist—the liveryman, the wigmaker, the tavern-keeper, and the bar-maid. And not infrequently he praised his ale or tobacco, while ostensibly imitating a dignified poet.

The one point of difference between college humor then and now, at least to judge by this volume, is that to-day it is much nearer to the humor of the world at large. "The Oxford Sausage" contains an occasional reference to London or to European politics, but in the main reflects university life. Every one knows the changes which have been made since then, and especially how close the college has grown to the world without its walls. We recall the modest admonition of a dean of one American institution that the stories in the college paper would greatly profit if they employed as heroes students who at least spent their nights in the college town. Yet, whatever professors may desire, it appears inevitable, under the present circumstances, that students should take on color from the world at large, and particularly that they should adjust their jokes to those of the stage and the popular periodicals. Save for the few lingering forms of literary burlesque, already described, college humor may be said to-day to differ from the professional variety only in the freshness, the delightful inconsequence, which youth can normally muster. Yet the modernists must wait for an answer to their question whether college fun at present is not superior to what it was a century or two ago. One point, at least, we are willing to concede—namely, that the "witty Frenchman" was not all that he has been cracked up to be.

THE AMERICAN HISTORICAL ASSOCIATION.

Providence, R. I., December 31, 1912.

The meeting of the American Historical Association at Boston, December 27-31, promised from the start exceptional interest in the fact that the president of the Association was Theodore Roosevelt. Beyond the reminder, however, still as necessary as it is commonplace, that literary attractiveness is not incompatible with scholarly worth, and

that a book must be readable if it is to be widely read, Mr. Roosevelt's address on "History as Literature" offered nothing of special interest to the historian; nor was it an important contribution to literature. There was no mistaking the warmth of the reception accorded the speaker by an audience mainly representative of the East, but it may nevertheless be hoped that the presidency of this great national learned society will hereafter be reserved for scholars rather than for political leaders.

The programme of papers and conferences, which presented an unusual array of distinguished names, exhibited to advantage the manifold activities of the Association. The Public Archives Commission, organized at the Boston meeting fourteen years ago, and with reports on the archives of two-thirds of the States to its credit, has begun to concern itself with other archival interests. This year, for example, the conference of archivists paid particular attention to a proposed manual of archival administration, and to the effort, unfortunately not yet in a very forward state, for a building for the national archives at Washington. Dr. Herman V. Ames, after ten years of service, retires from the chairmanship of the Commission, and is succeeded by Victor H. Paltsits. The Historical Manuscripts Commission, which continues under the chairmanship of Worthington C. Ford, promises, among other things, an edition of the private correspondence of William Vans Murray, Minister to France in the administration of John Adams.

Instead of the usual programme of formal papers, several of the section meetings dealt with the present condition of historical study in their respective fields, or pointed out new paths still awaiting the investigator. Oriental and Græco-Roman history, the Middle Ages, modern commerce, American history from 1815 to 1860, were all surveyed in this comprehensive way, with a resulting wealth of suggestions for doctoral dissertations and special studies. Prof. Edwin F. Gay frankly characterized as fiction a good deal of what had passed for instruction in the history of commerce. In the field of American history, Prof. William E. Dodd, of the University of Chicago, and Prof. Ulrich B. Phillips, of the University of Michigan, emphasized the need of a more thorough study of slavery on its economic side, though differing sharply in their views regarding the economic profitableness of that institution. Professor Dodd's paper, bristling with suggestions of work yet to be done, was nevertheless a striking illustration of the tendency, rather sedulously encouraged in certain academic quarters, to minimize almost to the vanishing point the abolition movement and the moral opposition of the North to slavery, and to write the history of the anti-slavery movement primarily in terms of economic development. Prof. T. C. Smith, of Williams, while sweepingly repudiating such a treatment as that of Von Holst, very properly questioned the contemporary prominence of the plantation system as a factor in national politics; and Prof. Allen Johnson, of Yale, wisely deprecated the sectional treatment of American history in any period. Constitutional history, once regarded as a serious and dignified branch of learning, and obviously of importance in a country like the United States, found no champion in the discussion. A largely attended section on military history, however, evidenced a marked increase of interest in this neglected field; and a forthcoming report on the study of military history in colleges and universities will be awaited with keen expectations.

An otherwise informing paper on "Religious Forces in the American Revolution," by Prof. C. H. Van Tyne, of the University of Michigan, developed a curious inaccuracy in the use of terms; the author devoting the larger part of his attention to the political influence of the New England clergy, and reaching the subject of religion only at the latter portion of his paper, where the opposition of Samuel Adams and others to Roman Catholicism, and of various dissenting sects to episcopacy, was interestingly touched upon. Prof. George L. Burr, of Cornell, on the other hand, offered a brilliant and all-too-brief discussion of the religious and theological conception of the state in the Middle Ages, and the position of Lutheranism in relation to it. Of another sort was the concise and straightforward paper by Henry P. Biggar, of London, on "The New Columbus," traversing the recent hostile criticisms of Vignaud, and upholding the older view that the discovery of America was accidental, and that the Indies were the region of which Columbus was really in search. Charles Francis Adams, with his usual incisiveness and more than his usual eloquence, pointed to the victory of the Constitution over the Guerrière as the birth of the United States as a world power.

The section on Historical Bibliography developed a novel and lively discussion over the reviewing of historical books. Prof. Carl Becker, of the University of Kansas, who opened the question, had no difficulty in demonstrating the shortcomings of much which to-day, especially in daily newspapers, passes for book reviewing, but his solution of the problem hardly matched the keenness of his criticism. What Professor Becker desired, apparently, was two distinct kinds of reviews: the one of the utmost brevity, restricted almost entirely to bibliographical specification; the other a more or less elaborate essay which should be not merely an appraisal of the book, but a critical contribution to the subject. He failed to take any satisfactory account of the fact that, while reviews of the first class would undoubtedly meet the needs of bibliographers and specialists, and those of the second must be as rare as great literature itself, the needs of an intelligent public, joined to practical conditions of space and proportion in every periodical, create a legitimate demand for reviews which, in modest compass, shall nevertheless be both critical and informing. That there is abundant need for reform in this direction every editor knows, but it was not with this phase of the matter that Professor Becker and most of those, nearly all of them reviewers, who discussed his entertaining paper appeared to be chiefly concerned.

The New England History Teachers' Association, which held its semi-annual meeting in connection with the American Historical Association, offered a contribution of special significance to teachers. A committee, the chairman of which was Prof. John O. Sumner, of the Massachusetts Institute of Technology, undertook the task of showing the kind of equipment which the study and teaching of history and economics in secondary schools requires, by fitting up at Simmons College a series of model classrooms. Separate rooms for ancient, European, American, and economic history, a library, map, and study room, and a history room for rural schools, were furnished with carefully selected maps, charts, pictures, casts, and other illustrative material, besides a liberal provision of books. An informal report by Professor Sumner (the full report will appear later), embodying the returns from a *questionnaire*, showed on the whole encouraging gain in equipment in the secondary schools of New England, notwithstanding that in the majority of schools no adequate provision for teaching history is yet made.

The reports submitted at the business meeting indicated that, while the membership exceeds 2,800, the financial resources of the Association do not at present justify the assumption of any new undertakings. Encouragement is to be found, however, in the fact that the *History Teachers' Magazine*, taken over by the Association a year ago, promises shortly to be self-supporting; and the series of prize essays, separately issued, bids fair to pay for itself. The Justin Winsor prize was awarded to Dr. A. C. Cole for an essay on "The Whig Party in the South." A committee on the preparation of teachers of history in schools, headed by Prof. Dana C. Munro, of the University of Wisconsin, will shortly report in print. The meeting of 1913 is to be held at Columbia and Charleston, S. C., with Prof. William A. Dunning, of Columbia University, as president; and the meeting-

places for 1914 and 1915 have also been decided upon, the former at Chicago, and the latter, in the summer, at San Francisco in connection with the Panama-Pacific Exposition.

WILLIAM MACDONALD.

THE PHILOLOGISTS AND ARCHÆOLOGISTS AT WASHINGTON.

GRANVILLE, O., January 4.

The annual sessions of the American Philological Association and the Archæological Institute of America were held in the rooms of the new building of the National Museum, in Washington, December 26-31. The weather was pleasant with the exception of one rainy day, the usual forms of social recognition were extended to members of the several organizations, and the authorities of the Library of Congress placed on exhibition for the occasion a selection from its facsimiles of ancient and mediæval manuscripts. Three long sessions each day, however, left comparatively little time for outside attractions. As usual, the main feature of the first evening meeting was the address of the retiring president of the Philological Association. Prof. Thomas D. Goodell, president for the past year, took for his subject "An Athenian Critic of Life," and gave to his hearers a very scholarly and effective appreciation of Sophocles.

Prof. William Gardner Hale, whose active interest in effecting a readjustment of linguistic terminology is well known, presented a scheme for the classification of sentences and clauses. The current classification as declarative, interrogative, imperative, and exclamatory, he assailed as not resting upon any one consistent basis of division, and for various other defects. In its place he would put a three-fold division, based on the fact that each sentence or clause either tells something, asks something, or assumes something. The terms declarative and interrogative would therefore be retained from the present classification, and the term assumptive added. Each one of the three, without losing its basic character, may become exclamatory under pressure of strong feeling. The whole matter of proposed changes in grammatical terminology will come formally before the Philological Association next year in a report from a joint committee of this Association, the Modern Language Association, and the National Educational Association. The main purpose of the movement is to procure a uniformity of grammatical terminology for the various languages taught in our schools and colleges, but it is not unlikely that the fundamental desirability of such uniformity will be strongly assailed when the report comes up for action.

The attendance of members of the Philological Association was less than the average, New England sharing with the Middle West and the South in responsibility for the shortage. The question of a meeting place for next year was left with the executive committee, with the suggestion that a joint meeting with the Modern Language Association would be desirable, if suitable arrangements could be made. This does not indicate the intention to break away permanently from connection with the Archæological Institute, but it was held that there might be gain in the occasional cultivation of other affinities, and perhaps in occasional meetings alone. Prof. Harold North Fowler was elected president for the coming year, with Profs. Frank F. Abbott and Carl D. Buck vice-presidents. Prof. Frank Gardner Moore, of Columbia University, was continued as secretary.

Washington is naturally favorable to a successful meeting of the Archæological Institute, and the session just closed is regarded as the most satisfactory in the history of the organization. The report of the president, Prof. Francis W. Kelsey, of the University of Michigan, gives a most inspiring sketch of the growth of the Institute since 1902, the date of certain changes in methods of administration in the interest of a more effective forward movement. Since that date the regular income has more than doubled, and the membership has risen from a little above one thousand to nearly three thousand. President Kelsey's five years of service have been marked by unbounded energy and enthusiasm, and in laying down the office he expresses the belief that the Institute "has only begun to realize the possibilities of its twofold mission, the advancement of knowledge in a most important field of human achievement and the wide dissemination of the highest ideals of art and learning." Among the recommendations of his report to the Council were the formation of a Committee on Egyptian Archæology, coördinate with the existing Committee on Mediæval and Renaissance Studies, the investigation of the possibility of procuring funds for the establishment of an American School in Peking, and the formation of a Committee on Museums, consisting of experts who will hold themselves in readiness to render assistance to affiliated societies in this part of their work. The Council took favorable action on all these suggestions.

On the last day of the year the absorption of the School of Classical Studies in Rome with the American Academy became complete, and thus the school passed finally out of its subordinate relation to the Institute. It is confidently expected that the movement to procure endowment for the School in Jerusalem will make such progress during the current year as to relieve the budget of the Institute of further expense except for the fellowship which it provides. A similar hope is entertained for the school in Santa Fé. The interesting fact was brought out that the representatives of the Institute in Santa Fé have been repeatedly appealed to for assistance in bringing the architecture of the city into harmony with its historical traditions and in recasting the naming of the streets to the same end.

Possibly the most important item of all in the work of the past year is the finding of a long bilingual inscription in the Lydian and Aramaic languages. As the accumulation of Lydian inscriptions now in hand is large, the importance of this key will readily be realized, especially when we consider the tradition of the Lydian origin of the Etruscans.

During the past year the demand came to the Institute for several series of "Extension Courses" of lectures on archæological subjects, and the success of these courses was so great that ten similar courses have already been arranged for the coming year, lasting from one to three weeks each. This movement, beginning in Colorado Springs and confined to the West, so far, is of course in addition to the regular system of lectures provided by the Institute under the direction of the general secretary, Dr. Mitchell Carroll, of Washington, and is likely to be of great service in strengthening the local affiliated societies and interesting a wider circle in the work.

The presidency of the Institute was filled by the unanimous choice of Dr. Harry L. Wilson, of the Johns Hopkins University, who, as vice-president, has had charge during the past year of the work of excavation and exploration.

W. H. JOHNSON.

THE SOCIETY OF BIBLICAL LITERATURE.

WASHINGTON, December 30, 1912.

The meeting of the Society this year (December 27 and 28) in conjunction with the Archæological Institute of America and the American Philological Association had the effect of bringing a larger number of its members to the sessions than usual. The social intercourse with numbers of colleagues in other fields at afternoon teas and evening receptions was also a pleasant feature, the nature of which, as an offset to the specializing tendency of modern scholarship, is not to be underestimated. On the other hand, there are some who feel that the distinctive and *intime* character of the scientific sessions is unfavorably affected by the somewhat restless spirit that accompanies large and promiscuous gatherings. Perhaps as a compromise, a combination of kindred scientific bodies should be planned at certain intervals, but not as an annual occurrence.

The feature of the opening session is

always the president's address, which this year, given by Prof. L. B. Paton, of Hartford Theological Seminary, proved to be particularly valuable and suggestive. Professor Paton chose as his subject "Israel's Conquest of Canaan." Beginning with an analysis of the two accounts of the conquest, one in the Book of Joshua and the other in the Book of Judges, which cannot be reconciled with each other by any sound scholarly method, he passed on to a consideration of the evidence from outside, chiefly Egyptian, sources for the presence of Hebrew tribes in Palestine, which parallels the apparent contradictions in the Biblical sources. Some of this evidence points to the conquest of tribes forming part of the later Hebrew federation during the Eighteenth Egyptian Dynasty, while other phases of the evidence lead us to the Nineteenth Dynasty. The solution proposed by Professor Paton, with a due consideration of the entire material, was to assume two conquests, an earlier and incomplete one by the tribes grouped around the name of Leah as one of the wives of the traditional Jacob, and a later supplementary one in which the Rachel tribes form the chief factors. The former, recounted in Joshua, he would place in the Eighteenth Egyptian Dynasty, the latter, described in Judges, in the Nineteenth Dynasty. This bare outline cannot do justice to the scholarly polish and charm of Professor Paton's presentation of one of the most difficult, though also one of the most fascinating, problems of ancient Hebrew history.

Prof. Paul Haupt's contribution at this session was on the visions of the Prophet Zachariah, which he interpreted as referring to internal dissensions in the Persian Empire during the reign of Darius I (522-486 B. C.), which it was hoped by the Jews would lead to the overthrow of the Empire and the triumph of the Jerusalem priesthood over that of the rival sect, with its religious centre in Samaria.

An incisive investigation of the alleged medical language of the Gospel of Luke and Acts was contributed by Prof. Henry J. Cadbury, of Haverford College. Ever since the days of Hobart, an American New Testament scholar who died in 1830, the thesis has been maintained that the medical terms in Luke and Acts confirm the tradition that the books were written by a physician. Professor Cadbury took up a detailed study of the language of these two books, with the result that the so-called medical terms are neither such as are peculiar to distinctly medical writings nor such as a layman could not be expected to know. Applying the same test to other writers, such as, *e. g.*, Lucian, who we know was not a physician, he found by statistical word studies that Lucian's Dialogues and Essays might have been written by a physician. The conclusion reached, therefore, was that the long-accepted thesis was unsound. The rejection of it does not prove that Luke was not a physician or that he is not the author of these works, but merely that the language is of no avail in settling the two questions.

Prof. Morris Jastrow, of the University of Pennsylvania, presented the outlines of a study of the thirteenth and fourteenth chapters of Levitieus, which form a little group by themselves, detailing (a) the symptoms of various skin diseases, as well as spots in garments, stuffs, or houses, and (b) the purification ritual in connection with those phenomena. He showed that the starting-point was a little *Torah*, or a series of priestly decisions regarding the manner of treating one supposed to be afflicted with leprosy, and what he was to do in case he was healed. This "stock" of the two chapters antedates a temple organization, as is shown, first, by the fact that the purification ritual takes place outside of the camp, where the suspect is obliged to dwell, and, secondly, by the circumstance that in this earliest form of the ritual the cleansing from disease (placed on a level with sin) is accomplished by the primitive method of transferring the disease to a bird, just as the scapegoat carries the sins of man with him into the wilderness. The elaboration of this little *Torah* into the detailed analysis of various skin diseases, and the attachment of an elaborate temple ritual for purposes of purification, were the work of many hands and many generations—the result of successive attempts to distinguish on the one hand and to amplify on the other.

At the second session, Prof. B. W. Bacon, of Yale University, gave a conclusive demonstration that what has hitherto been held a prologue to the Gospel of John in the earliest codex of the Latin version of the New Testament was in reality a subscript to the Apocalypse, ascribed to John. The formula forming the epilogue was written between the Apocalypse and the Gospel, and by a careless scribe was attached to John instead of being regarded as the conclusion of the Apocalypse. The practical agreement of this epilogue with one found in an Ethiopic version of the Apocalypse made the demonstration complete. Prof. M. G. Kyle, of Xenia Theological Seminary, laid before the Society the evidence from excavations conducted by Flinders Petrie at Heliopolis in the spring of 1912, at which Professor Kyle assisted, to show that this most ancient capital of the Egyptian kingdom contained traces of Hyksos occupation of the same character as the Hyksos settlement at Hres—the modern Tell-el-Yehudijeh—only a few miles from Heliopolis. This evidence comes from the character and measurements of the wall traced at Heliopolis and from the style of the pottery.

Several papers falling properly into the category of Biblical studies were read at the Oriental section of the Archæological Institute, which met with the Biblical Society on Saturday morning. Mention should be made of an uncommonly convincing argument to show that in its original form, Tatian's "Diatesseron," which is the earliest Harmony of the Gospels, did not contain the genealogy of Jesus as given by Matthew and Luke. The two genealogies, therefore, represent later additions to the Gospels and refer to distinct sources, though both are based on Jewish material.

Prof. George A. Barton, of Bryn Mawr College, was elected president of the Society of Biblical Literature for the ensuing year. M. J., JR.

CENTRAL DIVISION OF THE MODERN LANGUAGE ASSOCIATION.

URBANA, Ill., December 30, 1912.

About one hundred teachers, representing sixteen Central, Western, and Southern States, attended the eighteenth annual meeting of the Central Division of the Modern Language Association, held at Indianapolis, December 26-28. The Central Division was this year the guest of the State University of Indiana, of Purdue and De Pauw Universities, and of Wabash, Earlham, and Butler Colleges. Such a combination made possible the entertainment of the Association on a generous scale without imposing an unreasonable burden upon the modern language faculties of the separate institutions. The local committee representing the various institutions of higher learning in the State was assisted in its work by the modern-language faculties of the Indiana high schools; and the departmental meetings of Friday afternoon were, therefore, appropriately held in the rooms of the Shortridge High School.

These departmental sessions, which have become an important feature of the annual meetings, are peculiar to the Central Division, the Eastern meeting never having set apart any time for the discussion of the pedagogical problems connected with modern languages. At the departmental gatherings this year, the members discussed such matters as "Philology versus Literature" and "The Use of Phonetics in the Teaching of German," together with other topics of interest to

Philologers who chase
A panting syllable through time and space.

The English section has undertaken to deal methodically with certain problems connected with the teaching of that subject; it has appointed committees to carry on an extended investigation, the results of which have from

time to time been published. The committee appointed two years ago to investigate the labor and cost of composition teaching presented its final report this year. The report showed, among other things, that English is the least expensive subject taught in the high school, the average annual cost of supplying a pupil with instruction in English being only seven dollars, as compared with an average annual outlay of sixteen dollars the pupil for chemistry, and of twelve dollars for combined vocational subjects. This committee was continued for the purpose of investigating the conditions of composition teaching in colleges.

The chairman of the section presented a report of an investigation of the preparation of college teachers of English. Fifty-four per cent. of those doctors of philosophy who answered the inquiry sent to them believed a change in the training of graduate students for the teaching of undergraduates desirable. Of the college presidents who replied, 52 per cent. expressed a similar discontent with the present system. Both groups agreed, in a general way, that the graduate schools have overstressed scientific research. They believe that there should be more emphasis upon composition, and proportionately less upon linguistic training. As a result of these criticisms, a committee was appointed to investigate and formulate on the constructive side some definite suggestions for the improvement of graduate training of future teachers of freshman English.

The Central Division meeting was in one respect unique in the history of the Association. The programme was actually finished by Saturday noon, and the final session was, consequently, omitted. Such alacrity was made possible by the small amount of discussion that followed the various papers. This was due in part to the crowded condition of the programme, and in part to the high degree of specialization of which the papers were the expression. One questions whether the future programme should not be arranged on a somewhat different plan. The alternative would be to limit still further the number of papers presented to those certain to be provocative of discussion, leaving others to enlarge the list of those to be read only by title. Such a modification of the programme would be quite within the discretion of the secretary, and would almost certainly increase the interest of the meeting.

The next meeting of the Central Division will be held at Cincinnati. The officers elected for the ensuing year are Prof. T. A. Jenkins, of the University of Chicago (chairman), and Prof. C. B. Wilson, of the State University of Iowa (secretary, reëlected for four years). As members of the executive committee were elected Profs. F. G. Hubbard, of the University of Wisconsin; A. F. Kuersteiner, of the University of Indiana, and G. O. Curme, of Northwestern University. EDWARD C. BALDWIN.

Correspondence

CABINET OFFICERS IN CONGRESS.

TO THE EDITOR OF THE NATION:

SIR: In your excellent comment on President Taft's suggestion that Cabinet officers should appear in Congress, you point out that this plan "has long been urged here, from the time of Judge Story down." Perhaps it may not be improper for me to remind readers of the *Nation* of the many years during which my father advocated the measure which at last seems to be coming within reasonable distance of realization. In the late sixties, shortly after the war, he began writing to the *Nation* on the subject, and both in your columns and elsewhere he discussed the proposed reform from every point of view, defended it with arguments as thorough as they were rational, and answered innumerable objectors with fairness, brevity, and point.

As time went on, he became convinced that the change of political machinery he advocated would be even more beneficial in the cities and States than in the national Government, and he devoted his last years with energetic and passionate effort to the attempt to make Massachusetts the leader in a reform which he believed must surely come and would afford a cure for many of the evils now besetting our great experiment in democracy. The collection of his papers recently presented to the Massachusetts Historical Society is a remarkable illustration of long, patient labor for a patriotic object, with little hope or prospect of reward. "The Lesson of Popular Government" collects the results of this labor in definite, tangible, readable form.

It may well be that my father exaggerated the advantages of the end he aimed at. All reformers do. In his calmer moments he would have been the first to recognize this. No universal panacea can be found for the vast ills that necessarily beset an organization so huge, so complex, and so nervously sensitive as the self-government of one hundred millions. But my father had limitless confidence in the honesty and good sense of the mass of the people and he was convinced that the only thing needed to bring these qualities into effective action was the careful perfecting of the governmental machinery. In other words, he thought the cry that the best men are willing to take no part in politics was all wrong, that the best men were kept out of politics by a system which set a premium on dishonesty and incompetence, and that the change he urged would at least facilitate improvement. He would often point out, what you justly observe, that all civilized Governments except our own bring executive and legislature into direct contact; and he further believed that some points in the constitution of our Government would enable us to do this more effectively than almost any other nation.

My father often said to me that he did not care who got the credit of his plan, so it was tried, and that he did not expect either reward or glory from it. Yet now that those in authority are turning to it, it seems only just that his name should be mentioned, and especially in the *Nation*, where he fought the best and longest of his battles. GAMALIEL BRADFORD, JR.

Wellesley Hills, Mass., December 30, 1912.

[We print this letter with pleasure. No attempt was made in our editorial note to follow the history of the movement, and we took it for granted that our readers would recollect Mr. Bradford's long series of letters published in the *Nation*, the latest of which was dated July 27, 1909.—ED. NATION.]

CONDITIONS IN CUBA.

TO THE EDITOR OF THE NATION:

SIR: In a recent letter in the *Nation* Mr. Sydney Brooks protests that the State Department of the United States is too prone to interfere in Cuban affairs, and that too elastic a construction has been placed on the Platt amendment. He cites the recent protest of an English railway company, operating the Cuban Central Railroad, which has registered an objection, through the British Foreign Office, to a concession granted to a rival company.

Perhaps Mr. Brooks is not familiar with the conditions of that grant. The Cuban Central Railroad put in a bid for the concession, guaranteed building a better road at a lower rate, and had been virtually assured of the concession. But the concession was suddenly swung to the North Shore Railroad Company of Cuba, incorporated in Delaware. It gives the new company the right to parallel the Cuban Central for about three hundred miles, from Nuevitas to Caibarien, and is altogether contradictory to the terms of the charter of the Cuban Central. A liberal subsidy has been granted to the company. On these grounds, the protest was made to Mr. James Bryce, the British Ambassador at Washington, who officially requested the State Department to investigate the conditions of the grant.

Mr. Brooks does not refer to the Amnesty bill which is to come up before the Cuban Senate on January 13, and which has already passed the Cuban House. This provides for granting general amnesty to criminals whose crimes were committed during the six years that Gen. Gomez has been President of Cuba. It may be news to Mr. Brooks that the State Department is now investigating the scope of this bill, and will undoubtedly interfere if any attempt is made to carry the measure through and put it into force.

Various other concessions were granted under the Gomez régime which would not stand the light of investigation. In the new Administration lies the hope of the republic of Cuba, but till Gen. Menocal takes the oath of office, the Department of State is striving to prevent trouble. By interfering when unfair concessions are granted, and by investigating arbitrary measures, such as the Amnesty bill, it is hoped to avert more serious complications.

JOHN NEVILLE.

New York, January 1.

A CORRECTION.

To the Editor of The Nation:

Sir: In your review of "The Works of Thomas Deloney" (December 5, 1912) you credit the phrase, "better bread than could be made of wheat," to Sancho Panza. Although he does use the phrase in the sixty-seventh chapter of Part II of "Don Quixote" (published in 1615, not, as your reviewer says, in 1600), yet the knight's niece gets the start of him in the seventh chapter of Part I (1605). Joseph de Perott.

Worcester, Mass., December 27, 1912.

"NAPIER'S BONES."

To the Editor of The Nation:

Sir: Your editorial on "A Mathematical Centenary" (December 26, 1912) may make pertinent the following information: At auction sale, last November, in London, of the library of the late Dowager Lady Napier and Ettrick, "some interesting relics of the inventor of logarithms appeared. Among them were the original wooden and metal numbering rods, called 'Napier's bones,' used by John Napier in his 'Rabdologiæ, seu Numerationis per Virgulas libri duo,' in 1615, and forming the first attempt at a calculating machine. For these £121 was paid by Mr. Quaritch." (*Antiquary*, December, 1912, n. s., VIII, 441-2.)

Rockingham.

Boston, January 6.

AN ELASTIC CURRENCY.

To the Editor of The Nation:

Sir: In your financial article of December 12 you state the case for attributing the recent slump in stocks mainly to money market conditions, *i. e.*, to the dearth of money at the critical moment of moving the crops. If the point is well taken, what is this but another example of the mischief due to an inelastic currency? The Government persists in failing to apply to the currency problem such a measure of financial capacity and efficiency as we see successfully applied in most European countries, and in every important group of British Colonies.

We all know that the losses to the country in the panic of 1907, due to the currency chaos, were simply incalculable, but how about the annual losses due to the same cause?

The "rich men's panic" of 1907 left four bad years in its wake—years of hard work for everybody and thin profits for the most, and of heavy exports to pay foreign debts and interest on foreign loans, while business remained bad long after the return of trade activity in Europe, and in spite of rising merchandise prices.

At every slump in American stocks Europe buys, to unload later at higher prices. The profits thus harvested by European investors must amount to many millions annually—all paid for by exporting the products of American soil, mines, and labor.

At the same time, the richer and clearer-headed financiers at home gather in sound stocks at cut prices. These conditions clearly favor the big men at the cost of the general public; they tend to build up a "Money Trust," and yet Congress, instead of meeting the urgent demand for a proper currency, such as is possessed by every other commercial country, spends public money and wastes the valuable time of busy men in a futile "Money Trust investigation." F. R. Welles.

Paris, December 27, 1912.

[It is going altogether too far to assume that, because money stringency occurs in the autumn crop-moving period under the present currency system, therefore the currency system is exclusively responsible for it. The truth is that some such autumn stringency would presumably recur, even with a scientific system of central reserve and rediscount in operation. Our reasons for thinking so are, in the first place, that autumn is a season of money stringency in European countries as well as in our own, despite the central banks of those communities, and, in the next place, that the particular "harvest demand" is for paper money in small denominations (a need which banknotes do not fill) and for "lawful money" to build up interior banks' reserves at a time when their home loans are expanding.

A scientific currency system would doubtless mitigate the stringency of an active autumn season; but would hardly remove it altogether. The panic of 1907 was not caused by a defective currency system, and, granting the same financial practices and abuses as preceded it, the panic would not have been averted by an ideal currency system. What such a model banking system might have done is to have checked the reckless and mischievous practices of our most powerful financiers before it was too late, and to have prevented the bad effects of a currency-hoarding mania—as the Bank of France is doing today.—Ed. Nation.]

SHAKESPEARE AND ARISTOTLE.

To the Editor of The Nation:

Sir: In Shakespeare's "Troilus and Cressida," in a speech by Hector, occur the following lines (ii, 2, 165-7):

> Not much
> Unlike young men, whom Aristotle thought
> Unfit to hear moral philosophy.

For some time (*vid.* Holmes's "The Authorship of Shakespeare" *et al.*), Baconians have pointed to these lines as evidential of Bacon's authorship of the plays. They call attention to the fact that, in Bacon's "Advancement of Learning" (first printed in 1605), Aristotle, as in "Troilus and Cressida" (first printed 1609), was misquoted, and in a similar manner. Bacon says, "Is not the opinion of Aristotle . . . to be regarded wherein he saith that young men are no fit auditors of moral philosophy?" (Aristotle had said that young men are unfit to *study political* philosophy. "Nichomachean Ethics," i, 8.)

But the misquotation goes back to a date some eighty years earlier than 1605. Erasmus, in his "Colloquia Familiaria," in his address to the reader entitled "De Utilitate Colloquiorum" (Basil, 1526), says "velut irrepens in animos adolescentium quos recte scripsit Aristoteles inidoneos auditores Ethicæ Philosophiæ." And again a few lines farther on he says: "Aristotelis Ethice non est apta pueris."

In regard, then, to the lines in "Troilus and Cressida," Erasmus, not Bacon, was responsible for the misrepresentation of what Aristotle wrote. ("Troilus and Cressida," though not published till 1609, was certainly acted much earlier, *vid.* Malone, Furnivall, Halliwell, *et al.*)

Literature

MEMOIRS OF H. H. BANCROFT.

Retrospection. By Hubert Howe Bancroft. New York: The Bancroft Co. $2 net.

Mr. Bancroft, now eighty years old, gives in this book his own story of his extraordinary and useful career. "I hardly know," he says, "what first led me into collecting books. Perhaps it was because I was a crank." Whether he was "a crank" or not, he served his age well, and his account, written in most informal style, descending sometimes to slang, is absorbing.

Born in Ohio of New England parents, he established himself in early manhood in the book-trade, at San Francisco. He prospered greatly, finding time from business to read, write, and collect. This work grew on his hands, and he pursued it for fifty years and more with diligence ever increasing. He amassed a library at last which is one of the wonders of our Western coast. It relates to the western half of our continent from Central America to Alaska, and in respect to history is as nearly exhaustive as human energy can make it. Mr. Bancroft has worked unremittingly himself and employed copyists, translators, and investigators by the score, often scholars of a high rank. He has bought manuscripts, pamphlets, printed books, often whole libraries, in America and Europe. His agents have taken dictations in the huts of the Eskimos and Aztecs, ransacked the old Spanish missions, set down the stories of pioneers, English, Spanish, Russian; explored government archives whenever there was a hint of material, and stopped at no outlay which would procure even a scrap likely to be of value. The mass of information has been intelligently connected and indexed, and carefully prepared histories summarize and supplement where needful. The time was propitious for such a labor, the moment when the Anglo-Saxon advance was displacing in the West what had gone before. The entire collection is now the property of the University of California.

Mr. Bancroft interests us most when describing his library and its formation, but he does much more. His

Retrospection goes through the whole of his long and wide experience of American life, and indeed takes into view our history from the beginning. To a large extent his chapters are not retrospective, but discussions of matters of present moment, and he does not withhold himself from prediction. In these excursions, breezily and roughly set forth, our author lays himself open to criticism. His knowledge is comprehensive but not accurate. Witches were never burned in Massachusetts; no John Owen founded the community at New Harmony on the Wabash; the pioneers of Kentucky were not allured by any landscapes of blue grass, for, if we may trust good Indiana historians, blue grass was carried into Kentucky as an exotic by soldiers returning home from the campaign of Tippecanoe in 1811. But passing over small errors, we find more serious faults. Mr. Bancroft lays down an excellent principle. Whoever, he says, discusses contemporary or proximate events should confine himself to statements of fact, with authorities; he cannot do more without danger of dogmatism and prejudice. Having thus declared himself, our author straightway plunges into a handling of men and events independent and audacious to the last degree, in which, to any calm judgment, dogmatism and prejudice run riot. As to the races which have come to America, he holds the negroes to be slothful, unstable, and licentious, at the present moment in our society hopeless economically, politically, and socially. Their deportation from Africa was a passage from the depths of cannibalism and degradation far worse than any Egyptian darkness to what was relatively a Canaan of ease and security. They prospered and multiplied under slavery, and now that slavery is gone, they remain only as a dismal encumbrance, not to be assimilated or employed for the purposes of a high civilization. In contrast with this gloomy view of the Africans are Mr. Bancroft's convictions as to the Asiatics, of whom he considers in particular the Chinese. These he holds to be industrious, most capable, cleanly, and peaceable. Their coming in large numbers to our Western coast was of vast benefit. They worked contentedly and effectively for small wages, affording to the new communities a most useful form of cheap labor. He minimizes their vices, and holds that a main argument for their exclusion, the fact, namely, that they do not desire American citizenship, but universally return with their small savings to China, is strongly in their favor.

As to individuals, Mr. Bancroft's characterizations are equally incisive and uncompromising. Seward was probably the best and brightest man who ever sat in the chair of the Secretary of State. McKinley was a magnanimous spirit whose policies and intentions were sound. For Taft there is mention of "his ponderous flesh and sickly smile," his "narrowness of mind," "his childish wilfulness and petulance." Roosevelt, on the other hand, is one "of the greatest men that ever lived," and Hiram Johnson followed Roosevelt "as Christ followed John the Baptist." There is, in fact, little to relieve the gloom of the outlook but the presence in our firmament of such stars as these. Rockefeller and Leland Stanford are "carbuncles," morbid excrescences on the body of society, and Carnegie, of whose libraries our author speaks contemptuously, is perhaps no better.

We think that Mr. Bancroft's great desert in the field of history is as a collector, compiler, systematizer, and in directing and inspiring the labors of others. A calm, judicial poise, the primary requisite for him who shall write history greatly, is not evident in this book. The New West, Mr. Bancroft's special field, has risen in Miltonic fashion, "like an exhalation," over night. Exhalations almost of necessity connote miasma, and we unquestionably have been breathing very bad air. Asphyxiation, however, we may hope, is not imminent. In the physical world we are coping with malaria and the "cobras of the air" that distribute yellow-fever, typhus, and infantile paralysis. As to moral malaria, is there less reason to hope? To weigh these things rightly requires of the historian of our period infinite coolness and discrimination. We think Mr. Bancroft over-nervous sometimes in his fears. Some of his heroes we think *bêtes noires*, and vice versa. We distrust his judgment in dealing with past events and in interpreting the signs of the present. Where we cannot follow we find him always stimulating. He has his human limitation. In his proper field he has done his country and his age a great service, rendered with force, ability, and purpose of the highest. We rejoice in the vigor unabated, if sometimes impatient and eccentric, of a champion so eminent and venerable.

CURRENT FICTION.

The Social Cancer (*Noli me Tangere*). By José Rizal. Translated by Charles Derbyshire. New York: The World Book Co.

The Reign of Greed (*El Filibusterismo*). The same.

Here are two books that every American should read; not simply because a Malay novelist is a great curiosity, but because these romances contain a serious exposition of the conditions which prevailed in the Philippines just before the American occupation. Those who readily believe in racial superiorities and inferiorities may find in these novels some stimulus to reflection. For here is a Filipino, with no European blood in his veins, who writes with the compelling charm of a Galdós, who has a considerable store of European culture and a perfect understanding of European ideals; who strikes chords of emotion that no American could find exotic; who believes passionately in all that Western civilization stands for, and whose appeal for the fraternity of races has not a trace of cowardice or pose.

We feel even that if José Rizal seems foreign to us at all, it is because certain literary motives that in the West have become sodden from over-cultivation return in his works with the fresh sincerity of youth. Few of our contemporary novelists could describe with such true exultance the beauty of Oriental moonlight, a tropical spring, all that distinctive local environment that so moves men like Pierre Loti or Lafcadio Hearn. This exquisite delicacy, so characteristic of Rizal's temperament, is all the more remarkable when we try to estimate the amount of furious passion that must have been behind his novels. For, after all, they are romances of most sombre outline, and their tragic appeal is intensified by the apparent effort for reserve, for sobriety, and kindliness of judgment.

A Spanish imperialist would, of course, maintain that Rizal's novels are a gross slander on Spanish rule, and that his execution in 1896 was justified by his revolutionary associations and by the inflammatory spirit of his works. We are probably still too close to the events involved to reach valuable conclusions on such questions. But we should observe that the major theses of Rizal are distinctly pro-Spanish in every essential. He attempts to prove first that everything good in Filipino civilization is due to Spain; and then that permanent advancement must come not from political convulsions, not from endless and abortive revolutions, but from an assimilation of Spanish civilization which automatically will place the Filipinos on a footing of equal opportunity with their rulers. So his great case against the Spanish is their refusal to disseminate their civilization, their use of the Islands preëminently for commercial and social exploitation, their exclusion of them from a respectable place in the Spanish Empire, and their inhibition of any national spirit, even of any Spanish national spirit, among the natives. He is fighting less for Filipino independence than for a Spanish school system on democratic lines.

We believe that this is the only fair interpretation of Rizal's position in his novels; though it must be confessed that the emotions aroused by them are not those best suited to guiding pacific reforms. If we are to believe his biographers, his own life experiences have entered too directly into the principal

episodes of his books not to have left in them some of the wild passions which his own sufferings, ending in martyrdom, must have created. And perhaps the calm reflection that shapes the plot around a constructive plan for social betterment in his countrymen, is obscured by the violent emotional reactions caused by the narrative of oppression, sorrow, and death. We can see how a remote public might find here a strong dose of melodrama. But if these episodes are based on facts, and some of them are documented by Rizal himself, how are we to calculate the effect they must have had on a suffering people knowing them to be true?

This portrayal of Filipino life gives permanent interest to these books. The characters are taken from every branch of society, including the Spaniard of noble ideals and the native of barbarous instincts. We are not sure that psychologically these people are very deeply or acutely drawn; but their exteriors at least are real and vivacious. If we do not carry away from among them any lasting friendships, we do gain a picture of life in the Philippines that is varied and complete.

The translation is accurate almost to literalness. Yet it might have been more appreciatively worked in the spots where the spirit becomes most distinctively local. Here, in fact, the translator missed a fine opportunity for editorship. His notes are too frequent on the commonplaces of European erudition; at times too personal in their views; most often entirely neglectful of those characteristic features of Oriental life which necessarily recur in the narrative, and which only people of long residence in the Philippines can be presumed to understand. The few Filipino words that appear are interpreted in a useful glossary.

Scientific Sprague. By Francis Lynde. New York: Chas. Scribner's Sons.

This volume continues the history of the inter-mountain railway which played title rôle in the "Taming of Red Butte Western." Re-christened the Nevada Short Line, that indispensable and now thoroughly regenerate branch of the Pacific Southwestern might have enjoyed deserved prosperity had not its ancient enemy, the avid Transcontinental, marked it for its prey. Many and fiendish were the devices by which the "pirates of high finance" sought to render the Short Line amenable to assimilation through the depreciation of its stock. Wrecks were mysteriously incited by fake messages on the train dispatcher's wire, important papers en route to a directors' meeting were intercepted, a tunnel was to be demolished by nitroglycerine, a dam by dynamite, whiskey was surreptitiously fed to men and vitriol to engines, and, these expedients failing, the big system made a last audacious attempt to swallow the little road whole, alive and violently kicking, and to retain it by process of law. In every case it was Scientific Sprague, the Government soil-tester, and amateur detective, who foiled the agents of the enemy and identified the long arm of criminal enterprise with its directing brain-centre in New York.

In spite of his friendly services to the Nevada Short Line, and his admirable endowments of size, muscle, and modesty, it is doubtful whether Sprague as a personality will strongly impress himself upon the popular mind. Few readers are likely to share the gaping mystification with which the other people in the story follow his unerring steps towards prevention and detection, or to be as profoundly impressed as is the author by those seizures of sphinx-like immobility in which Sprague did his best thinking. The "appeal" of the tale lies neither in the mysteries of crime nor the ingenuities of the sleuth, but in an abundance of situations boldly designed to raise the reader's hair with apprehension.

Dawson, '11: Fortune-Hunter. By John T. McCutcheon Pictured by the Author. New York: Dodd, Mead & Co.

Dawson is a farm-grown boy just out of college and in search of a city job. Most of the story is told in the form of letters to his mother—genuine boy-letters, full of the conglomerate humor which is the special art of the undergraduate. The city does not welcome him with open arms, and he has a struggle to get a foothold—and to hide the extent of his troubles from the little family group at home. When he does find work he is tempted to trickiness by more than one employer, but the high moral ground he takes pays in the long run—in a somewhat shorter run, it may be, than is common in real life. A thread of romance is connected with the plot, and the pictures characteristic of Mr. McCutcheon almost tell the story by themselves.

SPORT AND ADVENTURE.

The Journal of a Sporting Nomad. By J. T. Studley. With thirty-nine illustrations. New York: John Lane Co. $3.50 net.

The Complete Wildfowler. By Stanley Duncan and Guy Thorne. Fully illustrated with practical drawings and diagrams and with many illustrations in half-tone. New York: The Outing Co. $3.75 net.

The Book of Winter Sports: An Attempt to Catch the Spirit of the Keen Joys of the Winter Season. Edited by J. C. Dier. New York: The Macmillan Co. $1.50 net.

By Flood and Field: Adventures Ashore and Afloat in North Australia. By Alfred Searcy, author of "In Australian Tropics." New York: The Macmillan Co. $2 net.

If we may put one of these sporting authorities against another, Mr. Studley's "Journal of a Sporting Nomad" must be relegated to a distinctly inferior position at once. He has ignorantly spoken of "a gaggle of geese on passage," whereas a "gaggle" of geese never exists except on the water; transforming itself into a "skein" immediately on rising for passage, in the parlance of every sportsman whose tongue is truly attuned to the shibboleths of up-to-date wildfowling. And Mr. Studley is still further discredited by the admitted discovery that his birds were not geese at all, gaggle or skein, but merely sand-hill cranes. A day or two of watching, however, brought him another discovery which would be of importance to the naturalist if authenticated. "It was perfectly evident to me that on arriving at this particular place some old bird of the lot, who knew his way about, was showing the birds of the year some of his landmarks that would enable them to find their way for the future." This and various other passages indicate that the author can draw a heavier percentage of conclusion from given premises than the trained naturalist would sanction, but in his various wanderings he has picked up much that is interesting, nevertheless. His sporting career began in Newfoundland with six close-range shots at a caribou, which walked calmly off unscathed when the fusillade was over. Seven chapters are given to Africa, where he went in 1894 as private secretary to Sir Claude Macdonald, and came into contact with about all the varieties of big game for which that land is famed. In 1896 he accepted an invitation to accompany Sir Martin Conway to Spitzbergen, where whale, seal, and reindeer were the chief objects of interest; the voyage was varied by a visit to the ill-fated Andrée and his balloon, at Danes Ghat, where he spent two months. Several pages are given to a detailed account of the balloonist's outfit and operations. Visits to the Florida Tarpon region, different parts of Canada, and Alaska are also described.

"The Complete Wildfowler" will make its best appeal only to those who have some acquaintance with the ways of the fowler and the fowl on the other side of the Atlantic. We shall not recommend too highly to "the general public" a book which declares with a tinge of acidity, on its initial page, that it is not intended for such. The authors seem unnecessarily sensitive on the subject of mistaken criticism of the sport to which they are devoted, as involving cruelty, butchery, etc. One does not need to be a technical expert on the subject to know that a continuance of conditions existing in a not remote past

would soon have left no game or wild-fowl in existence. Cruel and useless slaughter was rife everywhere, and men who classed themselves as sportsmen, with no challenge to their claims, were not ashamed to boast of feats of killing which could not be repeated today without great scandal. If this reaction, which alone has made the preservation of material for hunting, angling, and fowling possible, has naturally involved a certain amount of unintelligent and unduly severe criticism of these sports, no level-headed sportsman should be disturbed by that. On guns and their care, ammunition, wild-fowl dogs and their training, and the various other branches of their subject, the authors write from extended personal experience, and their book may be accepted with confidence as a safe guide.

"The Book of Winter Sports" is a compilation from at least a score or two of writers, including such well-known literary names as those of Charles Dickens, R. D. Blackmore, John Addington Symonds, A. Conan Doyle, Robert Burns, James Hogg, and "Christopher North." The most interesting pages are those which deal with some of the newer types of ice craft, such as those driven by the aeroplane type of propeller, or those which pull upon the ice itself by a chain around the tire of an automobile, or by a spiked wheel; or, again, the "scooters" of the Great South Bay, little flat-bottomed boats with runners attached underneath, which, with a good wind, can take the water from the ice or the ice from the water with equal facility and can be pulled over the ice by hand or rowed through the water when wind is wanting. Devised first, we are told, for life-saving purposes in dealing with the difficulty of the Great South Bay shore-ice driven by the tides, the "scooter" has naturally been taken up as a means of sport, chiefly along the shore of the bay where it had its birth. Ice sports of all types and in all lands are considered, and the book is well illustrated with half-tones, drawings, and colored plates.

"By Flood and Field" is an extremely interesting account of the author's adventures in the northern territory of Australia, some twenty-five years ago, grewsome in parts but of value to any one concerned with the problems of contact between civilized and uncivilized peoples. Blown out to sea in a dinghy from Selaru Island, picked up when almost exhausted by a boat-load of Malays caught in the same storm, compelled to live for some time among the blacks, reduced at last in wearing apparel to the simple breech-cloth of the natives, Mr. Searcy had opportunity to know at first hand of the native life to which a good part of his book is given. After a time he was taken by the blacks to Port Essington, and from there was finally able to reach Port Darwin, where he found men of his own race, and was taken into service in the Customs House. Here his chief duty was the circumvention of opium-smugglers. Later he joined the police force and was occupied in the region of the McArthur and Roper Rivers, to the west of the Gulf of Carpentaria. As the narrative is confessedly written for the most part from memory, after the intervention of about a quarter of a century, one cannot help feeling that certain of the sensational adventures recorded may unconsciously have taken on additional color in the meantime; but on the whole the book is doubtless a trustworthy picture of conditions then existing.

Problems of Men, Mind, and Morals. By Ernest Belfort Bax. Boston: Small, Maynard & Co. $1.50 net.

The miscellaneous essays contained in this volume are on the whole good reading because of the frank directness with which the author states his views; but they cannot be said to be marked by either profundity or originality. The view of Ethical Evolution set forth in the first chapter is not "the entirely new view" which the author leads us to expect, but simply the view at present current among the majority of moralists of the sociological school; and the essay on Speculative Thought is nothing more than a good summary of the history of philosophy for a small encyclopædia. The essay on Modern Feminism, though slight, contains some refreshing common sense. It is indeed a question how far an already over-privileged sex is entitled to the further privilege of the vote.

A certain unity of motive may, however, be derived from the circumstance that ten of the fifteen essays are concerned, more or less directly, with the defence of Socialism—against its enemies, but chiefly against the more timid of its friends. Socialism is accused of being unpatriotic, atheistic, and in favor of free love. Apparently, Mr. Bax resents this way of putting it—at least as regards the last term; but all his efforts are directed to proving that the formulation is correct. Socialism stands for internationalism as against patriotism, because patriotism is a form of capitalism. Nevertheless, Socialism is not a purely economic doctrine, but a theory of society based upon modern science. Hence, while permitting liberty of opinion, it is necessarily opposed in sympathy to all theology or transcendental metaphysics. In sexual relations, however, while not positively recommending looseness, Socialism stands for unrestricted freedom; that is, for freedom qualified only by certain considerations connected with offspring. Apart from these considerations, sexual relations are nobody's business, provided there is mutual consent. Marriage is to be simply a private contract. New contracts may be formed as often as you please, and they may be frankly and exclusively contracts for animal gratification—or perhaps there may be no contract; they are to be secure from interference and even from criticism. It is rather hard to see why this should not be called "free love."

And upon looking deeper we find a certain strain of tendency running through the volume which is at once amusing, repelling, and illuminating. The book is a vindication of Socialism from the standpoint of individual freedom. Those who think of Socialism as a system of organized interference into private affairs are slapped in the face with the assertion that Socialism proposes to regulate only those actions which concern society, leaving private conduct free. But all this assumes naïvely that human actions can be divided and distributed into two boxes—as if there were any private action wholly without effect upon the lives of others or any communal action without some effect upon every individual! And those who reflect upon the extensiveness of the economic interests which Socialism proposes to control will wonder what is to be left for the individual when society has taken its own. From reading Mr. Bax they will be led to infer that the chief item in freedom is sex. And when they note in particular his justification of sexual intercourse from the standpoint of mere animal enjoyment, his rather undisguised indifference to any higher aspects (in "Sex and Sentiment"), and (in "Modern Feminism") his open assertion of the organic inferiority of women, they will doubtless conclude that socialistic freedom presents a very pretty picture.

Notes

The Putnams will publish early in the year: "An Interpretation of Rudolf Eucken's Philosophy," by W. Tudor Jones; "The Positive Evolution of Religion," by Frederic Harrison; "The Personality of Napoleon" (Lowell Lectures, 1912), by J. Holland Rose; "The Problem of the Sexes," by Jean Finot; "The Evolution of States," by J. M. Robertson; "The English Scene in the Eighteenth Century," a study of social conditions, by E. S. Roscoe; "The Poems of Adam Lindsay Gordon," arranged by Douglas Sladen; "Mishnah—a Digest of the Basic Principles of Jewish Jurisprudence," translated and annotated by Hyman E. Goldin, and the following novels: "Ashes and Sparks," by Percy White; "Who Laughs Last," by Ashton Hilliers, and "The Port of Dreams," by Miriam Alexander.

"Patsy" is the title of a new novel by S. R. Crockett, which Macmillan will soon have ready.

The editors of the Catholic Encyclopedia,

the last volume of which has just come from the press, are preparing an exhaustive index of the work.

"Zone Policeman 88," by Harry A. Frank, which the Century Company will issue shortly, recounts the author's experiences as plain-clothes policeman and census-taker during five months in Panama.

Among the books shortly to appear from the press of Longmans, Green & Co. are the following: "The Wondrous Passion," by the Rev. F. W. Drake; "The Sympathy of God," by the Rev. Forbes Robinson; "Help from the Sanctuary," by the Rev. Jesse Brett; "Child of Storm," by Sir Rider Haggard, and "Essentials in Early European History," by Samuel Burnett Howe.

Miss Elizabeth Kendall has placed with Houghton Mifflin her new book on "China."

An Oxford edition of Browning's "The Ring and the Book" comes to us from Henry Frowde. For this volume Prof. Edward Dowden has written an introduction, and there are four facsimiles from the Yellow Book.

A book which both the special student of the Elizabethan age and the general reader will welcome is "The Correspondence of Philip Sidney and Hubert Languet," which the Merrymount Press, of Boston, has published in a handsome volume with marginal headings in red type. The text is a reprint of the translation from the Latin made in 1845 by Steuart A. Pears, Fellow of Christ Church, Oxford. Sidney first met the Burgundian at Frankfort in 1572, when Sidney, just out of Oxford, was a youth of eighteen and Languet was fifty-four. The correspondence was continued with fair regularity until the elder man died, eight years later. It is a lasting monument to both, but is of special interest for what it reveals of Sidney's extraordinary capacity for knowledge developed at an early age, and may be read and reread with steady inspiration. We also recommend anew the two letters, at the close of the volume, written in English by Sidney to his younger brother, Robert, when the latter was travelling abroad. More than any documents which we recall, they serve to correct the natural impression that Elizabethan life lacked delicate instincts. The book is provided with an informing introduction, by William Aspenwall Bradley, which describes the political situation of Europe of those days. Those who have followed the growth of The Humanist's Library will heartily welcome this fifth number of the series as being well up to the standard of editing and beautiful press-work which was in the original plan.

The drawing of historical parallels is proverbially as difficult as it is fascinating, and we cannot think that Robert W. McLaughlin, in his "Washington and Lincoln" (Putnam), has been more successful than most writers who have essayed such alluring tasks. The trouble lies, of course, not in pointing out resemblances or differences, but in making comparisons that are really significant. We are unable to agree with Mr. McLaughlin that either a philosophical or a biographical study of "the central problem of constitutional government," namely, "power in its derivation, expression, and abuse," forms in the present instance the indispensable common ground; for the reason that, instead of being a distinctive problem of 1789 recurring in 1861, it is rather the primary problem of government at all times and everywhere. On such a basis, one might profitably work out historical parallels between almost any two political leaders. At the same time, Mr. McLaughlin's analysis of the conditions under which Washington and Lincoln worked, the methods they employed, their public friendships, and their qualities of mind and heart, is interesting and instructive; it may well contribute something to the appreciation of the characteristics of their administrations.

In 1905, Sir Ian Hamilton published his "Staff Officer's Scrap Book," a personal record of the Russo-Japanese war. The book had a well-deserved success, and merited a translation into German. It is now republished in slightly abridged form, and in one volume only, by Longmans, Green & Co.

For the proper understanding both of the course of Jewish religious thinking in the two centuries just preceding our era, and of some aspects of the teaching of Jesus, especially the self-designation Son of Man, the composite pseudepigraph commonly known as Ethiopic, or 1 Enoch, is admittedly of immense importance. Competent editions of this document have been published in German by Beer (1900), and in French by Martin (1906); but, without question, the best edition is the present volume, "The Book of Enoch" (Frowde), from the hand of one of the few experts in the field of Jewish apocalyptical literature, R. H. Charles. Since 1893, when he published his first edition, with an English translation, based on Dillmann's Ethiopic text, Dr. Charles has issued his own Ethiopic text, edited from twenty-three manuscripts, together with the fragmentary Greek and Latin versions (1906), and has discovered that the original language of Enoch, like that of Daniel, is both Hebrew and Aramaic, and that much of Enoch is poetical in structure. These and other findings of long-continued investigation, together with the use of six additional Ethiopic manuscripts, induce the editor to say of the present volume that it is "not so much a second edition as a new book," and that "alike in the translation and in the commentary it forms a vast advance on its predecessor."

The best of the eight chapters in the recent volume by Prof. Alexandre Moret on the "Kings and Gods of Egypt" (Putnam) is the last, on The Reading of Hieroglyphics. It gives an account of the decipherment of the picture-writing of the Egyptians, and contains considerable detail, both of the history and process. It is both full and lucid. This is a subject in which a Frenchman may justly take pride, since the major part of the credit for finding the key belongs to Jean François Champollion, a fellow countryman. The other seven chapters deal with as many subjects: the temple of Queen Hatshopsitu at Der-el-Bahri, the ancient Thebes; the religious revolution of Amenhotep IV, who attempted the introduction of a solar monotheism into Egypt to the exclusion of all other gods, and particularly of Amon; the Passion of Osiris, the earliest passion-play; the mysteries of Isis, and their adoption into the circle of Roman religious practice; the immortality of the soul, and moral retribution through the ages; some legendary travels of the Egyptians in Asia; and the Egyptian origin of many incidents and statements in the poems of Homer. These chapters give sectional pictures of Egyptian art, culture, religion, thought, and history. Essentially, there is not much new material in the volume, and some of its statements have become antiquated, on account of the more fundamental results reached by Professor Breasted in his recent lectures on "Religion and Thought in Ancient Egypt." Nevertheless, Professor Moret's works deserve a place in the popular literature of Egyptology; this in spite of the absurd appearance of the native names, transliterated according to the French system.

At a time when a career was open to talents there were many cases of men who rose from obscurity to dazzling prominence; no case, perhaps, is more extraordinary than that of the son of a poor cooper who rose to the envied position of Marshal of France and Prince of Moskowa. The steps in Ney's career, his daring success in the capture of Mannheim, his share in the wonderful concentration which resulted in the capitulation of 60,000 Austrians in the campaign about Ulm, his immortal defence of the rear column in the retreat from Russia, his desertion to Napoleon after his foolish boast that he would fetch his former master to Paris "in an iron cage," his delays and wild mistakes at Quatre Bras before Waterloo, and his noble bearing as he stood up against a wall to be shot as his penalty for treason, are all well told by A. Hilliard Atteridge, in "The Bravest of the Brave" (Brentano's). The author makes, however, no pretention to any original contribution; he draws mostly from the well-known works of Bonnal, Houssaye, and Weil, and from the usual memoirs. He has found it necessary to burden his biography with a good deal of general military history of a rather amateurish sort. He is more successful in portraying the personality of his hero than in describing the hundred military events in which Ney took a prominent part.

An admirable, succinct statement of the main facts of the advance in democracy, agriculture, industry, and social legislation which Europe has made since the French Revolution is given by F. A. Ogg in "Social Progress in Contemporary Europe" (Macmillan). He succeeds in giving a good introduction to such subjects as the English Industrial Revolution and its progress and results in the other countries of Europe, old-age pensions and sick insurance, the immense increase of population in the nineteenth century, and the progress of socialism. His treatment is topical rather than by countries, and is supported by well-grouped facts and figures. It is just the kind of book which is suitable for Chautauqua reading groups, by whom it has been already adopted, and might also be successfully used in college courses as a parallel study of economic development along with the ordinary text-books which confine themselves chiefly to political development. Each chapter is furnished with a good bibliography intended for beginners rather than for research students.

In "Short Story Writing" (Macmillan) Prof. Walter B. Pitkin presents a rare spectacle. A professional lecturer on philosophy and an occasional student of Dewey's psychology, he offers a manual for increasing the already alarming production of short prose fiction. With the well-known modesty of the man with a hobby, he vigorously insists that his is the first exposition of the real technique of the subject. In the first section, "The Art of Short Story Writing," he does indeed explain and apply a theory of "integration" which is true enough as psychology and fits in well with the current doctrine of the "short-story," properly hyphenated, but has little relevancy to what some academicians call "tales." But this technique is clearly beyond the intelligence of the persons the author has in mind in the second part, which discusses the business side of the subject. He presents calmly the commercial status of short fiction, as seen by a practical journalist. He very sensibly admonishes his aspiring readers to eschew religiously Poe, Maupassant, and other short-story classics; to give their days and nights to the study of the *Saturday Evening Post* and the *Argosy*, and to write stories as rapidly as possible and publish all that are accepted in any quarter. An unimpressionistic critic might observe that the writer's psychology has done the world a real service in making him miss the psychology of the would-be producer of penny-a-word fiction. However that may be, his style shows the coloring of his magazine diet, notably in the topsy-turvy incongruities in the manner of O. Henry that are sprinkled through even the gravest parts of his handbook.

"The American Short Story" (The Editor Company), by Dr. Elias Lieberman, has its value for the author. He is learning to write. Such high praise cannot be meted out to his attempts at investigation and criticism. The enticing sub-title of the volume is, "A Study of the Influence of Locality on Its Development." But the pages following thereupon do not indicate in what sense there has been a development of the literary *genre* in America. They do not furnish, aside from a few excerpts from previous writers on the subject, even an inkling of what the influence of locality has been on the form. Besides, the nine chapters dealing with the fiction representing different localities from old New England to new Alaska discover no traces whatsoever of study, of rumination, or cogitation. In short, the book is distinguished by a plentiful lack of ideas.

As stated in the publisher's preface, the present edition of "Illustrious Dames of the Court of the Valois Kings" (The Lamb Publishing Company) is a reprint, in less expensive form, of Katharine Prescott Wormeley's translation of Brantôme's "Vie des dames illustres," or, as the author himself called it, "Le Livre des dames." This contains, also, in the shape of a "seventh discourse," under the title of "Various Illustrious Ladies," the chapter on "The Widows" in Brantôme's companion work entitled "Les Dames galantes." To each of the longer, as well as to several of the shorter sketches, Miss Wormeley has added Sainte-Beuve's comments on the persons described, from the "Causeries du Lundi," thus rounding out and rectifying Brantôme's picturesque but partial characterizations. For the volume she has written a biographical introduction based upon the introductory essays of preceding editors, quoting at length the remarks of one of Brantôme's earliest commentators, Castelnaud, who was almost a contemporary. According to him, Pierre de Bourdeille, Abbé de Brantôme, was descended from a King of France named Marcomir and Tlloa Bourdelia, daughter of a King of England.

But though the scion of an ancient and honorable family of Périgord, Brantôme, like his father before him—of whom the *chroniqueur* tells the amusing story of his amicable and familiar relations with Pope Julius II—was a simple soldier and gentleman. He worked hard for the honors and advancements he did not obtain and felt himself a lifelong victim of destiny. It was only towards the end of his life that, by way of consolation, he composed the works through which he has become famous and which are of such value in helping us to reconstruct the spectacle of courtly manners and morals under the Valois kings. He did not publish them himself, though he freely showed his manuscripts to his friends and patrons, and even his heirs were evidently as fearful as he of causing scandal. In violation of his testamentary injunctions, they let the manuscripts lie for fifty years later in their "five volumes covered with velvet, black, tan, green, blue, and a large volume, which is that of 'The Ladies,' covered with green velvet," until, after they had found their way into the cabinets of collectors, they finally were printed in Holland. Miss Wormeley's translation, although occasionally awkward and guilty of minor inelegancies, is, on the whole, satisfactory, and succeeds in retaining something of the spirit of the original. She adds several appendices, one of which contains a literal translation of Marie Stuart's lament on her sorrows after the death of her husband, François II, "En mon triste et doux chant," and the book is embellished with photogravures of several famous paintings and portraits illustrative of the text.

Readers of Mrs. Hugh Fraser's "A Diplomatist's Wife in Many Lands" will not need to be assured that there is excellent entertainment in the supplementary volume, "Reminiscences of a Diplomatist's Wife" (Dodd, Mead). We have the familiar medley of genealogy, anecdote, personal recollection, and hearsay presented with Mrs. Fraser's usual good-natured toryism. Nobody can lead one so readily up or down a family tree, witness the sketch of the Moltkes. Reminiscences of Vienna, of her brother Marion Crawford's villa at Sorrento, and an extended sketch of diplomatic residence in Chili are the chief topics. Within equal compass it would be hard to find a keener and more enlightening account of Latin-American society. Ghost stories are not absent, among them a singularly grewsome tale of a were-wolf picked up on the Roman Campagna. It is suggested by an actual experience with a *lycanthrope* in Chili. He howled most wolflike in the street, even if he did not actually change his form before the author's expectant eyes. An interesting observation is that the inner circle of European diplomats is still obedient to the traditions of Metternich, Beaconsfield, and Bismarck. One of the best anecdotes concerns Princess Metternich, who once criticised the Empress Eugénie for smoking. A Frenchwoman protested, "And what about the Empress of Austria—she even smokes big cigars?" "Oh, nothing at all, of course," was the reply. "*My* Empress has a right to do as she thinks best in such things. But, then—she is a *real* Empress, you see!"

There is little excuse for any one remaining longer in ignorance of the countries of Central America and its adjacent islands. The Panama Canal has called forth the attention of the literary world quite as much as the scientific and mercantile world to this part of the continent. Among the best books we have noticed of the many which cover more or less carefully this territory is Stephen Bonsal's "The American Mediterranean" (Moffat, Yard). It is more comprehensive than some, taking up the northern countries of South America, the various island groups, and the mainland as far north as Mexico. Twelve appendices contain valuable statistics which will prove useful to students of these countries. There is an amazing amount of information contained in the book, which seems in most cases to be correct. "The whole-souled love and appreciation of education which is characteristic of all Mexicans and is particularly strong in the lower or less fortunate classes," may be questioned, and the statement that the Mexicans have much affinity with the Japanese is, to our mind, incorrect.

In opposition to the talk in favor of disarmament and arbitration as a possible panacea for all international difficulties, Capt. A. T. Mahan offers some historical and theoretical counter arguments in a somewhat rambling volume, entitled "Armaments and Arbitration" (Harper). The ten chapters have already appeared as magazine articles in the *North American Review* or the *Century Magazine* during 1911-12. They aim to demonstrate the inevitable and often beneficial use of force in the settlement of international questions. He thinks that arbitration cannot always be a practical or beneficial substitute for armaments in the settlement of questions in which the policies of two countries conflict, and in which there is no established rule of law. His method of argument consists largely in the discussion of international settlements which have been made by armies used either actually in war or potentially as a club—settlements which the world has now generally agreed were beneficial, but settlements in which he thinks arbitration would have been either wholly impractical or would have resulted in solutions much less satisfactory. One chapter is devoted to a refutation of some of the pacifist illusions of the author of "The Great Illusion," another to strong military arguments in favor of fortifying the approaches to the Panama Canal, and another to a labored argument to prove that Mr. Roosevelt's support of the Panama Revolution in 1903 was not "A Chapter of National Dishonor"; the main point of his thesis is that Colombia's impotence and misrule at Panama and the world's need for an undisturbed transit across the isthmus made it expedient and justifiable for the United States to support and recognize the rebelling inhabitants of Panama.

Science

A BIOLOGICAL ASPECT OF CANCER.

Cancer is a phenomenon of growth, abnormal growth to be sure, but growth nevertheless, and therefore a biological problem quite as much as medical. The cure of cancer, yet to be found, will be empirical and purely medical. The pathological effect of cancer on the organism is also a medical matter, and quite beyond the realm of a biologist. These are secondary aspects of cancer, and, biologically, are not a part of the cancer problem as a phenomenon of growth. The explanation of this growth and the nature of the causes producing it are distinct biological problems, and if they can be solved and the cause of malignant growths discovered, new avenues for experimentation in cure or prevention will be opened.

Certain tissues of the body, or, better, the cellular units of these tissues, begin to grow, until an abnormal mass of cells results; this mass is malignant or non-malignant, according to the nature of the growth and of the tissues involved. After an injury of slight character, such as an abrasion, the surrounding cells grow and replace the lost or injured parts. This is termed regeneration, and the underlying biological principles are the same as in abnormal growth or cancer. The essential difference is that regeneration is a limited growth under control, whereas malignant tumors or cancers are unlimited growths which get beyond the control or regulation of the organism. The processes of regeneration may develop into cancerous processes as is frequently seen in cancer following surgical operation.

In science, when exact knowledge of causes is inaccessible or absent, hypotheses are formulated. The value of such hypotheses depends upon the area covered in the field of observed phenomena, and if accepted as working hypotheses, they are valuable in stimulating search for ultimate causes. If, on the other hand, they are conceived in a dogmatic spirit, and if investigation is limited to the search for phenomena which fit the hypothesis, then they are not only valueless, but pernicious.

The cause of cancer is not known; but many different working hypotheses, some valuable, some pernicious, have been formulated. The valuable ones have stimulated research and have been most useful in focussing searchlights from every angle on the cancer problems. Of the pernicious type none is more harmful than the pessimistic view that the cause of cancer will be known only when the secret of life is revealed. A divergent branch from a stream may be traced back to the boulder which divides the stream, without the need of chemical analysis of the water, or search for the source of the stream. So with cancer the cause of the divergent process of growth, like the boulder, may be and will be discovered without the need of solving the riddle of life.

It is not my purpose here to discuss or criticise in detail the various hypotheses of the cause of cancer. The Cohnheim theory of dormant embryonic tissue; the parasite theory; Ribbert's theory of tissue tension; theories of malnutrition and disordered vital functions, and a score of others, all have value as working hypotheses and are more or less supported by observed facts. The general criticism is that all current hypotheses are either too broad to be useful, as is the case with theories based on malnutrition or deranged metabolism, or else they do not cover a sufficiently large field of observed facts.

A biologically satisfactory working hypothesis of the cause of cancer must explain not only the different types of malignant and non-malignant tumors, but must also account for the phenomena of regeneration. We find it difficult to believe that there is a "self-perfecting" principle in living matter which insists upon the production of the normal type; we think it more probable that some stimulant to growth is produced through the abnormal condition of the injured part. We formerly thought that the presence of food in the intestine stimulated the pancreas to secrete, but we now know that the acid food irritates the lining cells of the intestine, causing them to secrete a subtle chemical body called secretin, belonging to a group known as hormones. This hormone, or enzyme, is carried by the blood to the pancreas where it stimulates the pancreas cells to activity. Knowledge of these chemically elusive bodies, termed enzymes, is still fragmentary and vague, but enough is known to intimate that they will play a most important rôle in the biology of the future.

Many vegetable galls caused by the presence of insects or thread worms are due to the abnormal development of the plant cells. Something derived from the sting of the maternal insect, or as an exudation from the developing larva or worm, has stimulated the cells of the plant to unwonted division. In some cases the stimulants have been determined as enzymes or, specifically, nucleo-proteids or products of the chemical disintegration of protoplasm. Here is a biological fact that may have some bearing on the problem of the cause of cancer, viz., a chemical substance formed from disintegrating protoplasm stimulating adjacent normal cells to abnormal division. Regeneration following injury may be interpreted as due to stimulants in a similar way, the injured cells and tissues undergoing chemical disintegration into amino acids and their derivatives and purin bases and their derivatives, some of these or all acting as stimulants to the adjacent normal cells and causing them to proliferate and to develop under control and regulation into the norm.

This, in brief, is the underlying principle in a recent hypothesis of the cause of cancer advanced last May by Dr. Bullock, Dr. Rohdenburg, and myself. We believe that it is the most widely applicable of all the existing theories of cancer. It offers a common biological interpretation for the manifold varieties of tumor growth and brings into harmony the facts observed by advocates of the different hypotheses of tumor origin. Chronic irritation produced by injury, by X-rays, by parasites of many kinds, by betel-nut chewing, by hot rice eating, by smoking, by mammary or uterine irritations, etc., all leading to injury and death of cells, and this to the disintegration or autolysis of their protoplasm, produces the chemical substances or enzymes responsible for the stimulated division energy of adjacent cells. Normal regeneration following the initial injury becomes chronic regeneration or a tumorous growth with continued irritation; and, once started, a tumor grows with increasing momentum by virtue of the chemical substances derived from its own degenerating cells. Oertel asserts that he traced the development of a liver cancer from degenerating liver cells. A mouse tumor transplanted into normal mice, grows, in a varying percentage of cases, into fatal cancers in the otherwise normal mice. With every transplantation, degenerating cells are transplanted with the living cells, and the transplant thus carries with it its own stimulants for cell division. The mouse furnishes food and oxygen for the growing tumor, and absorbs more and more of the poisonous products of degeneration until, overcome by cachexia or general poisoning, it succumbs.

Amino acids and purin derivatives are produced by successive oxidations of the nucleo-proteids making up protoplasm. Hence, in active, malignant tumors, some parts of which are degenerating, oxidation processes are more active than in normal tissue cells, which accounts for the greater avidity for oxygen on the part of cancer cells as contrasted with normal cells a discovery made by Ehrlich and Wassermann last year.

GARY N. CALKINS

The Sarah Berliner Research Fellowship for Women, of $1,000, is offered now every year. The successful candidate is the most promising among those who present themselves in the field of physics, chemistry, and biology, some preference being felt by the committee for these subjects in the order named. The chairman of the committee is Mrs. Christine Ladd Franklin, No. 527 Cathedral Parkway, New York.

from whom further information may be obtained.

The Naples Table Association for Promoting Laboratory Research by Women offers this year, for the sixth time, a prize of $1,000 for the best thesis written by a woman on a scientific subject. The thesis must embody new observations and new conclusions based on independent laboratory research in biological, chemical, or physical science. This prize has been named the Ellen Richards Research Prize, in honor of Mrs. Richards. The Association also maintains a research table for qualified women students at the Zoölogical Station at Naples. The chairman of the committee is Dr. Lilian Welsh, Goucher College, Baltimore. The prize is offered every two years.

Dr. William Henry Watson, ex-regent of the University of the State of New York, is dead at his home in Utica. He was a native of Providence, where he was born in 1829. He graduated from Brown University in 1852, and was one of the founders of the New York State Homœopathic Asylum for the Insane, at Middletown. In 1880 he was surgeon-general of New York. Among his publications are many contributions to medical journals.

Dr. Lewis Swift, astronomer, died on Sunday in Marathon, N. Y., aged ninety-two. He had discovered 1,300 nebulæ and eighteen comets. Several years ago he was stricken blind, and forced to give up his work. Dr. Swift came into prominence in 1862, when he discovered the comet which took his name. He went to Rochester, where he set up an observatory on Duff's cider-mill. Though in the hardware business at the time, he discovered a comet each year from 1877 to 1882. For three successive years the Imperial Academy of Vienna awarded him its medal for contributing most to astronomy. He was the author of "Simple Lessons in Astronomy."

Drama and Music

Ono of tho most successful pieces of the present season in London is the "Jelfs" of Horace Annesley Vachell. Judged by the printed copy (Doran), it is not easy to account for the favorable critical comment it has procured from some generally fastidious judges. Considered as a whole, it belongs to a very commou order of semi-sensational drama with a conventional, if fairly interesting, story and personages who, although they have long been accepted as actualities in the theatre, are but faint reflections of their living prototypes. For categorical purposes it is enough to say that the hero is a young rancher who, suddenly finding himself at the head of an old-established conservative private bank in London, proceeds to use it as a means of winning a fashionable bride and cutting a figure in the ranks of the idle rich. After recklessly courting ruin by identifying himself with all manner of financial reprobates, he receives the support of the Bank of England and triumphs in every way. Manifestly tbe play owes most of the notice it has obtained to a scene between the hero, his betrothed, and a secret lover of the latter, in which the question of marriage and the mutual responsibilities of the contracting parties are discussed with frankness and a large measure of common sense. The situation is indisputably fresh, if not very probable, but, of course, the subject is not one upon which it is possible to say much that is new.

"Pearls" is the name of a new sketch by Stanley Houghton, in which Arthur Bourchier and Violet Vanbrugh are appearing.

Macdonald Hastings, one of England's rising young dramatists, seems to be wasting his ability in the invention of morbid and unnatural situations. Thus in "The Tide," which has just been produced in London, he imagines a reckless young girl, who becomes a mother without any knowledge of the name or identity of the father. Of the child she sees nothing for seventeen years, when she discovers her at a fashionable watering place, and becomes her rival in the affections of a gay young officer. In the end, however, she marries the physician who had helped her in the first place to recover her lost daughter. The piece is said to be very cleverly written in places, but it is not likely that a fiction so improbable and disagreeable could be redeemed by mere literary excellence.

Sir John Hare delivered an optimistic speech on the British drama at the Actors' Benevolent Fund dinner. He said that for nearly fifty years he had been an actor on the London stage, for twenty-five years a London manager, and, in his opinion, at no time during that long span of years had the stage in England been in so healthy a condition as regards the ability and promise of the younger men and women who acted on it and the literary gifts of those who wrote for it. The time had passed when the French stage was held up as a model, and he contended that Paris itself could not boast of six theatres where better acting and more perfect ensemble could be shown than at the St. James's, His Majesty's, Royalty, Wyndham's, the New, and the Savoy at the present moment. Compare the condition of things with the early sixties, with the turgid melodrama and its indifferent translations of indifferent French plays, only relieved by the genius of that pioneer of the new and natural school, Tom Robertson. Compare it with the early pre-Victorian period and tbe sufferings of Macready, who recorded in his diary that he went from each performance "weary and incapacitated in body, sunk and languid in mind, compelled to be a party to the blunders, the ignorance, and wanton buffoonery which degrade the poor art I am laboring in." We live in happier times, and had Macready been living now, he would have been proud, not asbamed, of the profession to which he belonged.

English newspapers bring word of the deatb of George Rignold, the English actor, whose Henry V, as performed in Booth's Theatre, is still fresh in the memory of older playgoers. It was a mightily effective impersonation to the eye—although it had not much art or brains behind it. He appeared here also as Claude Melnotte, William in "Black-eyed Susan," and other characters, but his work in these had no distinction and made no deep public impression. But he was by no means a bad actor. Born at Leicester, in England, he was first connected with the Theatres Royal at Bath and Bristol, where in 1863 he played a long series of Shakespearean characters. In 1870 he made bis first London success in "'Twixt Axe and Crown." Having migrated to the Queen's Theatre, he played Caliban in "The Tempest," Posthumus in "Cymbeline," Romeo, and Cromwell in the play of tbat name, among other parts.

Some years ago the French Government undertook to abolish military bands; whereupon both the army and the public protested so vigorously that the bands were left in peace. Lately, in England, the abolishment of military bands has been advocated. Sir Alexander Mackenzie has come to the rescue by pleading that England "owed a great deal more of the immense improvement in the public taste and understanding of the art all over the country to the military bands than had ever been acknowledged. It would be nothing short of a disaster if anything were ever to happen to disturb or check the splendid work regimental bands were doing." Lord Roberts has also spoken of the exhilarating effect of band music, as witnessed by him in war time, as in peace.

Leon Rains, the eminent bass, has arrived in this country to begin a first season of concert and recital work. Mr. Rains brought with him Roland Bocquet, tbe Anglo-American composer, who will act as accompanist. The first New York recital will be given at Æolian Hall January 11. The first orchestral appearance will be made at the New York Philharmonic Orchestra's special festival concert, which they will give for their subscribers only, on January 29. Leon Rains, who enjoys great distinction abroad, will, at his recital next Saturday evening, sing Schubert's "Wanderer" and "Doppelgänger," and songs by Brahms, Wolf, Strauss, and others.

Hans Richter's decision not to conduct any more music seems irrevocable. When he was invited last summer by Schulz-Curtius to conduct the gigantic concert which is to be given in London on May 22, Wagner's hundredth birthday, he wrote: "My dear friend Schulz-Curtius: The ancient Greeks burued their ships in order to make a return impossible; so, after the 'Meistersinger' performances at Bayreuth, I shall burn all my bâtons. With best greetings, your old Hans."

The musical critic of the *Frankfurter Zeitung* having passed some very severe strictures on a concert given under Mengelberg, the leading musical organization of Frankfort, the Museums-Gesellschaft, demanded an apology. This being declined, the critic was not admitted to subsequent concerts of that society. To assert their critical independence, all the Frankfort newspapers thereupon declared a boycott on the concerts of the Museums-Gesellschaft.

Richard Wagner once wrote that he could think of the violin only in the plural, and a distinguished Boston critic used to express his belief that violin concertos were doomed to join the now obsolete concertos for flute, oboe, and other orchestral instruments, which were often seen on programmes until about a quarter of a cen-

tury ago. Of the fulfilment of this prophecy there are no signs at present. Last Sunday, Efrem Zimbalist played the Mendelssohn concerto with the Philharmonic Orchestra, while the New York Symphony Orchestra's soloist the same afternoon was Mischa Elman. Both these artists enjoy great popularity, and they play concertos not only with all the orchestras in the land but often at their recitals with piano accompaniment. They are only two of half a dozen or more superior violinists who have made New York their centre for excursions this season. Albert Spalding was the first. He started the concert season in October, and then went to Europe. Another distinguished American violinist, Maud Powell, will be heard later. Spalding was followed by Elman and Zimbalist. Then came Louis Persinger, and finally, by way of climax, the greatest two of them all, than whom perhaps no greater have lived—Eugène Ysaye and Fritz Kreisler. Having been brought over on exclusive contract by the Boston Symphony Orchestra, Mr. Kreisler played only concertos, the one exception being a recital he gave to aid the Music School Settlement. He returns next season for a recital tour. Ysaye is an older man, but his tone and his technique are as young as ever, and his popularity is unbounded. He, too, has been heard, as a matter of course, at Sunday concerts, of which there are now usually five, six, or seven. A few years ago it was an unusual thing to have more than one.

Art

Jade: A Study in Chinese Archæology and Religion. By Berthold Laufer. Chicago: Field Museum of Natural History. Publication 154; Anthropological Series, Vol. X.

Of all the precious minerals, none possesses more historic interest than do nephrite and jadeite, commonly combined under the single denomination jade. From prehistoric times they have attracted the eye of man, and their qualities of color and composition have rendered them favorite materials for ornamental use. And, over and above this merely artistic value, these substances were regarded in early times, and are still regarded in certain Eastern lands, as possessing a mysterious potency, a talismanic virtue, and also as exercising a singularly effective therapeutic action. Indeed, both the physical and the spiritual welfare of human beings were supposed to be furthered by the ownership of an object made of nephrite or jadeite, more especially when it had been worked into a form symbolizing certain natural forces.

Much has already been written on this subject, and we need hardly call attention to the monumental work describing the unrivalled Heber Bishop collection, "Investigations and Studies in Jade," privately printed in 1906, a work registering the results of a careful study of these fascinating minerals, as well from a mineralogical standpoint as from an historical one. The present book by Dr. Laufer not only completes and amplifies the part devoted to Chinese jade carvings, but offers much new and valuable information in regard to them.

Dr. Laufer was well fitted to prepare a study on this intricate subject. He was born in Cologne, in 1874, and received his degree of doctor of philosophy in Berlin. He took part in the Jesup Expedition to Siberia, in 1898-99, and the East Asiatic Expedition to China, 1901-1904. From 1904 to 1908 he was assistant curator of the ethnological department of the American Museum of Natural History; from 1905 to 1908, lecturer on anthropology at Columbia University, and from 1905 to 1908 assistant curator in charge of the Asiatic department of the Field Museum in Chicago. His trip for the Field Museum was a most successful one. The present work presents the fruits of years of travel and study.

While Dr. Laufer freely acknowledges that the great Bishop Collection of Jade, in the Metropolitan Museum of Art in New York, is the most extensive collection in existence of such objects, yet he thinks that the jades gathered by him in Si-yan-fu, Shensi Province, for the Field Museum, while conducting the Mrs. T. B. Blackstone Expedition to China and Tibet, from 1908 to 1910, include a number of interesting types of jade amulets of the dead not represented in the Bishop collection.

The special significance of the various jade ornaments is illustrated in the case of the girdle-pendants, which were not merely ornamental, but were thought to emit musical sounds as they struck together when the wearer was in motion. In the Li Ki it is said that gentlemen in olden times always wore these suspended jade ornaments, and that, while those on the right side emitted the notes *Chih* and *Kio*, the fourth and third notes of the Chinese scale, the jade objects on the left side gave forth the first and fifth notes, *Kung* and *Yü*. The melodious intermingling of these notes was believed to banish all depressed thoughts from the soul and to instil virtue into the wearer's heart. The color of these jades was strictly determined by the rank of the wearer—white jade being reserved exclusively for the Emperor's wear; jade of a green hue, like the green of a wooded mountain, belonging to princes of the first and second rank; water-blue jade to prefects. To the heir-apparent a special jade was also assigned, while plain officials had to comfort themselves with inferior greenish minerals, probably a variety of prehnite, or bowenite, a serpentine. Moreover, these girdle ornaments, according to a first-century writer, symbolized by their shape the occupation of the wearer—farmers wearing ornaments representing plough-handles or shares, and workmen those figuring axes or adzes. An almost endless variety of forms for these girdle ornaments were invented by the Chinese in the course of centuries—fish-forms, dragon-forms, various animal-forms, etc., each having many symbolical meanings. Certain of them were love-tokens given by husbands to their wives, and these were sometimes interred with the wife's body as protecting amulets. As Dr. Laufer writes: "The relations of a husband and wife did not cease at the moment of death; they continued to be united even beyond the grave, and expected to resume their marital relations in a future life."

In regard to the jade objects buried with the dead, denominated by Dr. Bushell "tomb-jades," the author calls attention to what he believes to be a misunderstanding of the Chinese designation *han yü*, interpreted to mean "jade placed in the mouth (of a corpse)." He asserts that this name always means either jade of the Han period or jade of a kind particularly used in this period, and he does not believe that there is a single, large comprehensive class of "tomb-jades," but several widely distinguished groups of jade objects found in Chinese tombs.

Much valuable information is given touching the hammer-shaped tablets of jade. Originally, in China, as in many other parts of the world, this shape was brought into connection with solar worship. The Chou emperors (1122-249 B. C.) are said to have worshipped the sun by holding in their hands hammer-shaped jade symbols of sovereignty. The hammer form was so conventionalized in process of time that it is now often difficult to determine whether a given ceremonial tablet belongs to this category or to some other.

Regarding the source of much of the old Chinese jade, Dr. Laufer, in accord with others who have treated the matter, admits that it probably came from ancient Chinese quarries, all traces of which have now been lost. He states that Chinese antiquarians fully agree with the view that the jades of the Chou and Han dynasties came from mines in Shensi Province, and points to Lan-t'ien and Feng-siang-fu as the chief ancient mines, although we know that at present neither jade nor jadeite is found within the confines of China proper.

The so-called *Nephritfrage* is treated briefly in the introduction. The discovery of masses of jade *in situ* in various parts of Europe clearly indicates the source of much of the prehistoric jade found in European countries, and chemical analysis has confirmed this, notably the 4,700-pound mass of nephrite jade found at Jordansmuhl, Silesia, by Dr. Kunz in 1899, now in a Heber R. Bishop collection exhibited at the American Museum of Natural History. Dr. Laufer, however, inclines to the belief

that the first worked jades were probably acquired from an Asiatic source, and furnished the inducement to seek for a home supply of the material.

Although it was not Dr. Laufer's aim to treat of the mineralogical characteristics of nephrite or jadeite, but to confine himself to the cultural and religious ideas and concepts associated with them, and largely governing their use for ornamental purposes, it is somewhat to be regretted that he did not have analyses made of some of the specimens, so as more definitely to determine their source and affinities. However, collectors are justified in hesitating to trust their jades to the tender mercies of the analyst.

The numerous, well-chosen, and excellently executed illustrations, 68 plates (six of them in color) and 204 text-figures, display all the principal forms of Chinese carved jade from historic times, and serve as invaluable aids to the student, making this work an eminently useful guide-book for those seeking information upon this important and difficult subject.

Two art books will be brought out shortly by the Putnams—"The Technique of Painting," by C. Moreau-Vauthier, and "The Childhood of Art," by H. G. Spearing.

The energy and consistency of Romain Rolland's "Life of Michelangelo" (Dutton) have brought it promptly the honors of translation. The work, saving bad transcription of Italian names, is tolerably done by Frederic Lees. That Michelangelo's life was one long tragic maladjustment between great genius and a hesitating will, is M. Rolland's thesis. It is ably supported from the sonnets and the well-known facts of the master's life. The style is emphatic, nervous, at times torrential—in striking and refreshing contrast to the usually placid tone of French monographs on art. Many will feel that M. Rolland forces the note of tragedy. At least, he deserves the credit for a reading that is coherent, suggestive, and masterly.

Louis B. Akin, an artist who received the commission, two years ago, to do mural paintings of Indian life for the American Museum of Natural History, died a week ago in Flagstaff, Ariz. He had just completed the work, which includes a sixty-foot panel. Born in 1870, he first received public recognition in 1907, after an exhibition in Chicago of a year's work among the Hopi Indians.

Finance

TWO IMPORTANT DECISIONS.

In its weekly budget of decisions, handed down by the United States Supreme Court on Monday, there were two of great importance. The ruling of the Court on the proposed plan for disposing of Southern Pacific Railway stock in the Union Pacific's treasury, and its decision that the Anti-Trust law, in its criminal provisions, necessarily applies to an attempt to corner commodities, open up far-reaching possibilities. It is more clear in the case of the corner decision, than in that of the Union Pacific merger, what the broader consequences of Monday's decree will be.

In the Union Pacific matter, counsel had proposed that the company, in divesting itself of its Southern Pacific holdings as previously ordered by the Court, should be permitted to allot or sell that Southern Pacific stock pro rata to Union Pacific shareholders. In defending this method of compliance with the Court's decree, argument naturally rested on the Supreme Court's own approval of the pro-rata distribution, as applied in the dissolution of the Northern Securities and Standard Oil holding companies. In the first of these dissolutions, the scheme of distributing the assets pro rata to the holding company's shareholders was contested, carried up to the Supreme Court, and upheld by that Court in 1905; in the second of them, the Court itself, in its original decision, recognized that method of disintegration as proper.

In rejecting the application of a similar plan to the Harriman merger, the Court draws distinction between a holding company which is required to part with all its holdings of stock in two or more competing corporations, and a railway company which has merely bought control of one competitor through purchase of its stock. From the language of Monday's opinion it appears that if, for example, a separate holding company had been organized to hold the stock of both Union and Southern Pacific, and if that holding company were ordered dissolved, the assets might be distributed pro rata; but that the same expedient is inadmissible where the chief party to the suit is a powerful corporation which continues in the field.

There is obviously a line of distinction here; though it may be that the Court has surrounded with a good many difficulties its future adjudication of similar cases. It is true, last Monday's opinion positively restates the Court's position that "each case under the Sherman Act must stand on its own facts," and there is also to be remembered the Court's declaration, in the Standard Oil opinion, that "one of the fundamental purposes of the statute is to protect, not to destroy, rights of property." But it is at least conceivable that rights of property may be impaired, though not destroyed, through departure from the pro-rata rule. That would inevitably be so in a case where forced public sale of such holdings, with the parties most interested eliminated from the bidding, was the only alternative recourse. The Union Pacific has no such prospect before it, since not only its own shareholders, but holders of the 54 per cent. of Southern Pacific stock which Union Pacific does not own, are interested in obtaining a fair value on the sale. But how the same rule would operate, in a case where all the stock of one railway were held by another, it is not altogether easy to foresee.

The Supreme Court's decision regarding corners in commodities, under the Anti-Trust law, is entirely plain, and the scope of its future application is not at all difficult to foresee. The defendants in this case had combined in 1910, after a disastrous shortage in the American cotton crop, to obtain control of the cotton actually available on the market, in quantity sufficient to make them masters of the price. The purpose and method of this conspiracy were perfectly well known on the cotton exchanges. It had the result, first, of advancing the price of cotton from 13½ cents a pound in November, 1909, to the utterly preposterous figure of 20 cents a pound in August, 1910—a price never reached, outside of paper inflation days, since 1836; and, next, through the virtual blockading of supplies except at the prohibitive corner prices, of emphasizing the world-wide depression in the cotton-spinning trade. The operations of Messrs. Patten, Brown, Haynes, and Scales did not primarily cause the troubles of the trade, but they unquestionably aggravated the situation. To put the matter in another way, a vicious and brutal attempt was made to extort speculative blood-money from the misfortunes and necessities of the cotton consumer in a trying season.

The Court does not pass upon the accuracy of the facts alleged; it merely gives its judgment as to the applicability of the Sherman Act, assuming the facts to have been correctly stated. The lower court had ruled that the corner manipulators were not engaged in interstate trade; that corners stimulate instead of restraining competition, and that any effect of a corner of interstate trade could be only indirect. But Monday's decision takes ground very positively that cotton as a commodity was cornered, and that cotton is a subject of interstate trade; replies that even if corners stimulate competition, they do so through methods as obnoxious as the suppression of competition; and concludes by reaffirming the principle that people "engaging in a conspiracy which necessarily and directly produces the result which the statute is designed to prevent," are properly "chargeable with intending that result."

It is difficult to see how any future attempt to corner a commodity market can escape the scope of this decision. As the Government's Solicitor-General points out, such undertakings will hereafter be subject to restraint, in their inception, through Federal injunction. The speculator who should try again the

experiment of 1910 in the cotton market, or of 1909 in the wheat market—or, we may add, of 1906 in the copper market—would have to be an unusually bold and reckless adventurer.

Gohdes and Buschek's Sprach- und Lesebuch

By W. H. GOHDES, Head of Department of Modern Languages in the Horace Mann High School, New York City, and H. A. BUSCHEK, Head of German Department in the Brooklyn Polytechnic Preparatory School. x+370 pp. 12mo. $1.15.

This book embodies the direct method in a form adapted to American beginners and includes only matter which has been repeatedly tested with pupils of high school age. The introductory material of each lesson consists of a number of sentences illustrating directly and concretely some grammatical point. This is followed by a reading selection and by simple and varied exercises, based upon the introductory sentences and the reading. Review lessons are provided at regular intervals.

English sentences for translation are appended to the more advanced lessons. The book includes also a concise systematic grammar in English for reference, and a series of special, systematic vocabularies for each of the first sixteen lessons, besides the usual German-English and English-German vocabularies.

NEW MACMILLAN BOOKS OF EXCEPTIONAL IMPORTANCE

TRAVEL

SOUTH AMERICA OBSERVATIONS AND IMPRESSIONS

By the Rt. Hon. James Bryce, British Ambassador

"One of the most fascinating books of travel in our language."—*London Daily Mail.* "Of profound interest to the whole of South America."—*State of St. Paul, Brazil.*

Fifth Edition Now Ready. $2.50 *net.*

BIOGRAPHY

THE WRITINGS OF JOHN QUINCY ADAMS

Edited by Worthington C. Ford

A collection of permanent historical value to students of our early democracy and of the social customs of the period.

Vol I. Ready Jan. 22. $3.50 *net.*

COMMERCE

INDUSTRIAL COMBINATIONS AND TRUSTS

Edited by William S. Stevens

Traces the historical development of the Trust movement in the United States and discusses the problems emanating therefrom. *Ready.* $2.25 *net.*

HISTORY

LECTURES ON THE AMERICAN CIVIL WAR

Delivered at Oxford by James Ford Rhodes

Critical studies of the great men and great events of the troubled period of our Civil War.

Ready Jan. 29. $1.75 *net.*

EDUCATION

TEACHING IN SCHOOL AND COLLEGE

By William Lyon Phelps

This book is intensely personal and confessional, abounding in reminiscences of the class-room. It is a discussion of the *art of teaching,* not of the science of pedagogy, and contains no technical terms. *Ready.* $1.00 *net.*

ECONOMICS

The ECONOMIC BEGINNINGS OF THE FAR WEST

By Katherine Coman

Author of "The Industrial History of the United States."

Describes the dramatic struggle for commercial supremacy among the races west of the Mississippi.

Two volumes. Ready. $4.00 *net.*

FICTION

THE CROCK OF GOLD By James Stephens

Author of "Insurrections," "The Hill of Vision," etc.

A remarkable book which is more of a fantasy with a beautiful moral than an ordinary novel. "Not another book like this in English literature."—*London Standard.* "Crammed full of life and beauty."—*London Times.* "A fairy fantasy, humorous, satirical, idealistic, and very beautiful."—*London Punch.* "A wise, beautiful and humorous book. Sterne—given the soul of a poet—might have produced 'The Crock of Gold.'"—*The Pall Mall Gazette.*

Just Published. $1.25 *net.*

JUST PUBLISHED
HISTORY OF MODERN ELEMENTARY EDUCATION
By **Samuel Chester Parker**, Dean of the College of Education, The University of Chicago.
8vo, cloth, xxiv+505 pages, illustrated.
$1.50
This carefully prepared "History of Modern Elementary Education" deals primarily with institutional development. It emphasizes typical movements, institutions and individuals, thus showing the student elementary school problems from the Middle Ages to the present time.
Enough material for one hundred hours of class work is provided in this book. If a longer course is desired, the text may be supplemented with Rousseau's "Emile," Pestalozzi's "Leonard and Gertrude," and Spencer's "Education."
The publishers present this book with the firm belief that it is the best one that has yet been written for the student of education and the prospective teacher.

THE COTTON MANUFACTURING INDUSTRY IN THE UNITED STATES
By M. T. COPELAND
Instructor in Commercial Organization in Harvard University
HARVARD ECONOMIC STUDIES, Vol. VIII
400 pages, $2.00.
The aim of this study is to describe the position of the American cotton manufacturing industry, including the spinning, weaving, finishing, and knitting branches. The book also includes a comparison of the natural advantages, equipment, labor cost, and industrial and commercial organization of the cotton industry in Europe and America at the present time.
The author has made an exhaustive search through published materials, and has obtained first-hand information from numerous manufacturers, business men, and labor leaders in America, England, Germany, France, and Switzerland.

IMPORTANT BOOKS

HEREDITY AND EUGENICS. By JOHN M. COULTER, WILLIAM E. CASTLE, EDWARD M. EAST, WILLIAM L. TOWER, and CHARLES B. DAVENPORT.

A book intended to present the recent developments of knowledge in reference to evolution, heredity, and eugenics, and related subjects. Five of the leading investigators in this field have collaborated in its production, and the result is a work which will appeal to the general public, because it presents the latest conclusions in a popular and extremely interesting manner. The authors are eminently fitted to discuss that branch of the subject covered by their respective contributions to the work.

312 *pages, 8vo, cloth; postpaid* $2.70.

THE MECHANISTIC CONCEPTION OF LIFE. Biological Essays by JACQUÈS LOEB, Head of the Department of Experimental Biology, Rockefeller Institute for Medical Research.

This volume consists of nine chapters written on different occasions, and mostly in response to requests for a popular presentation of the results of the author's investigations. The layman is led into the wonderful realms of biology, where he is made to see with understanding eyes things which heretofore have had no meaning for him, or about which he has at best speculated and thought with but partial comprehension.

238 *pages, 12mo, cloth; postpaid* $1.65.

AGRICULTURAL EDUCATION in the PUBLIC SCHOOLS. By BENJAMIN M. DAVIS.

In this book Professor Benjamin M. Davis has attacked the problem of the co-ordination of all the agencies now at work on the problem of agricultural education. He has performed a service which will be appreciated by all who have any large knowledge of the problem and of the difficulties which the movement encounters. He has made an effort to canvass the whole field and to give a detailed exposition of the forces employed in building up a rational course of agricultural education. He has presented more fully than anyone else the materials which define the problem and which make it possible for the teacher to meet it intelligently. The annotated bibliography at the end of the book will do much to make the best material available for anyone desiring to get hold of this material through independent study. The book serves, therefore, as a general introduction to the study of agricultural education.

170 *pages, 8vo, cloth; postpaid,* $1.12.

The Masters of Modern French Criticism

By IRVING BABBITT

Studies the main trend of nineteenth-century thought as revealed in the works of some of its most significant personalities—especially Madame de Staël, Joubert, Chateaubriand, Sainte-Beuve, Taine, Renan, Scherer, and Brunetière.

"Too frequently books about books, about the writers of books, and about the critics of books, make rather dull and heavy reading. This is not true in the case of 'The Masters of Modern French Criticism.' The work, from first to last, has life and strength as well as insight and justice, and may be called —without exaggeration — a very entertaining as well as instructive survey of the intellectual life of France during the nineteenth century."—*Chicago Inter Ocean.*

MITCHELL KENNERLEY'S CRITICAL BIOGRAPHIES

Each volume, octavo, uniform binding, cloth gilt, portrait-frontispiece in photogravure, $2.50 net

GEORGE GISSING — By Frank Swinnerton

"It is difficult to criticise good criticism, and for a long time I have read no criticism in English so distinguished and admirable as Mr. Frank Swinnerton's study of George Gissing. It is a model for such monographs. Mr. Swinnerton has gathered together and arranged everything that was available and everything that needed to be known about this painfully interesting personality; he has read and analyzed every scrap of his work with a patience and industry altogether scientific and a power and understanding altogether his own. The result is an illuminating interpretation of the man whose weakness and distinction are given with an equal penetration in Mr. Rothenstein's frontispiece. Mr. Swinnerton's book is the picture of a man seen through his mind, as Mr. Rothenstein's drawing is a picture seen through the body and its gestures. I see again as I read this scholarly, intellectual, unhappy, weakly dignified and intensely pathetic being as I knew him in his life! I find little in Mr. Swinnerton's estimates from which I can dissent, and nothing to which I can object."—*Mr. H. G. Wells in New York Times Review.*

OSCAR WILDE — By Arthur Ransome

"His diction is a delight, and any one with a predisposition to Wilde will probably find no better medium through which to study him."—*Chicago Record-Herald.*

THOMAS LOVE PEACOCK — By A. Martin Freeman

"The work is evidently the product of critical ability and sane judgment. Mr. Freeman's style, clear and accurate, with occasionally a happy phrase, makes the book distinctly readable and interesting."—*Yale Review.*

EDGAR ALLAN POE — By Arthur Ransome

"It is not a slighting of the critical services rendered by the many writers, from Baudelaire to Professor Woodberry, to say that this book practically supersedes everything written on the subject before, and will, if appreciated at its proper worth, put the criticism of Poe on a new basis."—*Chicago Evening Post.*

ALGERNON CHARLES SWINBURNE — By Edward Thomas

"In many respects the most important study of Swinburne's character and poetry that has appeared. Contains much careful and illuminating analysis."—*New York Times.*

THOMAS HARDY — By Lascelles Abercrombie

"Certainly Mr. Abercrombie's fine study will assist the genius of Thomas Hardy to its proper appreciation. It is entirely worthy of the attention it will everywhere receive as the first complete attempt to this end."—*New York Times Review.*

J. M. SYNGE — By P. P. Howe

"It is a very able and discerning introduction to the greatest genius of the Celtic Renaissance."—*North American Review.*

WILLIAM MORRIS — By John Drinkwater

MITCHELL KENNERLEY, Publisher THE FORUM, NEW YORK

The Nation

NEW YORK, THURSDAY, JANUARY 16, 1913.

The Week

The decisive vote of the Senate, finding Judge Archbald guilty on five of the thirteen articles of impeachment, will almost surely be looked back upon in coming years as a landmark. The removal of the impeached judge, with his disqualification ever again to hold an office of honor or trust under the United States, serves at once as a salutary warning, a notification that the ancient remedies of the Constitution have not lost their virtue, and a revelation that the people are aroused and vigilant as regards anything that may stain the purity of the judiciary. Nor can Judge Archbald complain that he did not have a fair trial. Ample time was allowed him, and he was ably defended. His lawyers addressed themselves to the evidence, and were able to break down some of the charges, but their chief dependence was, confessedly, a narrow interpretation of the clause of the Constitution governing the impeachment of judges. No one accused Judge Archbald of any crime for which he could be punished in a court of justice. There was no direct charge of bribery, or the indirect sale of decisions. The only legal question was whether the conduct of which he was shown to have been guilty came under the general head of "misdemeanors," or of a breach of that "good behavior" upon which judicial tenure depends, in such a way that the Senate could properly remove him from the bench. Any one who has read the arguments of counsel on both sides must be aware that the issue is something more than technical. Hereafter it will never be doubted that the Senate has power to impeach a judge against whom no indictable offence has been proved. It will be understood, in future, that there are certain things which the Senate will hold to be "misdemeanors" in a judge, sufficient to warrant his removal from office, even if he could not be criminally prosecuted for them.

It is commonly said in Washington that Judge Archbald could not have been impeached ten years ago. The acquittal of Judge Swayne, in 1905, is pointed to as proof that there has been a great change, and that the fear of God has been put into the Senate. We do not think so meanly of that body. The case against Judge Swayne was incomparably weaker than that against Judge Archbald. No doubt some effect must be conceded to the ardent advocates of the recall of judges. Such agitations start upon a mistaken theory and go wide of the mark, yet they sometimes help to bring about indirectly something better than their direct aim. One reason, we heard all along, why we must give to people power to recall their judges is that removal by impeachment is virtually impossible. Senator Owen, in the *Yale Law Journal* for last June, declared that "impeachment is wholly inadequate for practical purposes." Yet within seven months he was voting "guilty" in an impeachment proceeding, the results of which it would be hard to exaggerate "for practical purposes." For it has written large before the country both the high and solemn conception of the judge's duty and the adequate vigor of the remedy for judicial delinquency which our fathers handed down to us.

"This Committee cannot legislate on your fears," Chairman Underwood told one timid manufacturer who spoke of the dangers involved in revising the particular tariff schedule he happens to be interested in. It is a phrase which illumines many a dark corner in the intricate structure of our tariff policy. Protectionism was built up largely on fear, fear of what would happen to our industries if we were not saved from foreign competition. It has been maintained largely on fear, fear for the loss of his job implanted in the workingman, fear for the loss of his prosperity implanted in the business man, fear for the loss of his share of the Government's bounty implanted in the heart of the legislator who would not go into the protective log-rolling and pork-barrel game. And now that the mind of the country is so thoroughly made up as to the necessity of tariff revision, there are still men to bring forward the fear of something terrible that is bound to happen if a sacrilegious hand is laid on the sanctified structure.

Prof. Emory R. Johnson who, as Special Commissioner on Traffic and Tolls for the Panama Canal, is recognized as an authority on the subject, made an address on Wednesday of last week before the Western Society of Engineers at Chicago in which he strongly opposed the exemption of coastwise vessels from tolls. He based his argument purely on commercial grounds. The question of what we are bound to do under the Hay-Pauncefote treaty he left for others to discuss. But taking the matter up exclusively as one of freight-rates and the expense of the Canal upkeep, he contended that the remission of tolls to coastwise ships would be most unwise. At best, according to Professor Johnson's estimates, it will be fifteen or twenty years before the tonnage of all origins using the Canal will be great enough to meet, at the rate of $1.20 a ton, the fixed charges. But if the American coastwise tonnage, expected to cross the Isthmus, now fixed at 1,000,000, and reckoned to be 2,000,000 by 1925, is to be exempt from tolls, there is no chance of anything but a perpetual deficit. Furthermore, Professor Johnson's analysis of the nature of freights by water and rail, and of the charges which either form of traffic will bear, leads him to the conclusion that the exemption of coasting ships will not have the effect, except in a few instances and even then to a very slight degree, of reducing freight rates by the Canal. What Congress has voted not to collect, the shipowners will coolly put in their pockets as a subsidy, and a vicious kind of one at that. Professor Johnson's whole argument is well worth studying, and it should help along the movement to induce Congress to undo its blunder by repeal.

The potentialities of modern methods of business organization are not yet exhausted. Mr. Frank A. Munsey finds in the device of the holding company an instrumentality which can be made as effective in politics as in finance; and, as it is impossible to imagine any interpretation of "restraint of trade" which would bring the formation of a holding

party under the prohibitions of the Sherman act, he has not the fear of the law before his eyes when he proposes that Republicans and Progressives pool their issues. Divided, he sees little prospect of power for either of them; united they cannot be, he declares. But why not retain their separate existence in form, while merging with each other in fact? The thing has been done in business, and there is no reason, Mr. Munsey thinks, why it should not be done in politics. "The platforms of the Republican and the Progressive parties," he says, "are in many respects much the same. On economic policies they substantially agree." The Progressive platform is "freer from the slavery of tradition," but the differences between the two are not too great for reconcilement, if the sensible men of both parties but get together and see what can be done. Perhaps Mr. Munsey is right; but one almost wonders why he did not include the Democratic party likewise in the merger, and thus avoid political friction altogether, and the enormous waste attending it. But the Colonel refuses to be merged.

A modest but meritorious amendment of the Constitution of the United States is recommended by Gov. Baldwin of Connecticut. He simply proposes to do away with the device of Presidential Electors, leaving the real mechanism of the choice of President just what it is. This is a reform that certainly ought to be adopted, there being literally no reason whatever against it. The only thing, we imagine, that will stand in the way is the feeling that will be entertained by some that, while we are about it, a greater change should be effected. But to any change that would alter the real basis of the Presidential choice there are extremely serious objections, however strong may be the considerations in its favor; and so it would be a good thing to get this little improvement in mechanism at all events, leaving to the future the question of any deeper change. Gov. Baldwin would have the whole vote of a State—reckoned just as it now is—cast for the Presidential candidate getting a plurality of the votes in that State; so that the only change from the present method would be the elimination of an absolutely useless bit of machinery, the naming of and the voting for Presidential Electors. And while this is absolutely useless, and obviously cumbrous, it does occasionally give rise to trouble on account of technicalities, and also to possibilities of improper deals in unusual situations. In the case of an extremely critical and close election, the institution might prove a source of real danger to a just and peaceful settlement of the result.

As Gov. Harmon left the State House on Monday, he certainly had some things which he can look upon with satisfaction. Since the organization of the Republican party, no Democratic Governor of Ohio except Harmon has ever obtained a reëlection, or turned over the office to another of his own party. Unquestionably, Harmon brought about an improvement in the character of public administration in Ohio. It will be long before the people will again tolerate the lax and dishonest methods which he has exposed and reformed. Considering the nature of the legislators with whom he had to work, the amount of reform legislation which he procured was remarkable. His independence in appointments to office secured in general a high degree of efficiency. On the other hand, there must be charged against him a few appointments and dismissals wholly out of keeping with his general tone. The American Library Association felt itself justified in severe criticism of his removal of the Ohio State Librarian. The place was filled by a man of no qualifications whatever for library work. In an ordinary Administration such lapses would scarcely have been noticed. If Gov. Harmon suffers from them, it is because he himself has set up a high standard.

In the light of the varied comment, in the press and elsewhere, on Mr. George F. Baker's testimony before the Pujo Committee, there are two facts in regard to the concentration of banking capital which need to be kept in mind, especially when proposals for legislation are heard. One is, that this concentration of capital grew up to a large extent automatically, in connection with what may be called the recapitalization of American industry, between 1898 and 1902. Gov. Wilson said, in his speech of acceptance, regarding these financial and industrial confederacies:

> They have come about very naturally, generally without plan or deliberation, rather because there was so much money to be invested and it was in the hands, at great financial centres, of men acquainted with one another and intimately associated in business, than because any one had conceived and was carrying out a plan of general control.

In the main, this description is correct, though it must also be observed that any such process of centralized domination would be bound to inspire, in the minds of those conducting it, the wish to extend its scope. In the railway and industrial fields, a tendency to extend the consolidation process to its utmost limit was plainly visible during the period, after 1899, when the present condition of things financial really had its origin. It would have been strange if a similar tendency had not disclosed itself in connection with the movement of consolidation and centralization in control of New York's banking institutions.

The questions which properly arise, in a situation of that sort, are, first, whether the tendencies observed are wholesome in themselves; next, whether they do or do not embody future possibilities of evil if they continue to prevail and extend; finally, whether or not they are in need of public regulation. Mr. Baker, in his testimony of last Friday, contended that, under present management, such concentration of credit facilities as exists to-day is not unwholesome; but he added that "it had gone about far enough," and that, though in good hands its extension would do no harm, "if it got into bad hands, it would be very bad." This latter possibility he admitted to be not entirely a comfortable situation for the country. We believe that Mr. Baker put his finger on the actual danger-point, and that reform of existing methods is altogether advisable, so far at least as regards the supervision of future banking amalgamations, and, if necessary, a veto on them, by responsible public authorities. This is no new proposal; it was brought to public attention very forcibly but, unhappily, with slight result, during the "Morse bank scandals" of 1907, and a Morse in the banking field on a vastly larger scale than in 1907 is at least conceivable. We were told in 1901 that the huge consolidations of capital in industry would be safe, because, with so great a capitalization, an existing management could never be dislodged, and existing managements were conservative. Yet with-

in a year the public was favored with the view of one such management's monstrous financial experiment of turning the Steel Corporation's shares into mortgage bonds, and of another's equally stupid series of exploits, in the making of artificial prices at its own expense by the Amalgamated Copper.

How much more important in the growth of trade are natural causes than dickerings of diplomacy is plain to any one who thinks. Almost any foreign-commerce bulletin of the Bureau of Statistics might serve as an illustration; the one telling of automobile exports is striking. Our exports of automobiles and parts thereof amounted to 30 million dollars in 1912, against 22 million in 1911, 15 million in 1910, and 9 million in 1909. If any such leap had been made by our trade with any part of the world, following upon some political event with which it might be supposed to be connected, what a crowing there would have been over the result! But here we have a gain of 21 million dollars in 1912 over 1909, in a single line of manufacture, and it is set down simply to "the popularity of the American automobile." Already this export of automobiles is greater than the average annual total of all our exports to China for the five years 1907-11, which was 26 million dollars, and does not fall very far short of our average total exports to Japan during the same period, which was 41 million. All this is no reason for neglecting to advance our foreign trade by intelligent measures, but it is a very good reason for objecting to the kind of talk which represents "dollar diplomacy" as a factor of importance in the advancement of national prosperity.

It is a very poor discussion of the cost-of-living problem that does not bristle with statistics; but they are very often statistics that cannot be taken seriously. To the Long Island farmer who complains that he gets fifty cents for a bushel of beans that sells for $4.50 in New York, some one makes the tart reply that the farmer must be a fool, since beans fetch four dollars a bushel at the country store right at his own door. Apples that bring the orchard man $2.50 the barrel are sold in small quantities to the consumer at a price which brings the corner grocer more than thirteen dollars a barrel. President Yoakum, in what should be an authoritative treatment of the subject, speaks of melons which bring the farmer five cents apiece and sell in town for eighty cents. Obviously, there is exaggeration here on both sides. The difference between the producer's and the retailer's prices cannot be so great, if we strike an average for all food commodities, or else there must be some explanation for the enormous difference other than the greed of the middleman. We need a study of commodity prices not by isolated instances, but in a scientifically sufficient number of cases. The investigation need not be exhaustive. But an investigation covering, let us say, a hundred farmers, a hundred retailers, and a few hundred families should furnish a fair basis for intelligent discussion.

Gov. Tener has again spoken out manfully against the Coatesville lynchers. In his annual message he urges that the charter of the borough of Coatesville be revoked for its failure to punish any of the persons implicated in the burning of Walker in August, 1911. The Governor asserts that the "people of this borough, by fomenting murder and consorting with murderers," have forfeited the right to be a separate administrative entity. In this he voices the conscience not only of his own State, but of law-abiding men and women everywhere. This is the proper answer to men of the Blease type. As to dealing with the borough as a whole, the cry will doubtless be raised that this means the punishment of innocent and guilty alike. No such action has yet been taken anywhere. The nearest approach to it is in Ohio, where a law has been passed making it possible to sue civilly a community for damages for a mob murder. In Coatesville there are some good men and women who have dared to withstand the prevailing opinion; but they will be the last to oppose such a measure of discipline as Gov. Tener suggests; they know that to be redeemed the community must expiate its crime in some way.

Frenchmen of recent years have been congratulating themselves on the fact that the country has definitely passed out of the shadow of the famous and unhappy *Affaire*. The resolute spirit of the French people in the succession of severe international crises which they have been compelled to face in the last half-dozen years, has been cited as proof that the rancors and feuds engendered over Dreyfus have ceased to be important in the life of the nation. Yet on the very eve of a Presidential election, the dramatic emergence of one of the principal actors in the Dreyfus affair has brought about the resignation of a Minister, menaces the existence of the Cabinet, and is expected to affect the choice of a successor to M. Fallières. But it would be easy to exaggerate the significance of the reappearance of Col. du Paty de Clam in the public eye. There may still be dynamite enough in the Dreyfus business to make or unmake a Presidential candidate, though even that is doubtful. But it is plain that, whatever effect the incident may exercise, it remains only a temporary bit of underground politics of the kind with which public life in France is rife. The fact remains that there has been an appeasement among Frenchmen. The depths of national feeling can no longer be stirred by the appeal to ancient passions.

The Japanese people, for all their devotion to Bushido and the Emperor, react in a very human way when it comes to a choice between food and glory. When the Saionji Ministry recently made way for a Cabinet headed by Prince Katsura, leader of the Imperialistic party, the issue was one of military expansion. The Jingo element clamored for the increase of the army by two entire divisions and for an accelerated programme of Dreadnought building. Marquis Saionji insisted, on the other hand, that the great need of the country was fiscal reform for the purpose of lightening the heavy burden of taxation under which the Japanese have labored ever since the Russian war. He also advocated the development of public works for the purpose of increasing the productive capacities of the country. With the army element almost solid against him, Saionji found himself helpless and was compelled to resign. Yet it has not taken very long to convince his successor that the country will not submit to an increase in military expenditure. The Japanese taxpayer has his limits of endurance. The play of international politics has so decidedly shifted from the Far East to the Near East that there seems less reason than ever why the country should be called upon for additional sacrifices.

THE NATIONAL STATE OF MIND.

One thought stood out clearly in Gov. Wilson's Chicago address on Saturday. It is that the great problems with which his Administration will have to deal are as much psychological as political. What are the people thinking, feeling, demanding? That, said Gov. Wilson, "is the hardest nut to crack." It is the national state of mind which, in the long run, will decide what Legislatures and Congresses and Presidents shall do. Hence the duty—though it is far from being the whole duty—of one placed in high administrative position to seek to read true the temper of the nation. As Gov. Wilson said, he will sit in Washington doing his best to preside over the ongoings of government, but the thing that will really determine, let us say, the relations of legislation to business, will be the final attitude of the business men of the country.

These sentiments are, of course, to be found in the commonplace-book of every statesman in a democracy. But the test comes in their application. The skilled interpreter of public sentiment who is also an honest public man, will find on many occasions that the prevalent opinion of the hour is misinformed, sometimes even dangerous. Is he meekly to yield to that, simply because it seems for the time to be a settled conviction? He will surely discover, if he takes his functions conscientiously, that some apparent popular demands have to be, not complied with, but resisted. It seemed possible to Bishop Butler, even in his day, that a whole nation might go suddenly insane. We moderns have far greater facilities for upsetting the nervous equilibrium of the public; and it is more than ever necessary for the genuine statesman, as distinguished from the quack, to be able to tell a temporary craze from a permanent movement.

Another thing which every responsible statesman should write down on his tablets is that a given national state of mind may be genuine, yet be "induced." In politics, too, there is such a thing as hypnotic suggestion. After people have been told for a long time that they think thus and so, and are determined to have one thing or another done, they come half to believe it. They are good "subjects" for political hypnotism. Yet it is not to be forgotten that a rival practitioner may come along and induce an apparent public consciousness very different from the one of a year or even a month before. This is among the dangers of those who assiduously study public opinion as a guide to action. They may be rashly helping to create the power, by playing upon it and feeding it, which they afterwards explain is too strong for them. Any man in public life who is aware how his immediate audience may be swayed by what he says, and then communicate its impulse to wider circles, will guard his words as jealously as the wise man advises those to do who stand in the presence of the king.

It is, confessedly, an enormously difficult task to make out at any one moment the actual temper of the nation. The diagnostician has to divest himself of class feeling. It is not what he thinks, or the circle of his friends, but what the great and dominant mind of the people believes. And there are diverse and even conflicting manifestations to be studied. To do all this, and to arrive at a practically accurate result, is truly a hard nut to crack. Yet we think that Gov. Wilson was substantially correct in the cautious interpretation which he gave at Chicago of the popular desire and intention, as respects certain things. He is surely not mistaken in saying that the people of this country have decided to husband, yet administer, their natural resources. It cannot be a wrong reading of the national purpose which sees in it the doom of monopoly. Nor is Gov. Wilson deceived when he sees in Americans the old thirst for equality of opportunity still unslaked. The full report of the Governor's speech in the Chicago newspapers shows that he placed all these matters in due and orderly connection. He spoke with the fervor of a reformer, yet with the restraint befitting a man who admits that he is feeling his way.

Granting that he rightly read the signs of the times, it does not follow that there must be upheavals in the effort to carry out policies which he indicated. It may be admitted that the sentiment of the country is at present radical. Gov. Wilson evidently believes that it is; Roosevelt is sure of it. They are good doctors. But we believe that it would be an entire mistake for either of them, or for any man, to jump to the conclusion that the national temper is to-day destructive. The country is prosperous, and nobody wants to interfere with the good times. Labor is well employed, the few strikes we have, here and there, being really a sign of prosperity, in the sense that the workers ask for a greater share in the gains of business. No doubt a certain amount of discontent persists; it had been lashed in one way and another to such heights that it could not have been expected to subside entirely. But the best evidence is that it is to-day neither widespread nor violent. The nation wants certain things done. Gov. Wilson is right about that. But it has no such rage that it would, in order to punish some, engulf all in a common ruin.

CONGRESS AND SOCIAL LEGISLATION.

Every year a few bills slip into Congress devoted to pure questions of humanity. They represent an attempt to bring a complex civilization face to face with some of those obligations which have been lost to sight, it may be, in the dust of advancing prosperity. Such bills usually are backed by a lobby of women's clubs, national societies with jaw-breaking names, indicating at once to the practical if not better half the visionary character of their membership, and by other groups of disinterested persons to whose sympathies the neglect of these matters is a challenge they cannot ignore.

Legislators are extremely loath to accept lobbies of this kind at their face value. To those who followed the struggle over the Esch-Hughes "phossy-jaw" bill last session, the most exasperating and disheartening feature of the opposition was the thorough misunderstanding that seemed to exist in the minds of many Congressmen of the purpose of the measure. Several gentlemen appeared constitutionally incapable of grasping the fact that the real and the ostensible purposes of the bill were identical. For above a year they successfully opposed its passage while they hunted in every nook and cranny for the "joker" on which some match manufacturer or phosphorus producer might intend to ride to fortune. They found none, but, faithful to their suspicions, they fought the measure to the end, and the margin by which it finally passed the House was very narrow. In the case of the opposition, last session, to the Children's Bureau bill, one Senator declared from the

floor that when uplift people and women's clubs got through running Congress, there would not be a shred of the United States Constitution left. Yet the awful conspiracy won, and Miss Julia Lathrop, in her position as first woman chief of a Federal bureau, is attacking on a national scale some of the overlooked problems of childhood.

One other battle was lost. For five years there has been a struggle to enact a reasonable usury law in the District of Columbia. The reformers' bill takes the rather curious form of increasing rather than decreasing the legal rate of interest on small loans. This is in order that reputable capital may compete within the law instead of leaving the field to loan sharks who evade it. The bill finally struggled through the House last session in an amended form which defeats its purpose, and it will presumably be allowed to die. Three important measures of social legislation will be pushed this session. These are: the bill introduced by Mr. La Follette in the Senate and Mr. Peters in the House limiting the hours of labor of women in certain employments in the District to eight a day; the new child-labor bill for the District of Columbia; and the joint resolution calling for an appropriation for a hospital ship for the fishermen of the Grand Banks.

The eight-hour bill for women was drafted under the auspices of the National Consumers' League. It is this kind of legislation which always has met and probably always will meet with strong opposition, not only from those directly interested, but also from people who will not yield to demonstration. Eighty years ago, when Lord Ashley fought fifteen years for a statute limiting the working day of women and children to the ten hours which strong men now think about 30 per cent. longer than is good for themselves, it was opposed as spelling ruin to the manufacturer. History has proved the groundlessness of these terrors, yet opposition of the same kind shows itself in America every time a State attempts to catch up with the England of eighty years ago. The District of Columbia, though non-industrial, in boldly trying to outstrip the England of the thirties, will doubtless have Ashley's battles to fight over again.

The new child-labor bill for the District, introduced by Mr. Cox, who goes from this session to be Governor of Ohio, is another bill of the same character. The prohibition of child labor is, fortunately, not a step of which many of us are ready to question the wisdom any more. The District has now a law full of defective exemptions, permitting, for instance, a youngster of ten to remain out of school to "support" his widowed mother. The Cox bill contains no untested clauses, but all the best provisions of the laws now in force in those States which have come to perceive that there is no wisdom in mortgaging a child's future, in a way to perpetuate poverty, through illiteracy, even unto the third and fourth generations.

The hospital-ship appropriation, which Mr. Gardner of Massachusetts hopes to see voted before the session closes, represents one of our national responsibilities too long overlooked. Every year some seven or eight thousand fishermen sail from American ports for the Banks of Newfoundland, where they spend winter and summer supplying the American market with cod. The occupation is hazardous in the extreme, even more so than coal mining or war. What we have neglected to notice, however, while we admired this hardy race of men as pictured in fiction and poetry, is the large number of totally unnecessary deaths and disabilities, due to the lack of prompt surgical care of the kind which Dr. Grenfell's chain of hospitals give further north on the coast of Labrador. Congressman Gardner has challenged every fish-eater of the nation with his bill, and the matter should not be dropped until the hospital ship is built and equipped and turned over to the Public Health and Marine Hospital Service.

THE EFFICIENCY NOSTRUM.

"Harvard professors and instructors," so went a newspaper story the other day, "are thoughtfully rubbing troubled brows to-day while they ponder over an intricate network of blanks and spaces whereon Assistant Controller Taylor has requested them to record the exact disposition which they make of all time spent in the interests of the university." The Assistant Controller stated that he desired these data for the purpose of using them "as a basis for pro-rating salaries to the various classified functions"; but, after supplying a formidable array of blanks to be filled with this end in view, he wound up with a request for information concerning "Contributory Activities," the giving of which was optional. These activities were to include the number of hours spent on "research work carried on personally by the instructor," and certain other things which, like this, "are of a quasi-private nature." The Assistant Controller recognized that the variations in such data due to the personal equation "would make impracticable the direct use of these figures for the purpose of distributing salaries," but nevertheless he was apparently of the opinion that they would be a comfortable thing to have, and so he asked for them. And quite right, too; for the optional of to-day may be the compulsory of to-morrow, and it is well to "get a line" on these professor people, even if you can't pin them down to exact facts and figures.

This news from Harvard seemed a pretty serious matter. There has been a great deal of groping in the dark over the problem of raising the standard of our universities and colleges, and here at last was light. What we had needed all along was some simple and yet profound guiding principle, and this the new move at Harvard was to supply. See that you get your money's worth out of each professor—this is the philosopher's stone, which, firmly and steadily applied, will transmute into gold all the baser metal of our university Faculties. It seemed serious; and then, suddenly, it was turned into bad comedy. President Lowell sent to the members of the Faculty a statement which amounted to something like a repudiation of the inquiry issued in the name of the Assistant Controller of the University. He assured the alarmed professors that "answers were intended to be wholly voluntary," and that "the recent circular was issued under a misunderstanding."

The episode is one that Harvard should be glad to forget, except in so far as it drew out—as it did, though we are not informed to what extent—threats of resignation on the part of men who had a proper conception of the professor's calling. It is humiliating to think that such a protest should have been made necessary at our country's oldest seat of learning; we trust that the feeling of self-respecting professors has been made so manifest as to preclude the possibility of any revival of

the foolish scheme at Harvard in the near future. But this mania for "efficiency" is in the air, and sooner or later it will have to be met at our universities, and squarely faced, and settled.

To be a university professor has hitherto meant, in this country as in all the world, to give to the university yourself—your personality, your talent, your capacity to interest, to instruct, to inspire. Many professors have, to be sure, fallen wofully short of fulfilling this ideal; many have been deficient in ability, many in character. But the one great thing that has made the calling attractive to the best who are in it has been that this was the plane on which it was understood to rest. It offers none of the glittering material rewards of other vocations; it seldom holds forth the allurement of fame. In this country, its dignity has been far below that which belongs to it in Europe, thanks to an exaltation of the idea of management and administration elsewhere unknown; but the recognition of the personal nature of the professor's work, of a distinctively personal measurement of his value, has never been abandoned. It is Agassiz, or Child, or Martin, or Gibbs, or Norton, or Gildersleeve—not so many hours of their labor—that Harvard, or Yale, or Johns Hopkins has had the good fortune to possess; and every faithful and competent professor has a right to feel that the same is true of him in his degree. But how long would that feeling survive under a system which required each professor to make report of every hour that he spent upon his work, and have his pay doled out to him accordingly?

It is easy to accuse those who object to the introduction of this efficiency nostrum of being reactionaries—upholders of the doctrine that whatever is is right. But it is still easier to reply to the accusation. Not because our universities and colleges are all that they ought to be, but because the proposed remedy is crude and barbarous, do we reject that remedy. We ought to have more competent teachers, we ought to have more inspiring leaders of research; but we shall not get them by means of time checks or card catalogues. The American professor is already far more subject to managerial control than his fellow in Germany or France; but it is in America, and not in Germany or France, that the cry of incompetent professors and inefficient instruction is continually heard. What is needed, above all things else, is to make the professorship attractive to superior men—men of originality, men of power, men of enthusiasm. When you have got all your time-card and efficiency-measure mechanism going, you may be able to compel every professor to come up to a certain standard; but you cannot compel the men whom you ought to have as professors to enter the calling. You may get the same amount of "results" out of the Faculties for less money, or a greater amount for the same money, so far as "results" can be measured by your mechanical methods; but what you have lost you will never be able to measure. And what shall it profit the university to have gained countless student-hours and experiment-units and to have lost what is highest and best in it?

FOOD-TAXES.

While our coming tariff struggle is to be partly one to get taxes taken off food, the absorbing fiscal fight in England is to prevent their being put on again. Sir Robert Peel's proud consolation in the wreck of his own party, and in his own fall from leadership, was that he had at least the satisfaction of knowing he had made the bread of workingmen sweeter for being untaxed. For more than fifty years no responsible English statesman ventured to propose a reversal of that policy; but when the Conservatives, under the initiative of Joseph Chamberlain, began to toy with protectionist doctrine, they could not evade the problem of protecting agriculture—that is, of laying a tax on wheat and meat. But, from the day of its first broaching, this has been an issue full of strife and danger for the party. Just at present, it is as a sword thrust into the vitals of the Conservative organization. Its life and its leader are threatened. A meeting of Lancashire Conservatives is to be held within a few days, and if they persist in their resolute opposition to anything in the nature of a food-tax, Mr Bonar Law announces that he will at once retire from the leadership of the party. Certainly, he could not cling to it with any hope of success. As goes Lancashire, so goes the country, has not become a proverb for nothing.

It is probable that Mr. Law himself is a good deal puzzled at the violent insurrection of formidable elements among his following, in consequence of his recent speech nailing his flag to the mast in the matter of food-duties. He really said nothing which he and other Conservative leaders had not said before. Indeed, he may even have thought that he had found an ingenious way to shelve the issue, for he declared that the Conservatives had no desire to impose food-taxes, and would not do so unless the Colonies demanded it as the only way to set up and round out a system of "preferential trade" within the Empire. The doubt that the Colonies would do this is at least great enough to warrant the hope that the matter might never be forced to a practical conclusion. But Bonar Law linked this with the fatal assertion that the question would not be referred to a vote of the people. He frankly transferred the taxing power over English workingmen to the Colonies. This was, indeed, taxation without representation! No wonder that Lancashire and Yorkshire rose in arms. The Liverpool *Courier*, one of the oldest and stanchest of provincial Conservative newspapers, at once took the position that the plan would never do. And the revolt spread with amazing rapidity, so that the London *Times* soon gave figures to show that six-sevenths of the Conservative members of Parliament were against the policy of their leader. The casting down of party hopes was tremendous. Only two months ago, all the talk was of the Conservatives speedily returning to power. Now there is universal dejection and a feeling that Bonar Law has dished the party's chances.

Yet his speech was ostensibly delivered, and was in fact, in the interest of political honesty. If the party was soon to take office, the country was entitled to know what it proposed to do. And Bonar Law, with that immoderate valor which has so often in him swelled into a fault, bluntly stated his plans. The very fact, no doubt, that the time for action seemed so near at hand was one reason why his words gave so much offence. The leader of a hopeless Opposition may say hazardous things about what he will do in the improbable event of his getting again into power. But when apparently on the eve of taking office, he must be more guarded. And it was partly because Mr. Law, under such circumstances, was sweeping and even

reckless in his speech, that he is felt to have committed a blunder worse than a crime. At a time when he should have sought to be soothing and conciliatory, he alarmed the whole country and split his party asunder. The fighting man who was to show the Conservatives what they had gained by the retirement of the hair-splitting and too polite Mr. Balfour, has merely got his party into a worse mess than before.

The successive attempts which the English Conservatives have made to pack in cotton the dynamite of food-taxes are both curious and instructive. In 1903, Mr. Chamberlain based the saving of an otherwise doomed Empire upon the taxing of foreign—not Colonial—wheat and meat (not bacon, however). The English consumer was to have it made up to him by remitting to him the taxes on sugar, tea, etc. By 1906, this programme had been changed to include a tax on Colonial food-products, though at a lower rate than on foreign. In the general election of 1910, both Mr. Chamberlain and Mr. Balfour gave what was, in effect, a personal pledge that the net effect of food-taxes would not increase the cost of living to the working classes. Later Mr. Balfour veered to the doctrine that there would be no tax on Colonial wheat. Afterwards, he gave his famous promise that no food-tax at all would be imposed without a referendum. But in November Lord Lansdowne threw over that promise, and last month Bonar Law distinctly repudiated it.

When such a tortuous course has been necessary in connection with a single issue, the plain man will wonder why the party does not drop the troublesome thing altogether. But it cannot. Once start the protectionist log a-rolling, and every interest will demand a share in the pastime. The agricultural interest is very powerful in the Conservative party, and would never consent to protective taxes on manufactures unless the land should also come in for legislative favors of the kind. And it is this necessity of placating the farmer by taxing the workingman for his benefit that has harried the Conservative leaders for the past ten years, and brought them to their present melancholy plight. Their discomfiture is completed by the fact that English trade, which they have steadily predicted would go to the dogs under free trade, surpassed all records in 1912—especially in that over-sea commerce where England was going to be hopelessly beaten if she did not abandon the outworn shibboleths of Adam Smith and Mill, Cobden and Gladstone.

THE JUDGMENT OF PARIS.

The women of America are summoned to a new war of independence. This time it is not against the domestic despot who holds the vote and pays the family bills. The new enemy lives far across the seas, in the Rue de la Paix, the Place Vendôme, and the Avenue de l'Opéra. There the Parisian dressmaker sits and plots his fell designs, which designs are immediately copied by the dressmakers of the rest of the world. It is proper that our own country should be the first to rebel against this ancient tyranny. In the first place, we are, on principle, the enemies of foreign domination. In the second place, we spend more money in the Paris shops than any other nation. In the third place, we are the one nation that can afford to take the chance. For it is inconceivable that American women will ever be badly dressed, whereas if the women of Great Britain or of Germany were to cast off the Gallic yoke, there is a presumption that they might not quite be able to shift for themselves. They need a leader. Thus it is probable that the motto, "See America's milliners first!" may become the slogan of a world-wide movement of emancipation. With America at the head, the nations may press forward to another historic siege of Paris. The conflict will undoubtedly be severe. The Parisians will defend themselves with characteristic gallantry. There will be heavy fighting on the barricades in the Rue St. Honoré and the Champs Elysées. But there should be little doubt of the outcome. The dressmakers of Paris will utter their *dernier cri*, this time of anguish, as the flags of the allies are raised above smoking ruins of chiffon.

Dreams of foreign conquest are, however, somewhat premature. For the present it would be enough if our creators of fashions were to achieve their own independence. In their favor is the fact already cited that American æsthetic ideals have attained perhaps their highest development in the domain of clothes. The extravagance of the American woman has become a commonplace. But putting aside the question of expense, the men of this country are almost as interested in clothes as the women are. Certainly they give more thought to clothes than the men of any other nation, bulk for bulk. It is a sad imputation to bring against a people which loves to think of itself as exceptionally red-blooded and masculine, but the truth must be told that when it comes to clothes the American man is a good deal of a coquette. He demands of his tailor a flare of line and surface, an effect of easy grace, a harmony of coloring which the average European would consider altogether effeminate. We prettify. We strive after the flannelled elegance of Mr. Gibson's broad-shouldered, close-collared, well-creased heroes. Not that there is anything seriously blameworthy in the fact. Foreign visitors are always urging us to strive after beauty. Well, compare that distinguished German visitor's utterly ridiculous shoes with the product of our own factories, or his pinched-in shoulders with the fine military sweep of our own well-padded garments. As a nation we not only dress better than any other nation, but we allow no exceptions. The German professor's inalienable right to be a little more slovenly than the next man is not tolerated. Our college professors dress as well as their neighbors, and it is never easy to tell whether the man next to you teaches Sanscrit or sells automobiles.

Given this universal interest in clothes, and given the enormous extent of our domestic market, there should be no difficulty in evolving a standard of American fashions. As we have seen, the men's tailors in this country, while they may be influenced by the style of the hour in London, strive to adapt that style to what may be called the genius of American clothes. Why should the same privilege be denied the women of America? Why should Longchamps impose its ideas upon Detroit? Longchamps's moral outlook is so different from that of Detroit; and in the last resort, clothes, if they are to be something more than a protection against weather, must express a moral outlook as well as an æsthetic ideal. The present revolt against the domination of Paris is undoubtedly due in large measure to the extreme styles which Paris has latterly been sending us, styles for which the

inspiration apparently has come from the Egyptian dancing girls on the monuments in the Louvre. If the Puritan blood, which must still be current in these United States, revolts against the Bayadere styles, it is a legitimate spiritual manifestation. And there is the modern woman. Surely, she must sometimes grow aware how incongruous it is to demand a broader, freer existence for yourself and at the same time incapacitate yourself for the elementary business of crossing a crowded street by putting a hobble around your feet. Logically, the American woman ought to develop her own ideal of clothes, as our American cities are beginning to develop our own style of architecture.

So much for logic. As a practical problem, we have to face the snobbish instinct which is implanted in the heart of man and woman. Why does Paris impose itself upon the world? Precisely because it is Paris, and not Berlin or New York or Chicago. Develop a distinctive American standard in dress, and the temptation of Paris will be stronger than ever to a powerful minority. Will the majority stand for this form of class distinction? Will it refrain from fourth-rate Parisian imitations, and, by accepting the native standard, mark itself down as provincial?

FRENCH HISTORICAL BOOKS.

PARIS, January 4.

"Philippe II, roi d'Espagne" (H. Champion), by Charles Bratli, is a study of the life and character of its subject with a view to verifying or revising the judgment of history for 300 years. Neither in form nor in substance is it a book of literature. Its author is a Danish investigator, who, for twenty years, has sought throughout Europe, as well as in Spain, to acquire a complete knowledge of the case. Baguenault de Puchesse, of the Institut de France, presents his work to the public with the remark:

> We cannot say that he tries to rehabilitate Philip II completely. If he defends his memory, it is as an examining judge who seeks for proof in the documents of the case, instead of holding by public opinion, which so promptly asserts what it does not know.

M. Bratli has worked out this principle of historical investigation in his book. He has not written out his conclusions in continuous narrative. It is his critical examination of what historians have already said, his documentary and bibliographical references, which make his compendious work indispensable to all who attach other than controversial importance to the truth of history. In a first part he treats at length of the original authors out of Spain, and of modern historians who, similarly out of Spain, have sat in judgment on Philip II; and only then does he take up the history of Philip II in Spanish literature. In a second part he studies directly Spain of the mid-sixteenth century: its interior situation, the infancy of Philip II, his preparation for kingship, and his life as king. The third part will, perhaps, prove most profitable to the general student; for it comprises running notes on the compendious assertions made in the text; documentary appendices; an alphabetic bibliography, and a complete index of names and subjects mentioned in the entire book. While the book should aid in forming an independent opinion, it is not likely to please those who hold the seats of authority.

"Histoire de l'Inquisition en France" (Bloud), by Th. de Cauzons, is another work on an ill-famed culprit of history. This time it is an institution whose very duration through different centuries makes difficult, if not impossible, those clear-cut judgments which delight the general reader of history. The author is a Roman Catholic, already known by his study of the "History of Magic and Sorcery in France." The present (second) volume on the Inquisition indicates a work of considerable extent. Its separate usefulness is great, whatever may prove to be the merit of the work as a whole. Except for the introduction, it is devoted entirely to a systematic exposition of the legal "Procedure of the Inquisition" in France. With his usual competence and grasp of historic evolution, this subject has been treated by Professor Esmein in his "History of Criminal Procedure in France," but from his technical point of view and not in its relations with religious and general history. The part played by "trial by inquisition"—a subject by no means coterminous with the tribunals of the Inquisition—has been treated in this or that detail with considerable completeness by writers on English law, as in the great work on "Evidence," by the American Professor Wigmore. The late president of the French Court of Cassation, M. Tanon, has also given this vital question of procedure its due importance in his "History of the Tribunals of the Inquisition"; but all this has not supplied the need for a work explaining from the official acts the Inquisitorial procedure at each period of the tribunal's existence. Whether the present work is a step forward towards satisfying this need, due criticism must determine. It certainly avoids the error of Molinier, who deliberately began his study at a fixed year without attending to the hundreds of years of previous growth. Our author notes:

> Most singular of all, it is impossible to fix a date for the institution of the procedure of inquisition. . . . The tribunal of this name was created insensibly; and the mode of proceeding which gave the name also implanted itself without our being able to point out how it took birth (page 41).

In the single criticism (in a note, page 166) on the work of Henry Charles Lea, M. de Cauzons, in connection with this necessity of writing history latitudinally—that is, studying facts of the same generation together—makes this remark:

> The mixing up of times and places, which this completest modern historian of the Inquisition is far from having avoided, has two grave inconveniences. First, it renders the reading of the book exceedingly difficult; and next, it falsifies the reader's ideas. . . . In such a way of presenting things, the French may, at will, be a people of brigands or a society of saints. In reality, there were among them both the ones and the others.

M. Bratli says of Lea: "He cites papers and documents from nearly all the archives of Europe, without its being known that he anywhere undertook personal researches"—an insinuation which may have point where persons like Philip II are concerned, but is to no purpose in matters concerning the Inquisition. M. de Cauzons, in fact, uses without question the results of documentary collectors of recent date—Lea, Fredericq, Molinier—while rectifying the meaning of the documents according to the definitions and underlying ideas of their age, where the science of such collectors is not always adequate. It is curious, as he notes, that at the time an inquisitor who was a theologian and lawyer was thought preferable to a canonist. He is also justified, in this field, where "objectivity" is apparently impossible, in demanding that history shall be written by analysis of the documentary facts, and not by a controversial synthesis of them. His own work, at least in the present volume, is controversial defensively—that is, he attempts to show the consistency of the procedure of this tribunal of justice with the ideas of justice which guided consciences through the different ages of its very varying activity.

Every one must acknowledge that M. de Cauzons blinks neither facts nor documents, and this to a degree sufficiently disconcerting to the outsider, who is sure to be on his guard. The establishment of inquisitorial procedure, its sources and sorts, and its application to heresy; the judges and their powers, their auxiliaries and familiars and other officials, and their relations with bishops; the crime they

judged, the search, examination, and defence of guilty or accused; the use of torture, the sentences and penalties in life, liberty, fortune, and their execution; appeals, commutation, pardons—all are taken up in turn in this inevitably overloaded volume. Two serious criticisms remain to be made. First, there is no index of names, although the notes contain full bibliographical references at the foot of the respective pages. Secondly, the "Avant-propos," or introduction, is written in language that will cause many to close the book without reading further. Yet its eight kinds of Catholics who face the Inquisition and its history, and the "four serious parties hostile to the Church," are all well worth knowing. Why cannot those who explain so fearlessly the religion in which they have confidence use language which outsiders can understand? This criticism, applicable to the majority of religious writers of every stamp, applies scarcely at all to the present book in its main text.

"La Question du Sel pendant la Révolution" (H. Champion), by Otto Karmin, of the University of Geneva, is a documentary and statistical study of one of those economical questions which had so much to do with the popular movement in the French Revolution. In 1783, the eve of the general uprising, Buffon wrote of the *gabelle*, or state monopoly of salt:

> A fiscal law opposes itself to so legitimate a right as that of using what nature offers us with profusion—a law of proscription against man's ease and the health of animals who, like ourselves, should share in the benefits of the common mother, and yet, wanting salt, only half live and multiply; an unhappy law, or rather death sentence against generations to come, a law based only on miscalculation and ignorance, since the free use of a product so necessary to man and all living beings would work far greater good and prove more profitable to the state than all the revenue from prohibition. . . . The *gabelle* does more harm to agriculture than hail and frost.

The history is instructive, for the wages of monopoly and fiscal tariffs is still discontent working popular revolution. The twenty-fourth document, printed at length, is a decree signed by Roland and Danton in 1792, "the fourth year of liberty," inflicting a minimum on those who bid at the sales of "national salt and tobacco, on account of the considerable losses of the public treasury at such sales—the result of a coalition of several citizens who combined not to bid; wherefore the National Assembly, wishing to put a prompt end to such a disorder, decrees urgency in the matter!"

"1871—la Commune à Paris et en province" (Tallandier), by Lieut.-Col. Rousset, is a clear and complete narrative of the bloody weeks of the Paris Commune from its outbreak in February until it was wiped out in May. It cannot be called a complete history, for the history of those weeks and the men who played a part in them is as difficult to write as that of Philip II or the Inquisition or the Ferrer riots of three years ago. There is no better history, however, yet written for the general reader, since the events are related in soldierly order as they occurred, and to the actors in them is given their proper place. While the author recognizes the siege fever which left Parisian public opinion all but delirious, he does not, perhaps, insist enough on the uncertain position of what was called the National Government under Thiers. It was a Government still laboring under the doubtful legitimacy of the half-dozen lawyer politicians, who, as one of them said, had picked up authority where they found it lying—in the street—after they had driven out the only organized authority left from Sedan. He does insist on the carrying over of popular hatred of the Empire to the supposedly Monarchist National Assembly; and we see sufficiently the essential work done by agitators, without whom, as Dr. Le Bon has lately shown us, revolution is impossible. All this is needed to explain the action of such men as Clemenceau, Méline, Tirard, Ranc, during the early days of the Commune. It is not the same for those who persevered, like Paschal Grousset and Vaillant, and lived to be amnestied and sit in the present Parliament; it is difficult to absolve these from responsibility in the bloody massacres ordered by their associates.

Besides the memoirs of escaped Communists, there are other valuable histories of the movement, like that of Edmond Lepelletier; but they linger over their sympathies or excuses for persons and views, and these do not properly constitute history. It is one thing that civil war was engaged in by some whose motives are still the admiration of many; it is another thing that civil war once engaged had to be fought out to the bitter end. But to condone wanton massacre, because we share the slaughterers' hatred of the victims, or to condemn bloody repression, because the authority exercising it does not please us, is consistent neither with the truth of history nor with justice or fair play. No history of the facts of the Commune can satisfy those who have taken the fashion of sympathizing with it. At the time the Freemasons of Paris tried to adopt it in their rôle as schoolmastering Jacobins; but their pupils proved unmanageable, and the Grand Orient closed its doors, waiting for a more biddable Republic.

S. D.

NEWS FOR BIBLIOPHILES.

In *Notes and Queries*, 1883, Sixth Series, Vol. VII, pages 406-7, Mr. Austin Dobson inquired concerning a pamphlet advertised as follows: "An Answer to one Part of an infamous Libel reflecting on Captain *Vinegar*, and the late worthy *Jonathan Wild*, &c. By *Hercules Vinegar*, of *Hockley in the Hole*, Esq.; pr. 6*d*. [July, 1731.]" Mr. Dobson remarked that the advertisement "is extremely tantalizing, as it suggests that there was a 'Hercules Vinegar' interested in the famous thief-taker long before Fielding assumed the part of the Captain in the *Champion* of 1739-40, or published in 1743 the 'History of the Life of the Late Mr. Jonathan Wild the Great.'" Apparently no reply to Mr. Dobson's query has been offered. I have looked in vain for a copy of the pamphlet.

Further importance is given to the piece by the matter of an article of mine shortly to appear in the Cambridge *Modern Language Review*. There I shall show that "Captain Hercules Vinegar" was the name or the alias of a prize-ring champion or an entertainer at ring exhibitions, well known in London in 1731, and advertised in the newspapers regularly in a broadly jesting tone; and that, by adoption of the name and occupation of Vinegar, Fielding assumed at the outset and repeatedly sustained in the *Champion* a farcical association that is odd in face of the fact that many of his papers were written very seriously and were intended to be taken seriously.

In the *Grub-Street Journal* of July 29, 1731, under "Books and Pamphlets published since our last," is the notice: "24. An Answer to one part of an infamous Libel, reflecting on Capt. Vinegar, and the late worthy Jonathan Wilde, &c. by Hercules Vinegar of Hockley in the hole, Esq; Price 6d." The pamphlet is announced in the *Gentleman's Magazine* Register of Books of July, 1731. In the *Daily Post* of Saturday, July 24, 1731, col. 4, is the following notice hitherto not reprinted:

> This Day is publish'd, An Answer to one Part of a late infamous LIBEL, reflecting on Captain Vinegar and the late worthy Jonathan Wilde. In a Letter to Mr. James F-gg [Figg], the supposed Author thereof. In which Letter the Character and Conduct of the Gentleman, alias Captain Hercules Vinegar, are fully vindicated. By Hercules Vinegar of Hockley in the Hole, Esq.; Sold by A. Dodd at the Peacock without Temple-Bar. Pr. 6d.

I venture to suggest that possibly this pamphlet was a parody on a political pamphlet that was much to the fore at this date. Early in 1731 Pulteney and his opponents carried on a controversy following a pamphlet, "Sedition and Defamation Displayed. . . ." Later, on May 22, 1731, the *Craftsman* printed an article by Bolingbroke (see Dict. Nat. Biog. *s. v.* Pulteney) that aroused a considerable pamphlet war. There appeared a reply, "Remarks on the *Craftsman's* Vindication of his Two Honourable Patrons in his Paper of May 22, 1731." The two patrons were Pulteney and Bolingbroke (see Coxe, "Memoirs of Walpole," 1800, I, 166). This was followed by Pulteney's (see Dict. Nat. Biog. *s. v.* Pulteney) "An Answer to one Part of a Late Infamous Libel intitled Remarks on the *Craftsman's* Vindication of his Two Honourable Patrons, in which the Character and

Conduct of Mr. P. is fully vindicated"; by "A Final Answer to the remarks on the *Craftsman's* Vindication and to all the Libels which have come or may come from the same Quarter against the Person, last mentioned in the *Craftsman* of the 22 of May, 1731"; and by "Observations on a Pamphlet intitled An Answer to one Part of a late infamous Libel, etc." Copies of these pamphlets are in the Yale University Library.

The Vinegar pamphlet was actually published not later than July 24 (see advertisements quoted above). The *Gentleman's Magazine* for June, 1731, page 272, lists Pulteney's "An Answer . . ." as published June 19; "A Final Answer. . . ." June 23; "Observations on a Pamphlet intitled 'An Answer. . . .'" June 27. The *Gentleman's Magazine* of July, 1731, page 277, shows Walsingham in *The Free Briton* of July 1 attacking "An Answer. . . ." as by Pulteney; and at pages 286-7 shows that at the end of the second week of July the Grand Jury brought an indictment against various political libels, among which Pulteney's "An Answer . . ." is dealt with as the most offensive. According to the *Gentleman's Magazine* (1731, p. 307), as a result of this indictment, Walker, Rayner, Lynn, and Slow were arrested on July 7 for publishing "Robin's Game," and on July 12 Francklin, printer of the *Craftsman*, appeared for trial for printing the *Craftsman* of January 9 indicted by the Grand Jury. In the *Daily Post* of July 28 is noticed the fact that on Monday, the 26th, Francklin was brought up by *habeas corpus* proceedings to be bailed after arrest for printing and publishing Pulteney's "An Answer . . ." (see also on this Dict. Nat. Biog. *s. v.* Pulteney, p. 30, col. 2, and Coxe, *op. cit.* I, 169-70). Further, in the *Daily Journal* of July 29, the date of the *Grub-Street Journal* that notices the appearance of the Vinegar pamphlet (see above), appears: "Just Published, [Price Six-Pence], A Letter to Mr. P. in which the Controversy betwixt the Friends of the present Administration and him is fairly stated; occasioned by a Pamphlet, call'd, An Answer to one Part of a late infamous Libel, intitled, Remarks on the *Craftsman's* Vindication of his two Honorable Patrons, etc. . . ." This all shows that the Vinegar pamphlet followed Pulteney's "An Answer . . ." and (as reading of the abstracts from the periodicals in the *Gentleman's Magazine* for July will confirm) that it appeared in the heat of the political controversy, while Pulteney's pamphlet was very prominent in the public eye.

In 1731 few if any would be concerned seriously to deal with a vindication of the rogue Jonathan Wild, hanged at Tyburn in 1725. When we read again the full title of Pulteney's "An Answer . . .," quoted above, and the full title of the Vinegar pamphlet in the *Daily Post* of July 24, quoted above, we are struck with the similarity of their phrasing. It looks as if the parallel of phrasing and the occurrence of the names of Vinegar and Wild parallel with the occurrence of the *Craftsman's* "Two Honourable Patrons," were adopted for the purpose of parody by some one (probably on the Ministerial side) who was following in the steps of Gay in his "Newgate opera," the "Beggars' Opera," and who substituted for the political heroes in the controversy the Hockley-in-the-Hole heroes Vinegar and Wild and the man Vinegar's actual "patron," James Figg, the prize-ring champion and promoter. At the date of the Vinegar pamphlet every one who read the newspapers must have associated jesting and the mock-heroic with appearance of Vinegar's name. The coupling of his name with that of the still celebrated Wild, is what a parodist might readily adopt. I remind of the use of Hercules Vinegar's name as pseudonym by the authors of the 1742 pieces against Pope, "The Cudgel: or a Crab-tree Lecture" and "Blast upon Blast, and Lick for Lick" (see list of books in the *Gentleman's Magazine* and the *London Magazine* for August, 1742, and British Museum Catalogue, 1890). It is of interest here that in the *Gentleman's Magazine* for 1731, page 495, are six quatrains, "The Prize-fighters. A Simile," in which the Ministerial writer, Osborne, and Caleb D'Anvers of the *Craftsman* (both fierce contestants in the strife of the year) are, in their fiery defiances and threats of each other and in their actual sole aim of pecuniary gain, likened to the prize-ring champions (especially Sutton) who issue their "weekly bills From *Figg's* or *Stokes's* room."

Correspondence

MAN THE PARADOX.

TO THE EDITOR OF THE NATION:

SIR: The astonishment referred to in your editorial of August 22, touching the work of the late Dr. Howard Furness, is interesting not only in itself, but also as a phase of the inexplicable human paradox.

It is indeed, as you say, "an astonishing thing that more of those who are blessed with independence and who seek after pleasure in a kind of bewildered ignorance of their needs do not see the joy of an intellectual purpose steadily followed year after year, binding day to day in orderly interest, and leaving no approach to the ravaging attacks of ennui"; and, one might add, less approach to the ravages of misfortune.

But why are we astonished at this very familiar phenomenon? The explanation is found in the fact that the cause of the astonishment is not in the conduct of man, but in his constitution—not in his conduct in thus following his own dominant desires, but in the inexplicable and preposterous conduct of nature in thus enslaving him to such undesirable desires, endowing him with lofty and noble faculties and at the same time carefully rendering those faculties abortive by so constituting and environing him that he shall always lack either the opportunity or the inclination to cultivate or use them. It is as though man's higher faculties were given him in jest or in derision. From long familiarity with this fact, we have ceased to be astonished at anything that man does, but we are so constituted that we can never cease to be astonished at what he is.

We are unable to rid ourselves of the primal intuitive impression that the world is the product of intelligence, and that therefore the life of man must be ordered according to some intelligible plan and purpose; but, being wholly unable to discover any design that will square with the facts of man's existence and performances, we are in perpetual astonishment at the seemingly aimless and senseless prodigality of nature in furnishing him with a nature so inharmonious, and so grotesquely out of keeping with what he is destined to accomplish.

Observation constantly reminds us that not one person in a thousand realizes a tithe of the possibilities of his higher faculties or has any real desire to do so; that, although equipped in some ways for a far higher destiny, man's grosser appetites so preponderate that he almost invariably spends his life ministering to his lower, rather than his higher, nature; that, indeed, the vast majority of mankind are so environed by nature that they have no opportunity to cultivate their higher faculties, because the struggle for mere existence absorbs all their energies. Even when this is not so, when the few fortunate ones are relieved from this struggle by material prosperity, or, as you put it, "become blessed with independence," nature has so ordained that the very blessings which give this independence shall breed in their possessors indolence, love of luxury, and a new supply of lower appetites, which forestall the use of the higher faculty. Nevertheless, in spite of all this, our optimistic expectation still persists, and in extremely rare cases, such as that of Dr. Furness, the expectation is realized. In the wise use which he made of his opportunities, he did just what we obstinately expect everybody to do, and know very well that they will not do.

Implanted as they are in a nature filled with hostile elements, the higher faculties, when they survive, usually render their possessor the storm-centre of a thousand conflicting desires, by which he is drawn hither and thither in endless vacillation and inconsequence. Unable to free himself from this internal conflict, he goes on:

> Forever tortured by the unquiet breast,
> Which neither deadens into rest
> Nor ever feels the fiery glow
> That whirls the spirit from itself away,
> But fluctuates to and fro:
> Never by wisdom quite possessed
> And never quite benumbed by the world's sway.

THE ETHICS OF NEWS-SUPPRESSION.

TO THE EDITOR OF THE NATION:

SIR: The nation-wide publicity that was given to the cry, "To hell with the Constitution!" shouted by Gov. Blease at the recent Governors' convention in Richmond, is a forceful reminder of what I believe to be a deplorable situation with our American press. This instance is bad enough, but it is hardly typical of what comes to us on every hand every day. Must everything be published? May not our newspapers give us something besides stories of crime or scandal, or cease to flaunt in our faces glaring accounts of sham derringdo? Indeed, it seems to me that our press is fast becoming no more than an open sewer contaminating our very atmosphere with its airing of putrid "news," which should be allowed to flow underground to the sea of quick oblivion.

But the newspaper man must have "a nose

for news"; even your "cub reporter" will tell you that. Speak to him about the suppression of any type of news, and he is righteously indignant. And many of our increasing number of text-books on journalism emphasize the necessity of the "news instinct." But what they and the press in general need to emphasize above everything else is a discriminating news instinct; an instinct that will not only ignore a type of news that the public does not want, but a type of news that the public ought not to have. Now the "public" is a hard thing to define; but some one has well said that it is only a big baby. And because this big baby will devour unwholesome news, swill-tainted fiction, and gaze at indecent picture shows or vaudeville, is no reason whatever that it should be aided in doing so, especially by a power which ought to be a leader of thought and a bearer of light in our national life.

And not until our newspapers realize this fact and cease to tell us in flaring headlines of the fourth or fifth marriage of Lillian Russell; of foolish, notoriety-seeking suffragettes who make a record-breaking walk of fully one hundred and twenty-five miles, or of a Governor who desired exactly the kind of advertisement he got—only then will they regain in a measure the respect of intelligent people. And more especially, not until they reduce to a minimum accounts of ingenious and suggestive crime, will they cease to serve an immoral purpose with the weaker and criminally inclined elements of our population. For crime is not made odious by constant exposure, but it is made to appear common; and whatever seems common is bound to be regarded with little aversion, or even welcomed as a solution of difficulty.

And, finally, I believe that the press, like politics and the stage, must find its reformation in the young men of our colleges. Why should not our collegiate schools of journalism teach our young men of courage to give a wide reading public not those things which will appeal to or remind men of their baser natures, or urge them to cheap notoriety, but mainly those things that are honest and of good report?

CHAS. V. STANSELL.

Ottawa University, Ottawa, Kan., January 1.

SHAKESPEARE AND HERBERT.

TO THE EDITOR OF THE NATION:

SIR: In your number for December 5, Miss Charlotte Porter calls attention to two passages in Rowland Whyte's letters which she thinks have been overlooked. The first passage was, however, taken account of by Mr. Tyler, and an allusion to it may be found in a foot-note in his volume on Shakespeare's Sonnets; unfortunately, I write under conditions that make it impossible for me to give the exact reference.

The passage appears to Miss Porter to give evidence that young Herbert was sent off to Leiden instead of coming to London, and that therefore "an intimate friendship between Shakespeare and Herbert can no longer be assumed to occur until the middle of 1599." Tyler, however, thought *Leiden* to be merely an error for *London*—with some show of reason, if I remember correctly. Evidently the matter needs further sifting. If Miss Porter's conjecture is right, Tyler's theory of the composition of the "Sonnets" will require material modification. We should have a swift succession of the events of Shakespeare's friendship and its wreck in the latter half of that year in which Jaggard got hold of two of the later sonnets and printed them in "The Passionate Pilgrim," and there would be no provision for the sonnets of which Meres made earlier mention. I have neither inclination nor facilities to discuss this further, but if there is a single conclusive bit of evidence in this perennially baffling mystery, we want to know it.

A. G. NEWCOMER.

New York, January 3.

DRYDEN ON FANCY AND IMAGINATION.

TO THE EDITOR OF THE NATION:

SIR: The passage from Dryden cited by B. S. M., in the *Nation* of December 19, as an example of an early attempt at distinguishing between fancy and imagination, is interesting in a way, but there is nothing in it to suggest the distinction hinted at in Beattie's "Dissertations," a passage from which I cited in my letter of November 28. Dryden is trying to define wit, and makes it virtually synonymous with the faculty of imagination, the product of which, or *wit written*, includes, he says, three things: invention, fancy, and elocution or expression. The sole point of the distinction between the two terms here is that *imagination* is used to indicate the activity of the faculty in its widest range, *fancy* to denominate the same activity within narrower limits. There is no suggestion of two faculties, nor even of two phases of the same faculty. The term *fancy* retains its common meaning, and is obviously used to avoid the awkwardness involved in employing the term *imagination* in two senses in the same sentence. Ordinarily, as for instance in the first passage cited by B. S. M., Dryden uses fancy and imagination as equivalent terms, though he uses the former rather more frequently than the latter. In the following passage from the preface to "An Evening's Love" (1671), fancy is used in somewhat the same general sense as in the preface to "Annus Mirabilis":

> The forming it [the story of the play] into acts and scenes, disposing of actions and passions into their proper places, and beautifying both with descriptions, similitudes, and propriety of language, is the principal employment of the poet; as being the largest field of fancy, which is the principal quality required in him. . . . Judgment, indeed, is necessary in him; but 'tis fancy that gives the life-touches, and the secret graces to it; especially in serious plays.

EDWARD FULTON.

Urbana, Ill., January 6.

THE CABINET IN CONGRESS.

TO THE EDITOR OF THE NATION:

SIR: Apropos of President Taft's suggestion that Cabinet officers should be granted the right to appear in Congress, the following bit of history, as giving an early indication of President-elect Wilson's sympathy with that administrative theory, may be of general interest. When Wilson was a student and fellow at the Johns Hopkins University, he organized a debating society for training the students in the department of history. He organized it in the form of a legislative body, and, passing over the Congressional order, he chose the norm of the English House of Commons, as "representing the most perfect example of a legislative body extant." This expression of his judgment may have more than academic value.

CRISPI'S MEMOIRS.

Francesco Crispi: I Mille (da Documenti dell' Archivio Crispi). Milan: Treves. 1911.

Francesco Crispi: Politica Estera. Memorie e Documenti raccolti e ordinati da T. Palamenghi-Crispi. Milan: Treves: 1912.

The Memoirs of Francesco Crispi. Translated by Mary Pritchard-Agnetti from the Documents Collected and Edited by Thomas Palamenghi-Crispi. Vol. I: Exile—The Thousand. Vol. II: The Triple Alliance. New York: Geo. H. Doran Co. $7 net.

These two volumes contain some important and much interesting material. The interest, for the person who has been behind the scenes in recent Italian history, lies often not so much in the facts stated in the documents as in the dexterity with which the editor has picked and arranged those documents so as to exhibit a white-washed Crispi. The nephew-editor is simply the latest of several apologists who have been working to transmute apology into panegyric. They have undertaken an impossible task, and that they have an inkling of this fact appears on one side from the character of the material which they suppress, and, on the other, from the growing effrontery of their statements. Having reached the stage where "Claim everything!" is their watchword, they exalt Crispi as the colossus of the Risorgimento, beside whom Garibaldi and Mazzini were but heroes in 18mo, Victor Emanuel a mediocre figurehead, Cavour a very negligible quantity, while Manin, Farini, Minghetti, and Ricasoli —to mention no others—were beneath mention. In a world which has always reasons enough for being grave if not down-hearted, the unconscious humorists who stir unexpected laughter deserve our thanks. Of such is T. Palamenghi-Crispi.

The career of Francesco Crispi falls into two periods of almost equal length, but of conflicting contents. Born in 1819, he was a conspirator and exile until the autumn of 1860, when the Two Sicilies were united to Italy. Elected to the Italian Parliament in 1861, he filled a conspicuous place thenceforth until his second and final expulsion from the premiership in 1896. The last five years

of his life he spent in retirement, execrated by all classes of Italians for having brought upon Italy the Abyssinian disaster, not to speak of the shame of the bank scandals which he had tacitly allowed to go on, or of the general corruption in public life which flourished under his ascendency, or of the social and industrial revolt which, hardly suppressed during his régime, he left as a legacy to his successors.

It being the editor's purpose to present Crispi under only the most favorable light, he masses his material in the first volume on the Sicilian Expedition, in which Crispi's talents as a conspirator culminated. We could wish that the information about the ten years' exile were more detailed. Little is added to what was already known. Crispi's relations with Mazzini, for instance, which really determined the younger man's policy, are only sketched. That Crispi, while accepting Mazzini's gospel of unity under a republic, refused to be a blind disciple, is the only important fact revealed—and that could be inferred long ago. Vital matters, on the other hand, remain sealed.

Thus, after the fatuous Mazzinian attempt at Milan, in 1853, the Piedmontese Government expelled Crispi, to whom it had given asylum for above three years. Crispi complained of unjust treatment, on the ground that it could not be proved that he was plotting; but by the showing of the expurgated documents here printed, he never ceased plotting. He was not, indeed, directly implicated in the Milanese fiasco, because he regarded it as too hazardous, and so kept out of it. But he knew of it.

Failure to convict was, in his reckoning, equivalent to a certificate of innocence. Di Rudio, one of Orsini's accomplices in the attempted assassination of Napoleon III, declared that Crispi, then a refugee in Paris, threw the third bomb. The Paris police evidently suspected him, for they arrested him at once and only released him for lack of proof. A year later, he was journeying through Sicily, teaching the conspirators there how to make and use Orsini bombs: for he had then neither moral nor sentimental scruples against political assassination—or tyrannicide, as he would have called it. But his nephew discreetly passes this matter over in silence. He lets us infer throughout that Crispi was a high-minded, unselfish patriot, who despised the ordinary methods of conspiracy—a James Otis or John Adams—instead of the actual Sicilian incendiary of history.

In the account of the Sicilian Expedition, which fills two-thirds of this volume, we can but admire the skill with which the nephew-editor constantly clears the stage in order to leave only his uncle in view. We forget at times that that epic adventure was not exclusively a Crispian achievement, so artfully are Garibaldi, Medici, Bixio, and Bertani thrust into the background, or reduced to the rôles of walking gentlemen. Historically, the relative proportions are not quite exact.

We look in vain for fresh light on the spurious telegram by which Crispi prevailed on Garibaldi to sail with the Thousand; but we find much inedited material for the period from May to October, 1860, when Crispi was indisputably Garibaldi's political mentor, exercising over the liberator an influence almost hypnotic. From behind the shelter of Garibaldi's power he could at last display with impunity the domineering qualities which he had hitherto been forced to curb.

Crispi's conduct had three motive springs: the maintenance of his personal ascendency, the assertion of Sicily's superior claims, and the promotion of the control of the movement by the Party of Revolution up to the latest possible moment. He brooked no rival; he listened to no suggestions. When the other members of the Sicilian Cabinet, incensed by his arrogance, threatened to resign, Garibaldi found it wiser to remove him from the Cabinet to the post of private secretary, a post in which Crispi could act as he pleased, unrestrained by law or public opinion, so long as he retained the Dictator's support.

The nephew-editor presents the material bearing on these critical months in such a way as to make it appear that Crispi alone had the statesman's knowledge; that those who differed from him or opposed him were traitors; and that even Garibaldi's contagious patriotism needed to be guided by the private secretary in order to be effective. The great question of the annexation of Sicily to Victor Emanuel's Kingdom appears as if it had only one side—Crispi's. The expulsion of La Farina, the hectoring of Depretis and of Pallavicino, are set forth as the shining acts of an incorruptible patriot. You would suppose that Crispi was George Washington and that they were Benedict Arnolds. In fact, however, La Farina and Pallavicino had already achieved far more than Crispi for Italian independence; and Crispi's assault on La Farina had personal vindictiveness rather than patriotism behind it. For politicians to identify their private hatred with patriotic righteous wrath is, of course, a common spectacle.

But the deeper criticism of the action of Crispi and his fellow fire-eaters does not concern the rightness or the wrongness of immediate annexation: it concerns the spirit in which they acted. If Garibaldi succeeded in his adventure, the Two Sicilies, or certainly Sicily, would become a part of United Italy. A patriot, therefore, would have done nothing to stir up sectional animosity, which would inevitably react as a blight on the union. Crispi, on the contrary, did his utmost to enrage the Sicilians against the North Italians, and where discords had not already sprung up he planted them. He bade the Sicilians to beware of Victor Emanuel and Cavour, whose purpose, he insinuated, was not to free Italy, but to Piedmontize her. They worked, he declared, for dynastic, not patriotic, aggrandizement, being the tools of Napoleon III, to whom they would turn Italy over at the first opportunity. The Sicilians must refuse to join the Kingdom of Italy except on their own terms. This was Crispi's idea of the best way to promote durable concord among a people whom envenomed sectionalism had kept asunder for centuries. His defenders may say that his opponents also indulged in vituperation and calumny, but this does not excuse him. Neither the Northern nor the Southern revilers during the Civil War could sweep Lincoln from action which should make reunion easy, "with malice towards none, with charity for all."

If the editor of these memoirs had not taken *nil nisi optimum* for his motto, he would at least have allowed us to infer the savage quality of Crispi's methods as well as the sinister effect which such a stimulation of sectional passions had on the subsequent welding of Italy into a united nation. Crispi's purpose during the summer is sufficiently expressed in the following sentence from a letter he wrote on July 9 to a fellow-revolutionist, Luigi Orlando (Italics are ours): "Let us all work together *in the cause of the Revolution, and the Revolution will be crowned with victory*" (I, 331).

But Crispi was too much of a realist in politics not to respect the accomplished fact. In his early days he had clung over-long to his Sicilianism; then he had clung to Mazzini's republic-or-nothing doctrine after the majority of the republicans had turned, under Manin's guidance, to Piedmont; he had even signed a protest against the Piedmontese alliance with France in 1859—that alliance which immediately freed Lombardy, Emilia, and Tuscany, and paved the way for the Sicilian Expedition itself. But after the annexation of the Two Sicilies had proved that the Italian monarchy was stronger than the Revolution, Crispi saw a new light.

Elected to Parliament as a Radical, in 1861, he soon realized that the Mazzinian creed was out-of-date. "The Monarchy unites us; the Republic would divide us," was his famous reply to Mazzini's reproach. Nevertheless, Crispi was an unwilling convert, and he did not refrain from relentless attacks on the Government, which caused confusion and bitterness at home and often endangered Italy's relations abroad. The death of Cavour in June, 1861, proved even more injurious to Italian recon-

struction than Lincoln's death proved to American Reconstruction; and during more than a decade, when patriotism and common-sense alike called for a spirit of mutual trust, conciliation, and compromise, Crispi was easily first as a sower of rancor. He surpassed Thaddeus Stevens—our eminent Reconstructionist—in partisan intolerance; he outdid Benjamin F. Butler in cunning vindictiveness. He upheld the fatuous Garibaldian enterprises which collapsed at Aspromonte and Mentana. Secure in his Deputy's seat, he filled to perfection the rôle of parliamentary privateer.

This rôle, which is a favorite one among the politicians of Continental Europe, often gives to its player a factitious importance. He need have no fixed principles; but he must have pertinacity, combativeness, a dogged indifference to consistency and to scruples. If he lacks the rapier of sarcasm, he will be quite as well served by the bludgeon of abuse. Even courage, which seems at first an indispensable quality, may turn out, on closer examination, to be either obtuseness or effrontery.

It was by playing this rôle for some fifteen years that Crispi came to take rank as the most formidable of Italian public men. He could unmake reputations and Ministries, though he could make none: and he availed himself to the full of the outsider's privilege of condemning captiously the party in power, and of demanding changes and concessions which he well knew neither himself nor any one else could bring to pass.

The nephew-editor glides over this long period, without a knowledge of which we cannot understand the fierce antipathies which largely determined the rest of Crispi's career, in order to introduce him, in 1877, as visiting Berlin, Paris, London, and Vienna, on the secret diplomatic mission out of which issued, we are led to assume, the Triple Alliance several years later. Crispi returned to Rome, believing that he had not only made a deep impression on Bismarck, but also penetrated his secrets and procured his support. How mistaken Crispi was appeared in 1881, when Bismarck consented to the seizure of Tunis by France—a consent which wounded Italy's pride and roused her enmity against the French, while, by requiring a large addition to the French army in Africa, it lessened the power of France to attack Germany. Bismarck was, in fact, not quite so simple as Crispi and his nephew suppose.

For ten momentous weeks, at the beginning of 1878, Crispi was Minister of the Interior, rendering energetic service in upholding Italy's prestige after the death of Pius IX. But almost immediately thereafter he was literally hurled from office on a charge of bigamy. In the law-suit which followed, it was shown that in 1853 he had been *religiously* married to the washerwoman's daughter whom for twenty-five years he acknowledged as his wife; but he escaped by the quibble that there had been no *civil* marriage. We cannot go into the scandalous transaction here; but we ask why the nephew gives no hint of it? The biographer of a public man is not required to burrow into the private affairs of his subject; but, when what was private becomes a matter of great public concern, the biographer who hushes or evades it is guilty of rank dishonesty. Any record of Parnell without a statement of the Kitty O'Shea scandal, which wrecked Parnell and the Home Rule cause, would be laughed at. Crispi's nephew is well aware that the suppression of truth is often the most effective way of deceiving: nor can he escape by protesting that he deals only with foreign policy; because he devotes a large part of this volume to arguing that Italy's foreign policy would have been very different if Crispi had been in office. The trial for bigamy was the prime reason which kept Crispi out of office for nine years.

But while Crispi had no Ministerial responsibility during these years, he exerted greater or less influence. He approved of the Triple Alliance, forgetting that he had formerly berated the leaders of the Right as traitors for their subservience to France. How the upholders of subservience to Germany, of which the Triple Alliance was the sign, were to be regarded not as traitors, but as patriots, is not explained: and the nephew-editor seems not to perceive that since 1882 the Triple Alliance has served chiefly to protect Italy against her allies, Germany and Austria; for she has never been in serious danger, despite Crispi's tremors in 1889, of an attack from France.

Much of the material referring to foreign politics during Crispi's long eclipse is interesting: but we do not accept his own assurances that, if he had been in office, he would not have made this or that blunder, because we remember that from 1887 to 1896, when he was Prime Minister most of the time, he showed himself only too fallible and plunged Italy into the worst calamity in her history as a nation. It is easy for Crispi to declare that, if he had been listened to, France would not have got Tunis in 1881, or that Italy would have joined England and France in Egypt in 1882: such declarations sound to the historian too much like the excuse of the sportsman who would have shot a stag if his gun had been loaded. Perhaps Crispi deceived himself as to the real influence produced by his interviews and diplomatic correspondence. The Prime Ministers of Europe could not help listening to so aggressive a colleague; they said graciously that Italy's interests must be promoted; and then they followed their own devices.

The nephew-editor collects much evidence in regard to the commercial rupture with France, which led to strained political relations. The first break occurred when Crispi was out of office, but while he protests in the documents here printed that he had no ill-will towards France, he gave free rein to the Gallophobia which he inherited from his Mazzinian days. The tariff war caused Italy immense damage, from which she did not recover until after Crispi's death, and it no doubt inflamed the conditions which led up to the riots in 1898. Crispi himself was in so fevered a state that in 1889, believing that France was about to attack Italy, he placed the Italian army and navy on a war footing, and, not daring to trust even a ciphered telegram, he hurried off a trusty messenger to Bismarck for help. Bismarck, better informed and clearer-sighted, calmed the ex-conspirator by assuring him that France would not commit suicide in that way just then.

So in regard to many other projects which Crispi's restless mind agitated: we search this book in vain for proof of his lasting influence on international politics. Only in his dealings with the Vatican was he uniformly decisive. In 1889, when Leo XIII's reactionary advisers gave out that he could tolerate no longer his "imprisonment" and must seek an asylum outside of Italy, Crispi sent word to the Pope that, if he went, he should be escorted with royal honors, but that neither he nor his successors should ever return. Cardinal Hohenlohe, who conveyed the message, added that, as the Almighty had decreed that the Temporal Power could never be recovered, the Catholic hierarchy ought thenceforth to devote themselves to the salvation of souls instead of to worldly schemes. When Hohenlohe's letter reached the Pope, despite the efforts of his entourage to isolate him from all but their influence, he abandoned the "farce of the departure"; and it has never since been seriously considered.

Jingoism lay at the bottom of Crispi's notoriety—Jingoism preached and promoted by a man of ruthless personal temperament, whom even his supporters submitted to rather than respected or loved. So far as he instilled into the Italians a spirit of self-reliance, and of patriotism, he did well; but, unfortunately, he taught them to mistake swagger for dignity and to put their trust in the external trappings of a Great Power. For all his truculence, he had no moral courage. So, although he had earlier denounced standing armies and militarism, he endeavored, as Prime Minister, to give Italy a large military establishment; and though he knew the folly of colonial expansion in Abyssinia, he lacked pluck to resist it. He displayed a similar moral cowardice in the

case of the bank frauds, which he allowed to go on. Although he was too clever to be caught with incriminating spoils upon him, his wives, and familiars, and his political favorites for the time being, profited by the countless opopportunities for graft. He was energetic in the physical exercise of his authority: as when he suppressed the starving Sicilians by martial law; and whenever he returned to office there was a sudden bustle and hum, as of mighty workings. But Jingoism, like the drug habit, requires larger and larger doses, and the activity it generates is often deceptive. Having filled Crispi's two Administrations with sound and fury, it left little constructive legislation, almost nothing beneficent, to show for his long political ascendency. It ended in the terrible disaster of Adua, which brought the Italians only one compensation: it freed them forever from Crispi.

Whether Signor Palamenghi-Crispi will print another volume containing an apology of Crispi's conduct in home affairs, seems doubtful. If he does, it will necessarily require even more "doctoring" than these two, which will never command the trust of historians. Crispi was so crafty that we cannot be sure that he did not make changes even in his diaries. It is known that, on becoming Prime Minister, he sent to Turin and had abstracted from the archives there many documents which have since totally disappeared. The Italians have too high a respect for his cunning to pretend that these documents contained good things about himself which he wished to hide under a bushel. After Adua, he spent the last five years of his life arranging his papers, suppressing here and destroying there, so that the apologists might conjure from them a fictitious Crispi—farseeing, dauntless, wise, righteous, canonizable. The nephew-editor has manipulated this material still further to meet the exigencies of to-day, when the fact has been recalled that Crispi, among many suggestions, said that Italy ought to possess Tripoli.

The psychologist's interest in Crispi's career is this: he never outgrew his conspirator's nature. So his life was cut in two, the second half a denial of the first. As lawmaker and constitutional Minister he was continually doing that which, as a Mazzinian conspirator, he had denounced Cavour for doing—that is, insisting on the supremacy of the national Government and on the maintenance of law and order. Although he accepted the monarchy, he was never more than a reluctant convert: his head, weighing expediency, approved; his heart remained republican. Deeper still than his political convictions was his temperament. From youth to age he never belied his Albanian ancestry or his Sicilian apprenticeship. Proud as Lucifer, self-dependent, tenacious in wrath, scornful, domineering, crafty, vindictive, he treated his supporters like lackeys and his opponents like outlaws. His public career was a perpetual vendetta; his private life a scandal.

We should add that Signora Agnetti's translation is readable; but it is not always precise. Occasionally she misses the meaning altogether; so that students should be warned to turn to the original text wherever important statements are involved.

CURRENT FICTION.

A Picked Company. By Mary Hallock Foote. Boston: Houghton Mifflin Co.

According to "Who's Who in America," Mrs. Foote's address reads, with surprising appropriateness, "North Star Mines, Grass Valley, California." Writers about the Far West commonly prefer to dwell in the East, but this novelist, though she was born in New York State and educated in New York City, has spent most of her life in the region from which her subjects are derived. "The Led Horse Claim" appeared (does it seem possible?) thirty years ago. Since then this writer's output has run to a scant dozen books (she is, of course, an illustrator as well). There is not a big story among them, but they have an atmosphere, and a gentle distinction of style which now grows rather old-fashioned.

In "A Picked Company" Mrs. Foote has gone back to the forties and the followers of the Oregon trail. A band of New England villagers, under the leadership of their old pastor, set out in the footsteps of Dr. Whitman, to found a pious colony on the farthest frontier. The old man is an enthusiast and a visionary, fit to inspire a pilgrimage, but helpless in practical matters. A villain (of, it must be owned, pretty conventional type) associates himself with the party from mercenary motives, as guide and manager, and becomes the mainspring of a rather sensational romantic action. This involves the seduction of a girl of the company and the eventual death of the villain at the hands of virtue. We could have wished more made of the pioneering experience of the band as a whole, and less of the personal episode. Stella, the girl who goes wrong, is painted in great detail, and is a good picture of the worthless, selfish butterfly type, foredoomed from birth to a paltry fate.

The Inner Flame. By Clara Louise Burnham. Boston: Houghton Mifflin Co.

Without subjecting this gentlest of tales to a too searching analysis, we may venture to say it was the inner flame that for twenty-five years had kept poor, solitary Aunt Mary alive and enthusiastically painting unsalable pictures. After her unobserved light had failed, and the fuel was handed on in the shape of a legacy to her nephew, who had it in him to paint pictures of recognizable value, it was the self-same inner flame that sustained the hardworking young art student in buoyant spirits amid the social rigors of a New York winter. It illuminated with contentment his town quarters in a Gramercy Park stable, and when fortune landed him radiant but penniless for the summer in a painter's paradise off the Maine coast, the divine spark even fired him with the rare courage to turn a henhouse into a studio. Again, it was the inner flame that revealed to Kathleen, his fair, intellectual cousin-by-marriage, certain fairy-tales of educational value that might be based upon microscopic research and illustrated by an able but impecunious young artist. A kindred irradiation—this time an extraordinary vocal gift—lighted her nonchalant brother into the pleasant paths of financial independence, and with a more tricksy gleam led the nimble feet of the young instructress in the art of dancing, who made the fourth member of this youthful quartet. What, we beg the patient and presumably juvenile reader to consider, would it have profited either pair to meet in New York and to summer together on Brewster's Island, had there been lacking that sympathetic understanding engendered by the inner flame? As to the faithful servitor Eliza and the mother who in Western exile unselfishly fostered her son's ambition, while these lacked the glory of the artistic impulse, it is well understood that these had "lights" of their own, and that they also shine as luminous examples.

The Soldier from Virginia. By Marjorie Bowen. New York: D. Appleton & Co.

Not long since this writer produced a romance the scene of which was laid in mediæval Italy. It was a fustian affair, but not intolerable. It is easier to romance with some degree of plausibility about a "Viper of Milan" than about a Washington of Virginia. A fact apparently understood upon the stage is that a good deal of absurdity may be allowed a "costume play"—a more antique and fantastic toggery allowing of grosser follies in speech and action. One would hardly take the trouble to consider the credibility of Miss Bowen's Milanese reptile, with his outlandish armament and haberdashery; but it is less safe to take liberties with the knee-breeches and queue, the conduct and vernacular, of the father of one's country:

> Hesperian curls, the front of Job himself,
> An eye, like March, to threaten at command—
> A station like Harry Mercury—

There is no charm of a romantic hero

which Miss Bowen hesitates to visit upon the memory of the great Virginian; and he stands out from her pages a very pretty and clever little man—or manikin.

With the Merry Austrians. By Amy McLaren. New York: G. P. Putnam's Sons.

Here, as in "Bawbee Jock," the writer has produced a creditable story in the mild later-Victorian style. The school of William Black, Walter Besant, *et al.*, is, it seems, not yet extinct. The "merry Austrians" and their outlandish scene merely afford contrast and freshness of setting to the pair of young Britons who, with hearts of oak and manners to match, play out their little British drama according to very ancient rules, indeed. She is the young widow whose well-born husband has been disinherited for marrying her. When his death leaves her in poverty—that is, with only enough money to live on—she does not care for herself; but that her child should be deprived of his "rights," namely, the inheritance of superfluous wealth, fills her with a bitterness which all faithful students of English fiction will understand. Still, being proud as beautiful, after a single useless gesture of abasement before the inexorable grandfather of little Benjie, she retires in the direction of the Tyrol, and Belgravian rumor knows her no more. Then the grandfather dies. Then the supplanter, the presumably unpleasant person into whose pockets Benjie's patrimony has been diverted, undertakes that supreme feat of transatlantic heroism—the feat, to put it vulgarly, of shelling-out. He pursues the widow, he finds her, melancholy among her merry Austrians, he falls in love with her, and, after reluctances and misunderstandings, he marries her. The Austrian lady who covets Him and intrigues against Her, the Austrian officer who adores Her and triumphs over passion for her sake, are well enough as accessories, but chiefly serve to intensify the Briticism of the tale.

TWO BOOKS ON CARIBBEAN SOUTH AMERICA.

Venezuela. By Leonard V. Dalton, B.Sc., Fellow of the Geological and Royal Geographical Societies. With a map and 34 illustrations. (The South American Series.) New York: Charles Scribner's Sons. $3 net.

Guiana, British, Dutch, and French. By James Rodway, F.L.S. With a map and 36 illustrations. The same.

These two volumes belong to a useful series of treatises descriptive of the various countries of South America, one of which, Mr. Koebel's "Uruguay," was reviewed in these columns about a year ago. Both are the work of authors who know well the countries they describe, and contain a great deal of information which will be serviceable to persons desiring to know something about the regions dealt with. They are not records of travel, though they contain pretty full topographical accounts.

Mr. Dalton's "Venezuela" gives a sensible, careful, and, where it touches historical questions, impartial description of a country of great natural beauty and immense natural resources. The physical geography, the plants and animals, and the aboriginal Indians are duly described. A chapter is given to the country under Spanish rule and another to its fortunes as an independent republic since 1811. Eight chapters treat of the different regions and states, and a general survey, which winds up the book, discusses the prospects of material development, including the means of communication and transport. Some statistics of population, trade, and finance are placed in an appendix, which would be useful if the governmental figures could be relied on. Even so, they are at least better than nothing. An interesting bibliography, the fulness of which shows how many travellers and writers from the beginning of the sixteenth century have occupied themselves with the country, adds greatly to the practical worth of the book. It will thus be seen that there is something in it about Venezuela in nearly all the aspects which a country presents, except those which may be called by the modern name of "sociological." A short paragraph is given to education, but one perhaps not disproportionate to the provision for public instruction made in the republic where there are only 1,404 elementary schools, with less than 50,000 pupils in a population of 2,665,000. We hear less than we should have wished about the racial characteristics of this population, *i. e.*, what are the proportions of persons of pure European blood, of mixed European and Indian blood, of mixed Indian and negro blood, and of pure Indians. This is a point of much importance in considering the social and political phenomena of the country, as well as in attempting to predict its development, and although no trustworthy figures regarding it are attainable, any light the author could give would have been welcome.

We are told very little about the politics of the country, with its twenty-two states and a small Federal District round Caracas, the capital; and the historical sketch is a monotonous record of faction fights which ended in nothing but the fall of one and the rise of another military adventurer, all more or less corrupt and rapacious. Venezuela is one of the oldest settled parts of the Western Hemisphere; and it is one of the few in which the traveller doubts whether things are any better now than they were under the rule of Spain, whether order is more secure, justice better administered, instruction more widely diffused, the development of the country better promoted, the life of the people any happier. Nevertheless, its condition during the last few years does seem to show some improvement from the days of Castro, and there is probably more prospect of further progress than can be discovered in such republics as Ecuador or Nicaragua.

Mr. Rodway's book on Guiana stands on much the same literary level as Mr. Dalton's on Venezuela. It is a description of the country, not a tale of travel or adventure, and, considered as a description, it tells the reader the things which most readers wish to know. The author has written about the country before, has lived in it, has formed views about the people which sometimes, as in his treatment of the case of the missionary Smith, may be thought to disclose partisan sentiment, but which have the effect of giving a certain freshness and "local color" to his writing. He tells us less about the several districts of Guiana, their physical character and their products, than Mr. Rodway tells us about the several districts of Venezuela, but he enters much more fully into the history of the country, and presents a more graphic account of its social conditions. The two books are worth reading together, for they call attention to three remarkable contrasts between the countries. In the first place, while Venezuela shows the results of republican independence in a Spanish-American country, Guiana shows the results of dependence on European Powers. Secondly, while the population of Venezuela is almost entirely of either Spanish or Indian origin, that of Guiana has a large negro, and in some districts a still larger Hindu, element. Thirdly, while administration in Venezuela is notoriously corrupt, it is in Guiana, or at least in British and Dutch Guiana, quite honest. To explain how these things come to be would require more space than we can spare for the purpose, but the facts suggest many reflections as to the value to be attributed to the name of republic. Mr. Rodway's comparison of the conditions in the three Guianas, French, Dutch, and British, is interesting. He may be, of course, and probably is, partial to his own countrymen; but the facts he states, if correct, reflect little credit on the management by France of her colony, to which she still continues to send out convicts; while they show that the Dutch dominion, though less prosperous as well as much smaller than the English, has latterly begun to make progress and has found in Malays from Java a source of labor supply almost as good as that which India has provided for the British plantations. In none of

these colonies, according to Mr. Rodway, are the negroes of much use for regular plantation labor. The East Indian, with habits of industry formed during many generations in his own country, appears much more available.

What Mr. Rodway tells us regarding the scenery of Roraima, the lofty sandstone mountain on the confines of British Guiana and Brazil, and about the vegetation round the magnificent waterfall which is the glory of that region, is well worth reading. But the most interesting problems raised by the account given of the three European colonies, are those which bear on the quality and capacity of the three races here placed in juxtaposition, Indians, negroes, and Asiatics, on the possibility of making the country fit for white settlement on a larger scale than at present, and on the kind of mixed race which will ultimately arise out of a fusion of these various elements.

A Miscellany of Men. By G. K. Chesterton. New York: Dodd, Mead & Co. $1.50 net.

One or two recent collections of Mr. Chesterton's essays have given us an uneasy feeling that the burliest of Tory-Democrats, the jolliest of living Englishmen, was growing weary. Though glorious Jack Horner was still lustily thrusting in his thumb, he seemed to be pulling out plums in less profusion than of yore, and to be more attentive to his thumb than to his pudding. His latest offering is not entirely reassuring, for it is largely made up of articles written some time ago—"from the South African War to the first impudences of eugenics; a time in which the liberal tradition, as I hold it, was not only dying, but committing suicide." Furthermore, he closes the book with an essay called The Angry Author: His Farewell, in which he threatens, with certain reservations, to desert the Fourth Estate, and become a romancer pure and simple: "I wish to gather up into this last article a valedictory violence about all such things; and then pass to where, beyond these voices, there is peace—or in other words, to the writing of Penny Dreadfuls; a noble and much-needed work."

But, at any rate, here once again is the earlier fiery gusto, the whiff and glitter of a keen blade not sporting idly with feathers, but hot with the conflict and bent on unseaming the adversary from the nave to the chaps. Here again is the masterful brushing aside of party catch-words, the steady drive at realities, the scorn of Utopists and doctrinaires, the unrelenting hatred of national oppression and hypocrisy—a head-on collision, in short, between a ruddy, human liberalism, and the allied forces of canting Christians, visionary rationalists, and shifty, calculating imperialists. Mr. Chesterton's *casus belli* and his mode of attack are too well known to require further commentary. Let this serve as a taste of his valedictory violence—of his "Don'ts for Dogmatists; or Things I am Tired Of":

> Don't use a noun and then an adjective that crosses out the noun. An adjective qualifies, it cannot contradict. Don't say, "Give me a patriotism that is free from all boundaries." It is like saying, "Give me a pork pie with no pork in it." Don't say, "I look forward to that larger religion that shall have no special dogmas." It is like saying, "I look forward to that larger quadruped who shall have no feet." A quadruped means something with four feet; and a religion means something that commits a man to some doctrine about the universe. Don't let the meek substantive be absolutely murdered by the joyful, exuberant adjective.

The Problem of Edwin Drood. By W. Robertson Nicoll. New York: Geo. H. Doran Co. $1.25 net.

Death took a hand in a fine piece of mystification, by stilling the voice of the great story-teller in the middle of "Edwin Drood." The world has been tolerably well content to leave half-told the story of Cambuscan bold, but the tale of Drood has been completed—in fancy—scores of times: the mystery of him is infinitely more absorbing than if Dickens had been permitted to solve it for us. Dr. Nicoll appends to his present study a bibliography of some hundred titles—adaptations, sequels, solutions, scholarly citations of evidence, wild speculations of every conceivable sort. Among the authors responsible for this mass of Drood literature one notes many distinguished names. The late Andrew Lang appears in the discussion a dozen times or more. Other well-known contributors are Mrs. Meynell, Mr. Chesterton, Mr. Archer, Beerbohm Tree, Hall Caine; and in the course of the text opinions are quoted from John Forster, Joseph Hatton, Hugh Thomson, and others. Professor Nicoll himself is anything but a dabbler, and the seriousness of his present undertaking is evident, not only from the character of the text, but from the fact of its dedication to Lord Rosebery.

The chief element of mystery in the story, as planned by Dickens, had to do with the fate of Drood. "Was he murdered?—if so, how and by whom, and where was his body hidden? If not, how did he escape, and what became of him, and did he reappear?" This is the direct Drood question left unanswered by Dickens's death. If he had lived, the question would have been distinctly answered. The corollary mysteries: who was Datchery, the stranger who appeared in Cloisterham after Drood's disappearance, and was manifestly destined to solve the initial problem; and who was the opium-woman, known provisionally as the "Princess Puffer"—these problems might have been left more or less shrouded, even at the end of the tale. The mysteries of Drood and of Datchery are dealt with in this book.

On the basis of a thorough marshalling of evidence, the writer shows that Drood was undoubtedly murdered. Dickens told John Forster that in the projected story a nephew was to be murdered by his uncle. "The murderer was to discover that his crime was useless for its purpose, but he was not to be convicted in the ordinary way. It was by means of a gold ring, which had resisted the corrosive effects of the lime into which the body had been cast, that the murderer and the person murdered were to be identified." Mme. Perugini, the novelist's daughter, corroborates this testimony, and says that it is impossible to suppose that, in view of the close relation between Dickens and Forster, Dickens would have changed his plan without informing his confidant. Neither Mme. Perugini nor her first husband, Charles Allston Collins, doubted that Drood was murdered. "Edwin Drood" was to be issued by Chapman & Hall in twelve shilling numbers. Six numbers were actually published. Collins designed the original wrapper, or cover, which enclosed the numbers really issued. Further, Charles Dickens the younger "positively declared that he heard from his father's own lips that Edwin Drood was dead"; and in that belief dramatized the story (in collaboration with Joseph Hatton). Also Sir Luke Fildes, the sole illustrator of the story (except for the wrapper), has testified that Jasper was provided with a double-length necktie because "Jasper strangles Edwin Drood with it." Furthermore, there is a note by Dickens himself to the effect that "Jasper lays the ground for the manner of the murder to come out at last. Night picture of the Cathedral."

After all which, Professor Nicoll concludes, "the proof that Edwin Drood was murdered is to my mind mainly to be found in the pages of the story"—which seems to be leaving little to the credit of the Dickens testimony, elder or younger. But it appears that there have been careful and prayerful students of the subject who, while they are ready to admit that Jasper did his best to erase his nephew with the aid of quicklime, and rejoiced in the belief that the method had been effectual, suggest that he may have been more sanguine than sanguinary. Hence a legion of conjectures as to the time, place, and manner of the lamented Edwin's return. They are here assembled, and, one would think, finally disposed of.

Professor Nicoll believes that "Datchery" was Helena Landless in male disguise, and argues the point, if not with absolute finality, at least very ingeniously and credibly.

Continental Legal History Series: Vol. I: A General Survey. By Various Authors. Vol. III: A History of French Private Law. By Jean Brissaud. Boston: Little, Brown & Co. $6 net; $5 net.

If the next generation of lawyers are not far more learned than their predecessors, the fault will be their own. Not only are law schools multiplying, but their requirements for admission as well as for graduation are increasing, and the quality of their instruction is improving. The law student of to-day enjoys educational advantages which Blackstone and Kent would have envied. And the end is not yet. Legal educators are insisting that the prescribed law-school work, extensive and strenuous as it is, has not proved to be sufficient; that it needs to be supplemented in many respects. Accordingly, the Association of American Law Schools has undertaken the task of mapping out a course of study in Continental Legal History, and of preparing translations of some of the best works on that subject. The volumes before us are the first fruits of this endeavor.

In volume one we have a general survey of events, sources, persons, and movements in Continental legal history. It is not the production of a single author. No European scholar, we are assured by the editor, has ventured to write such a book, out of his own studies. The volume has therefore been constructed by fitting together chapters separately written, each by a specialist in his own field. Some of the chapters have been prepared expressly for this volume. Most of them, however, are reproduced from standard publications; although, in "weaving them together into a connected and inclusive story," the translators and editorial committee have taken frequent liberties with the author's arrangement of topics, and at times have curtailed the text.

Notwithstanding the title, the historical outline in this volume does not embrace the entire continent of Europe. It is limited to the portion west of Russia and the Balkans—the portion in which the codified law of Rome and the customary law of the Germanic tribes have blended to produce a legal system, "which now broadly divides with Anglo-American law the spheres of influence in the eastern hemisphere." The reasons given by the editors for omitting any sketch of the legal systems of Eastern Europe—the Slavic, the Byzantine, and the Hungarian—are briefly as follows. These have remained quite separate and distinct from the legal systems of Western Europe, so that there has been no interchange of ideas between the two groups; no blending of legal rules; no reciprocal influence.

The story of the volume begins at the close of the Roman Empire of the West, near the end of the fifth century, and comes down to the present time. It is divided into nine parts. The period of political amalgamation from Justinian to Feudalism forms Part I of the narrative. Part II tells of Italy; Part III of France; Part IV of Germany; Part V of the Netherlands; Part VI of Switzerland; Part VII of Scandinavia; Part VIII of Spain, while Part IX traces the Canon Law Sources.

Although none of these sections could be omitted without detracting from the completeness of the story, it must be confessed that they differ widely in interest and importance. The first three parts and the last will be read with most zest, we believe; and are worthy of careful study. It is true that Professor Brissaud's sketch of early French law traverses a part of the field covered by Professor Calisse in his account of early Italian law, but the student will not feel that his time has been wasted by this duplication. On the contrary, after reading both authors, he will thank the editors for not limiting his acquaintance to either.

The third volume of the series, entitled "A History of French Private Law," is the work of a single author, Professor Brissaud. Here, again, the editors have taken liberties with the text. The original work is in two volumes, divided into three general parts—The Sources of French Law, Public Law, and Private Law. The introduction to part second has been taken from its original setting and made to serve as an introduction to part third. This rearrangement is not altogether felicitous, for it brings such topics as Anglo-American Townships, The Russian Mir, and the Village Communities of India into immediate connection with obligations, ownership, and the various other topics of private law.

In passing, we cannot refrain from a word of surprise at the absence of all reference to American publications on the subjects of townships and of the transition from collective ownership to individual ownership of land. Professor Brissaud cites a number of English and French writers, but seems not to have heard of the more valuable literature which has appeared on this side of the Atlantic. We are sure that his discussion would have been enriched by an acquaintance with the famous Johns Hopkins Studies upon these themes. They would have supplied him with additional evidence in support of his view, that "the abandonment of collective ownership has everywhere coincided with general progress"; that "the modern phalansteries have not succeeded in restoring it to honor, and the recent experiments made with the object of returning to this archaic system are not at all encouraging."

The main portion of this volume is worthy of all the praise lavished upon it in the editorial prefatory note by Dean Wigmore and in the Introduction by Mr. Holdsworth. After lauding the author's wonderful breadth of research, and his catholic and cosmopolitan use of every source of authority wherever found, Mr. Wigmore declares that these enable "him to show us the inter-relations of the individual principles. Everything is explained as a growth. Nothing appears as a merely arbitrary fact of law. It is the very antipodes of the formal lifeless treatment of the legal historians of fifty years ago. In the philosophic study of causes and conditions, Brissaud exhibits the best type of the modern legal historian. Law is expounded, not mechanically, but as 'a felt necessity of the times.'"

Notes

Prof. C. H. Grandgent will soon complete his edition of "The Divine Comedy"; Heath promises shortly the "Paradiso."

The same house will issue Bolt's "Peterli am Lift," illustrated, with notes and vocabulary by F. Betz.

"Socialism and Democracy in Europe," by Samuel P. Orth, is in Holt's list.

"With Master Minds," announced by the Universal Series Publishing Co., is a volume of interviews held by Herman Bernstein with many celebrated men.

"The Eternal Maiden," T. Everett Harré's first novel, is announced for early publication by Mitchell Kennerley.

A story of Western adventure, by Ridgwell Cullum, will be brought out shortly by Jacobs & Co. Its title is "The Night Riders."

Prof. Roland G. Usher is publishing, through Houghton Mifflin, a book on Pan-Germanism.

Four new novels are promised for this month by the Appletons—"Adnam's Orchard," by Sarah Grand; "General Mallock's Shadow," by W. B. Maxwell; "Everbreeze," by Mrs. S. P. McLean Greene, and "The Ghost Girl," a detective story by Henry Kitchell Webster.

Little, Brown & Co.'s forthcoming list of fiction includes: "Joyful Heatherby," by Payne Erskine; "The Happy Warrior," by A. S. M. Hutchinson, and "The Day of Days," by Louis Joseph Vance.

Among the new novels to be issued this month by Duffield & Co. are the following: "The Street of the Flute Player," by Dr. H. de Vere Stacpoole; "The Silver Dress," by Mrs. George Norman; "The Wooing of Margaret Trevenna," by Roy Meldrum, and "Wild Justice," by Frances Clare.

Prof. Paul Terry Cherington, of the Harvard School of Business, has a forthcoming book on "Advertising as a Business Force" (Doubleday, Page).

February publications of Frederick A. Stokes Co. include: "Bobbie, General Manager," by Olive Higgins Prouty; "The Life Mask," by the author of "To M. L. G."; "Smith and the Church," by Harry H. Beattys, with an introduction by Meredith

Nicholson, and "Cooncan" (a card game sometimes known as "Rum"), by R. F. Foster.

The following titles are included in the announcements of Sturgis & Walton Co.: "The Love-Seeker, A Sentimental Handbook," by Maud Churton Braby; "Tad Sheldon, Scout, Stories of his Patrol," by John Fleming Wilsou; "Education for Economic Democracy," by Prof. Arland D. Weeks; "Getting Together," essays by British and American Churchmen, Christian and Jewish; "Constructivo Rural Sociology," by Prof. John M. Gillette, and "Memoirs Relating to Fouché, Minister of Police under Napoleon," which was originally published in September 1824, with the title "Mémoires de Joseph Fouché, duc d'Otrante, ministre de la police générale."

The Villon Society, of London, which is issuing, uuder the supervision of Mr. John Payne, an anthology of French verse from the twelfth century to the present time, is about to publish the fifth section. This, in two volumes, will include translations, in like metres, of selections from 150 contemporary French poets. Sections two and four—"The Renaissance Period" and "The Romantic Period"—have already appeared. The other sections, which will follow regularly, are the first, "The Beginnings" (twelfth to fifteenth centuries), and the third, "The Dark Ages" (seventeenth and eighteenth centuries).

Prof. Ernest D. Burton has been succeeded in the post of editor-in-chief of the *Biblical World* by Prof. Shailer Mathews.

Empires may vanish and provinces may be swallowed up, but the "Almanach de Gotha" goes on unchanged. The present volume, for 1913 (published by Justus Perthes of Gotha, imported by Lemcke & Buechner), bears, indeed, the proud inscription: CENT CINQUANTIEME ANNEE, and by way of introduction presents the reader with its history from 1763 to 1913. The portraits exhibit Alexandrine, Reine de Danemark; Christian X, Roi de Danemark; Marie-Adélaïde, Grande-duchesse de Luxembourg, and Alexis, Prince de Bentheim et Steinfurt.

The English "Who's Who, 1913" comes to us from the Macmillans, one of the most welcome books of the year. The present issue is printed on a larger page, which lowers the number of pages somewhat from the edition of last year. We need scarcely inform our readers that this work does not confine its biographies to citizens of Great or Greater Britain, but contains eminent names from all the world. In one point we think the book might be made more serviceable: the pronunciation of the names might be indicated.

In its journeys through the "realms of gold" the Oxford University Press has now come to Tennyson, offering two publications which are particularly attractive. One of these, in the green-and-gold series, "is an exact (but not a page-for-page) reprint of the Bodleian copy of the 1842 edition. The half-titles and advertisements are not reproduced, and line-numbers have been added to some poems. A few trifling errors of spelling, punctuation, and numeration have been corrected silently." The two volumes of 1842 have their separate title pages preserved in this pleasant reprint. The other publication from the Oxford Press gives the "Poems of Tennyson, 1830-1870." The print is exceptionally good; the illustrations include two pictures in color after G. F. Watts, and ninety-one cuts from Millais, Rossetti, and others. T. Herbert Warren, president of Magdalen College, furnishes an introduction. With the exception of the omission of poems later in date than 1870 (for copyright reasons we presume), this is almost an ideal one-volume edition of the poet.

Mr. Holbrook Jackson belongs to the one type of critic not obnoxious to authors. That is to say, he makes it his function merely to facilitate friendly intercourse between books and readers. In his "All Manner of Folk" (Kennerley), he flutters from subject to subject, kindling a little blaze before each, never says anything disagreeable, seldom pronounces judgment. If you were to give a great literary *soirée*, you would be glad to hear him moving among the guests, with his breezy and genial *parlage*, making every one feel *chez soi*. We do not mean to intimate that he has no personality or preferences. He has a decided taste for red. If you wish to give him a thoroughly enjoyable evening, you must invite artists and authors who are in the "movement." A sketch of Whistler serves as his frontispiece, and half way through you fall in with Max Beerbohm—the elever young man who in his early twenties felt that he was "outmoded" and must give way to "younger men with months of activity before them." Mr. Jackson is a modernist, though tinctured with discretion and humor. He is in love with the energetic, the picturesque, the unexpected, the defiant, the eccentrie. He will fling his cap—a little while—for any one who has produced a variation in species, and not inquire too curiously whether it may not be a *lusus naturæ*. He intoxicates himself with a cocktail made by mixing a dash of Whitman, Emerson, and Nietzsche in a tumbler full of Mill's "Liberty." Richard Jefferies writes: "Erase the past from the mind, stand face to face with the real now—and work out all anew"; and Mr. Jackson finds the utterance "full of suggestion and in line with the ripest thought of the day." He holds that the "real enemies of society are custom and precedent." A clever observation, with a kind of centennial sound—where have we heard it before? He clasps hands with John Synge, Poe, Edward Carpenter, Thoreau, William Morris, Henry Mayers Hyndman, Jo Davidson—and any one else who is not a merely respectable member of the herd. Besides all this, he laughs in a cheerful and reassuring fashion, with Lewis Carroll and Edward Lear, and admits that the Superman is as yet only "an exuberant and tragic ghost pervading the twilight of humanity." It was an error to say that there is nothing disagreeable in his book. He declares that shameless "lionizing" prevails in the United States: "personal distinction is there received with a rapturous adoration which has small reference to the thing achieved by the adored one." In England "a healthy and keen sense of humor keeps the habit within the bounds of seemliness." We fail to see how such a nice man as Mr. Jackson could have permitted himself to say anything so horrid.

Volume XIX of the "Journals of the Continental Congress" (Washington: Library of Congress), edited by Gaillard Hunt, comes to hand two years after its predecessor; the delay, as the editor explains, having been due to the state of the appropriation for library printing. The period covered, January 1-April 23, 1781, was one of progress in national organization, notwithstanding the imminence of national bankruptcy. A Department of Foreign Affairs, the Secretary of which was to have liberty "to attend Congress," was provided for January 10, followed February 7 by the appointment of a superintendent of finance, a "Secretary at War," and a Secretary of Marine. February 16 an attorney-general of the United States was recommended, together with a Federal court for the trial of civil offences; while on April 5 Federal courts for the trial of piracies and felonies on the high seas were created, and two days later rules for the conduct of privateers adopted. On the first of March, following the ratification of Maryland, the Articles of Confederation were signed, and the Continental Congress became the Congress of the Confederation. So greatly had conditions changed, however, since the adoption of the Articles by Congress more than three years before, that almost immediately (March 6) a committee was appointed to prepare additional articles.

The overshadowing question, however, was that of ways and means. On February 3 Congress proposed to the States an amendment of the Articles, authorizing the imposition of a 5 per cent. duty on certain imports, the proceeds to be applied to the discharge of the principal and interest of the debt. The resolution, which Mr. Hunt in his prefatory note erroneously ascribes to January 24, was adopted only after a resolution declaring that the right to levy such duties should be vested exclusively in Congress, and that the duties ought to be uniform among the States and for specific purposes only, had been negatived. A circular letter of January 15 had already set forth the dire straits of the treasury, and the failure of the States to pay their requisitions; and on February 19 came an itemized statement of the debt, aggregating in specie, so far as the items could be ascertained, $26,617,812. Five days later the rates of postage were doubled. In March, with the outlook darker than ever, it was resolved that payment of the debt thereafter should be made at its specie value: and the States were urged to amend their laws regarding bills of credit, so that such bills might no longer have a legal tender standing save at their rating in specie. The further history of these well-meant efforts lies beyond the chronological limit of this volume.

The expedition, of which M. W. Hilton-Simpson gives an interesting account in "Land and Peoples of the Kasai" (McClurg), was made in 1907-09 for the purpose of studying the primitive natives of the Southwestern Congo, and making collections for the ethnographical department of the British Museum. Its remarkable scientific results have already been published by its leader, E. Torday. The basin of the Kasai (the great southern tributary of the Congo) was chosen for investigation because it contained an extensive *terra incognita*. This rare opportunity for the study of the negro who has not come into contact with the white man has opened up a new chap-

ter in the history of African culture. The expedition found the Bushongo, for instance, governed by a wise king, controlled by a sort of parliament of about 140 members, with an upper chamber of a very few of the highest dignitaries, such as the prime minister and the commander-in-chief of the warriors, and with a lower chamber in which were representatives of outlying districts, of the arts and trades, as well as women and slaves. Their art, says Mr. Torday, had attained a level never suspected in Africa outside Egypt, and their moral code was ideal. To prevent treacherous murders in the darkness it is forbidden to carry a knife when there is no moon, a wooden imitation of a knife at such times being stuck in the girdle.

The roof of the palace is supported by massive wooden pillars, elaborately carved, and in the centre of the little doorway is a beautifully carved door-post dividing the entrance into two. Door-posts such as this, some of them of great age, are common at the Mushenge (the capital), and one often sees specimens of woodcarving of an artistic quality, worthy of place in any European mansion, supporting the doorway of the most dilapidated leaf huts.

Cannibalism, according to Mr. Hilton-Simpson, is generally dying out and many of the tribes show possibilities of great development. Very different conditions prevail from those in the other parts of the Belgian Congo. The atrocities, of which the world has heard so much, are virtually non-existent here. "We came across no brutality on the part of white men towards natives during our journey in the Kasai district." What is needed is white men "of the *best class*" in the Congo service, and especially men who can give instruction in farming and will introduce new and useful crops. The book is attractively made up and has eight full-page color plates, 74 half-tones, a map, and an excellent index.

"The Book of Wooderaft and Indian Lore" (Doubleday, Page), by Ernest Thompson Seton, is a revised and enlarged edition of the author's "Birch-Bark Roll." It forms a bulky volume, in which the American youth who is "tormented with an insatiable instinct for the woods" may find an inexhaustible store of information and incentive, from forest ceremonies to "wild-wood remedies" and camp-fire stories. And the adult amateur camper, as well as the boy scout, will learn much from these heavily-loaded pages. The illustrations, half a thousand pen sketches, are as neat and accurate as Mr. Thompson Seton's usually are. From its predecessors the new edition differs mainly in the inclusion of a deliberate attempt to rehabilitate the Indian ideal, in which attempt the author seems to us zealous rather than wary.

In the preface to his "Essentials of International Public Law" (Macmillan), Dr. A. S. Hershey states that "the work aims to furnish the teacher and student with an up-to-date text adapted to the needs of the classroom, and also to present the specialist as well as the general public with a scientific treatment of the subject." Pursuant to this design, the author divides the law of peace into subjects and objects of international law; the law of war into land, maritime, and aerial warfare, and treats of the settlement of international disputes as the adjective law of nations. The chapters in which the up-to-date quality of the book is quite apparent are those entitled The Law of Aerial Space in Time of Peace and Aerial Warfare. Each chapter is short. The author offers no new or startling suggestions, but he reviews the various theories that have been advanced, and presents a very full bibliography of each topic. We do not find any reference here to the first American statute on aerial navigation. This omission is specially noticeable because its author, Gov. Baldwin, is often referred to in the notes. As the statute was enacted June 8, 1911, and embraces the regulation, numbering, and use of airships, as well as the licensing of operators, and defines the liability for injuries inflicted upon persons and property by the owners and operators, we should expect to find some reference to it in this up-to-date work. Still, we may well waive complaint on this score, as the notes and bibliography throughout the volume are unusually extensive; but we must complain of the author's dry and unattractive style, which, besides, is not always clear. In this respect the book is inferior to some of its predecessors, for example, the handbooks of Lawrence and of Woolsey.

Italy so abounds in charm that few scribbling tourists go wholly amiss, and Credo Harris finds at least a new frame for the old scheme, in "Motor Rambles in Italy" (Moffat, Yard). A fine young chap, crippled in the hunting field, seeks health in Italy, taking along in the motor a Kodak and a medical Austrian baron. Zigzagging across the peninsula from Como to Rome, they skim the cream of things, and the invalid sends back jocose and sentimental travel letters to a not wholly relentless Polly in a Como villa. The traveller is a Van Bibberish person with well-developed sensibilities, and engagingly untutored likes and dislikes. Worthy of the admirable Van Bibber, also, is the scornful misprinting of about half the Italian names. Between lovers these trifles are negligible. We leave the hero about to go on the operating table. Doubtless all young persons who read the book will agree with the reviewer in hoping that the hero's spine was put right and the car speeded for the Como villa.

"New Rivers of the North" (Outing) is a narrative of a journey made by Hulbert Footner and Auville Eager, during the summer of 1911, along portions of the Fraser, Peace, and Hay Rivers, to the west and north of Edmonton, Canada. The text is by Hulbert Footner, the photographic illustrations are mostly by his companion. The Fraser was followed from near its head waters to Giscomb portage, where it abandons its northwesterly course and turns to the south. At Giscomb portage a carry of six miles brought the explorers to Summit Lake, one of the sources of the river Peace. After descending the Peace to Fort Vermilion, they carried their collapsible canvas boat north to the waters of the Hay River on horseback, and explored the Hay from the end of this portage to Alexandra Falls, a distance of about 180 miles. Returning, they followed the same route to the junction of the Peace and Great Smoky Rivers, and then turned southeast, by way of Lesser Slave Lake, to Edmonton, their starting point. The interest of the volume lies rather in its narrative of personal adventure than in any considerable amount of carefully gathered information as to the characteristics and possible resources of the region traversed.

"Among Congo Cannibals" (Lippincott), by John H. Weeks, is the best and most trustworthy account of the natives of Central Africa with which we are familiar. For thirty years the author, a missionary, lived in close touch with the cannibals, his aim from the start having been to win their confidence and affection. After a brief narrative of his personal experiences in founding a station at Monsembe, about 600 miles up the Congo, he describes his struggle to learn the language of the Boloki and to reduce it to writing. Through the help of old and young he was able to collect "close upon 7,000 root words, which, with their derivatives, give us a vocabulary of nearly 40,000 words," and he says that the natives do not, as is generally supposed, "talk a gibberish like a lot of monkeys, but have at their disposal a magnificent language that excites the admiration of every student." Light is thrown upon moral conditions by the fact that "among the Congo languages there is no proper word for virgin." Then follow interesting accounts of the arts and crafts, government, ordeals, mythology, religious beliefs, and games. Fifteen of the numerous folk-lore stories are told, each one of which has its own little plot and exhibits some characteristic trait of native mind and habit. Much space is given to charms and to the magic of the medicine man, and it is significant that the latter "cures just that class of ailments that the different branches of 'faith healers' cure in Europe and America." In his brief reference to the burning question of the ill-treatment of the natives permitted by the Free State Government, he says that it would be impossible to publish "the outrageous and abominable details that were brought to light by those who were living in the midst of them." Throughout the book it is shown that the natives have far more intelligence and finer qualities than they reveal to the casual traveller. There are forty illustrations, mostly reproductions of photographs, and an excellent map.

The death is reported of Dr. David Henry Mueller, professor of Semitic languages at the University of Vienna. He is remembered for his numerous contributions to the history of Arabia and for works on Sabæan archæology.

Science

Stokes will add next month "The Rock Garden" to the Garden Flowers in Color series.

"Trees in Winter," by A. F. Blakeslee and C. D. Jarvis, is announced by Macmillan.

Mr. Henry T. Finck has completed his book on "Flavor in Food"; it will be brought out in the spring by the Century Company.

Mrs. Linda Hull Larned has rewritten her book, "The Hostess of To-day," and will bring out the new edition next month, through Scribners, with the title, "The New Hostess of To-day."

That Dr. James G. Mumford, after writing

many interesting essays concerning medical biography and on other topics more or less closely connected with medicine, besides some valuable contributions in his special field of surgery, should wish to let himself out more freely in a literary fashion was almost inevitable. He calls the outcome "A Doctor's Table Talk," and the Houghton Mifflin Company has made it into a pleasant little book, handy to read or carry. The form is not of the table talks of the Autocrat and some other literary forebears, but largely the talk and discussion of various of his friends ("Primrose," "Ely," and others) whom the reader will be glad to know. The topics are chiefly those of medical training and practice, the desire to put in a little descriptive writing occasionally getting the upper hand. The result is generally good, but would be better if a sharper file and somewhat finer sand paper were used in polishing. Dr. Mumford's views are in the main sound and well presented, although we think he lacks a clear understanding, not to say appreciation, of the attitude of the investigator. What he has to say concerning the general practitioner, his decadence and possible rehabilitation, and concerning nurses, where one has the feeling that much is held back, were worthy of a more extended elaboration. The general reader, besides enjoying the sensation of getting behind the curtain upon the stage of medical endeavor and among the actors and the "props," will derive much pleasure and no little profit from incidental discussions on the question of female suffrage and of socialism.

"The Sexual Life of the Child" (Macmillan) is a translation of the book which Dr. Albert Moll published four years ago last autumn, and which was well known to students of such subjects. The translation has been made by Dr. Eden Paul, a person of some experience in this line of work. In a special introduction Prof. E. L. Thorndike, of Columbia University, points out the usefulness of the book for parents and others who have to meet the complications and solve the problems most intimately connected with this phase of childhood. Intelligent readers of this class will certainly be much helped in understanding conditions which are now much less obscure than formerly. They will have read a good deal of bluntly frank detail and, as Thorndike points out, there is a quite possible danger that the enthusiasm of fresh knowledge may convert a few mole hills into ranges of mighty mountains. The translation is free and occasionally somewhat heavy, but an extended careful sampling shows that it is not often seriously misleading, although it distinctly loses in precision and fineness towards the end. It is hardly possible to do the book justice without going much more into particulars than our space permits or the subject would quite justify. It may, however, be said that Moll here as elsewhere seems to take a somewhat exaggerated view of the importance of some details, but possibly he is altogether right. He suggests that diaries, private autobiographies, and similar documents may well be the source of valuable information concerning the development of the sexual life of the writers. The value of diaries and similar papers depends upon so many conditions that all such material must be used with the utmost caution, and, it may be added, there is a considerable period of childhood for which an actual diary cannot exist and retrospective records are decidedly untrustworthy. Of more general interest is Moll's attitude to the question of education in sexual matters, about which so much has been said in recent years. Moll does not believe that this matter belongs to the school teacher, public or private, but regards such instruction as the proper function of the parents or those who for some special reason take the place of the parents. He thinks that the efforts to make this subject (the *sexuelle Aufklärung*) a part of the work of the school have already shown themselves to be harmful in Germany, where also, we may add, there are distinct indications of a growing agreement with him on this point.

Drama and Music

The Diaries of William Charles Macready, 1833-1851. Edited by William Toynbee. New York: G. P. Putnam's Sons. 2 vols. $7.50 net.

These two portentous volumes, containing more than a thousand pages, are chiefly remarkable, perhaps, as a monument of editorial indiscretion and bad judgment. For the publication of much of the matter in them no excuse can be made on the score either of interest or of information. The valuable stuff, of which the proportion is not large, has to be dug out by the conscientious reader from a great mass of reiteration and triviality. Quantity, not quality, seems to have been the main object of the compilation. It is true that the restored passages in the diaries—suppressed for obvious reasons of friendship and good taste by Sir Frederick Pollock in his well-known edition of the actor's letters and diaries—throw a fierce light upon some of the most undesirable and familiar traits in Macready's character, but they serve no other purpose, and as these personal infirmities in no way affect his artistic standing, or the reputation of others, the necessity for reviving the memory of them now, when he has been nearly forty years in the grave, is not obvious. He was not one of the world figures whose idiosyncrasies are influential in the destinies of nations.

In a prefatory note Mr. Toynbee says that the diaries "present a series of character sketches unsurpassed in the pages of Greville." They do nothing of the kind. They abound, indeed, in mention of a vast number of celebrities, literary, dramatic, and political, of the Victorian era, but Macready, who, except on rare occasions, viewed everything and everybody through the medium of his own jaundiced temperament, furnished no trustworthy sketches except of himself, and those, of course, all unconsciously. He was, as all readers of Sir Frederick Pollock's book know, a man of extraordinarily complicated character, an interesting study for an expert psychologist. Mr. Toynbee reveals him in no positively new aspect, but confirms earlier estimates of him by additional testimony. He must have been one of the unhappiest of mortals, loathing his profession as he did, and being continually tormented by his sense of public neglect, his fears of failure, habitual suspicion even of his friends, and his innumerable jealousies. The offences into which he was led by his ungovernable temper were sources of almost endless remorse. With the highest sense of personal honor he was ever ready to attribute the meanest intentions to others. Deeply devout, and fond of dilating upon the beauties of Christian charity, he was rabidly intolerant of all other forms of religion but his own. Enormously egotistical, and convinced of his own genius, he habitually stepped upon the stage with mistrust and suffered the direst pangs of jealousy if any fellow-player won applause. A ferocious radical in politics, he craved the social distinctions he pretended to despise, and, even in the days when he was the honored guest of the most distinguished men and women of the time, he was forever deploring his exclusion from Court. A stickler for good manners, and proud above all of the title of gentleman, he was capable, when roused, of the coarsest language and even of disgraceful physical violence, as in the case of Bunn, which might have had very serious consequences.

A few extracts will show his attitude to his contemporaries. Of Edmund Kean's death, he says that "it scarcely awoke a passing thought; he has lived his own choice of life; even his indecencies have found eulogists." (But, nevertheless, he acted as chief mourner at the funeral, "feeling in thrall to public opinion.") William Hazlitt, who praised him insufficiently, was "a writer of conceited trash." Of Sir Joshua Reynolds, he notes that he was, "as usual, shrewd, humorous, and indecent." He "always believed that the erudition of John Philip Kemble had been falsely attributed to him." William Farren, the elder, was "hard and harsh as a crabstick and artificial to the last degree." The Kemble monument in Westminster Abbey is "a sorry affair, but in my opinion quite good enough." The statue of Kean is "a disgusting bit of quackery," to which he adds that "Kean was the greatest disgrace to the art of all the disgraceful members who ever practiced it." An unfavorable review of the Werner of Vandenhoff moves him to say: "It gave me satisfaction to see this vindication of myself. This man is no artist; he is a very vile imitator, a servile slave of the press, and, I believe, an utterly low and worthless character." Of the same actor's Iago, he remarks: "A poorer, more unmeaning,

slouching, ungainly, mindless, unimaginative performance I have never witnessed." Fanny Kemble's journal is marked "by presumption, conceit, vulgarity of mind, and quackery." Commenting upon the prosperity of Charles Kemble, he describes him as a man "of moderate talent, without learning or one amiable or estimable trait." He subscribed, however, to a piece of presentation plate for him, while bemoaning his own lack of principle in doing so. Even his closest friend and ally, John Forster, to whom he owed much, did not escape this vituperation when he ventured to praise others. He is called "a mere hooter on of any successful person" for showing friendliness to Sheridan Knowles, one of Macready's choicest abominations. Such quotations might be multiplied almost indefinitely, but they make melancholy reading.

It is pleasanter to revert to his finer characteristics, to his integrity, his intense zeal for the elevation of his art, his indefatigable energy and conscientious study, his devotion to his family, and his courage in adversity. It is not surprising that a man of his exacting, jealous, and volcanic temperament should have been on ill terms with press representatives, who were in his day too often vulgar, greedy, and venal. His refusal to conciliate them was to his credit, but their antagonism hurt him badly throughout his career. Charles Kean and others were wiser in their generation, and, by making friends with the Mammon of unrighteousness, got good notices, while some of the noblest efforts of Macready were neglected or abused. For years he played to bad houses, and it was entirely upon his merit that he won at last. The main facts in his career are too well known to need rehearsal, but it is interesting to the stage student to note in these diaries the foresight and labor which he expended in the preparation, not only of new pieces and of his own particular character, but of the oldest plays. No matter how familiar he was with a part, Hamlet or Macbeth, for instance, he made it the subject of long preliminary study before every performance. It is clear that he left little or nothing to inspiration. All his efforts were the result of elaborate calculation, and this was why he could so easily be disconcerted by the careless or incompetent players, who were so frequently the objects of his furious denunciation. He took extraordinary pains with the manuscripts of Browning and Bulwer Lytton, both of whom were indebted to him for a large measure of their success. The former had a temper and a will of his own, and had some lively encounters with the actor, but the men remained fairly good friends. Forster was involved in the disputes over "Strafford," and these became so warm that it was doubtful at one time whether the piece would ever get to the footlights at all. After its production Forster angered Browning by criticising it somewhat coolly, and Macready laments Browning's ingratitude.

With the production of "The Tempest" and "Henry V" at Covent Garden, Macready established his supremacy over all living rivals, and at the public dinner which followed, with a Royal Duke in the chair, he delivered an address which was a fine vindication of his career. Considerable space is devoted, of course, to his American excursions which followed. His complaints of the supporting casts provided for him are incessant and bitter. He speaks of "battling against the odious and disgusting contagion of these senseless drones and beetles buzzing about the scene." He deals with the discomforts of travel in the Southern States in a vein of exaggerated humor equal to anything in "Martin Chuzzlewit," although at an earlier date he had written in strong disapprobation of Dickens's diatribes, which he feared might destroy his own chances of success in this country. On the subject of American journalism he grows exceedingly angry. Nevertheless, it appears that in 1847 he was seriously contemplating a permanent settlement in the new world. Any such plan was ended by the disastrous outcome of his New York engagement in 1848, with its riots and bloodshed. His diaries are full, of course, of his controversy with Forrest, but the verdict in that case was given long ago, and it is not necessary to review it. He does not strengthen a good case by the violence of his language, which is in strong contrast with the peaceable and politic utterances made by him in this city and Philadelphia.

This book will bring no satisfaction to the admirers of Macready. It shows him an aspiring and highly accomplished artist and a conscientious but weak, vain, passionate, unstable, and envious man. To his family he was staunchly loyal, but his lamentations over his dead children are among the many things which might better have been omitted. His friendships were easily chilled. A conspicuous instance is found in the case of Helen Faucit, with whom he was long on tender but entirely honorable terms. In those days he praised her abilities enthusiastically, but when she drifted from him, it was not long before he found her as devoid of talent as of gratitude. These diaries would have brought great disillusion to one of Macready's most fervent worshippers, Sir Theodore Martin, if he had survived to read them.

A volume of one-act plays by George Middleton, bearing the title of one of the pieces, "Tradition," will be published in February by Henry Holt & Co.

"The Spy," an English version, by Peter Le Marchant, of "La Flambée"—the play by Henry Kistemaeckers, about which much fuss has been made in European newspapers—was presented here in the Empire Theatre on Monday evening. It proved to be a melodrama, very unskilfully made, with one highly effective scene, based upon somewhat violent premises. Monique Felt, a good and religious woman, has been chilled and estranged by the egotistical tyranny of her husband, Col. Felt. She is in love, platonically, with the brilliant deputy Marcel Beaucourt, and would marry him if the Church would sanction her divorce. She invites him to meet her in her boudoir at 1 A. M., to consider their future course. Hither comes, unexpectedly, at the same hour, her husband, to confess that he has just strangled in the adjoining bedroom his chief creditor, Julius Glogau, a German spy, who had tried to bribe him to betray the defences of the fortifications of which he is in charge. He confesses also his suspicions of Beaucourt, while asserting his own undiminished love for her. The spectacle of his suffering, and her sympathy with his outraged honor, somehow rekindle the flames of dead and gone affection, and she not only throws herself into his arms, but volunteers to aid him in concealing the crime. Her lover, Beaucourt, becomes her confederate, holding that the killing of a spy is a glorious deed. So the happy ending is effected. Unquestionably the scene of the midnight confession is striking, and it was vividly enacted by Cyril Keightley and Edith Wynne Matthison, but even the latter could not make the sudden conversion of the wife convincing in the circumstances. There may be something in the original French to make it more natural and human. Apart from this episode the piece is of very ordinary material and quality.

The new Repertory Theatre, at Birmingham, England, will be opened with "The Merry Wives of Windsor," by a carefully selected company. This will be followed by various plays of Shakespeare, Jonson, Ibsen, Galsworthy, and others—"Strife," "The Silver Box," "Hedda Gabler," "An Enemy of the People," "Candida," "The Cassilis Engagement," "Nan," "The Scornful Lady," "Chains," "The Alchemist," and "Twelfth Night." The ideas, however, of Mr. Barry Jackson, the moving spirit in the affair, go farther than this. He hopes for the discovery of new authors and musicians—for one-act operas find a place in the scheme—the establishment of a definite school of dramatic art, and, in short, all the uses of the theatre in the wider sense. There may be coöperation, too, with the Repertory Theatres at Liverpool and Glasgow, with exchanges of ideas and of companies. The building itself has its distinctive features. So far as the auditorium has any model at all, it is fashioned upon that of the Kuntzler Theatre at Munich, and in place of the orthodox division into stalls, circle, and pit, there are only two tiers of seats, with the slightest curve, arranged so that it is possible to approach the dress circle directly from the stalls. The lighting arrangements of the stage also are based upon a German model.

"La Femme seule" is the name of the

latest play by Brieux. It has just been produced at the Gymnase, in Paris, and deals with certain aspects of the feminist movement.

The dignity of the House of Molière in Paris has been ruffled by the brusque action of the dramatist, M. Henri Lavedan, who the other day suddenly wrote to M. Jules Claretie, the director of the Théâtre Français, and withdrew his new piece, "Servir," which had been accepted by the committee for representation. M. Claretie now publishes a letter which he has addressed to the *sociétaires* of the State Theatre, whom M. Lavedan had accused of lukewarmness with regard to his new dramatic venture. M. Claretie complains, first of all, that M. Lavedan published his letter of withdrawal before it had reached the hands of the director. It is quite true, he admits, that the piece when it was read to the committee was not received exactly with enthusiasm. The reason was that the committee thought it rather audacious to produce on classic boards, where words carry far, a piece which, however well intentioned, was "disquieting" in respect of its action and the political tirades in which it abounds. It should appear from M. Claretie's letter that in M. Lavedan's piece an officer in uniform delivers "humanitarian and Anarchist" speeches, and that these proceedings, which can only be an echo of the Combiste régime, take place on the eve of a war, the declaration of which is announced on the stage by an actor representing the War Minister in person. M. Claretie assures M. Lavedan that there is no want of patriotism in the committee of the Théâtre Français. That is precisely the reason why the members of the committee "had some scruples about letting the first cannon shot be heard behind the scenes as a piece of theatrical effect on the eve of a day when the declaration of war might easily be no playing matter." The piece will be produced at another theatre and is certain to attract a considerable measure of public attention.

Doubleday, Page & Co. will bring out this month in a cheap edition Rupert Hughes's "The Music Lover's Cyclopedia."

A monograph, entitled "Foreign Trade in Musical Instruments," has just been issued by the Bureau of Foreign and Domestic Commerce. The subject is handled under three headings: (1) Pianos, piano-players, and player-pianos; (2) phonographs, and (3) organs and string and band instruments.

In the days of Mozart it was customary to compose airs and whole operas to order for a particular singer, after the fashion of tailor-made gowns. This is no longer done except in the case of operettas; but sometimes the repertory of an opera house is shaped largely with reference to a particular singer. Caruso fills the house, no matter what he sings, but other vocalists, though they be as good and as popular as Tetrazzini, draw only in certain parts that seem to have been written to order for them. For the present season the repertory at the Metropolitan Opera House was arranged largely with a view to giving the newly engaged Frieda Hempel a chance to show why she has been for some years so great a favorite in Berlin. Her best rôle apparently is that of the Queen of Night in Mozart's "Magic Flute" (one of the made-to-measure parts for a particular singer). Illness prevented her from crossing the ocean in time to make her début at the first performance of that opera this season, which was unfortunate, for when she subsequently did appear in it she made a better impression than she made in the parts that she sang before this, particularly in that of Rosina, in "The Barber of Seville," in which her colorature was by no means impeccable and her acting lacked the Southern grace and vivacity indispensable in this rôle. She appeared to better advantage in the "Huguenots," another opera revived for her sake, with a big cast, including Caruso, Destinn, Alten, and Scotti. She is certainly an admirable artist, yet neither in beauty of voice, nor agility of execution, nor general charm of style is she the equal of the world-famed colorature singers who have preceded her at the Metropolitan.

With the possible exception of Theodore Thomas, no one has done so much to give Americans a musical education as Theodore Presser, of Philadelphia. Thirty years ago he founded the *Etude*, a monthly magazine devoted to the interests of music teachers and students. It carried the gospel of art to every town and village throughout the land, teaching correct methods, telling how the world's greatest artists won success, and arousing enthusiasm for the best in the musical productions of all countries. Its freedom from bias has been most commendable, and there has never been a trace of sensationalism or resort to charlatan methods to attract attention. It is therefore a satisfaction to know that it has probably the largest circulation of any musical periodical in the world. Its success refutes the current notion that to make a musical periodical profitable it is necessary to appeal to the vanity and the pocketbooks of singers and players. The January issue of the *Etude* is a jubilee number. It contains, besides the usual number of useful articles and 25 pages of music, several pages of congratulations from most of the leading American and many European musicians and writers of note. George Henschel gives his personal recollections, Moszkowski tells how fine editions help, Godowski writes on the place of technique in piano playing, A. J. Silver discusses the brain-training value of music, and a group of prominent writers recount anecdotes from personal experience by way of illustrating the difference between our musical life now and thirty years ago.

In a recent address, the Rev. Dr. Lyttelton, of Eton, England, quoted Edward Speyer, a German by birth, who was an admirably trained musician and a competent judge, as having said that nowhere in Germany could they get such an intelligent audience for classical music as in London. The recent improvement of popular taste in London goes to show that there was a large element of literal truth in that observation. Indeed, Erasmus said that the English were the musical nation, and the Germans the drunken.

One of the strangest things about Spain is that it has never produced a great composer, although the nation is fond of music, German and French as well as Italian. But now comes Ernest Schelling, who is referred to in *Musical America* as having discovered a Spanish Chopin during his recent concert tour. Granados is his name, and, said Mr. Schelling, he

> seems to be doing for the music of Spain what Chopin did for that of Poland. His works are amazing in their intensely Spanish quality and atmosphere—though they are not merely Spanish in the conventional manner. I have been busily studying his set of piano pieces called "Goyescas," which were inspired by the paintings of Goya. They are exceedingly difficult—difficult not only technically but also in conception. Although one feels in them the influence of the innumerable folksongs of Spain, his work is distinctly of his own creation. Granados has also written an opera and some orchestral works.

Art

Scribners bring out this month "Art Museums and Schools," being lectures by G. Stanley Hall, Kenyon Cox, Stockton Axson, and Oliver S. Tonks; also G. Maspero's "Art in Egypt," a new volume in the General History of Art series.

"Rossetti" will soon be added to Stokes's series of Nineteenth Century Art Books.

From the Lippincotts we receive two numbers of a new art series, French Artists of To-day. "Puvis de Chavannes" contains a critical introduction by André Michel, and notes on the cuts by J. Laran; "Edouard Manet" is introduced by Louis Horticq and annotated by J. Laran and Georges Le Bas. The work, which is done with Gallic brevity and pith, suffers somewhat in translation. The small quartos are attractively bound in blue boards, and contain each forty-eight illustrations. The series seems in all respects well planned, but we hope the English manufacturers will in subsequent numbers provide half-tone cuts of better and more even quality.

A quiet and well-bred deftness is the leading characteristic of the brief essays collected in Stewart Dick's "Master Painters" (Small, Maynard). Three Monkish Painters, Leonardo da Vinci, Michelangelo, Giorgione, Albert Dürer, Velasquez, Rembrandt; Watteau, The English Portrait Painters, Turner, Rossetti and the Pre-Raphaelites, are the subjects. The essays suggest rather the outlook of a man of culture and tactful use of obvious sources than any closer contact with the matter in hand. The method is biographical, and the tone that of high-class encyclopædic compilation. A few errors may be noted. Cavenaghi's researches while cleaning Leonardo's Last Supper prove that this work, tradition to the contrary, was painted, not in oils, but in tempera. The Syndics, by Rembrandt, is misdated. Luca della Robbia, being dead before the "bonfire of the vanities," naturally could not have attended it.

We have already reviewed at length Rodin's talks on art, as reported by Paul Gsell (*Nation*, September 21, 1911). It remains to say of the English edition published by Small, Maynard & Co., Boston, that the translation by Mrs. Romilly Fedden is satisfactory, and that the handsome quarto has especial features in the way of fuller illustration and an index which make it more useful than the original French edition. Rodin's reflections range widely

over the field of art, and this book will be a valuable possession for any art lover.

Rodin's rhapsody, "Venus: to the Venus of Melos," comes to us in the authorized translation of Dorothy Dudley. The work is adequately done, but errs on the side of literalness. This is an important little tract, for it contains in epitome most of the views on his craft which the master has elsewhere expressed more diffusely. As an example of the thought and of the translator's style, we choose this:

> The ancients have obtained by a minimum of gesture, by their modelling, both the individual character and the grace borrowed from grandeur that relates the human form to the forms of the universal life. The modelling of the human being has with them all the beauty of the curved lines of flowers. And the profiles are secure, ample, like those of great mountains; it is architecture.

This pretty booklet is published by B. W. Huebsch, of New York, with a portrait and two other plates.

The scope of "A Text-Book of Design," by Charles Fabens Kelley and William Luther Mowll (Houghton Mifflin), may be judged by the chapter headings. After chapters on the problem and principles of design follow: Spot Composition, Line Composition, Area Composition, Value, Color, Lettering, Design in Architecture. There are many illustrations after interesting and unhackneyed originals. The book is planned for college classes and mature readers. It differs from many manuals in approaching practice through theory. We judge it reflects the teaching of Dr. Denman Ross. To the academic student of design it will undoubtedly be serviceable. How far the doctrinaire approach is available for actual practitioners is another question. It has at least the high sanction of Leonardo da Vinci.

Finance

THE "MONEY TRUST."

Whatever any one may think of the merits and the tangible results of the "Money Trust Committee's" investigations—and opinions on those points are surely almost as diverse as the people one meets on a walk down Broadway—no one of an observant temperament can have failed to notice the wholly extraordinary nature of the existing status of the inquiry. On the one side a group of financiers who appear to be utterly unconscious of anything that is wrong or intolerable in the quite abnormal system of things that has grown up in the money market, and has spread until the very men who undertake to control and direct it are, so to speak, caught in the meshes of the net and dragged along with it. On the other side, a newspaper-reading and cheap-magazine-reading public which has been educated in the school of the Lawsons, the La Follettes, and the Lindberghs, until it believes that the very air we breathe is tainted with the machinations of the millionaires, and that the private citizen's rent and grocers' bills are secretly marked up by a malign Money Power.

Between the two, an investigating apparatus which excites alternately admiration for its cleverness, distrust for its particular methods, and irritation over a certain lack of breeding which frequently pervades it. At one moment we are summoned to watch a fencing of wits between counsel and witness, over questions which every Wall Street man knows are the most awkward and delicate problems of the day; at another, to hear testimony on the commonplaces of modern finance, so ingeniously manipulated that the simplest and most familiar phenomena and institutions of the market are made to appear in the headlines and editorials of the penny papers as cool and calculated conspiracy. To the observer familiar with the facts, the witnesses frequently seem to be unaware of the force and nature of their own admissions, and not to have the faintest conception that they have damaged their own case. On the other hand, a considerable part of the outside public seems to leap to the inference, on every such occasion, that a crime had been unearthed.

The fact is, that the large financiers understand their critics as little as the outsiders understand the financiers. They do not think in the same terms, and would merely be puzzled at overhearing one another's ordinary conversation. To a good part of the public, the New York bankers who testified at the hearing are regarded as malign conspirators from whom unwilling confessions were being dragged. By a good part of the immediate community in which these financiers are themselves accustomed to move, the outside public's attitude is ascribed merely to hopeless ignorance and incendiary agitation. The one notion is about as accurate as the other.

The inquiry is itself in some respects a puzzle. That certain men are brought to testify is no less surprising to the well-informed than the fact that other men, even more essential to the purpose of the investigation, are not. At times, the inference that a spectacle has been staged with more regard to the bringing of star performers to the footlights than to the getting at the facts by the shortest road, becomes irresistible. This happens when a capitalist in whose views of finance Wall Street itself has never taken great interest, and who is known to be seriously ill, is hunted like an escaped malefactor, whereas everybody knows that two or three other men, far better qualified to testify on the questions for which he has been summoned, can be brought to Washington overnight.

It is hardly to be wondered at, that intelligent people watch this extraordinary episode with very mixed feelings—not less so, when the dumb Committee, who might equally have fulfilled their office had they been wax figures, are supposed to be the repositories of the remedial legislation which is to correct all the evils brought to light by the investigation, and to undertake the extremely delicate problem of overhauling the financial machinery of the day. All these things being so, it is quite inevitable that the thinking part of the community should feel a sensation of profound relief that this has happened in the last weeks of an expiring Congress, and not in the first weeks of a new one. No more mischievous situation could be imagined, from every point of view, than one in which a body of hastily constructed legislation on such a question should be in a way to impulsive enactment.

Yet no one is likely to deny that many highly important facts—largely kept secret hitherto, and bearing on a position of affairs which, in one way or another, must some day be dealt with in sober restrictive legislation—have been brought to light on the basis of authoritative testimony. These facts are in some respects more striking than the financial community had expected; in others much less so, for the Money Power has been an object of much legend and superstition, even on the floor of the United States Senate. But those of the facts which have been established—taken along with such comments on them as Mr. George F. Baker's—give the basis for some very necessary and judicious consideration of the problems which the community will presently have to solve; notably the problem of surrounding the banking field itself with such proper and conservative restrictions as will prevent its exploitation, now or hereafter, under the auspices of ambitious concentrated ownership.

Studies in the Psychology of Intemperance

By G. E. PARTRIDGE, Ph.D., *Author of "The Nervous Life," etc.*

This book considers its subject in relation to psychological and social conditions. Practical and grounded in science, it is of special value to all interested in intemperance as an individual or social problem. *12mo. $1.00 net, postpaid $1.10.*

Story-Telling in School and Home

By EMELYN NEWCOMB PARTRIDGE, *Story-Teller for the Bancroft School and Worcester Playground Association, and* G. E. PARTRIDGE, Ph.D., *Author of "The Genetic Philosophy of Education."*

Here are all a teacher or parent needs to know about story-telling and plenty of stories to tell. A book of broad culture and fine taste, and based on the experience of experts. Unsurpassed in its field. *12mo. Illustrated. $1.00 net, postpaid, $1.10.*

STURGIS & WALTON CO.
31-33 East 27th Street, New York.

FOOD IN HEALTH AND DISEASE

By N. S. DAVIS, Jr., M.A., M.D.
Northwestern University, Chicago.

Octavo. Cloth $3.50 Postpaid.

The first part of this book reviews the underlying principles concerning the nutritive and other qualities of different kinds of foods, discusses briefly their relation to the digestive organs, and traces the changes that food must undergo before it can be appropriated to the needs of the human system. This is followed by detailed consideration of the proper diet indicated for the various conditions of health and disease, each condition being taken up seriatim with concise, plain directions, and diet lists.

A descriptive circular with list of contents will be sent upon request.

Symbol and Satire in the French Revolution

By ERNEST F. HENDERSON
Ph.D. (Berlin), L.H.D. (Trinity),

8vo. With 175 Illustrations Reproduced from Contemporary Prints. $4.00 *net. By mail* $4.25.

Of books on the French Revolution there have been many, but Mr. Henderson's volume covers a field almost untouched. In it are given a very full series of the extant broadsides, allegories, caricatures, and cartoons that appeared during the Reigu of Terror, which, supplemented by an explanatory text giving so much of an account of the events of the time as is necessary to an understanding of the illustrations, brings home to one as nothing else can the passions that stirred the masses.

New York G. P. Putnam's Sons London

THE GREAT ART GIFT-BOOK OF THE YEAR

ART By Auguste Rodin

(Translated from the French of Paul Gsell by Mrs. Romilly Fedden.) With over 100 illustrations in photogravure and half-tone. Buckram, $7.50 net; three-quarter levant, $15.00 net; carriage additional. A book which takes its place at once as the most important art book in years. It covers practically the whole range of art, and abounds in memorable analyses of the works of the masters of painting and sculpture, ancient and modern. *Send for descriptive circular.*

New Books: **E. P. DUTTON & COMPANY** Publishers

NEW NOVELS

To be ready in February.

A New Novel by

PIERRE DE COULEVAIN

Author of "On the Branch," now in its thirteenth American edition.

American Nobility

The story turns on the theme of international marriages, which is handled with full knowledge and characteristic delicacy and charm. $1.35 *net.*

NOW READY

Three singularly charming books by

The Misses FINDLATER

Authors, with Kate Douglas Wiggin, of "The Affair at the Inn."

Crossriggs
Penny Monypenny
Seven Scots Stories

Simple, unpretending, yet exceedingly full of personality, an unobtrusive humor, and a genuinely beautiful spirit.

3 *vols.* $1.35 *net per volume.*

A New Novel by

ROBERT HALIFAX

Author of "Low Society," etc.

A Slice of Life

Another amusing, keenly genuine story of life in London's "borderland."

Now ready. $1.35 *net, pospaid* $1.45.

A New Novel by

MARJORIE BOWEN

Author of "I Will Maintain," etc.

The Quest of Glory

A romance full of color, movement and tenderness; altogether out of the ordinary.

Now ready. $1.35 *net, postpaid* $1.47.

To be ready early in February.

"Crowned" by the French Academy.

The Fear of Living

By HENRY BORDEAUX

Translated from the 74th French edition by RUTH HELEN DAVIS. $1.35 *net.*

HISTORY

The War Drama of the Eagles

By EDWARD FRASER

Stories of hard fighting and heroism. The adventures of the men who carried Napoleon's Eagles in victory and defeat. Never before collected into one volume from the scattered memoirs of Napoleon's time. *Demy 8vo.* $4 *net.*

LITERATURE

Chaucer **By EMILE LEGOUIS**

Sorbonne Lecturer at Harvard University. The first full-length portrait by any French critic of the poet whose inspiration was chiefly from France. Translated by L. Lailavoix. $1.50 *net, postpaid* $1.62.

The Influence of Baudelaire in France and England

By G. TURQUET-MILNES

A study of that peculiar spirit in literature, evidenced, as is shown, in many writers who preceded or followed Baudelaire, but of which he is the fullest exponent.

Demy 8vo. $2.50 *net, postpaid* $2.67.

English Epic and Heroic Poetry

By Prof. MACNEILE DIXON, of Glasgow

A volume in the new series, "Channels of English Literature," in which Prof. George Saintsbury's "The English Novel" is to appear shortly.

Cr. 8vo. $1.50 *net, postpaid* $1.62.

TRAVEL

The Sea and the Jungle

By H. M. TOMLINSON

An experimental voyage by steamer pushing up one of the tributaries of the Amazon with a view to establishing a water route. Full of exciting incidents and the wonderful atmosphere of tropical forests.

Cloth. $2.50 *net, postpaid* $2.67.

PHILOSOPHY

Dante and the Mystics

By EDMUND G. GARDNER

who is unquestionably the best-qualified of Dante scholars to deal with the extent of Dante's debt to the early mystics and the question of interpreting the poem as figuratively representing direct mystical experience.

8vo. Cloth. $3.50 *net, postpaid* $3.67.

QUESTIONS OF THE DAY

The Nature of Woman

By J. LIONEL TAYLER

An argument from the biological standpoint against the tendencies of the modern feminist movement.

12mo. $1.25 *net, postpaid* $1.35.

BOOKS OF THE WEEK 91

• • • Copies of *The Nation* may be procured in Paris at Brentano's, 37 Avenue de l'Opéra; in London of B. F. Stevens & Brown, 4 Trafalgar Square, Charing Cross.

THREE NEW BOOKS

CHIVALRY IN ENGLISH LITERATURE

By Professor W. H. SCHOFIELD. 12*mo. Cloth.* 250 *pages.* $2.25.

Four lectures, on Chaucer, Malory, Spenser, and Shakespeare, delivered in French at the Sorbonne, and in English at the University of Copenhagen, during the spring of 1911, and now revised and enlarged for publication.

The BARRINGTON-BERNARD CORRESPONDENCE

Edited by Professor EDWARD CHANNING. 8*vo. Cloth.* 300 *pages.* $2.00.

Letters from Sir Francis Bernard to his political backer in England, with Lord Barrington's replies, covering ten of the most interesting and important years in the history of Massachusetts—including the Stamp Act and "Liberty" episodes.

THE COTTON MANUFACTURING INDUSTRY IN THE UNITED STATES

By Dr. M. T. COPELAND. 8*vo. Cloth.* 415 *pages.* $2.00.

A description of the American cotton manufacturing industry, including the spinning, weaving, finishing, and knitting branches. The book also includes a comparison of the natural advantages, equipment, labor cost, and industrial and commercial organization of the cotton industry in Europe and America at the present time.

Published by HARVARD UNIVERSITY

Kühnemann's Schiller

Translated from the German by KATHARINE ROYCE, with an introduction by JOSIAH ROYCE.

In two volumes. The set, $3.00

This life of Schiller reinterprets the permanent significance of the poet Schiller for the literature of the world.

It shows clearly the relation of Schiller's dramas to dramatic poetry—ancient and modern.

It explains the evolution of Schiller's powers, ideas, and poetry.

The Nation

NEW YORK, THURSDAY, JANUARY 23, 1913.

The Week

The argument in favor of advancing the date of inaugurating a new President of the United States is by no means so strong as the argument in favor of bringing a newly elected Congress together earlier than is done now. In the first place, the period of retardation is much less in the case of the President, who assumes office four months after his election, whereas Congress waits just thirteen months, in the absence of a special session. In the second place, the President is elected for a term twice as long. Indeed, from his own point of view, since Presidents are only human, he is elected for a provisional term of four years more. Is it too much, then, to give a man four months time in which to plan a policy and a programme that may extend over eight years? To rush a candidate from the hurly-burly of a campaign straight into the White House would take him at a disadvantage. The mere task of deciding upon his Cabinet selections requires time and study. And he is all the more entitled to a fair period of preparation when we think how much depends on the first impression a new Executive creates in the public mind. It takes months and years to atone for a false start.

Senator Root has introduced a bill to repeal that part of the Panama Canal act which exempts American coastwise vessels from the payment of tolls. The sentiment is widespread that the honor of the nation demands such repeal, or, if not, the submission of the question to arbitration. There is almost literally no indication of public approval of the exemption, still less of an insistence upon it and refusal to have it passed upon by an impartial tribunal. But, so far as the feeling in the Senate is concerned, it seems that, if any step is to be taken, a straight-out repeal would be more acceptable than arbitration. We doubt not that, if the sentiment of the country is brought adequately to the notice of Congress, the repeal will be effected. The exemption has been earmarked both as a violation of the nation's plain promise and as the grant of a subsidy to an interest already completely screened from foreign competition.

There was a time when the Panama Canal was thought of chiefly as a means of promoting the world's commerce. Then its advantage to us from the point of view of naval power became a leading consideration. Even then, a very respectable element, quite apart from the promoters of the peace movement—an element entitled to a hearing in military circles—urged that the canal strip should be neutralized and not fortified. That seems long ago now; we are all thoroughly accustomed to the idea that the canal must be defended by tremendous fortifications, duly manned. But until last Sunday, the idea that we were in for the maintenance of a canal garrison equal in numbers to those of the entire United States regular army up to a few years ago probably never crossed the mind of a single individual among the general public. Yet that is what Col. Goethals nonchalantly tells the House Committee on Naval Affairs, as though it were the most natural thing in the world. Indeed, we do less than justice to his position, for, if correctly quoted, what he says is that "at least" 25,000 men would be needed to guard the canal properly. There is standing room on the canal strip for more, and doubtless the time will come when 25,000 will seem an absurdly inadequate safeguard.

It was to be expected that the election of Congressman Weeks to the United States Senate from Massachusetts would widen the breach in the Republican party. Able as Mr. Weeks is conceded to be, and popular as he is with those who know him, particularly in Congress, he is none the less identified with large business affairs and with the interests of State Street. Hence, it was a foregone conclusion that the choice would be far less satisfactory to the Progressive Republicans than that of ex-Congressman McCall. The first effect of Mr. Weeks's election has been to drive Joseph Walker, a former Speaker of the House, and Republican candidate for Governor in the last campaign, into the Bull Moose party. This is a serious defection, because Mr. Walker is a man of independence and courage, who has not been identified with the inner Republican ring, and has always been well thought of in the State. In a statement explaining his action, Mr. Walker declares that the election of Mr. Weeks can have but one meaning:

> The Republican party in Massachusetts is to be permanently dominated by the old reactionary leadership, with which I have no sympathy and in which I do not believe. There seems to me now no hope for reorganization of the Republican party in which progressive principles or progressive leadership will be recognized. If the Legislature can be dominated by private and special interests in the election of a United States Senator, it can be dominated by the same interests in matters of legislation.

Had the "Money Trust" hearing been part of a criminal suit instead of a legislative inquiry, one would be tempted to suspect that Mr. George W. Perkins had been put on the stand by the defence in order to prove that concentrated capital was too inattentive to its own affairs to be dangerous to anybody else. Mr. Perkins admitted that he had been for ten years a partner in J. P. Morgan & Co., for a longer period a director of the Steel Corporation, and an original member of the voting trust which controlled the Bankers' Trust Company. But he only "knew in a general way about what the Stock Exchange was and what was done there; he had been so long out of Wall Street that he did not clearly know how new securities were distributed in underwritings by financial institutions." Considering that Mr. Perkins now classes himself as a "student," and considering what were his opportunities in Wall Street for study and knowledge of these various fields of inquiry, it must be admitted that the result is disappointing. Even the statement that a bond issue based on the desert of Sahara and issued under the auspices of the firm with which Mr. Perkins was affiliated would find a ready market and would make money for its takers, is not convincing after his profession of inability to master the subjects of Wall Street's every-day interest

and information. But perhaps the vocation of "angel" to third-party candidates obscures and confuses recollection of things like these.

Age cannot wither nor defeat stale the infinite optimism of Uncle Joe. In comparison with him, even President Taft is a man of gloom. Reorganize the Republican party? Never. In the humble judgment of the only member of the Old Guard who defiantly refuses either to die or to surrender, there is but one course to pursue: submit to the inevitable, let the majority have its way, and wait for the hour in which, disgusted with what it has done, it gladly returns to its old love, and everybody packs his grip for Washington again. It must be conceded that the ex-Speaker has a good deal of history on his side. In 1892 even he was caught in the shadow, but in 1894 the sun came out from behind the clouds and shone with tolerable brightness for another long day. How could things go otherwise? You have, by hypothesis, two "great" parties. You put one of them in charge of affairs, and after you have stood it as long as you can, you look around for another to take its place, and there being only one other, you try it, and so on and on *ad infinitum*. Is not patience, as the veteran philosopher of Illinois says, the great virtue? No matter which party happens to be "in" at any given moment, is it not as certain as fate that it will be voted out sooner or later?

Our exports to South America have recently been increasing at a remarkable rate. A bulletin just issued by the Bureau of Statistics points out that, in the comparison between 1902 and 1912, this trade shows a far greater percentage of increase than does our export trade to any other grand division of the world. Even the absolute growth makes an impressive figure—a round hundred million dollars; our exports to South America having advanced from 38½ million dollars in 1902 to about 138 million in 1912. This is an increase of nearly 260 per cent. (not "nearly 300 per cent.," as the bulletin states), while our exports to Europe have increased only a little more than 50 per cent. But, striking as is this showing, there is nothing marvellous about it. It is precisely in these ten years that the country has been developing into a great exporter of manufactures; and naturally the increase in that line would show far more heavily in our commerce with highly prosperous and rapidly developing agricultural countries than with old and comparatively stationary manufacturing countries. Our export of manufactures for the year 1912 amounted to about 1,100 million dollars, as against about 450 million dollars ten years ago, an increase of 145 per cent., while the rest of our export trade grew from about 900 million to about 1,200 million, an increase of only 35 per cent. Thus the facts pointed to in the bulletin are in the main—though of course not exclusively—a manifestation of a general process of economic development, both here and in South America. We have been rapidly developing our manufacturing power, they have been rapidly developing their agricultural wealth; and the result is what might be expected.

The *Survey* this week contains an interesting retrospect of the first year of Mayor Blankenburg's Administration in Philadelphia. It has been most gratifying to note that the Mayor and his coadjutors have retained, without impairment, the confidence and support of the good citizenship of Philadelphia, and that apparently none of those untoward complications have arisen which sometimes discredit reform administrations that set out with high hopes and excellent intentions. In the *Survey* article, a number of concrete illustrations are given of what it has meant to make a clean sweep of "politics" and put the management of the various city departments into the hands of men chosen for fitness only. Thus Director Cooke, of the Department of Public Works, reduced the garbage contract, which had been $516,000 in 1911, to $278,000 for 1912 and to $225,000 for 1913; he has radically improved the street-cleaning service; and in the Bureau of Highways his forty inspectors are all engineers, whereas not one of the forty he found when he took hold was an engineer. A remarkable improvement has taken place in the police force, and especially in the handling of the vice problem. Methods of letting contracts which were manifestly in the interest of fraudulent contractors, who were able to underbid honest firms because their failure to come up to specifications would be connived at by the city officials, have been abolished. It looks as though the hope entertained by all lovers of decent government that the election of Mayor Blankenburg would mark the beginning of a new era in Philadelphia's history were to be fully justified.

The question of Federal control of quarantine at this port is raised again, not only by the reappearance of cholera in Europe, but also by outbreaks of bubonic plague in Central America and Cuba. They reinforce the argument that the United States should adopt the most efficient system of safeguarding its citizens from such diseases. Now, the consideration that particularly influences such experts as the members of the Public Health Committee of the New York Academy of Medicine is the necessity of divorcing quarantine control from politics. In the words of this Committee: "It is universally recognized that scientific work of any kind can be done efficiently only under the condition of permanency of office." State control insures no such condition, while Federal control does, and in addition provides for uniformity of policy, supervision of administration, and interchange of information. These considerations would seem sufficient to decide the question. When to them we add the tremendous importance of this port and its management to the entire nation; the fact that, other than Boston, it is the only port not under national control in respect to quarantine; and that even in New York the general Government controls all the services incident to the administration of the port with the single exception of quarantine, the duty of Congress appears plain.

The proposed substitution of officers for civilian instructors at the Naval Academy is indefensible from every standpoint—except, indeed, that of the men in the Department who desire to minimize the civilian influence in naval affairs, and to increase the spirit of militarism. The net result of this policy would be that officers would be withdrawn from their natural duties to attempt a task for which many, if not most of them, are unfitted by either inclination or training. What would be the consequences to the midshipmen of pursuing courses in English, chemistry, and mathematics under the guidance of instructors who would be every moment under a strain not to show that they did

not know what they were talking about? That this is not an extreme view is evidenced by the statement of a prominent officer of the Department, who finds advantage in the very fact that, as these officers might be "rusty" in such subjects, the assignment to teach would force them to "brush up" their knowledge.

The profit of this situation to the officer is, indeed, manifest, but the benefit to those fated to sit at his feet is anything but clear. In addition to this, there would be frequent changes in the teaching staff, since officers would not be assigned permanently to any of these positions. Even the argument of economy is lacking, since the places of officers detailed to give instruction at the Academy would have to be filled by new appointments. Taking into account the difference in pay between a civilian instructor and an officer, the change in contemplation would double the cost of instruction. Is this the real motive behind the proposal—to get more officers—just as the Department is always moving heaven and earth to get more battleships? It is to be hoped that such representations will be made to Congress as will result in the restoration to the Naval Appropriation bill of the item providing for the ten civilian instructors of the junior grade now at the Academy, instead of the four to which it is proposed to reduce them.

Gov. Wilson has given an unusual proof of his courage—doubtless in Washington they are calling it "nerve"—in the position which he has taken in reference to the inaugural ball. To declaim against bosses, even to wage unrelenting war upon them, is comparatively easy; but to lay hands upon a social custom—what is this but to trifle with fate? Every four years, since a time whereof the memory of man runneth not to the contrary, the citizens of Washington have enjoyed the privilege of paying five or ten dollars for admission to the Pension building, when Congress was not so unkind as to make them go elsewhere, and of seeing, for a fleeting moment, the new President and his wife as they appeared upon the balcony for a look at the dancing throng. Every four years the merchants of the District have spent, or rather invested, thousands of dollars in preparations for the inauguration, relying upon the proceeds of the inaugural ball for reimbursement. Upon all this Mr. Wilson has frowned. The arrangement does not strike him as befitting the dignity of an inauguration, and he makes bold to hint as much. Outside of Washington at least, there will be many to agree with him.

The question of incendiary fires, which has recently been assuming such prominence, demands attention from the standpoint of insurance methods even more seriously than from that of the criminal law. The shocking exposures that have been made in New York in the past week or two have their counterpart in Chicago, where, according to statements from responsible public officials, the practice of arson and fraudulent insurance has been carried to the point of a regular and extensive business. Chief Deputy State Fire Marshal Bock makes the explicit assertion that the business of incendiarism is organized on a regular percentage basis, and that there are three men known as insurance adjusters who "often get to fires before the firemen," having received tips that a fire is about to be started. For the prevention and punishment of these unspeakably atrocious crimes, no exertion of the power of the criminal law should be spared; but an equally necessary step is such change in fire insurance methods, and in the laws relating to fire insurance, as will remove, so far as possible, the motive for incendiarism. There are foreign examples which we might well copy in whole or in part.

"This mountain empire now occupies geographically the top of this continent. The creation of such a university as we propose will place it intellectually at the top of the greatest republic of the world." These are the final words of a statement by the Association for the Creation of a Greater University of Montana. The great obstacle to be removed is the present situation of the four existing higher institutions of learning at as many places. The University is at Missoula, 70 miles from the Idaho line; the School of Mines is 100 miles southeast of Missoula, at Butte; the Normal College is 60 miles south of Butte, at Dillon; and the Agricultural and Mechanical College is 85 miles northeast of Dillon, at Bozeman. The plan is that these departments should be consolidated at some suitable point, not only for the sake of economy, but in order to give such opportunities for higher education as would keep Montana students from going to other States. The houses of the departments that would be abandoned, it is suggested, could advantageously be taken over as polytechnic high schools. The four departments mentioned have still unsold 270,000 acres of public lands, "the picked lands of the State," and for the public schools there is still a heritage of more than 3,000,000 acres. No wonder that the creators of a Greater University of Montana look pityingly upon the inadequate campuses of Yale, Harvard, and Columbia, and talk about a "domain" for their university "of at least 5,000 acres," although 10,000 "would be far better," and "see upon Montana's soil the largest, the greatest, the most splendidly endowed and equipped university of America, if not of the world."

When John Redmond, on Thursday of last week, declared his confidence that the Home Rule bill, which the House of Commons was about to approve, would become a law within the life of the present Parliament, his prophecy was not jeered by the Unionists, as it would have been two months ago. They have had their own bitter family quarrels within that time, and if not now in a chastened mood are at least not hopeful. They are no longer talking of turning the Government out in the spring. The strategic advantage has passed to the Liberals, and their ability to keep themselves in power two years more is not seriously questioned. If they do, they can make the Home Rule bill law, even if the Lords twice throw it out, as they are, of course, expected to do. This is what Mr. Redmond meant when he said that, though the House of Lords still had some teeth left, it could not bite. Under the Parliament Act, the Commons can enact a law, by repassing it, despite the refusal of the Lords to assent to it. And this fact is the reason, too, why Bonar Law laid so much stress upon the Ulster threat to resist Home Rule even if it becomes the law of the land. What could not be beaten by argument and voting, would be beaten by rioting and revolution. The Orangemen appear to be in dead earnest, but their position is too untenable to be long maintained.

EXHORTATION AND GOVERNMENT.

Gov. Wilson's Chicago speech has been received with enthusiastic applause in some quarters, with caustic criticism and severe condemnation in others, and with a certain friendly deprecation among a large class of hearty well-wishers of the President-elect. Its reception would have been widely different from all this if a few passages in the speech had been omitted, or even if these had been taken with their full context, instead of being lifted into special prominence in the dispatches. For the speech was in the main an exhortation to the great business men of America to show that kind of regard for the common welfare, and that kind of readiness to conform to the spirit as well as the letter of the law, which every right-minded man must feel is no more than the duty of the wealthy and prosperous citizens of a republic. And moreover it is a fact, indeed one of the salient facts of the time, that the realization of the kind of responsibility to the public on which Mr. Wilson was insisting has made extraordinary headway in recent years, and must make more if we are to grapple as we should with the problems that confront us. The mere fact, therefore, that the speech was in the nature of an exhortation to virtue could not justly be made the occasion of serious criticism.

It may be taken for granted that Mr. Wilson's own course as President will be actuated by the spirit which he seeks to promote among those whose duty is less imperative than his own. If anybody ever entertained the idea that he was going to allow himself to be influenced by "the interests," or by anything but a sincere desire to promote the general welfare, surely this must have been dispelled long ago. There was little occasion for a mere reassertion of his general attitude. And here comes in the secret of that division of feeling which his speech at Chicago —like his speech at Staunton and his speech at Trenton—has aroused. For, while these utterances were all in the main hortatory, each of them also contained a touch of the threatening. When he said at Staunton that the business men of America are "not going to be *allowed* to make any money" unless they rendered an equivalent service to the country, and that "the Government —that is to say, the moral judgment of the majority—must determine whether what they are doing is a service or not a service," he passed from the inculcation of principles to the indication of a programme. When, at Chicago, he declared that "the banking system of this country does not need to be indicted, it is convicted," he said a thing which, understood in one way, is undeniable, but which was unquestionably understood by the majority of plain Americans as meaning a kind of condemnation of the American banking world the sponsorship of which we are sure the President-elect would be most unwilling to assume. And many solid old-fashioned persons—persons who may be engaged in large business enterprises and yet be patriotic citizens of the republic, persons who are not business men at all but who understand the gravity of business questions—have been set to wondering whether there was any specific purpose behind such statements as these, and others of similar nature.

Only a few weeks remain before Mr. Wilson will be called on to shoulder a responsibility heavier than that which rests upon the holder of any other office in the world. The power of an able and popular President to shape the course of public events is almost without limit; and to every word he utters that bears on the effective issues of the time an importance is attached which he cannot control and which is sometimes far beyond his intention. What he may intend as a mere expression of general attitude may awaken expectations that are doomed to disappointment, or arouse apprehensions for which he did not mean to give any ground. Propagandas of economic change are, of all things, most prolific of such consequences. There is a place for exhortation or agitation, and there is a place for proposals of specific action. The dangerous thing is to mix the two, and when the President of the United States does that, he cannot count on the necessary corrective being applied by the public. Mr. Wilson's general purposes have been amply asserted; they have been enforced with rare eloquence and impressiveness. He is under no obligation now to go beyond these pledges of general intention; but if he does speak about banking, or taxation, or the like, what the country looks for is some specific indication of a programme. And if people are prone to find such indication when he had no intention of giving it, the fault is neither with over-zealous applauders nor with over-critical objectors, but is in the nature of things.

It is not by accident that the three foremost figures in the leadership of popular sentiment in this country in recent years are all of them given quite as much to moral exhortation as to political discussion. The fact corresponds to a certain need of the times, and to a certain change that is going on—a change for the better—in the tone of thought and of conduct. In no previous stage of our history, probably not of that of any country, can any counterpart be found to the phenomenon presented by the sermon-speeches of Bryan and Roosevelt and Wilson. But whatever of good there may be in this, and whatever of natural, there is a point beyond which it cannot go without danger, and cannot go without failure. Out of key as it may seem with the tone of the moment, the Anglo-Saxon tradition —the tradition which demands the concrete and not the abstract, the definite application and not the general principle—is by no means extinct. Social justice, equality of opportunity, and the like, may do very well to talk about for a while; but when the time approaches for something to be done, we all wish to think of the thing in terms of specific laws that may be passed, or specific executive acts that may be performed. When a man talks of social justice or equality of opportunity, he may mean anything he pleases. It all depends upon the tone of voice, and we don't care to vote either for or against a tone of voice. Wholesome as has been the moral upheaval that has been going on, it has been unwholesome, too; for it has put into the background, for the time being, that unsentimental weighing of political questions, that quiet measurement of the practical results of proposed policies, which is indispensable to sane and successful government.

REINVIGORATING THE CRIMINAL LAW.

A few years ago, President Taft, in a public address, declared that the administration of the criminal law in this country was a disgrace to our civilization. There was nothing novel in the substance of this declaration; but so emphatic an utterance, coming from the

head of the national Government, gave to the criticisms that had long been current a standing and an effectiveness which nothing else could have so sharply brought about. And it is not taking too favorable a view of what has happened in the past few years to assert that to-day the temper of any responsible declaration on the same subject would be widely different from what it was when Mr. Taft pronounced his judgment. There has been no specific reform, there is a vast amount of room for improvement; but there has unquestionably been a remarkable toning up of the criminal law in its actual working.

In New York this revitalizing of the administration of criminal justice has been peculiarly striking. The vigor of District Attorney Whitman's prosecution of police corruption furnishes the most conspicuous element; but the expedition of Judge Goff in the procedure of his court is equally important, and the headway that is made in bringing to justice the vile gang of systematic practitioners of arson furnishes another instance. Were the matter limited to such cases—cases in which what is generally thought of as "the underworld" is the primary factor—it might have less of hopeful significance; but the MacNamara trial at Los Angeles, the trial of the forty labor-union men at Indianapolis, and the trials of Cummins, Reichmann, and Hyde, in this city, all tell the same story—the story of a new vitality in the processes of criminal justice, whether related to high or low, rich or poor, the friendless or the influential.

The change that has been taking place is an instructive illustration of the degree in which the good or evil of governmental institutions turns on the influence of public sentiment. There are doubtless specific statutory reforms that ought to be made; but the evils that had grown up were largely the result of bad habits. The undue exaltation of technicalities, the preposterous drawing out of the process of selecting a jury, and even the readiness of juries to let a trial fail through disagreement, were habits that had been allowed to thrive through indifference or inertia. There is such a thing as evil, as well as good, imperceptibly broadening down from precedent to precedent. But it is seldom that the structure of precedent becomes so solid that it cannot be broken through by the vigorous assertion of common-sense on the part of judges; and in this way a new set of precedents is introduced, which will restore the vitality sapped by the evil precedents.

Along with this reinvigoration of the criminal law there has been going on a decline in a certain phase of humanitarian agitation on the subject of crime. A few years ago, the doctrine that the only justifiable end of penal enactments was the reformation of the criminal seemed to be making great headway. In more than one conspicuous utterance, either from judges or from serious writers, it was roundly asserted that punishment has no deterrent efficacy whatever. With such a view boldly put forward by earnest men and women, and gaining serious attention, it must be difficult to infuse into the execution of existing laws that vigor which is necessary to their effective enforcement. And, while it might be impossible to trace any specific causal connection between the diminished prominence of this agitation and the increased efficiency of our criminal administration, we feel sure that the concurrence of the two things is something more than a mere coincidence.

We would by no means, however, be understood as placing under this criticism the whole movement for prison-reform. On the contrary, this movement is continually gaining head, and it is most desirable that it should be encouraged. The recent action of the Governor of Arkansas, though open to serious objection in point of method, was fine in spirit and reflected the sentiment of all right-minded people in regard to the barbarous convict-contract system. And elsewhere, there is room both for more humanity and for more intelligence in the treatment of prisoners. Hardly a day passes without bringing reports, from one State or another, of efforts to introduce honor-systems, or farm-labor colonies, or of plans for letting the convict's labor supply the means of support to his family, or some other expedient for humanizing prison life and giving the convict a chance to redeem himself. All these efforts are in the highest degree praiseworthy; and along with them there ought to be a constant strengthening of the endeavor to get the best possible class of men for prison officials. But, so long as the varieties of men are what they are, it would be madness to overlook or belittle the primary function of the penal system—the function of deterrence. And in this respect recent experience affords a rich material for instruction; only the wilfully blind can imagine that the corrupt police official, or the labor leader going into a dynamite plot, or the dishonest banker, or the systematic fire-insurance incendiary, is uninfluenced in his conduct by the question whether or not his crime is likely to land him in the penitentiary.

GENERALS AND TROOPS.

The conference of army generals which has been going on in Washington for the last few days is unique in itself, but is particularly interesting in view of the fact that much of the discussion has had to do with the future duties as generals of those participating. That a detailed scheme of army reorganization has been worked out by the General Staff is but little known, although Mr. Stimson attached to his annual report as Secretary of War the outline of the plan. It is so elaborate and in some aspects so revolutionary that the War Department itself is going at the matter in piecemeal fashion. One important subject of discussion has been the proposal to reform the housing of troops and also the military separation of the country into geographical departments and divisions.

That has been the unvarying military custom in this country in time of peace. Departments were arbitrarily set apart to be commanded usually by a brigadier-general, and there were also divisions embracing two or more departments and presided over by a major-general. This was a delightful expedient for the creating of additional red tape, since official papers then had to go from a post to a department commander, thence to division headquarters, and finally to the War Department. The department or division head was often hundreds of miles from the nearest army post in his territory, unless, as at St. Paul, there happened to be a post near his city. As a result, the American general in the years between the Civil and Spanish Wars was an anomaly among generals the world over. For he was a mere head clerk

under the War Department; he might not see a company on drill or wear his uniform in a year's time. Promotion to the rank of general usually meant not, as abroad, close association with active troops, but separation from them—unless an Indian campaign required a Crook or a Sheridan to take the field.

In Europe, on the other hand, the general lives with and commands a brigade, or a larger body of troops, drills it constantly, leads it to manœuvres and to the grand army manœuvres, and has to demonstrate to his superiors not only that he is himself capable of commanding his men, but that he has brought their drill to the highest standard, and that he has ability as a strategist. In this country, the army was until lately too small and scattered to make this possible. Now it is proposed to adopt the European system: to abolish geographical commands and to assign generals to troops. Last year, it will be remembered, Secretary Stimson tried to get Congress to do away with most of the present army posts, which are not barracks in any sense, but extremely expensive suburban villages, located in large and handsome parks, the cost of the upkeep of which is enormous, and makes great drains upon the time of the soldiers who do the work of the posts. Partly because of politics, partly because of the great sums involved, no action was taken; local prejudices were aroused, and Senators of the Warren type who had built up great posts in their States blocked the whole matter. Obviously, it was of such importance as to require careful thought and study; the policy involved was too great an innovation to be entered upon lightly.

Until, however, this question of rehousing the troops is solved, the affiliating of the generals with troops can only go on in limping fashion. There seems to have been in the conference at Washington substantial agreement that the Continental plan is correct, but a marked difference of opinion as to whether the scheme should partly be put into effect or await a complete reorganization of the stations of troops. To our mind, the change should, for the sake of efficiency and economy, be adopted as far as possible at this time. Some brigade posts are already in existence, others can gradually be created. In New York State Gen. Bliss commands coast artillery in sea-coast defences, and three regiments of infantry scattered in four or more posts. We can see no reason why the coast artillery, which has no duties in common with mobile troops, should not be put into the proposed "inspection districts," and the three infantry regiments be given to Gen. Bliss as his brigade, to be brought together in summer time for drill as a complete organization. True, some officers might hesitate to give up control over thousands of officers and men and territory, from Maine to Washington, D. C., and Fortress Monroe, which is the extent of Gen. Bliss's present command, for three regiments of perhaps 1,800 men. But so competent an officer as Gen. Bliss would, we are sure, prefer for every military reason to subordinate his own interests to the welfare of the service.

From the standpoint of economy, the policy of concentration cannot be too highly commended. As the army has grown in size, its cost per capita has increased, not decreased, as it ought in reason to do. It is the costliest army in the world for its numbers, and none other is so coddled or so lavishly supported. The development of our railways all over the land does away with any argument for widely distributing troops. The army problem can be worked out precisely like that of a civilian business or a manufacturing one, and with a consequent saving of millions to the taxpayers.

THE FRENCH PRESIDENCY.

The balloting at the palace of Versailles, which resulted in the choice of Poincaré as Chief Magistrate of the third French republic, took on peculiar interest this year in several ways. In the first place, there is the fact that one of the two leading candidates is the present head of the Cabinet. M. Raymond Poincaré is admittedly a man of calibre superior to the average run of French Presidents during the last thirty years. His election will thus impair to a considerable extent the tradition that the safety of the republic calls for the election of a man of mediocrity and safety, a *bon bourgeois* who shall be content with the highly ornamental duties of the office without striving after the reality of power. In the second place, the election has occurred at a time which may not be quite described as one of international crisis, but which nevertheless renders the conduct of French foreign policy more important than any domestic question of the moment; and foreign affairs is a field in which the President does make his influence felt. In the third place, the present election has been preceded by much discussion regarding the advisability of strengthening the President's functions so as to make him in fact as well as in name the head of the Government of the republic.

M. Poincaré's success will be taken as indicating a sympathetic attitude on the part of Parliament towards the enhancement of the authority of the Presidential office. It is doubtful whether the present Radical majority leans that way. M. Clemenceau, as the veteran exponent of Radical politics, is sharply antagonistic to M. Poincaré. This may have reacted in M. Poincaré's favor by swinging to his support the members of the Moderate and Reactionary groups. But the present head of the Cabinet is elected President with the aid of the Conservative elements, and this fact will be seized by his opponents as an additional reason why the powers of the Chief Executive should not be augmented. There is one almost fatal objection of a practical nature to all proposals looking towards the removal of the so-called abuses of the parliamentary system, and the substitution of a true nationally representative régime for the present system of chaffering and endless log-rolling among parliamentary groups. Whatever merit there may be in such proposals, they emanate from sources which, to a very considerable degree, have been suspected of hostility to the republican system of government in itself. The fear of Cæsarism is not so acute as it was during the early years of the republic. But the Dreyfus affair is not so very remote after all; and no reform programme that has behind it the men who in the dark days of fifteen years ago were suspected of hostility to republican principles can commend itself to the present Radical majority.

Still another consideration is the incompatibility of a powerful Executive with the principle of Ministerial responsibility. This principle, of course, obtains as absolutely in France as it does in Great Britain. Ministries are made and unmade by the majority in the Chamber of Deputies. To increase the

functions of the President, who is not responsible to Parliament, would be the same as increasing the functions of the Crown in Great Britain, a proposal which no British party would seriously think of bringing forward. The example of our own Presidents is not at all in point. They are representative in the sense that they are elected by the people after a prolonged contest in which public interest runs higher than on any other issue which is presented for popular decision. The President of the French republic is chosen indirectly by a body of something less than nine hundred men made up of the Chamber of Deputies and the Senate. The Deputies who took part in the present election were elected in May, 1910, nearly three years ago. The members of the Senate are themselves elected indirectly for a term of nine years, one-third of the Senate being renewed every three years. Of the three hundred Senators participating in the choice of a President, it is conceivable that one-third may have been elected as far back as eight years ago, or before M. Fallières was chosen President. Evidently, the candidate selected in this manner cannot pretend to be so representative of the popular will of the moment as a Cabinet dependent on an actual Parliamentary majority. Increasing the powers of the President at the expense of his Ministers would thus mean a step away from representative democracy.

But when all is said and done, the exact delimitation of power between the Executive and the Legislature is difficult. The element of personality is a factor which must be taken into account, and especially in France, which has a national habit of exalting principle by word of mouth and an equally strong habit of yielding to the fascination of personality. M. Poincaré as head of the republic may come to exercise a steadying and, within certain bounds, a directive influence on public affairs without overstepping the principle of representative government as embodied in a Ministry responsible to Parliament.

UTILITY AND DISCIPLINE.

Complaints of poor results in the teaching of modern languages, in American schools and colleges, have long been common and continue to make themselves heard. It is something of a novelty, however, to encounter them in the land where we have often been told such teaching is done to perfection. In France there is just now no small stir about the subject. At the very moment when the French Government is completing an arrangement with the Italian for the exchange of teachers of modern languages in secondary schools—whereby both the French master would teach his language to Italian pupils, and the Italian master to French, by the "direct method"—the success of the whole plan is called seriously in question. The fear is expressed that the ordinary student is getting neither a working command of the foreign language he is studying, nor the benefits of intellectual discipline.

The subject is handled vigorously by a recent article in the *Revue des Langues Vivantes*. The writer is one of the examiners for the degree of Bachelor of Letters, and sets forth particularly his experience in dealing with papers and essays offered in German. His report is pretty depressing. Except in a few cases, the work he declares to be "lamentable," and "the progress achieved is insignificant, puerile, or, in fact, non-existent." Not so good a knowledge of German grammar is displayed as is shown of Latin by candidates in the classics. This examiner asserts:

> For my own part, I have more than once in recent years been painfully surprised to find that young candidates for the degree manifested an inconceivable ignorance. They appear to be confronted with wonderful discoveries when they are told that there is a declension of adjectives in German, according to strict rules, or when they are informed that the German relative pronoun — a decidedly treacherous part of speech, they think—has a syntax of its own.

We have had dismal pictures painted for us of boys dozing over the Latin grammar and getting nothing out of their futile wrestlings with Greek except a general conviction that such a language once existed. But it appears that German or French grammar may have fully as soporific an effect upon the student, and that he may emerge from long struggles with the modern languages with little actual French—save as a thing of shreds and patches—and less German. Smattering for smattering, as much could be said for the graduate whose reading of Latin at sight was a purgatory to all concerned, as for the youth who thinks he knows Spanish or Italian because he can make his traveller's wants understood in it, and because the natives are too polite to laugh in his face at his murdering of the grammar. Let no one think that the French teachers of foreign languages have not been alert and fertile in devices to arouse the interest and spur the industry of their pupils. All the tricks of their trade they know and practice. Yet some of them sadly report that even the most varied and seductive instruction in modern tongues is no more attractive to the mind of youth than was the dreary grinding away at the Greek verb. Indeed, the *Journal des Débats* thinks that there are some signs in the French schools of a reaction towards the classics.

It would be as unfair to press this one set of facts, indicating disappointment of the hopes pinned to courses in living languages, as it would be to infer too much from statistics marshalled in favor of classical training. Picked men are picked men, whatever they study. When we are told that the men taking Greek in college easily outstrip the non-Greeks in the scientific schools, it is impossible to deny that one reason for their having taken Greek was that they had superior minds, which were bound to display their quality both then and later. But this truth at least appears clearly to come out of the whole dispute—namely, that if we think of the study of language not merely as the search for a tool, but the striving for a bracing exercise of the mind and a discipline of the perceptive and reasoning powers, the classical courses offer a robuster training than can be got by the ordinary boy out of any modern grammar.

There is no occasion to be sweepingly dogmatic about this. We have a lot of experimenting yet to do. The battle appears just now to be going strongly against Greek, which the archers of utility have sorely wounded. Yet if Greek is beginning to hold up its stricken head in France, it may do so in this country. The hope that it will may be cherished even by one who assents, in principle, to the doctrine of equivalency of subjects in education. Given the right kind of man and the right kind of teaching, discipline can no doubt be had from almost any study. But when we say so glibly, "other things being equal," we easily forget that they almost never are equal. It is barely possible, of course, that the idea of immediate utility and the idea of mental enrichment and strengthening may be

blended; but we have to admit that in actual practice they seldom are. The useful we must, of course, attain in one way or another. Even in the United States it is now admitted that instruction in modern languages is highly important. On the Continent, we know, it is regarded as absolutely necessary. But in doing what we must it is not wise to overlook what may be optional yet of the greatest advantage. And the educational disquietude in France which we have noted is an indication that the short road to discipline may be found the longest way round.

LITERATURE IN A VACUUM.

It all began about ten years ago when Mr. Chesterton published a volume on Browning. There had been amateur scholars before, but none till then had come into so direct a clash with professional scholars. The two sorts had existed side by side, peacefully despising each other: the one having to do with authors' feelings, the other with facts. But Mr. Chesterton changed all that. He confronted previous criticism squarely, questioning its facts and generalizations. Two or three years later Mr. Shaw attacked every variety of loose Shakespearean criticism, as well as the master himself. Mr. Belloc has since got after the mediævalists, and Mr. Harris, with his own special axe, has cut off the heads of some more Shakespeareans. The work of these men is not entirely alike. Mr. Harris, for instance, having new theories to establish, has sinned exactly in the fashion which he condemns in others. But so far as their criticism is destructive, and much of it is that, it partakes of a common method. To call this method rational would confuse it with something quite different which had full sway in the eighteenth century. The solid commonsense which Dr. Johnson often employed as a supreme test finds little place in the new discipline. It might better be termed the criticism of logic. Its main concern seems to be looking for logical leaks in the reasoning of other critics. It places literature in a vacuum, apart from the vapors of prejudice and tradition, and looks it full in the face.

On this side of the water, the pastime has received a democratic twist, of which Mr. Shaw, too, has not been guiltless, and has developed into a battle between ancients, by which are meant writers half a century or more old, and moderns. Scholars have been asked to say anew why Victorian fiction is superior to our best sellers. The latter have interest, certainly reflect life, and often reveal an admirable style. It will not do to rely chiefly on the steady hold which the Victorians have had on readers. Would they have fared so well if they had had so many contemporary writers to compete with as our moderns have? Besides, to consider the mere tradition of their popularity is aside from the point, is outside the vacuum. It is as if one were to call Burton's "Anatomy of Melancholy" great simply because Johnson got out of bed to read it. We all know that he would have robbed his sleep equally for one of our detective stories. Here are two works, come, let us compare them. What this putting of literature in a vacuum really means is illuminating it by strictly modern lights. But it must be confessed that the game has not been unprofitable. The English coterie in particular have shown a mental agility which has put the professional scholar on his guard against haphazard statement and has brought into a sharp light the various kinds of criticism that have flourished these many years.

After the death of Matthew Arnold scholarly criticism in England permitted certain fundamental elements to be largely impaired, if not thrust into a subordinate position. The life of an author and the philosophy connected with his thought, which at the hands of truly famous critics have always been brought intimately into a discussion of his works, were in no small measure replaced by gossip and bibliography. For all his valuable services this has often been the method of Professor Saintsbury, and every one knows that when the lovable Dr. Furnivall looked up from his severe textual work and surveyed the sweep of literature, he was apt to approach it through a pleasant experience of his own, sculling on the Thames or drinking tea. This is not implying that the literary gossip of an age has no proper place in criticism; but it is time to remonstrate when it assumes the inconsequential form of the social programmes, given so freely to the world, of our young contemporary writers. As for the emphasis placed on bibliography, this, as we are all aware, was made in Germany, and involves this country quite as much as England. It has produced "scientific criticism." It makes the boast that it has corrected a vast number of errors which, if they had been known to Pope and Hazlitt and Pater, would have saved them from the ridicule of a later age. This is no doubt true, and yet it is noteworthy that when the scientific critic permits himself to speak broadly, which he does all too infrequently, he is likely to utter in only a slightly different way impressions of long standing, and by lack of sharpness to lay himself open to the quick logic of a Chesterton or a Shaw.

Then there's the "household critic." Above all, he is pleasant. And, as his audience is large, it is good to be able to add that he is quite harmless. His manner is hard to describe. He has good taste, in a puritanical sense of the word, is something of a man of the world, is a repository of anecdotes, has much that passes for ideas, and his criticism always ends happily. If he is writing of authors of the last fifty years, he has usually met them, and they are placed prettily in a setting of their own homes. The household critic is constitutionally what he is, he is born that way. He has his enthusiasms, and his appreciations are unquestionably genuine. If his scope is limited, that is through no lack of intention, but merely because his reactions upon literature are invariably ethical—again we are bound to say in the narrow sense of the word.

The household critic and the scientific critic, more than others, may take the blame to themselves if just now they are annoyed by the bustle and popularity of the vacuum critic. There never was a time better suited to robust criticism than the present day. An army of scholars have turned up the external facts of literature to such an extent that a learned man, if he cared to generalize, need not go far wrong. That uninstructed men are to-day attempting to fill in the lack is proof of a widespread yearning for criticism that is vital. If philosophy and biography in the best sense were more employed as the backbone of criticism, the confusion of the present day would be much less. Literature, to be properly studied, belongs no more in a vacuum than under a microscope.

GOMPERZ'S GREEK THINKERS.

It was Gomperz's intention to bring his history of Greek philosophy down to the foundation of the Stoic, Epicurean, and Skeptical schools in the third century B. C. His death, while the present volume* was passing through the press, concludes, with this monograph on Aristotle and his school, what will probably remain for our generation the most popular, if not the standard, history of the subject. Philologians will still consult Zeller for the details and the evidence. But workers in other fields and the larger educated public will take their impressions of Greek philosophy and their generalizations about the Greek mind from Gomperz.

I.

The qualities of Gomperz's brilliant work are well known and have been praised by many reviewers of the earlier volumes—the picturesquely imaged style, the wealth of apt allusions and pertinent modern parallels, the frank substitution of the point of view of positive science for Zeller's modified Hegelianism, the wide interest in ideas, and the treatment of each idea in turn, not as a fact in an historical catalogue, but as a claimant for recognition at the bar of absolute truth. Gomperz has few misgivings over the competence of the tribunal constituted by the "best modern scientific thought" as he conceives it. His distinctive note, his formula, as it were, is that he is a thoroughly trained German philologist who has also studied Grote and John Stuart Mill; and his explicit elucidations, from the standpoint of the philosophy of utilitarianism and the associationist psychology, of all problems raised by ancient philosophy sometimes remind even the sympathetic reader of that "offensive lucidity" which for Nietzsche was synonymous with the name of Mill.

These qualities and their corresponding defects were especially conspicuous in the first volume, which dealt with the infinite suggestiveness of the fragmentary remains of the Pre-Socratics. The critic might have his reserves, but to the general reader the book was as fascinating as a romance. Less successful, in the volumes on Plato, was the combination of this method with the highly specialized Platonic philology of the past two or three decades devoted to the determination of the evolution of Plato's thought by the ascertainment of the dates of his dialogues. To fit himself to do justice to Plato, Gomperz should have extended his English reading from Grote and Mill to Arnold, Jowett, Froude, Martineau, Pater, and Emerson. If, for example, he had appreciated Arnold's ironical preference of Moody and Sankey to Clifford, he would hardly have written in the present volume that "Aristotle is separated even from the purified theology of his master Plato . . . by a gulf wide almost beyond belief in the light of chronology." It is not a question of chronology at all: Plato and Schleiermacher and Arnold have no more dogmatic theology than Aristotle and Haeckel and Gomperz, but they prefer to speak of religion in a different tone.

The more matter-of-fact and direct work of Aristotle is less open to misconception. His true relation to Plato will continue to be misrepresented, and his final psychology and metaphysics will always be a problem. But the ordinance and content of his systematic treatises must remain much the same in every exposition. Gomperz here challenges comparison with the exhaustive work of Zeller, which has now been accessible to English readers for some fourteen years. Here, too, Gomperz is much more interesting in cursory perusal. But his inferiority for the purposes of the student is even more marked than in the volumes on Plato. Plato can be made intelligible to the English reader without the employment of technical terms. But Aristotle's philosophy, as distinguished from his ethics and politics, cannot be understood at all without a fuller and more precise explanation of his terminology than can be found even in the appendix to this volume. Life is perhaps too short to waste on the study of Aristotle's wrestlings with the problem of "universals." But there is not the slightest use in trying to understand it if you are not willing to go beyond English terminology and master the different meanings of τὸ καθόλου and distinguish the τί ἐστιν from the τί ἦν εἶναι.

II.

Gomperz's arrangement of material is in the main that of Zeller, proceeding from logic and ontology through the physical and biological sciences to ethics, politics, and rhetoric, with occasional digressions on topics of special interest. But the space assigned to the Aristotelian treatises is proportioned not so much to their intrinsic significance or their need of elucidation as to Gomperz's personal interests or their availability for literary presentation. He seems to have adopted the Horatian rule, "quæ desperat tractata nitescere posse relinquit." The logical works are dismissed in twenty pages and two brief chapters. In the first he mildly defends the categories against Mill's contemptuous gibe that they resemble "a classification of animals into men, quadrupeds, asses, horses, and ponies." The second, on the logic proper, consists solely of a few miscellaneous observations on the value of the syllogism in answer to the objection that it is merely a *petitio principii*, and on the "Topics" as illustrating the eristic strain in Aristotle, and the weakness and the strength of his dialectic. Now, it is true that formal logic is not a "nitescent" theme for the general reader, and Mr. Schiller is supposed to have given the Aristotelian logic its *coup de grace* in a big book which American reviewers are unanimous in commending, apparently in the innocent belief that the progress of the American schoolboy is still retarded by those mediæval exercises of argumentation in mood and figure denounced by the Oxford scholar. But whatever the absolute educational value of formal logic, it is not possible to understand either Aristotle's philosophy or the history of philosophy from Aristotle to Bacon without a fuller acquaintance with the terminology and problems of the "Organon" than Gomperz's two brief chapters impart or presuppose. Of the problem of the unity of the definition, for example, which the logic, after vainly trying to solve, transmits to the metaphysics, he has little or nothing to say.

The transition from logic to metaphysics is made through two topical chapters on the antithesis between the Platonist and the Asclepiad in Aristotle. The Asclepiad is represented by the passage of nominalistic psychology at the close of the "Analytics," which Grote was never weary of praising; the Platonist is made responsible for all the mystic metaphysics and *a priori* physics which Grote and Gomperz deplore as inconsistent lapses from the true psychological standpoint elsewhere won. The opposition of the two tendencies undoubtedly exists in Aristotle, but it is a misconception to make the survival of Platonism in his thought the *fons et origo* of all his errors. Plato, in fact, committed fewer gross fallacies in science than Aristotle, and the chief source of the errors of both is not so much false metaphysics as simply the lack of knowledge which their age could not possess. The complaint, repeated after Bacon, Lange, and Grote, that they rejected the great scientific truth of atomism, involves a confusion of thought. Ancient atomism never accomplished anything for science, as the history of the Epicurean school sufficiently proves, and it is unreasonable to challenge the right of Plato and Aristotle to criticise atomism as a final philosophy merely because they could not foresee its usefulness two thousand years later as a working hypothesis of science. The neglect of this distinction is, indeed, the chief obstacle to the modern reader's understanding of both Plato and Aristotle. They both use the absurd science of their day in the illustration and discussion of those ultimate concepts of science, ethics, and religion, in the analysis and correlation of which we have advanced little

*Greek Thinkers. By Theodor Gomperz, Vol. IV. Translated by G. G. Berry. New York: Chas. Scribner's Sons.

beyond Aristotle, and not at all beyond Plato. The working scientist content with working hypotheses may dismiss all such disquisitions as logomachies or make his correlations "by the aid of that respectable Scottish sectary, Robert Sandeman." But no professor of philosophy who takes Herbert Spencer or M. Bergson seriously is logically justified in an attitude of condescending allowance for the immaturity of the thought of Plato and Aristotle. In his censure of Plato and in certain chapters of his logical and biological works Aristotle seems to speak the language of positive, empirical, and nominalistic science. But unless you are prepared to go the whole way with "Mill on Hamilton," it is uncritical to single out these passages for special praise as representative of the true Aristotle, and to lament with Gomperz that "after once gaining the shore, he could have slipped back into the vortex of doubt and allowed himself to be engulfed in the depths of Platonic mysticism." It was as impossible for Aristotle to accept "Mill on Hamilton" as the final philosophy as it was for Plato or is for Bergson and Maeterlinck; and the "vortex of Platonic mysticism" is simply that problem of the ultimate nature of conceptual thought which still baffles the powers of expression, if not the analysis, of the few psychologists who venture to grapple with it.

In a closely reasoned chapter on chance and necessity Gomperz argues for once against the view of Grote and Mill, who affirm that Aristotle denied the universality of causation and treated accident as an objective fact under the name of chance or spontaneity. He seems to be unacquainted with Mr. D. D. Heath's anticipation of his argument in the seventh and eighth volumes of the English *Journal of Philology*. The question is perhaps insoluble; for it turns first on Aristotle's doctrine of the freedom of the will, and, second, on the possibility of conceiving an unbroken chain of causation extending from the First Mover through all the seeming irregularities of the weather that obtains in the sphere of mutability below the moon. But if Aristotle's faith in the reign of law was as fixed as Gomperz assumes, why did he not more explicitly approve the pre-Socratic dictum which he quotes, that chance is merely a name for our ignorance of the real cause?

From the defence of Aristotle's scientific orthodoxy on this point, Gomperz passes to the doctrine of the four causes and the special sciences that arise from their application in different fields of investigation. The physical works proper, he passes over very lightly, using them mainly for the illustration of the limitations of Aristotle's mind and the defects of his method—that corruption of physics by logic of which Bacon complained. More interesting are the chapters on the great biological works, enriched by illustrations taken from Meyer, Pouchet, Lewes, and the author's own readings in modern biology. Gomperz here and elsewhere rightly protests against the misconception, encouraged by Zeller's equivocal use of the word "development," that Aristotle was in any fair sense of the term an evolutionist either in biology or general philosophy. The paradoxical juxtaposition in these biological writings of amazing knowledge and grotesque errors can be explained only on the supposition that Aristotle took over from his predecessors vast collections of facts which he had no time to verify.

The chapters on "Psychology" consist mainly of suggestive, but unsystematic, observations on special points of interest—dreams, memory, and recollection, the correlation of a sensitive skin with superior intelligence, and Aristotle's alleged anticipation of Berkeley in the belief that distance, size, and form are mediately perceived through inference. The insoluble problem of the *nous* or highest reason is brought no nearer solution, but supplies a transition to the chapters on theology and astronomy. Gomperz declines to prolong the lines of the "Physics," "Metaphysics," and "De Anima" to their meeting-point in the unifying dogma that God, the prime-mover and self-thinking thought, is identical with the totality of conceptual forms which are the Aristotelian equivalent of the Platonic ideas. The whole subject is distasteful to our author, and he takes his leave of "this uninspiring portion of Aristotle's doctrine" with the confession that "much in it remains for us utterly obscure."

III.

One hundred and sixty-four pages, nearly half of the entire exposition of Aristotle's thought, is devoted to a running analysis and criticism of the "Ethics" and "Politics." Little space is wasted on the philological problem of the composition and order of the books in the two treatises. Both, Gomperz thinks, are the publication from notes of pupils and manuscripts of the teacher of courses of lectures often repeated, sometimes in varying order. The existing arrangement of the books of the "Ethics" is, he maintains, excellent. If the discussion of the virtues was to be continuous, there was no other place for the book on self-control and for the two books on friendship except that which they now occupy. Similarly, though with less confidence, he rejects the transposition of the two unfinished books on the ideal state from their present place at the end of the "Politics." Aristotle may sometimes in his lectures have adopted a Platonic order, and treated existing states as degenerations from an ideal. But the empirical, scientific spirit would ordinarily lead him to describe what is before depicting what ought to be.

The summaries are well executed, and each idea as it emerges is judged at the bar of Gomperz's own enlightened modern liberalism. But this leisurely, diffuse treatment, though rich in interesting observations of detail, occupies space which would have been better given to an illuminating and comprehensive historical criticism of the works as a whole. The detailed exposition as Aristotelian doctrine of much that is mere Platonic commonplace is both superfluous and misleading. The reader who seeks only that can find it for himself in Welldon's translation of the "Ethics" and Jowett's translation of the "Politics." What we miss is the perpetual confrontation with the ideas of Plato and Isocrates, which is the first requisite of a truly historic and critical estimate of these books. For the "Ethics" the materials for such a comparison were in large part before Gomperz in the edition of Burnet, to which he awards high, but not excessive, praise, but he has not used them. There are, of course, many references to Plato, and Gomperz himself must have been aware of many coincidences which he does not mention. But, though such was doubtless not his intention, his résumés will leave upon the reader the impression that Plato's political and ethical thought was negligible as compared with the greater fulness and sobriety of his successor, that Aristotle solved problems which he merely evaded, or, in some cases that there is no problem. The first misapprehension results from his neglect to mention Plato's anticipation of ideas expounded in great detail as parts of the Aristotelian system; the second may be illustrated by his singling out for praise, and as proof of Aristotle's superiority "both over ancient and modern intellectuals," the sentence which he renders, "for reason alone sets nothing in motion." The true meaning of this is given by Welldon: "the mere intellect has no motive power; it must be intellect directed to a certain end." Aristotle, as a matter of fact, nowhere in the "Ethics" succeeds in clearing up the problem of the relations of "right reason" and will, or the "orectic" faculty, in the determination of conduct. Gomperz treats as the solution of this problem what is merely an evasion of it by the verbal distinction between the "theoretic" and the "practical" reason. Thirdly, Gomperz seems to ignore the existence of the problem, when, in praising Aristotle's tranquil acceptance of the formula (attributed to Thrasymachus in the "Republic") that "justice is the good of another," he adds,

"he does not trouble himself about any eudæmonistic foundation." But, though modern utilitarians persist in imitating the proverbial ostrich, the problem of the "eudæmonistic foundation," that is, the "sanction" which provides the individual with a motive for social conduct, will always remain, as it is in Plato, the supreme test of any ethical philosophy that endeavors to face the facts.

IV.

The brief chapter on the "Poetics" touches lightly on topics which Gomperz had treated more fully elsewhere. He assumes that the Katharsis question is settled in favor of the medical meaning, "purgation," and, like other advocates of the extreme rigor of this view, ignores the fact that purgation may imply, as it does in Plato, purification of what remains. He dwells upon Aristotle's neglect of lyric poetry, and, with the majority of commentators on the "Poetics," creates unnecessary difficulties for himself by misapprehending the Platonic and Aristotelian meaning of "imitation." By μίμησις they usually meant the representation or suggestion of the emotions and states of feeling that accompany the actions or are associated with the objects imitated. In this sense, a lyric may be as truly an imitation as is a dialogue. Gomperz thinks that it "was reserved for the genius of Aristotle to free the concept of poetry from the external mark of versification." Mr. Saintsbury would regard this as the loss of a valuable distinction of common sense. But, however that may be, Aristotle is certainly not the originator of the obvious generalization that assimilates artistic or imaginative prose to poetry. It is implied by Isocrates, and still more clearly in Plato's ironical application of the name poet to Lysias as author of the erotic discourse in the "Phædrus."

V.

The exposition of Aristotle concludes with a résumé of the content of the "Rhetoric," which Gomperz accepts entire and places last because he believes that it was, in fact, one of the latest works. In this he relies on references in the "Poetics" which imply that the "Politics" had been written and that the "Rhetoric" was still to come. But whatever may be the date of the composition of the extant treatise, there is a well-authenticated tradition that Aristotle lectured on rhetoric in the lifetime of Plato, and in a genetic exposition of Aristotle's life-work, the "Rhetoric" ought to be associated with the "Topics" in an introductory chapter describing his methods and the dominant interests of his mind. Gomperz sometimes suggests this way of interpreting Aristotle, but apparently shrank from the labor that such a redistribution of the immense material would involve. His book is thus a compromise between this method, the old encyclopædic method, and an exposition in the presumed order of composition of the extant works. The order of composition is uncertain, and in any case the extant works represent the systematic thought of Aristotle's maturity in which there is little observable development. Gomperz's one attempt in this direction is not encouraging. The biological works, he tells us, are later than the "Physics," and we may expect to find here a "culminating height of intellectual maturity." He finds it in an "extraordinary piece of self-correction. Fire is removed from the series of elements and now conceived as a phenomenon accompanying processes of which any of the three remaining elements may be the seat." This would be indeed extraordinary, if true. But it is a complete misunderstanding. All the elements are mixed in our experience. We do not know any in absolute purity; least of all, dwelling as we do in the region of earth, water, and air, can we know pure elementary fire. Its place is at the outer circumference of the atmosphere adjoining the sphere of the moon.

The encyclopædic method of Zeller is convenient for reference, and may usefully supplement a more penetrating analysis. But it envelops with a disguising robe of omniscience and objectivity what under scrutiny proves to be a very fallible and human, though almost superhumanly comprehensive and active, intelligence. What Plato says of Homer's inspired omniscience is true of all encyclopædic and universal philosophers: "When anybody tells us that he has met a man who knows all arts and sciences, we must assume him to be a very simple person who has been deceived by some pretence and imitation of knowledge." The first step towards the real understanding of an Aristotle, a Leibnitz, or a Herbert Spencer is to distinguish what they actually knew, what they studied and mastered before the age of thirty-five, from what they crammed or copied or deduced to fill up the compartments of their systems. What Aristotle knew best was Platonic dialectic, Isocratean rhetoric, and the practice of Athenian fourth-century oratory and debate. From these he generalized and systematized formulas, definitions, and methods, which constituted the content of his "Logic," "Topics," and "Rhetoric," and the framework of all his later study and thinking. Second to this comes, on the one hand, the great body of ethical, political, and philosophical ideas, dispersed through the Platonic dialogues, which he seems almost to have tabulated and indexed for use; and, on the other hand, the enormous collection of biological facts which it is customary to say was a part of his inheritance as an Asclepiad. From these sources, with elaborations and additions of his own, grew the "Ethics," "Politics," and biological treatises. The rest is encyclopædic and doctoral dissertation, valuable when, as in the "Constitution of Athens," it rested on a good compilation of facts, nearly worthless when, as in the "Physics," the logical mill ground *in vacuo*. An exposition on these lines would give us the real Aristotle. The studious reader could almost construct it for himself from the footnotes of Zeller. Gomperz does little more than suggest it, and the work still remains to be done. The present volume will none the less probably long remain the most attractive and stimulating account of Aristotle available to the general reader. It includes, in addition, chapters on the Old Academy and on the successors of Aristotle from Theophrastus to Strato, which I have no space to discuss. The translation was revised by Gomperz himself; it reads easily, and appears to be correct so far as I have tested it.

PAUL SHOREY.

NEWS FOR BIBLIOPHILES.

The library of the late Matthew C. D. Borden, which, with his collection of paintings, will be sold at auction by the American Art Association during the winter, is in many respects a notable collection. Mr. Borden was not as intimately acquainted with his books as was Mr. Hoe, indeed he was a collector for a comparatively short time, but what he purchased he wished to be the very best of its kind. Instead of making up sets, book by book, of first editions, he generally preferred to have the preliminary work of assembling, collating, nd binding done by some one else.

His set of the writings of Charles Dickens is one of the most valuable ever offered for sale. It is the set brought together by Mrs. Norton Q. Pope, added to and bound uniformly after her death. It is especially rich in inserted drawings, either the originals of the illustrations of the first editions of the books themselves, or other drawings by well-known Dickens illustrators. The "Pickwick" contains no less than thirty-four drawings by H. K. Browne ("Phiz"), mainly the originals of the famous illustrations, besides twenty drawings by F. W. Pailthorpe and drawings or prints by Crowquill, Onwhyn, and Heath. The "Oliver Twist" contains twenty-six drawings by George Cruikshank, being the twenty-four illustrations of the book with two additional sketches, and twenty drawings by Pailthorpe, besides a series of twenty-seven pen-and-ink drawings by an unidentified artist. The set includes two manuscripts, "The Perils of Certain English Prisoners and their Treasures," of which chapters i and iii, 51 leaves, were by Dickens, and chapter ii, 39 leaves, by Wilkie Collins; and "A Curious Dance Round a Curious Tree," more than half of which is in Dickens's autograph, and the balance by W. H. Wills.

Mr. Borden's set of first editions of Thackeray is very fine. It includes the rare

"Floro et Zephyr" (1836), with an original drawing by Thackeray; complete sets of the *Snob* and the *Gownsman*, the two little college papers to which Thackeray contributed; "The Second Funeral of Napoleon" (1841), and other rarities.

Among other authors, collected sets of whose works are in the Borden library, are Goldsmith, George Borrow, Marryat, Lever, Ainsworth, George Eliot, Charles Kingsley, Leigh Hunt, Blackmore, Hardy, Swinburne, Stevenson, and Kipling.

Among the early printed books the first edition of Homer (Florence, 1488), 2 vols., folio, is easily the most important. Of early English books the library contains the four folios of Shakespeare; Holinshed's "Chronicles," first edition (1577); Gower's "Confessio Amantis" (1553); Painter's "Palace of Pleasure" (1566-67); "Paradise Lost," both issues of 1667, and first editions of "Comus," "Lycidas," and "Areopagitica"; and the first five editions of Walton's "Compleat Angler." Burns's "Poems," the first or Kilmarnock edition; the first edition of "Robinson Crusoe"; Wordsworth's first two books, "An Evening Walk" and "Descriptive Sketches" (1793), most interesting association copies; Lamb's "Tales from Shakespeare"; Keats's three volumes of verse, and a long list of Shelley first editions, are among the books of the late eighteenth and nineteenth centuries.

There are some remarkable extra illustrated sets, among which are the Augustin Daly set of "Battles and Leaders of the Civil War," four volumes extended to twenty-five; Boswell's Johnson; Lady Jackson's Works; Burns's Works, extended to thirteen volumes, and with several manuscript poems inserted; Irving's "Life of Washington"; and many others.

A collection of engraved views of New York City and vicinity, bound in twelve volumes, folio, is certain to bring a great price, as will also the collection of two hundred and twenty-five autograph military dispatches of Gen. Grant, 1864 and 1865, and correspondence of Grant and President Johnson, bound up in two volumes. These dispatches of Grant are the originals written out by him in his own hand, which were apparently preserved by the telegraph operator.

A complete set of John J. Gould's "Ornithological Works," forty-three volumes, folio, with about three thousand colored plates; Audubon's "Birds" and "Quadrupeds," the first octavo editions, bound from the parts; and Lilford's "Birds of the British Islands," are among the notable works on natural history in the collection.

Some ten years ago Mr. Borden acquired the remarkable collection of Cruikshank drawings and engravings brought together by John B. Gough, the temperance lecturer, who was a close personal friend of George Cruikshank. Mr. Gough's interest was confined to the pictorial matter only, so that he preserved only the engravings and discarded the text in almost every case. This method is not in accordance with present-day collecting, but the great size and comparative completeness of the collection, together with the fact that many of the plates are autographed by Cruikshank himself, make it a rich prize and one the possession of which would make any library famous. After Mr. Borden acquired the collection he had it put into the best shape and handsomely bound by the Club Bindery at an expense of many hundreds of dollars. Besides this Cruikshank collection Mr. Borden's library contains many books with colored plates by Leech, Rowlandson, Alken, and others.

Of their more important books it has been the custom of the Grolier Club to print two, or at most three, copies on vellum. Mr. Borden was able to acquire a number of these vellum copies, including "A Decree of Star Chamber Concerning Printing," "Rubaiyat of Omar Khayyam," "Peg Woffington," De Vinne's "Christopher Plantin," Richard de Bury's "Philobiblon," Matthews's "Modern Bookbinding," Conway's "Barons of the Potomac," Donne's "Poems," "Two Note-books of Thomas Carlyle," "Life of Count Hoym," and the "Catalogue of Books from the Libraries of Celebrated Bibliophiles." These were for the most part acquired at the Frederick W. French sale in Boston in 1901. The Kelmscott Press books are, many of them, vellum copies, and Mr. Andrews's "Among My Books" is one of the two copies printed on vellum. This is the only one of all the books issued by this well-known amateur of which any copies were printed on vellum.

Before his death Mr. Borden had had a catalogue of his library prepared and printed, two volumes quarto, fifty copies only, but it seems never to have been circulated by him, though the title pages are dated 1910. From one of these copies of the private catalogue these notes have been made. The American Art Association sales-catalogue is not yet ready.

Correspondence

SHAKESPEARE AND HERBERT AGAIN.

To the Editor of The Nation:

Sir: The significance of the first passage from Whyte, which I cited (*Nation*, December 5, 1912), as "overlooked," has been effectively and universally obscured by the manner of Mr. Tyler's allusion to it in the foot-note to which Professor Newcomer refers (*Nation*, January 16). Its bearing either upon the facts or upon the Herbert theory was not clear to me until I had put beside it the complete citation. I venture to say without this it could scarcely be clear to others. Mr. Tyler says (p. 44):

> It was in the spring of the year just named [1598] that, according to Rowland Whyte (Sidney Papers, Vol. II, p. 43), William Herbert was to commence residing permanently in London.

His footnote upon this statement reads as follows:

> "My Lord Harbart hath with much adoe brought his Father to consent that he may live at London, yet not before the next Springe." And about a week later, April 27, 1597, Whyte again speaks of Herbert's coming to London "next spring," that is, if "Leiden" is a misprint for "London."

No reason is given for this lightly supposed misprint. It is a supposition airily enabling a warping of evidence directly opposed to that first quoted into a semblance of corroborating it. The passage thus obscured I cite again: "I heare that my Lord Harbart the next Spring shall come to Leiden." The newsman of Sir Robert Sydney corrects the first news he gave by this second news. So I read his letters.

I may add that I examined the "Sydney Letters" with relation to accuracy and typography and found more than usual carefulness on the part of the eighteenth century transcriber and editor of the original MSS., Arthur Collins. One evidence of it is his calendaring of old-style and new-style chronology; another, the preciseness of references to names of places, italicized throughout according to older customs.

I avoided bringing this obscuring foot-note in when writing before to the *Nation* because I desired not to involve with any controversial matter my space for a brief unvarnished record of the evidence. I desired to set the fresh facts in order with old ones in point, and put them only in such due relation to the context of the "Sydney Letters" as would afford a true glimpse of the affiliations there shown of the Pembrokes with the Low Countries and with Lord Herbert's uncle, Sir Robert Sydney, Governor of Flushing.

Charlotte Porter.

Cambridge, Mass., January 9.

TOO MUCH PREACHING.

To the Editor of The Nation:

Sir: The recent utterances of President-elect Wilson indicate, it seems to some of us, a lack of appreciation of the conditions commercial and financial. His attitude is similar to that of the numerous brood of self-constituted and amateurish "uplifters" and "reformers" who swarm throughout the land and flood the editorial columns of our daily papers. Nobody objects to the general statement that wrong is wrong whether in big or little men, and further that there should be a power not ourselves to punish the iniquitous.

It is indeed true that the doughty rough-rider has accustomed us to Presidential preachments and almost daily proclamations on the exceeding sinfulness of sin. But it is a little disappointing to turn from the big-stick to the big-whip and the high-swung gallows of Haman, to turn from bombast to fustian. The preacher who is constantly exposing the fires of hell runs the danger of working his people up to a pitch of excitement ill-suited to that quietness and confidence in which strength lies.

Henry Leverett Chase.

St. Louis, Mo., January 15.

THE ATTORNEY-GENERAL AND PRIVATE PRACTICE.

To the Editor of The Nation:

Sir: The difficulty of obtaining authoritative evidence in respect to certain political usages is often great. Rather longer ago than two years I called attention (*Nation*, September 22, 1910) to the question whether the Attorney-General of the United States would be violating any custom or rule of honor in accepting private practice in case he had time to do so. The custom was well enough known in early days, indeed up to 1853. But it was strongly disapproved by Caleb Cushing in 1854 (6 "Opinions of the Attorneys-General," pp. 326-355). A bit of new evidence on the subject may be found in "Ebenezer Rockwood Hoar: A Memoir," by Moorfield

Storey and Edward W. Emerson. On Fast Day, 1870, Attorney-General Hoar wrote to his wife as follows:

I have argued a case two hours to-day—that's instead of *preaching*—have received a small fee for it—it being for a private client—and so send you $100—that's for *charity*—which "begins at home" (p. 205).

Mr. Hoar, it may be recalled, served as Attorney-General under President Grant from March 5, 1869, to July 7, 1870. Perhaps some one of your readers can shed further light on the custom with reference to more recent days.

HENRY BARRETT LEARNED.

New Haven, Conn., January 13.

FRENCH FASHIONS.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* is much mistaken if it thinks (see editorial, January 16) that the new American fashions are going to be provincial. How absurd it would be to say that American architecture is provincial simply because it is not Parisian! The naïve belief that good things in dress come from Paris is merely a relic of an undeveloped artistic sense, and now that the country has been fully awakened to its silliness, there will be no trouble in making it a thing of the past. My prediction against yours!

CHRISTINE LADD FRANKLIN.

Columbia University, January 17.

AREN'T I?

TO THE EDITOR OF THE NATION:

SIR: In reading H. G. Wells's latest, "Marriage," I uncarthed this precious gem of locution, in Book II, chapter the third; "My dear! *Aren't I* a feminist? Don't I want woman fine and sane and responsible?" The italics are mine. I remember meeting the same formula elsewhere in contemporary fiction, but have forgotten to note volume and chapter. Now, if Mr. Wells were of the *indocti*, one might swallow the formula as a mere Cockneyism. But he is supposed to represent, or at least reflect, Young Oxford, and his hero, Trafford, is the latest word in British science and culture. What, then, are we to do with such a barbarism? One of my colleagues, an Oxford man, suggests this explanation: Assuming the abbreviation *A'nt I* for *Am not I*, also assuming the heavy English *a* sound, we get a spoken *Ah'nt I*, of which the *Ahn't* may be mistaken for *Aren't*. Well, I have my doubts, but give the explanation as proposed, and pass on to the question, whether we Anglo-Americans are losing all sense of grammar. Anything "goes" apparently, if uttered in the tone of "authority," and no one seems able to think. Our utterance runs in grooves. Because we say: Isn't he, Aren't we, therefore we must say A'nt (Am not) I. Is there anything to prevent us from saying Am I not? Or shall we all jabber and scribble indiscriminately? Of course, every one knows the *jus et norma loquendi* doctrine. But every one ought to remember also that the same poet advises you to lock up your lines ten years before letting them loose, and took infinite pains to make his every word and phrase tally with the ultimate genius of his mother tongue. His authority was that of reason, not of blind following. And I am one of those relics of a past age who maintain that not even an act of Parliament or a constitutional amendment can make poor grammar and diction good. Accordingly, I appeal to *Nation* readers: Aren't I justified in rebelling?

J. M. HART.

Ithaca, N. Y., January 10.

Literature

A QUEEN'S DIARY.

The Girlhood of Queen Victoria: A Selection from Her Majesty's Diaries Between the Years 1832 and 1840. Published by Authority of His Majesty the King. Edited by Viscount Esher, G.C.B., C.C.V.O. In two volumes. New York: Longmans, Green & Co. $9 net.

The selection from Victoria's correspondence published five years ago revealed the Queen's character in its early maturity. The present extracts from her girlish diary, made by Lord Esher (co-editor with Mr. A. C. Benson of the Letters), show the conditions and influences under which that character was formed. The young Princess began to keep a journal at thirteen, when she must have had an inkling, at least, as to her destiny. Her mother, the Duchess of Kent, was an ambitious and not tactful woman, and had already begun to irritate King William by taking her daughter about the country in a series of what he called "royal progresses." She seems to have meant to make the Princess happy; but surrounded her with neutral or odious persons. She spared no pains in having her educated according to the best standard she knew; but that standard was low. "It was," says Lord Esher, "precisely what might have been expected from one whose youth had been spent in a small German court, and whose later opportunities had not brought her into contact with highly trained and thoughtful minds."

This is easy to understand: the odd fact is that the commonplace rearing of the heir to the English throne was not only permitted but approved by the England of that day. The Dean of Chester superintended the studies of her childhood; and when the Bishops of London and Lincoln were called upon to investigate the results, they did not hesitate to report favorably to Parliament upon her intellectual attainments, and to give the Duchess credit for due care. In fact, the Princess had the education then held proper for a lady: she learned to draw a little, to sing a little, to play a little—music then meant Italian music—and she got something more than a smattering of modern languages. Of great literature, of history, of politics, she knew nothing. Lord Esher believes that this may have been fortunate—agreeing with a foreign observer that the Queen might not have "maintained through life her admirable mental equilibrium if education had developed in her high intellectual curiosity or fantastic imagination." He adds:

The Queen's teachers were excellent, commonplace people, and they left precisely those traces on her mind that might have been expected. Her character was another matter. They could not and did not influence that, and it is the character of the Queen that places her in the small category of rulers who have not only deserved well of their country, but have left an indelible stamp upon the life of their people.

That the good Queen was morally great and mentally sound the world will never forget. That she had latent in her either intellectual curiosity or fantastic imagination is itself a fantastic, not to say humorous, speculation. Many a woman's taste for reading or zest for thinking has been born in her after she has reached the end of her teens. As Queen, Victoria had the widest opportunities for development; but in matters of taste or of high speculation, there was nothing to develop.

The earlier journals show her as a commonplace and even rather dull little girl. The entries record with deadly accuracy the daily incidents of life. Setting out upon one of their "progresses," they leave Kensington Palace at six minutes past seven; they reach Barnet at five minutes past half-past nine; at one minute to four they change horses at Dunchurch, etc. As for what is to be seen from the royal carriage, things are "very pretty" or "very dusty"; people cheer as they pass through some town; a mayor gives her a box full of Shrewsbury cakes; now and then it rains. It is well that the editor has given relatively little space to extracts from the journals of the earlier years. The fact that they were open to the inspection of the Princess's mother and governess accounts in part, no doubt, for their dulness.

Once the diarist becomes Queen, her tone changes, both because she has more to write about, and because she is writing for herself. It remains the diary of a young girl with rather narrow and personal interests. She takes her accession to the throne for granted, as she would have taken for granted the inheritance of great wealth. She writes fondly and even gushingly about the people and things nearest to her: not, one notices, her mother, but her governess, her singing teacher, her horse, her dog, this uncle or that cousin. But she is sentimental rather than devoted. She is troubled by such poverty and suffering as are thrust upon her attention, but does not think of them if she can avoid it. Her attitude towards persons outside the court circle is reserved and proud.

The truth is, if it were not for the appearance of a single figure in these

pages, they would be of very mild interest. The Princess, the young Queen, had little knack at self-expression; she was a recorder; and until Lord Melbourne came into her daily life she had found little worth recording. From the moment when his name is first mentioned, her diary begins to be literature in a sense in which nothing she wrote before or after was literature. Lord Melbourne was her sole masterpiece. At the time of her accession he was at the head of the Whig Government, a man barely past middle age, a seasoned courtier, and a statesman of no mean order. To him fell the delicate task of training the ignorant young Princess to play her part as Queen. From him she must learn her first lessons in politics and statecraft; the relations of the sovereign to the personnel of her court, and to the Government; and the principles of her conduct on public occasions. It was a fortunate chance which gave Melbourne this office. He at once gained the confidence and affection of his pupil, as Peel, for example, could not possibly have done, and guided her with almost unerring skill among the intricate paths of royal conduct.

But it is the young Queen's almost Boswellian portraiture of her Prime Minister which gives her journal of these years its distinct charm. From 1837 to 1840 it is chiefly a record of her meetings with Lord Melbourne, how he looked, what he did, and, above all, what he said. In critical or selective instinct the diarist seems to be deficient; yet her reports of Melbourne have the cumulative value of Boswell's on Johnson. He was the first person of strong native individuality with whom she came into close contact, and she promptly surrendered to his influence and his charm. He was still in his fifties, still handsome and full of vitality, a delightful companion as well as an invaluable counsellor. Everything about him interested her: his ancestry, his school-days at Eton, his lightest chat as well as his serious opinions. The latter were often whimsical and bluntly put. Courtly in the acts of composition and of public speech, he chooses the simplest vernacular for his intimates. It is odd to find at least a passive sense of humor developing in this matter-of-fact daughter of the house of Hanover. His sallies draw from her "fits of laughter"—due tribute of delighted and puzzled maidenhood to an acknowledged "case," on whatever social plane. She counts upon his companionship—wishes to have him always by her on public occasions—she "feels safer so"; and when he is obliged to warn her that she cannot expect a visit from him of a Sunday, she makes him promise to give her an extra day the following week "to make up for it." Many of the entries begin with "He said" or "He came"—there being plainly but a single owner of that pronoun in her intimate life. As for the paragon himself, he soon became engrossed in the task which had been undertaken as a duty. There was a tinge of romance in the relation between the accomplished man of the world and the young girl, of which the Queen was apparently a little ashamed in later years. To a passage in which the maiden Victoria exclaims: "God knows! *no Minister, no friend* EVER possessed it [confidence] so entirely as this truly excellent Lord Melbourne possesses mine!"—Victoria the matron appended, in 1842, a note, the only note by her here printed, as follows:

> Reading this again, I cannot forbear remarking what an artificial sort of happiness mine was then, and what a blessing it is I have now in my beloved Husband, real and solid happiness, which no Politics, no worldly reverses can change.

One naturally looks with some curiosity for Prince Albert's appearance in these journals. There are two or three early mentions of him as a favorite cousin, but his name first takes on importance in an entry of April, 1839. Victoria's uncle, King Leopold of Belgium, had long wished to bring about a marriage between his son, Albert, and his royal niece. The scene in which the young Queen broaches the matter to her chief Minister and chief friend is reported with characteristic directness and thoroughness:

> I felt terrified when it came to the point; too silly of me to be frightened in talking to him. Well, I mustered up courage, and said that my Uncle's great wish—was—that I should marry my Cousin Albert—who was with Stockmar—and that I thought Stockmar might have told him (Ld. M.) so; Lord M. said, No—Stockmar had never mentioned a word; but that I had said to my Uncle, I could decide nothing until I saw him again. "That's the only way," said Lord M. "How would that be with the Duchess?" he asked. I assured him he need have no fear whatever on that score; then he said "Cousins are not very good things," and "Those Coburgs are not popular abroad; the Russians hate them." I then said, Who was there else? We enumerated the various Princes, of whom not one, I said, would do. For myself, I said, at present my feeling was quite against ever marrying. "It's a great change in the situation," he said. "It's a very serious thing, both as it concerns the Political effect and your own happiness." I praised Albert very much, said he was younger than me. I said Uncle Ernest pressed me much about it; Lord M. said, if one was to *make* a man for it, one would hardly know what to make; he mustn't be stupid, nor cunning. I said, by all that I heard, Albert would be just the person.

So it is arranged that the Prince shall submit himself for inspection, and he reports at Westminster the following October: "At ½ p. 7 I went to the top of the staircase and received my 2 dear cousins Ernest and Albert,—whom I found grown and changed, and embellished. It was with some emotion that I beheld Albert—who is *beautiful*." The next day the fortunate candidate is reported as "quite charming, and so excessively handsome, such beautiful blue eyes, an exquisite nose, and such a pretty mouth with delicate moustachios and slight but very slight whiskers. . . ." The young man whom her commonsense had determined upon as "just the person" thus steps easily into possession of her heart. Cousin Ernest was a homely youth. Four days later the Queen informs Prince Albert of his destiny, and finds him "so kind, so affectionate." So she was to find him for twenty years—kind and affectionate and trustworthy and even strong on occasion. Much of what Melbourne had been to her in her public capacity, as adviser and mainstay, he became. But he was dull material for a Boswell.

CURRENT FICTION.

The Valiants of Virginia. By Hallie Erminie Rives. Indianapolis: The Bobbs-Merrill Co.

The Virginia of the Valiants is a curiously composite region. Occasional pages restore us to the happy land of the pickaninny and the mint julep, others introduce us to the exclusive society of the first families; at times we find ourselves in a realm of arcadian adventure, again in an atmosphere of ancestral tradition reminiscent of old England.

The Valiant whom we follow to the enchanted environs of Damory Court is a hero to satisfy the most aristocratic tastes. His personal appearance, his amiability, his talents, his latent strength of character (we are assured that "he might suffer, but he would be strong"), make exhausting demands upon our capacity for admiration. Forced by financial disaster to quit the career in which he has achieved fame as inventor of a vanity-box, leader of cotillions, and winner of polo matches, he magnanimously abandons his considerable private fortune to the insolvent corporation which bears his father's name, and, turning his back upon the barren splendors of New York, motors southward to reclaim the estate of his fathers. Needless to say, a companion paragon awaits him there. In jasmine-grown thicket Shirley sucks the poison from a moccasin bite on John's ankle, on garden terrace she encourages his manorial projects with sage horticultural advice, at county tournament (remarkable chivalric survival) she accepts from his victorious lance the crown of Queen of Love and Beauty. But ere John and Shirley can proceed to the altar, two momentous uncertainties must first be cleared up. Had Shirley's mother loved the man who fell in a duel

with John's father, a quarter of a century ago? Had John's father, upon that fateful occasion, so far derogated from the standards of a Virginia gentleman as to fire upon an intoxicated opponent? In the latter case, John would consider his escutcheon grievously blotted. In the former, Shirley would see an absolute bar to his eligibility. Nothing need be said of these delicious woes, their prolongation, and predestined termination, except that the midnight ride which ultimately brings Shirley to John's arms furnishes an appropriate finale to this somewhat antiquated series of pretty heroics.

The Street of the Two Friends. By F. Berkeley Smith. New York: Doubleday, Page & Co.

That the glamour of the *Quartier* is not yet exhausted for the English-reading public is evident from the assiduity with which Mr. Smith and others continue to work the old vein. The most primitive methods appear to suffice: Mr. Smith makes his dirt pay tribute to the ancient pan. The two friends for whom his street is nicknamed are, of course, the student and the grisette, artist and model, of immemorial fame. Even of the sacred tongue he has no need to be lavish. The italics which blacken his pages mark Gallicisms like *bourgeosie, entre nous, en famille, mon Dieu, concierge, fiacre, voilà, bonjour, bon garçon, mon vieux;* and we are never many pages from an *apéritif.* "Cameraderie" is naturally the watchword by means of which we gain entrée to Bohemia. French girls are more fascinating and more satisfying than the daughters of that Anglo-American *horreur,* Mme. Grundy, because they do not ask, do not wish to be more than "good comrades" to the Anglo-Americans who (we gather) ask everything of them. Does Mimi pout? Take her to a café and set before her a salade and a bottle of ordinaire, and she is at once and adorably happy. A childish menu suffices for Mimi, and her author—and his public.

The Ordeal. By Charles Egbert Craddock. Philadelphia: J. B. Lippincott Co.

Miss Murfree's recent volume of tales, "The Raid of the Guerrilla," contained some work, at least, which was reminiscent of her best. "The Ordeal" is a rather painful attempt to make bricks without straw. A group of moonshiners, to be sure, play their part in the action, but their minds are on other things. As for the summering and sporting aliens in their luxurious camp, among the Great Smoky Mountains, they move as the inventions of a novice. The child who is kidnapped is a stage child, and the adult pair, estranged in former years, who are eventually brought together in the common search for the lost one, have little human reality. In her descriptions of mountain scenery and of the purely native types, Miss Murfree is, of course, at home. It is a mistake for her to wander from them; and departure from the short-story form is, with her, always a doubtful chance.

AN OXFORD POET.

Poetical Works of Robert Bridges. Excluding the Eight Dramas. New York: Henry Frowde. 60 cents.

Outside of Oxford, where he now resides as a retired physician, Mr. Bridges has, we believe, never attained anything like popularity, and in this country he has scarcely been known except as a shadowy name. Yet his reputation has been spreading quietly among the refined for many years, and this cheap and attractive volume of his poems from the Oxford University Press will no doubt introduce him to many new readers.

It is not difficult to explain the exclusiveness, so to speak, of Mr. Bridges's fame. The fact is, his work falls between two stools. On the one hand, it has neither the swiftness of motion, the immediate impressiveness, the narrative zest, and facile emotionalism, which go to make up the style which is popularly and rather naïvely admired as "creative"; nor the esoteric intricacy and obscurity which commonly pass for profound. Lacking these qualities, it misses the great body of readers of verse. On the other hand, it does not quite hit such an audience as Matthew Arnold satisfied: it is intellectual without touching to the quick the deeper beliefs and doubts of the age; it is highly self-critical without being heavily freighted with thought. That is the negative count against Mr. Bridges, stated, perhaps, with a certain over-emphasis. In his favor he has great refinement, now and then a sober but exquisite sense of beauty, a kind of chaste sincerity with the Muse, an appealing modesty of self-confession.

In "Eros and Psyche" Mr. Bridges has employed with great dexterity the seven-line stanza which James Thomson adopted for his "City of Dreadful Night." It is slow-moving form, more lyric and reflective than narrative, but suits the relishing restraint with which the poet retells the beautiful old story of Apuleius. Anything more different from the light, almost breathless flow of William Morris's version of the tale could scarcely be conceived. At a first reading Morris will captivate where Bridges merely pleases, but it is not so sure that a second or third reading would leave the victory so absolutely to the earlier poet.

We cannot now criticise the sonnets and lyrics in detail, and from the studies of classical prosody we turn with abhorrent eyes. The space needed for such analysis may better be given to quoting at length one of the poems, "Indolence," which exhibits a certain dreamy languor latent here and there in Mr. Bridges's verse, and which associates him most intimately with the romance of Oxford:

We left the city when the summer day
Had verged already on its hot decline,
And charmèd Indolence in languor lay
In her gay gardens, 'neath her towers divine;
"Farewell," we said, "dear city of youth and dream!"
And in our boat we stepped and took the stream.

All through that idle afternoon we strayed
Upon our proposed travel well begun,
As loitering by the woodland's dreamy shade,
Past shallow islets floating in the sun,
Or searching down the banks for rarer flowers
We lingered out the pleasurable hours.

Till when that loveliest came, which mowers home
Turns from their longest labor, as we steered
Along a straitened channel flecked with foam,
We lost our landscape wide, and slowly neared
An ancient bridge, that like a blind wall lay
Low on its buried vaults to block the way.

Then soon the narrow tunnels broader showed,
Where with its arches three it sucked the mass
Of water, that in swirl thereunder flowed,
Or stood piled at the piers waiting to pass;
And pulling for the middle span, we drew
The tender blades aboard and floated through.

But past the bridge what change we found below!
The stream, that all day long had laughed and played
Betwixt the happy shires, ran dark and slow,
And with its easy flood no murmur made:
And weeds spread on its surface, and about
The stagnant margin reared their stout heads out.

Upon the left high elms, with giant wood
Skirting the water-meadows, interwove
Their slumbrous crowns, o'ershadowing where they stood
The floor and heavy pillars of the grove:
And in the shade, through reeds and sedges dank,
A footpath led along the moated bank.

Across, all down the right, an old brick wall,
Above and o'er the channel, red did lean;
Here buttressed up, and bulging there to fall,
Tufted with grass and plants and lichen green;
And crumbling to the flood, which at its base
Slid gently nor disturbed its mirrored face.

Sheer on the wall the houses rose, their backs
All windowless, neglected and awry,
With tottering coigns, and crooked chimney stacks;

And here and there an unused door, set high
Above the fragments of its mouldering stair,
With rail and broken step led out on air.

Beyond, deserted wharves and vacant sheds,
With empty boats and barges moored along,
And rafts half-sunken, fringed with weedy shreds,
And sodden beams, once soaked to season strong.
No sight of man, nor sight of life, no stroke,
No voice the somnolence and silence broke.

Then I who rowed leant on my oar, whose drip
Fell without sparkle, and I rowed no more;
And he that steered moved neither hand nor lip,
But turned his wondering eye from shore to shore;
And our trim boat let her swift motion die,
Between the dim reflections floating by.

American City Government. By Charles A. Beard. New York: The Century Co. $2 net.

The Government of American Cities. By William Bennett Munro. New York: The Macmillan Co. $2.25 net.

A few weeks ago (November 7, 1912) we noticed Henry Bruère's "The New City Government." Notwithstanding the similarity of title between it and the two volumes named above, the three books overlap only slightly. Mr. Bruère's is the most narrowly limited in subject-matter, being confined to a survey of ten commission-governed cities and to an examination of the movement for greater efficiency in municipal administration. Professor Beard and Professor Munro take a much wider range. The sub-title of Professor Beard's volume is "A Survey of Newer Tendencies," and he treats of the political, economic, and social functions of city government. Two-thirds of his space, however, is given to the non-political functions. The aim of Professor Munro is, in his own words, "to describe, in a summary way, the machinery of city government in the United States." His book, accordingly, stands between the other two in amount of ground covered.

In almost every other respect, however, Professor Munro's volume is decidedly more satisfying than either of the others. It is obviously the work of a scholar. He marshals the facts he has gathered in a way that makes for intelligibility and proportion; he arranges arguments pro and con, and suggests conclusions, in a manner that reveals careful thinking; and his text is continually fortified by references to sources. It is Professor Beard's treatise that suffers most by this comparison. While his chapters make a convenient, trustworthy collection of information on such topics as city revenue and expenditure, public utilities, streets, recreation facilities, and police, they fail to leave an impression of first-hand judgment upon questions in connection with these activities. A rather loose style adds to this effect as of a book compiled rather than composed. In a place or two, indeed, the author is upon the verge of contradicting a preceding statement, with his placidity undisturbed. Yet this is rather a limitation than a defect, and does not seriously impair the value of the volume as a manual in a field that must be frequently re-surveyed.

In "The Government of American Cities," Professor Munro is at once historian and judge. Expressions of opinion are common in his book, but nowhere does a reader feel that the author has descended from the chair to become an advocate. After an illuminating historical survey, he analyzes the social structure of the city, and then takes up the difficult question of the relation between the city and the State. Municipal politics occupies three chapters, and these are followed by studies of the various departments of city government, from Mayor to employees. Commission government has a chapter, as have direct legislation and municipal reform, respectively. Professor Munro has little sympathy with the doctrine of separation of powers as applied to city government, but on the other hand he is not carried away with the idea of commission government as a panacea. Nor does he think that much can be predicated yet of the workings of the initiative and referendum; he is, however, decidedly skeptical of the recall as an instrument for remedying conditions which have been created under a system of popular election of numerous officials.

His final chapter, on Municipal Reform and Reformers, is not of the sort that usually gets into books on government. It is particularly pungent, although it praises as well as blames. Here is Professor Munro's conclusion regarding this subject:

> Across the history of nearly every reform movement of the last twenty years may be found written the tedious chronicle of bickerings due to personal jealousy, class bigotry, and the failure of reformers to realize that vindictiveness has no place in the programme of a political agitation which seeks to be successful.

The most complete exception to this characterization is the Municipal Voters' League of Chicago.

It would be possible to quarrel with Professor Munro here and there, but his book is authoritative both for the history of the development of our city government, and for the presentation of the considerations for and against proposed changes in it. These considerations are set forth with an adequacy and fairness that make them historical, too, rather than polemical.

Religious Liberty. By Francesco Ruffini. Translated by J. Parker Heyes, with a preface by J. B. Bury. New York: G. P. Putnam's Sons. $3.50 net.

Professor Ruffini's treatise is a history of the progress towards religious toleration from the persecutions of the early church to the present time. All European nations and peoples are included in the survey, as well as the United States. The number of books and tracts in a score of languages listed, epitomized, and estimated is enormous. The appraisals of the worth of the arguments, the literary excellence, and the influence upon governmental action are discerning and fair. Two names stand out conspicuously: Socinus, the heretic and the father of toleration, and Locke, whose famous "Letter on Toleration" is the charter of religious freedom among English-speaking peoples.

If Professor Ruffini's volume were nothing more than an account of the endeavors of the protagonists of liberty in the realm of conscience and worship, it would demand recognition. But it has a larger and more practical interest for Americans in its keen criticism of the form which religious toleration has taken upon this continent. It is probably true that most Americans assume, without having given real thought to the subject, that complete legal separation of church and state is the system under which religious toleration best develops; if, indeed, it is not the only plan under which liberty of conscience is possible. Popularly an established church is regarded as the equivalent of religious inequality.

The Turin professor combats this view with force, and evidently from earnest conviction. He holds that, while every system of relations between the state and the church contains inherent defects, liberty is most truly secured under an Erastian system, where the state controls the church but decrees absolute freedom of thought to all from a conviction of its justice. He maintains even that true and complete religious liberty can exist only apart from Separatism, and points to "the defective and one-sided manner in which religious liberty is conceived in America." It is from this country, both the early Puritan colonies and recent legislation affecting ecclesiastical bodies, that he derives his argument and illustrations as to the impossibility of toleration where church and state are separate. One is prompted to inquire whether there were not other causes of Puritan intolerance than their separatist doctrine. And were the Pilgrims strictly separatists? Perhaps it was more a matter of persons than of doctrines, and Roger Williams might have fared differ-

ently if John Robinson had been in the place of Cotton Mather.

As to recent events and present tendencies, one may question Professor Ruffini's facts. He declares that the Catholic Church has succeeded in obtaining in America a far larger amount of effective power than it enjoys in Italy; further, that "the iron, absolutist hierarchy of the Catholic Church is recognized and protected in the United States in such a manner as rigidly to exclude any democratic or representative velleity of the lay element, and hence in a manner which has no parallel in the European states, unless one goes back to the Middle Ages." If that be true, the eyes of the majority of American Protestants are quite blinded, the assurances of the liberally minded Catholics who have disclaimed any such motive or desire are hypocritical, and the fanatic American Protective Association should be revived.

The intention is not to dismiss Professor Ruffini's volume with a cavil. Its merit as a history commands respect, and as an account of a movement of deepest practical interest to all Americans it should be received with gratitude. Were a society to be formed of all citizens of this republic whose ancestors have suffered under the persecutions here recorded, the organization would include the nation. The principles of religious liberty and the governmental modes under which it may best be fostered have been too much taken for granted, and the commonplaces of cheap orators have received too easy credence. The present volume is well calculated to stir more serious reflection on the subject, even by those who have suffered too keenly from the tender mercies of a church established by law ever to return willingly to any form of jurisdictional liberty.

Notes

The *Constructive Quarterly*, "a new journal of the faith and work and thought of Christendom," will make its appearance March 1, published by George H. Doran Co. Mr. Silas McBee is the editor. Among the contributors to the first number are Wilfrid Ward, Prof. Friedrich Loofs, Shailer Mathews, Bishop F. J. McConnell, and Prof. W. L. Bevan.

Three of Gov. Wilson's essays will be published by Houghton Mifflin in a limited, one-volume edition about the time of the inauguration. They are "Mere Literature," "The Author Himself," and "On an Author's Choice of Company."

Among Macmillan's forthcoming books we note: "The Secret of the Clan," by Alice Brown; "Poor, Dear Margaret Kirby," by Kathleen Norris; "Social Religion," by Scott Nearing; "Lectures on the American Civil War," by James Ford Rhodes; "The Problem of Christianity," by Josiah Royce, and "The Science of Human Behavior," by Maurice Parmelee.

Included in Stokes's spring list are the following titles—Fiction: "Ranching for Sylvia," by Harold Bindioss; "The Frontiers of the Heart," by Victor Margueritte; "The Declension of Henry D'Albiac," by V. Goldie: "The White Thread," by Robert Halifax; "The Sixty-first Second," by Owen Johnson; "Roast Beef Medium," by Edna Ferber; "The Kingdom," by Harold Elsdale Goad, and "The Dream Ship," by Cynthia Stockley—Miscellaneous: "Complete Poems" and "Tales of the Mermaid Tavern," by Alfred Noyes; "A Guide to the Montessori Method," by Ellen Yale Stevens, and "Pedagogical Anthropology," by Maria Montessori.

The following titles are included in the list of books soon to be published by the Putnams: "Rahel Varnhagen," by Ellen Key, translated by A. G. Chater, with an introduction by Havelock Ellis; "Bible Reading in the Early Church," by Adolf Harnack, translated by the Rev. J. R. Wilkinson, and "The Story of the Borgias," by John Fyvie.

The same house will shortly issue several Cambridge books, among them: "Ancient Babylonia," by C. H. W. Johns; "L'Invasion ou le Fou Yégof," by Erckmann-Chatrian, edited with notes and vocabulary by A. Wilson-Green; Dryden's "Preface to the Fables," edited by W. H. Williams; Plato's "Ion," with introduction and notes by J. M. MacGregor; "Forfarshire," by Easton S. Valentine; "Key to the Exercises in English Composition," by W. Murison, and "Cambridge University Law Tripos Papers (1907-1911)."

Midwinter publications of Small, Maynard & Co. include the following: "The Balkan War: Adventures in War with Cross and Crescent," by Philip Gibbs and Bernard Grant; "The Confession of a Fool," by August Strindberg; "English Literature, 1880-1905," by J. M. Kennedy; the first volume of "A Modern History of the English People," by R. H. Gretton; "The Eurhythmics of Jaques-Dalcroze"; "King Edward in His True Colours," by Edward Legge; "The Law of a Household," by Eunice Beecher; "To Mesopotamia and Kurdistan in Disguise," by E. B. Soane; "New Lives for Old," by William Carleton; "Our Book of Memories," by Justin McCarthy and Mrs. Campbell Praed; "Problems of the Pacific," by Frank Fox; "Republican France: 1870-1912, Her Presidents, Statesmen, Policy, Vicissitudes, and Social Life," by Ernest A. Vizetelly; "Ripostes," by Ezra Pound; "Syndicalism and the General Strike: An Explanation," by Arthur D. Lewis; "Tommy Tregennis," by Mary E. Phillips; "Uncharted Seas," by Robert Adger Bowen; "Whippen," by Frederick Orin Bartlett; "The Windham Papers," in two volumes, with an introduction by the Earl of Rosebery, and "Zebedee V," by Edith Barnard Delano.

On the first of next month Houghton Mifflin will issue the following volumes: Three novels by Richard Pryce, author of "Christopher," viz.: "Jezebel," "Elementary Jane," and "The Burden of a Woman"; "A Wayfarer in China," by Elizabeth Kendall; "Old Homes of New Americans," by Francis E. Clark; "Psychology and Industrial Efficiency," by Hugo Münsterberg; "The Diary of a Free Kindergarten," by Lileen Hardy; "The Satchel Guide to Europe for 1913," by W. J. Rolfe; "Vocations for Girls," by Mary A. Laselle and Katherine Wiley; "The Teaching of English Classics in the Grammar Grades," by Eugene Clarence Warriner; "Word Mastery," by Florence Akin, and "Selected Stories from the Arabian Nights," by Samuel Eliot.

E. P. Dutton & Co. have in preparation: "American Nobility," by Pierre de Coulevain, translated by Alys Hallard; "The Fear of Living," by Henri Bordeaux, in a translation from the French by Ruth Helen Davis, and one volume in the Channels of Literature series, edited by Oliphant Smeaton—"The English Novel," by Prof. George Saintsbury.

Two new novels will be issued this month by Lippincott—"Sally Castleton, Southerner," by Crittenden Marriott, and "The Parasite," by Helen R. Martin.

Crowell's early spring publications include: three novels—"A Superman in Being," by Litchfield Woods; "The Debt," by William Westrupp, and "Princess Arthura," by Samuel W. Odell; "English Cathedral Journey," by Kate F. Kimball; "The Joys of Living," by Dr. Orison Swett Marden; "What Is New Thought?" by Charles Brodie Patterson; and a translation of Karl Mortensen's "Handbook of Norse Mythology."

From the Yale University Press we may expect shortly: "Some Influences in Modern Philosophic Thought," being the John Calvin McNair Lectures for 1912, fifth series, delivered by President Hadley at the University of North Carolina; "The Economic Utilization of History," by Prof. Henry W. Farnam; "Problems of Genetics," by William Bateson; "The Framing of the Constitution of the United States," by Prof. Max Farrand; "A Landsman's Log," by Robert W. Neeser, with an introduction by Admiral Charles J. Badger; "Studies in the Lyric Poems of Friedrich Hebbel, the Sensuous in Hebbel's Lyric Poetry," by Prof. Albert Gubelmann; "Catalogue of Early Printed Books," given to Yale University in 1894 by William Loring Andrews, and "Gawayne and the Green Knight," by Prof. Charlton Miner Lewis.

February 1 is the date of publication set by Doran for four works of fiction: "'Twixt Land and Sea," by Joseph Conrad; "The Story of Stephen Compton," by J. E. Patterson; "The Lee Shore," by Rose Macauley, and "Bunch Grass," by Horace Annesley Vachell—and for the following: "Modern Problems," by Sir Oliver Lodge; "The Private Life of Henry Maitland," by Morley Roberts; "Elements of Child Study," by William Walter Smith, and "The Case of Oscar Slater," by Sir A. Conan Doyle.

Two more volumes (III and IV) of the Selected Writings of William Sharp (edited by Mrs. Sharp, published by Duffield Company) bring us the sort of literary work in which he was most at home and best showed his talents. He was not a critic of philosophic discrimination, but in the borderland between criticism and personal reminiscence he always wrote pleasantly. Both of the present volumes are in that field, one being called "Papers Critical and Reminiscent," the other "Literary Geography and Travel-Sketches." More particularly in the former of these he writes of his acquaintance with such men as Ros-

setti, Swinburne, Pater, Marston, Burne-Jones, and others, with a freshness of impression that makes his articles decidedly worth reprinting. Philip Bourke Marston, the blind poet, for instance, is little more than a name to most readers to-day, but he stands revealed in Sharp's essay for any who care to learn of his brave and saddened life. Another excellent and clear portrait is that of Walter Pater. The account of Sharp's visit to the critic's Oxford rooms is singularly vivid.

"The Oxford Book of Latin Verse" has the excellent form and the *multum in parvo* to which we have become accustomed in these authologies from the Clarendon Press. The selection has been made by H. W. Garrod, Fellow of Merton College, and ranges in time from the Saliar Hymns to the stanzas of Phocas prefixed to his Life of Virgil. The purpose of such an anthology would have been better served had the editor added a sufficient quantity of notes to make the reading of the selections easy for the half-scholar, and to this end the space might have been devoted which now contains a discussion of the Saturnian metre and a group of verse translations chosen from various sources. However, the book has sufficient merits to excuse this defect.

"Some six years ago," wrote George Moore in the preface to the first edition of "Spring Days," published in 1888, "I noticed that an artificial, vicious, and decadent society was represented by a restricted and conventional literature of no relation with the moment of which it chattered." "Spring Days" is the fifth of a series of "realistic works" which Mr. Moore wrote to supply the deficiency. It contains some admirable character drawing of the stupid, vulgar rich, conceived in the author's peculiar acrid humor. But the book spins out at too great length the intolerable tediousness and purposelessness of the life that it depicts, and it was damned by the critics, and finally abandoned by Mr. Moore himself, who, whenever he laid hands on a copy in the house of a friend, purloined it, and tossed it into the river. With the lapse of time, if we may trust the new preface, many admirers rediscovered the foundling. Mr. Moore re-read it, saw that it was very good, provided it with an interesting introduction in his latest manner, and Brentano's has republished it.

"Emerson's Journals" (Houghton Mifflin) are publishing at a faster rate without any appreciable diminution in richness. The two volumes just issued cover the years 1845-48 and 1849-55. In these years of the Mexican War, the Fugitive Slave act, of Emerson's successful lecturing tour in England, we find the sage sometimes torn between motives. But the strife helped to confirm his vocation as a liberator of the individual spirit. On the Fugitive Slave act his position was unequivocal. He preferred disunion to such ignominy, and shed a fine scorn upon the timid New Englanders who became the apologists of slavery. It was in such a mood that he wrote, "Boston or Brattle Street Christianity is a compound of force, or the best diagonal line that can be drawn between Jesus Christ and Abbott Lawrence" (the great cotton spinner). In the same temper Emerson remarks, "Democracy becomes a government of bullies tempered by editors." But the interest of the journals remains chiefly literary. Especially just is this estimate of Goethe: "Anything that Goethe said, another might attain to say, but the profusion of sayings, every one of which is good and striking—no man." It is also a shrewd judgment on newly published "In Memoriam" that runs, "Tennyson's 'In Memoriam' is the commonplaces of condolence among good Unitarians in the first week of mourning. The consummate skill of the versification is the sole merit." Similarly accurate is the criticism of Macaulay's "History of England"—"The writer has a great deal of talent, but no elevation of mind." A fine picture is the inauguration of Edward Everett at Harvard with the exercises suspended with a great cheer as Webster entered, Everett saving the decorums by a beautiful compliment. The English visit affords a vivid portrait of De Quincey, gentle, shabby, and wholly amiable. The lighter vein may be illustrated by a gastronomic dictum of Tom Appleton's: "Canvasback ducks eat the wild celery, and the common black duck, if it eats the wild celery, is just as good—only, damn them, they won't eat it." Unlike most familiar journals, these constantly enhance the author.

Certain fugitive papers, addresses, and reviews of Emerson, which have not been included in his collected works, have been brought together by the Lamb Publishing Company, of New York. These "Uncollected Writings" are naturally of uneven value. The sketch called "Nature," reprinted from the "Boston Book" of 1850, seems but mediocre Emerson. Excellent is the little address made at the Japan banquet in 1872. It was a happy thought to make a clean sweep of Emerson's unpublished contributions to the *Dial*. These include, with lesser matters, a capital essay, "Thoughts on Art," an interesting "Explanation of Transcendentalism," and singularly astute Notices of Tennyson's "Poems," Borrow's "The Bible in Spain," and Carlyle's "French Revolution." By an odd fault in compilation, the letter to S. G. Howe, protesting against the negro kidnapping of 1846, is twice printed. On the whole, it is an interesting gleaning, and worth while. The book is of a size and make to set alongside the standard 12mo editions.

"Through South America" (Crowell), by Harry Weston Van Dyke, is a handsome little volume, in which the reader will find a concise description of the ten republics of South America and of the three regions of Guiana, held by Great Britain, Holland, and France, respectively, together with an outline of the history of South America, recounting the principal events in the Spanish conquest of the sixteenth century and in the revolt of the colonies against Spain in the early part of the eighteenth. There is no record of travel, nor, indeed, are we told which of the countries and cities have been visited by the author, though it is evident that some at least of his descriptions are written from personal observation, for they have freshness and graphic force. Such are those of the cities of Bogotá and Cartagena, such is that of the scenery along the course of the River Orinoco. The book is agreeably written, and none the less so because it contains few statistics and no politics, being chiefly devoted to descriptions of scenery and of towns, with some incidental remarks on the resources of each region and on the life of the people. These are conceived in a friendly spirit, and the same tone of benignant optimism pervades the brief introduction, in which Mr. Barrett, director-general of the Pan-American Union, indicates the prospects of improvement and development which he anticipates for the South American countries.

If it is true that every plot available for fiction or for drama has been used again and again, it is even truer that in all the world is hardly a place or a scene worth description that has not been described and re-described. And still ambitious authors set down the records of their European travels, and still publishers think it worth while to give them to the world. Albert B. Osborne, in "Picture Towns of Europe" (McBride), exhibits the only two qualities in the writing of travel diaries that in this day can hope to command, or that deserve, attention. He has a fresh point of view, which is good, and he can write the English language, which is better. He describes in this volume towns or villages in ten of the countries of Europe, which appeal to him as the most picturesque, an epithet that connotes not only sheer beauty, but interest in history or legend as well. Other travellers, each with his own fond recollections, will doubtless differ from him over the selection he has made, but few will quarrel with the manner of the book. Mr. Osborne writes with charm and distinction, conveying in few and well-chosen words the impression each of the places described has made on him personally, and giving just sufficient of history or legend to stir the memory of those who know whereof he speaks and to whet the curiosity of those who look forward to such travels in the future.

A modest volume of sermons which merit more than usual attention is "Sermons in Summer," by the Rev. Ralph Birdsall, M.A., rector of Christ Church, Cooperstown, N. Y., published in that village (The Arthur H. Crist Co.). The discourses show no straining for eloquence nor endeavor to elucidate mysteries, but they are marked by true religious insight and a fine feeling for the essential graces of Christian character. They are lifted above all theological and ecclesiastical partisanship by appreciation of the high truths in which men of all schools are at one. One gathers something of their quiet but persuasive and uplifting character from the titles, The Romance of Modern Life, The Comedy of Hypocrisy, and The Importance of Humility. It is good to know that now and then in a village pulpit there is preaching which sustains the worthier traditions of a thoughtful and truly spiritual ministry.

It is a pity that Joseph Adams ("Corrigeen" of the *Field Magazine*) did not confine his "Ten Thousand Miles through Canada" (Stokes) to a record of his experiences and observations as an angler, for on that subject he writes entertainingly, if not with novelty. As an account of "where to go and what to see," however, the book is hardly more than a crude and hasty compilation of miscellaneous information, valuable chiefly because its statistical statements are true. A writer who starts with the assertion that "the Dominion is still a *terra incognita*, and is likely to remain so to all except the occasional intrepid explorer"; writes "Anti Costa" and "new Brunswick"; speaks of Gaspé, which apparently he did not visit, as a

French town; refers to the attempt by the United States, during the Revolution, "to annex the Dominion"; sees the St. Lawrence "dashing over huge rocks" at the Richelieu Rapids; thinks of the Lake Erie shore as the "Far West," and coins such a delicious phraso as "scientific and dairy farming," is not to be counted upon for sober and informing description, even though we forgive him for discoursing on the amenities of seasickness or penning another rhapsody on Niagara. The book may serve at least one useful purpose, however, in that it will give the traveller a new increment of respect for Baedeker.

Zoeth Skinner Eldredge has attempted to follow the ideals of the modern historian in his new book, "The Beginnings of San Francisco: From the Expedition of Anza, 1774, to the City Charter of April 15, 1850" (The Author, two volumes). The work gives evidence of being "the result of a study of original documents, and the statements of contemporary writers and of actors in the events described." He has spent many hours of study in the Spanish Archives of California, which, unfortunately, are no more, having been destroyed in the San Francisco fire of 1906; he has also made use of the Bancroft collection of manuscripts in the University of California; nor has he neglected the printed sources. The result is that his statements seem to be well founded, although we miss the helpful references to the sources which are expected in volumes which make such pretence to learning. The first volume carries the history of the city down to the conquests by the Americans. Here we have the general story of California told in a sketchy manner and interspersed with the minutest happenings of the region which was to develop into the city. One hundred pages are devoted to the accounts of Juan Bautista de Anza's two expeditions (1774-1776), which resulted in the founding of the Presidio and Mission of San Francisco. We are able to estimate the miles travelled day by day on these slow-moving expeditions, for the author is fond of the Xenephontic style; but, unfortunately for the reader, the daily events on the Western deserts lack the Xenephontic sprightliness. After having thus started the future city on its career, the first volume gives an ill-digested account of the Spanish and Mexican régimes, and the second volume continues the story down to 1850. The author is at times an annalist and at others an antiquarian. The second volume in particular is filled with names to which no personality is attached; and the greatest pains have been taken to give full explanations of the origin of all the place and street names, until the reader is wearied and loses the thread of the story. Almost half of each volume is devoted to discursive notes of more or less value, one of which is a bibliography (pages 754-783), being a useful list of books and manuscripts. If Mr. Eldredge had worked over his style; had studied the methods of our best historians; and had cut down the narrative very considerably, his volumes would have won for him satisfactory recognition; but his good work in investigating the sources is hidden by faults.

Restore Panama to Colombia, less the Canal Zone, and give her a cash indemnity equal to the value of the part taken for the canal, is the way to regain our national honor, according to William R. Scott, in "The Americans in Panama" (Statler Publishing Company). This book can be recommended as a short, straightforward history of the American work on the isthmus. It is marred by an occasional lapse into the colloquial style of the usual newspaper correspondent.

Brave little Holland has become a source of inspiration to a number of well-meaning writers, who, using the excellent Dutch and Belgian standard works as a source, have told the public an agreeable story about an interesting people. Historical scholarship may not have been advanced by these labors, but the general information of the people has been increased. The Rev. William Elliot Griffis, having described Holland in half a dozen books, has now turned his attention to the sister country, and in "Belgium, the Land of Art" (Houghton Mifflin) has written a short history of that country. As far as facts go, the book is correct, except on page 173, where the Burgers of Ghent, instead of those of Bruges, are putting the Emperor Maximilian in prison, and where the Cranenburg, which is in Bruges, is stated to be in the rival city of Ghent.

Julia Caroline Ripley Dorr, widow of Seneca M. Dorr, and "last of the Cambridge group of New England poets and writers," died Saturday, at her home in Rutland, Vt., in her eighty-eighth year. While well known as a writer of verse, Mrs. Dorr is remembered especially for her friendships with Emerson, Holmes, Longfellow, and Lowell, with whom she carried on a correspondence for many years. She was born in Charleston, S. C. Among her writings are: "Farmingdale," "Lanmere," "Sibyl Huntington," "Expiation," "Bride and Bridegroom," "Friar Anselmo," "Bermuda," "Afternoon Songs," "Poems Complete," "The Flower of England's Face," "A Cathedral Pilgrimage," "In King's Houses," "Afterglow," and "Beyond the Sunset."

Science

Among the forthcoming science books in the list of Houghton Mifflin are "Field Days in California," a study of birds by Bradford Torrey, and "The Teacher's Health," in the Riverside Educational Monographs, by Lewis M. Terman.

"The Interpretation of Radium," third edition revised and enlarged, by Frederick Soddy, is announced by Putnams.

Science books in Stokes's list include; "The Childhood of Animals," by P. Chalmers Mitchell; "Hardy Perennials and Herbaceous Borders," by Walter P. Wright, and "The Story of My Rock Garden," by Reginald A. Malby.

The first sheet of the United States portion of the international map of the world has just been put upon the market by the Geological Survey. It is called the Boston sheet, and is 24 by 25 inches on the scale of 1 to 1,000,000. It includes the eastern part of Massachusetts, parts of Maine, New Hampshire, Connecticut, and New York, and all of Rhode Island, together with the ocean as far east as Nova Scotia and south to the fortieth degree of latitude. It is a beautiful colored product of the engraver's and lithographer's art, printed on fine enamelled paper, and costs only 40 cents.

A bill was reported last week by Senator McLean, of Connecticut, providing that the Federal Government shall undertake the protection of migratory birds. It calls upon the Department of Agriculture, which has in its records a great mass of precise information on the subject, to draft regulations, afterwards to be enacted into law. This is no mere response to sentiment. It is not intended to catch the "bird-lovers'" vote. The project is based on economic considerations, and its active supporters include such men of science as William T. Hornaday, Henry Fairfield Osborn, Theodore S. Palmer, of the United States Biological Survey, and Edward H. Forbush, ornithologist of the Massachusetts State Board of Agriculture. The Year Book of the Department of Agriculture is authority for the statement that, in a single year (1904), the damage done to crops by insect pests amounted to $420,000,000. From the same source we learn that the annual loss to apple-growers from the ravages of the curculio pest amounts to $12,000,000, to say nothing of $8,250,000 expended each year for spraying trees; that the chinch bug damages the wheat crop to the extent of $20,000,000 a year, and that the value of the cotton crop is decreased annually by the same amount through the work of the cotton boll weevil, while the gypsy moth and other insects destroy or seriously damage every year trees valued at $100,000,000.

These figures have increased significance when we remember that the insectivorous birds (most of which are migratory) are most efficient aids in keeping down insect pests. Mr. Forbush saw a pair of grosbeaks taking insect larvæ to their young at the rate of 450 times in eleven hours, and estimated that a single yellow-throated warbler would devour 10,000 tree lice in a day. Similar observation establishes the fact that several kinds of destructive caterpillars form part of the regular diet of more than fifty species of birds, and that plant lice are persistently destroyed by thirty-eight species. But the experts declare that the number of these birds is steadily decreasing, and that this is due primarily not to their natural enemies, but to man. The most persistent and inclusive slaughter is carried on constantly in the Southern States, where many species of our most valuable insectivorous birds pass the winter months. Several of these States not only do nothing to prevent this slaughter, but actually legalize it by laws which class certain insectivorous birds as "game." For example, the robin is so classed in North Carolina, South Carolina, Louisiana, Mississippi, and Tennessee. The bobolink is slain in even greater numbers, and doves are legalized "game" in twenty-six States. As for the migratory birds properly classed as game, they, too, are rapidly disappearing, thanks to the success of the market-hunters in keeping on the statute-books of many States laws which provide no effective closed season.

Dr. Wolfred Nelson, a well-known physician, of New York city, who had spent much time in Central and South America for the purpose of studying tropical diseases and

climatology, died the middle of last week, aged sixty-six. He was born in Montreal and was educated at McGill University. He was the author of "Aper-Construction du Canal de Panama," "Five Years at Panama," and "Cuigans à Panama." For his work in the tropics Spain bestowed upon him the Order of Queen Isabella the Catholic.

Dr. Thaddeus S. C. Lowe, scientist, died in Pasadena, Cal., on Friday. He was born in Jefferson, N. H., in 1832, and was without college education. He studied atmospheric conditions by means of balloons, and in 1861 built the largest aerostat of his day, making a trip of 900 miles in nine hours. Later he entered the Government service as chief of the aeronautic corps. Next he invented a system of signalling to field batteries from high altitudes. He also established the Lowe Observatory in the Sierra Madre Mountains.

Prof. George Augustus Koenig, professor for the past twenty years in the Michigan School of Mines, died last week at the home of his son in Philadelphia. He was born at Willstätt, Germany, in 1844, and studied at the Universities of Heidelberg and Berlin. He was the discoverer of several metals.

Drama and Music

Plays by August Strindberg: "Creditors," "Pariah." Translated from the Swedish, with Introductions by Edwin Björkman. Authorized edition. New York: Charles Scribner's Sons. 75 cents net.

Easter: A Play in Three Acts, and Stories. By August Strindberg. Translated by Velma Swanston Howard. Cincinnati: Stewart & Kidd Co. $1.50 net.

These three plays add little that is new to what English readers of Strindberg have already observed concerning his methods. Yet for the striking confirmation which they furnish of judgments based on such dramas as "The Dance of Death," "The Stronger," "Miss Julia," they may be read with considerable interest. The impression becomes certain, as more and more of his plays are brought out in English, that Strindberg, though reputed in his own land to be a creator of great and subtle emotions, never truly understood of what genuine, downright feeling consists. His ability to plan dramatic situations and to turn them inside out by the play of ingenious reasoning and a very alert fancy we have never questioned. But these qualities, which should remain auxiliary, are not in themselves sufficient to make characters appear human. Strindberg's characters are like Dr. Johnson's women—wiggle waggle!

In "Creditors," which its author is said to have placed in the front rank of his realistic work, we are asked to consider yet again woman's baneful influence upon man. Tekla, the shallow wife of Adolph, a painter, has previously divorced Gustav, a high-school teacher, after having taken from him, without giving anything in exchange, the best that he had to offer. And now by the same process she has almost exhausted Adolph, who is seen to be in a wretched state of mind and body. She, meanwhile, from trafficking in the reputations of the two men, has contrived to win no small name as a writer. The scene opens at a summer hotel with Adolph under the spell of Gustav, whom he has never before seen and whom he does not know to have been his predecessor with Tekla. Whatever his motive, Gustav sets out to torture Adolph, and after receiving his confidences—with which, on account of his own experiences with Tekla, he is able to manifest the utmost sympathy—he shows him in a dozen ways how the wife has been playing the leech. Just here is a good example of the author's willingness to overstep the bounds of probability. The logic of his theme demands that Adolph shall be destroyed, and speedily. Gustav is the convenient tool with which to sharpen the issue. Ergo, he may transgress every canon of good taste and human impulse. By a series of suggestions and plots—in the fashion of Iago, though without the latter's justifying diabolical genius—he reduces Adolph to an epileptic fit from which he dies. The figure of Tekla, whom some may be tempted to compare with Hedda Gabler, might have been effective if she had been surrounded by any personages of steady emotions. But, as it is, she simply adds to the general confusion.

About the time that Strindberg was writing "Creditors" and "Pariah," in the winter of 1888-89, he became much absorbed in Poe's mystery tales, especially in Poe's theories of mental suggestion. We have seen Gustav practicing it upon Adolph, and in "Pariah," a dramatic dialogue between two persons, the phenomenon is illustrated with equal fulness. Mr. X and Mr. Y—the former a murderer, though accidentally; the latter a forger; the one full of human understanding, the other of cunning—carry on an intellectual duel. In this the superior intellect of Mr. X succeeds in leading Mr. Y, though the aggressor, on to damaging admissions, and Y retreats in confusion.

"Easter," in a sense, is much more of a play than either of the other two, for it has half-a-dozen characters—enough to create a desirable diversity of interest. The theme also lacks the excessive morbidness to which Strindberg inclined. It deals with the family of an embezzling banker, now paying for his crime in prison. Unfortunately, there is only one bit of action. This forms the climax of the play, yet by intimating that it may take place at any moment, the author gives a certain potentiality to the situations. The horror which all fear is that the chief creditor may deprive the family of house and furniture. Elis, the son, with whom the main responsibility rests, is a spineless person, crossing all his bridges before it is necessary, and seeing in every unexpected happening an earnest of misfortune. Eleonora, the young daughter, alone of the personages, including the mother, a schoolboy, and Elis's fiancée, has promising traits. Though her mind tends to be unbalanced, it runs to lyric sweetness, to hope and good will, and is possessed of a definite purpose. She is an indication of what Strindberg might have accomplished if he had been concerned more with characters than with themes. As Strindberg had determined to make this play a comedy, it turns out that the creditor, out of gratitude for a kindness done him years ago by the defaulting banker himself, waives all claims, in the spirit of the Easter season, and leaves the family happy. A penny-whistle climax, forsooth.

Those who like the variety of symbolism which Maeterlinck has often employed—most notably in the "Bluebird"—will turn with pleasure to the seven short stories of Strindberg which Mrs. Howard has included in her volume. What the stories mean, if anything at all, is not always easy to determine, but they are one and all diverting on account of the author's facility in dealing with fanciful details. "Midsummertide" may be summarized as a typical example.

A dove came out of the forest and perched outside the hut where a great-grandmother of ninety was bedridden. Her window was composed of little panes of different colors and properties:

> Thus, when her big son came home cross, and stormed out in the yard, then the mother wished him little and good again, and immediately she saw him ever so little. Or, when the great-grandchildren came toddling along out there, and she thought of their future, then—one, two, three—they appeared in the magnifying glass, and she saw them as tall, full-grown people—perfect giants!

The dove sang the joys of heaven and the pains of earth, but the old lady refused to accept. It flew to others, and finally to an unhappy city lady and her little daughter living at the farmer's. The two set out to market at the village, to reach which it was necessary to pass through several gates and to cross the fields. Inside the first gate they found themselves in the midst of wild horses. "O, God in Heaven—help us!" prayed the mother. "Then a sun scoter's song was heard in the pines, and see! that instant the horses ran off in different directions, and all was quiet again." Each field had its danger and its miraculous peacemaker. When the village was reached,

not a soul was to be seen: shops were closed and houses vacant:

Out of the river she saw a white sailboat coming with taut sails, straight toward the landing, but no one was seen at the helm. She waded forward, bathing in flowers and flower-perfumes, so that her white petticoat looked like a flower bed, but of much more delicate colors.

They stepped into the boat and sailed away, but now the water became beautiful corn flowers. It was the heavenly kingdom they had entered.

Houghton Mifflin has in press "Irish Plays and Playwrights," by Cornelius Weygandt.

On the 14th of this month the Germanistische Gesclischaft of the University of Wisconsin presented Hauptmann's "Der arme Heinrich." A lecture on the play was delivered a few days before performance by Prof. Eugen Kühnemann.

Arthur Bourchier will return to the boards of the London Garrick Theatre on February 6. He will appear in a new play by Stanley Houghton, called "Trust the People," which is said to be free from party bias, although strongly political in character. The action is laid in the future. This will make the fifth play by Mr. Houghton produced in London within a twelvemonth.

F. H. Payne, who was associated with the production of "The Miracle" at Olympia in London, has leased the Criterion Theatre in that city, to produce a new comedy, by Roy Horniman, entitled "Billy's Fortune." There are more than thirty speaking characters in the cast. The principal figure is a boy of ten, Billy Charteris, who, throughout his various adventures, is accompanied by a trusty dog. The son of a working man, he has been adopted by a wealthy gentleman, who leaves him the bulk of his huge fortune, a condition of the will being that Billy shall select his own guardian from among the number of his benefactor's relations. The guardian is to get £100,000, and the humor of the piece lies in the efforts of the various relatives to win the boy's favor.

Mr. Horniman has also sold a new play to H. B. Irving, who will present it upon his return to England from South Africa. It is called "After Many Days," and the hero of it is a man whose whole life is embittered by the memory of a crime committed in youth. This, of course, is the theme of "The Bells."

At the London Strand Theatre Louis Meyer has begun rehearsals of Gladys Unger's play, "The Son and Heir." In it the two leading parts have been assigned to Ethel Irving and Norman Trevor. "The Son and Heir" presents a picture of English country life and of an old English family divided against itself, its younger members rising in revolt against the old-fashioned ideas and prejudices of their elders. This has been the theme of several recent plays, but the treatment of it by Miss Unger is said to be completely original.

Martin Harvey has been obliged to postpone his production of "Hamlet" indefinitely, as Max Reinhardt, who was to superintend the scenic work, finds it impossible to visit London for the purpose at the time agreed upon. This is all the more unfortunate as Mr. Harvey had obtained the London Opera House, whose spacious stage was essential to his design. He has decided now to defer the revival of the tragedy, especially as Forbes Robertson has selected it for the opening play of his forthcoming farewell engagement at Drury Lane.

For their second production this season, the Incorporated Stage Society of London have settled on "The Brothers Karamazov," a drama in five acts, founded by Jacques Coupeau and Jean Croué on the original of Dostoievsky, and translated by Christopher St. John.

In February Matheson Lang and Miss Hutin Britton will reappear in London after long absence in South Africa. They are to play the hero and heroine in a version of Kingsley's "Westward Ho!" at a series of Palladium matinées. The production will be on big spectacular lines—a romantic drama in the vein of "Drake," full of color, excitement, and romance.

Frederick Harrison's plans for the London Haymarket Theatre are indefinite at present owing to the continued popularity of Stanley Houghton's Lancashire comedy, "The Younger Generation." It is understood, however, that he has Ibsen's "The Pretenders," in a forward state of preparation. Laurence Irving's appearance in the part of the Bishop will be a special feature.

J. T. Grein announces his revival in London of the Independent Theatre which gave its last performance in May, 1897. The first performance of the new series will take place in February, the programme consisting of "A Paladine," translated from the Dutch of Mrs. Simons-Maes by Alix and J. T. Grein, with Henri de Vries in the leading part; and in March Mr. Michael Morton's version of MM. Maurice Donnay and Lucien Descaves's "Oiseaux de Passage" will be given. The programme will be presented on week-days, beginning at 4:30 P. M.

Ottilie Metzger, who appears with the New York Philharmonic, is the successor of Mme. Schumann-Heink and Mme. Matzenauer at the Hamburg Opera. At the last Bayreuth Wagner Festival she was pronounced "one of the few great artists who are the mainstay of the festival, with but one competitor, Schumann-Heink." Last October, when Caruso sang in Hamburg as "guest," Ottilie Metzger, it is reported, fully shared the honors with him; and at the Bremen Opera, where both appeared as "guests" in "Carmen," she repeated the success. In London, Berlin, and Vienna she is recognized as one of the foremost artists of the day. These will be Mme. Metzger's only American appearances, as she comes under exclusive contract with the Philharmonic and is obliged to return at once to resume her European engagements.

The New York Symphony Orchestra opens its second series of eight subscription concerts on Sunday afternoon, January 26. Some of the soloists who will appear during this second series are Eugène Ysaye, John McCormack, Ernesto Consolo, George Barrère, Gustave Langeus, and Willem Durieux; and Elena Gerhardt, Julia Culp, Frances Alda, and Cornelia Rider Possart. In the performance of Rimsky-Korsakoff's Symphonic Prelude, "A Page from Homer," the Symphony Society will have the assistance of the St. Cecilia Club, Victor Harris conductor. Several interesting novelties will be heard, among them Jean Sibelius's Fourth Symphony, to be given for the first time in America, and "A Fairy Tale," by Mr. Victor Kolar, a member of the orchestra. Eugène Ysaye will play the Brahms violin concerto. The concert on January 26 will be devoted to Bach and Debussy. Ernesto Consolo will play Bach's D minor concerto for piano, and George Barrère will be the soloist in the Suite for Flute and Orchestra by the same composer, and also in the Minuet and an Arabesque by Debussy. The orchestral numbers will be Bach's first Brandenburg Concerto and Debussy's "L'après-midi d'un Faune" and "Marche écossaise."

American singers are, year by year, gaining ground in the various European opera houses, there being hardly one, at the present moment, where some of the artists have not been recruited from across the ocean. Even so conservative a capital as Vienna, where in the old days singers like Minnie Hauk or Charles Adams were the exceptions, has opened its doors with ever growing hospitality to young aspirants. A new addition to the list is a young lady coming from Lima, O., and calling herself, after the precedent of Melba, by the name of her native town. After studying in Paris, she went to Orgenyi, the famous teacher who instructed Edyth Walker, Maud Fay, and other successful stars, and, her studies completed, has now appeared at the Vienna Opera House as Mimi and Micaela, and has stood the ordeal of comparisons with the prime favorite, Selma Kurz, in a manner that bids fair to bring her to the fore ere long.

Before leaving for America, Felix Weingartner personally introduced one of his most recent compositions to the Vienna public, a "Comedy Overture," which he conducted at one of the Philharmonic concerts. Its reception was as flattering as even so fêted a musician as Weingartner could desire; the new opus possessing, above all, the quality of being essentially pleasing. Unlike much in modern music, it sets no indecipherable problems, but is as clear in its structure as it is effective in its scoring. Its themes are ushered in by one conceived much in the vein of Richard Strauss, when in a frolicsome mood, and then follows one of those catching waltz tunes for which the composer has a decided taste. By way of contrast is added an Hungarian March, with an incisive rhythm, which, blended with the dance measures, leads up to a finale that, though it may not boast profundity, with its stirring sweep gives a capable orchestra, as well as a conductor such as Weingartner, ample opportunity for distinguishing work.

New York has robbed Berlin not only of its favorite singers (Farrar, Destinn, Hempel, Goritz, Griswold), but of its best conductors—Carl Muck and Josef Stransky. The latest wail that comes from the German metropolis is uttered by *Die Zeit am Montag*. After criticising sharply a recent performance of the "Rheingold," given at the Royal Opera, it says: "In comparison I have still vividly in mind Josef Stransky's great work in conducting Wagner operas here. It is a pity that this genial conductor

was not obtained by the Royal Opera. Now that he has become the successor of Gustav Mahler in New York, and, as such, is highly prized, it would undoubtedly be difficult to get him back, especially as his income in that position is larger than that of all our Berlin Royal Opera conductors combined."

Art

DEGAS'S ART AND ITS VALUE.

PARIS, January 8.

A painting by Degas of two ballet-dancers doing their practice at a bar along a straight blank wall, with a water-sprinkler on the dusty floor behind them, was sold last month from the Rouart collection for something above $90,000—and its aged painter could only remark dryly: "I sold it for 500 francs." He is a philosopher, nearly eighty, and almost blind. For years he has given issue to his artistic genius by working with his fingers little statuettes. Meanwhile, the careless art-gazers of Paris have let him slip more or less from their memory.

The international art-dealing house of Durand-Ruel has bought the picture, so it is said, for an American collector. I remember seeing, a dozen years ago or more, some sixteen paintings and pastel designs by Degas in the Paris showroom of that house. It was commonly said among connoisseurs at the time that the house was making one of its accustomed corners in his works. If so, it is nearly time to unload. This artist will never have a greater advertisement; and his pastels and designs in the same sale have gone at similar top-notch prices. It seems a pity, as in other cases of the kind, that he is the one not to profit by all this unearned increment for those who pocket the money.

Soon after Alfred Sisley's death, one of his pictures was sold for 29,000 francs. Not so many years before, he had himself sold it for 80 francs. His need at the end was so great that friends were obliged to contribute money that he might die comfortably, and his daughter was left in destitution. About that time, a struggling young painter, who is still living and still struggling, had an exhibition of his works in a little Paris Gallery, put at his disposal by a quaint old character who liked to help young men to get a start. I was informed I could get my choice among the pictures for 80 francs without a frame, or 120 francs framed. Only the next year I was consulted by a New York friend about a purchase he had made for his collection. The art dealer had assured him my 80-franc friend was the coming man in French painting, and sold him one of the very pictures offered to me for $16 for the slightly different price of $800. When this painter is dead or disabled, perhaps there will be a corner in his works, also.

This sort of thing has started the question whether some copyright might not be invented, by which an artist should receive a percentage of the increased value of his work at each successive sale. Two per cent. is the modest rate mentioned. Artists who are clever enough to do their own advertising do not need such protection. Yet even some of the portrait painters who have "done" our millionaires at royal prices —no, at prices of the newly rich of a republic—complain they had to divide up with an art-broker for a commission of one-half or three-fifths; for example, $3,000 out of the $5,000 or $6,000 they were supposed to be paid. It is an old story, not likely to be mended.

Degas is understood to have expressed the opinion that no picture could be worth such monstrous sums. Clearly, his genius does not extend to our social economy and its laws of demand. And he does not understand what demand has been created for his paintings in the Anglo-Saxon world and in Germany. It will now spread to France, where keen-eyed and open-minded critics have recognized Degas's merit from the start.

Twenty years ago, I remember, the uneasy English sought to find in him the new art-light—and they succeeded in reading into his work more than was there. He had been painting since Manet's time, but they were only beginning to hear of him. They associated him with all that was unconventional and unfelt by the Philistine—with forgotten La Mélinite, who was improvising her goose-steps on the Jardin de Paris dancing-pave; with Ibsen, who was running his course, and young Maeterlinck, who was beginning to run, and with Toulouse-Lautrec's colored poster for the Moulin Rouge. All these were worthy in their kind and have gone off in the passing show, except Maeterlinck, who is only now coming into his own in France—and Degas, who has continued to puzzle critics.

He never exhibited at the Salons. His work is not beautiful, if in beauty you look for a bit of sentiment. The nearest approach to it is in his pink-gray danseuse who whirls fluffily to the footlights in his picture in the Luxembourg Gallery—and critics remind me that this is not regarded as his best work.

The truth is, any human eye, with patience to look, can see the unique excellence of Degas's art. No label is needed—Impressionist, or any other—to make the public mind easy. One of his pictures that made most impression when he was still painting years ago was his usual ballet-dancer stooping to tie her shoe. Said another painter: "That perspective of the shoulder blades with the varying planes has not been equalled since Michael Angelo." Very likely—and perhaps there is not a painter to-day who could paint the water-can of the picture just sold in its true perspective on the floor, with the flat wall and bar and extended leg of the dancer.

If critics who talk glibly about the New Art think it is easy to realize these problems of perspective, that is, changing surfaces to be represented to the eye by light lines and color, let them have their painters try to do what Degas did three art-generations ago. Impressionist or not, his chief excellence is in design. And this technical triumph, to one who knows its difficulty, is interesting to the point of intellectual beauty. Gauss said he had his highest sense of beauty from the theory of hydraulics, which he had simplified into one satisfying conception letting the pent-up spirit through into something more than mathematical infinity.

The world may or may not find in Degas the revelation of New Art after which it is forever straining; but surely he has loved and feasted his eyes on the old classic art of the ballet of our grandfathers. It is hard to conceive what new-fangled Russian dancers would look like on canvases painted by him. Perhaps more like the circus riders whom he also painted in his forgotten days—for that is most likely to be an object of New Art as the vision of Beauty changes.

S. D.

Houghton Mifflin will bring out, February 1, "The Letters of a Post-Impressionist: Being the Familiar Correspondence of Vincent van Gogh."

"Fromentin" will be added shortly by Stokes to the Masterpieces in Color series.

In the course of the excavations at Ostia, near Rome, an important discovery has been made. Near the theatre came to light a head of a youth, broken from a statue, of the style of the fifth century B. C. It reproduces a type which is generally associated with the sculptor Kalamis.

Commendatore Boni is carrying on his excavations on the Palatine with interesting results. He has made a thorough examination of the ruins of an ancient house, which he believes to have been the one inhabited by Tiberius and Julia, the daughter of Augustus. This house shows signs of unusual luxury, which corresponds well with what we know of the character of Julia. There is a long bath with arrangements for a douche, and a hot and cold-water supply; there is a species of marble waterfall over which the water was to pass; also an underground staircase with stucco ornamentation. In the house were found coins of Agrippa, Germanicus, and Tiberius, fragments of glass and of Megarian pottery, and some pieces of a beautiful marble pottery. Moreover, an underground cell has been opened beneath the floor of the house, which may possibly be the prison in which—as Tacitus tells us—the young Drusus was starved to death in A. D. 33.

During the archæological work at present proceeding near the entrance of the Viale Guido Baccelli (formerly Via Appia)

some workmen discovered an earthenware urn full of gold coins. The coins, which include valuable and rare fifteenth-century specimens of the Papal Mint of Florence, have been placed in the National Museum.

Two officers, while reconnoitring from a dirigible over the Tripoli desert beyond Zavia, discovered a ruined city, which has been tentatively identified as Sabatta, a flourishing colony in the days of Imperial Rome. The ruins are imposing and well preserved; they include numerous marble statues, twenty of which are still standing on their pedestals. The ruined city will shortly be explored.

Finance

NEW JERSEY'S CORPORATION LAWS

No doubt the chief source of interest on the general public's part, in the proposed revision of New Jersey's corporation laws, arises from the fact that the new bills have Gov. Wilson's official approval. From this it is naturally inferred that the pending proposals foreshadow the corporation policy of the national Administration after the fourth of March. The seven new corporation bills announced at Trenton on Monday are, however, designed specifically for the reform of abuses in the existing New Jersey statutes. In their prohibitory clauses, they follow to a large extent the footsteps of the Federal Anti-Trust law as interpreted by the courts.

But the obnoxious acts are defined more explicitly than in the Federal Anti-Trust law. The New Jersey bills provide that "any combination or agreement between two or more corporations, firms, or persons to create restrictions in trade, to limit production or increase prices, to prevent competition in manufacturing, transporting, or selling any commodity, to fix any standard or figure whereby prices to the public shall in any manner be controlled, to make any agreement which shall directly or indirectly preclude a free and unrestricted competition among themselves or any purchasers or consumers, to make any secret oral agreement or arrive at an understanding without express agreement whereby the same thing is accomplished," shall be dealt with as an offence punishable by revocation of a guilty company's charter or by imprisonment of a guilty individual. In this proviso, as in the others, however, the new bills are pretty much in line with the present attitude of most States of the Union. The bills, it is announced at Trenton, were drafted by two eminent judicial authorities, Chancellor Walker and ex-Judge Van Syckel, both of the New Jersey courts; it is fair to presume, therefore, that they were constructed with a view to maintaining the just interests of the general public and to avoiding constitutional obstacles.

The most interesting aspect of the New Jersey proposals lies in the fact that they are made in New Jersey, Gov. Wilson did not overstate the case a whit in his annual message of last week, when he asserted that "the laws of New Jersey as they stand, so far from checking monopoly, actually encourage it." Those laws were enacted in the early nineties, for the avowed purpose of attracting to New Jersey, for incorporation, mergers and combinations which could not find other States with laws sufficiently lax to suit their purposes. Briefly stated, they authorized the chartering of corporations with power to do pretty much anything. Under the charters granted, not only may the companies engage in such business as they choose, but they may do so merely by purchasing and holding the shares of other companies. Their powers in that regard are virtually unlimited; they may even buy and sell their own outstanding shares in the open market.

Under the New Jersey corporation law, virtually all of the huge industrial combinations of the fifteen past years were chartered—including three which the United States Supreme Court has since forced into dissolution. The Standard Oil combination, the American Tobacco, the United States Steel, the International Mercantile Marine, the American Can, the American Woollen, are a few of the companies which obtained New Jersey charters. Counsel for the Northern Securities admitted, in the dissolution suit, that it was hypothetically possible, under the New Jersey charter of that company, for a small group of individuals, with a comparatively small amount of personal capital, to hold control of all the railways in the United States. These extraordinary charters, it is important to observe, were such as Wall Street, prior to the adoption of the New Jersey laws around 1893, had supposed no corporation in the United States could exercise. It would be difficult to say how much of the wild orgy of company promotion and stock speculation, from 1899 to 1901 inclusive, was directly due to mischievous facilities granted by New Jersey.

That the laws—an admitted reproach and disgrace to the State which had passed them—would sooner or later be swept off the statute-books, was a foregone conclusion in the present public temper on such questions. If the legislation now proposed is enacted, however, New Jersey will take her place as a leader of constructive legislation in restraint of the very monopolies which she has fostered and encouraged for the past two decades. These bills attempt nothing retroactive. The great holding companies chartered under the former laws may retain the stocks of other companies which they have bought in accordance with those laws; but they must buy no more, and no company shall be organized hereafter with any such power. Mergers of corporations, without recourse to the holding-company device, are still to be permitted, but only on the written approval of the Public Utilities Commissioners of the State.

The further provision that, in purchases of the sort, "no fictitious stock shall be issued; that no stock shall be issued for profits not yet earned, but only anticipated; that when stock is issued on the basis of the stock of any other corporation purchased, no stock shall be issued therefor in an amount greater than the sum actually paid for such stock in cash or its equivalent," does not nowadays sound very revolutionary. But to understand the conditions and possibilities which it sweeps away, one has only to recall the late John W. Gates's recapitalization of his $24,000,000 Illinois Steel & Wire Company into a $90,000,000 New Jersey corporation—in the course of which transformation, in 1899, some $26,000,000 of the stock went to destinations never afterward accounted for. The country has lived through an instructive experience since then.

Publish Saturday

Samuel P. Orth's SOCIALISM AND DEMOCRACY IN EUROPE

12mo. 350 pp. $1.50 *net.*

A book largely based on first-hand study in Europe. By an author who has strongly attracted the public by his trenchant papers on similar subjects in *The World's Work.* A high authority advises the publishers that he "combines easy mastery of his complex material with an excellent and sprightly style."

The contents include: The Development of Socialism—The Political Awakening of Socialism; The Period of Revolution; The International—The Socialist Party in France—The Belgian Labor Party—The German Social-Democracy—The English Labor Party—A very full Appendix, including a Bibliography, "Programs" of Socialists in different countries, etc.

W. P. Pycraft's INFANCY OF ANIMALS

8vo. 325 pp. $1.75 *net.*

A "popular" but reliable book by Dr. Pycraft, of the British Museum, author of "A History of Birds," etc. He shows, among many interesting things, the Why and Wherefore of the several peculiarities of form and color of very young animals, and of the degree of activity which they display on their entry into the world. The book contains food for thought not only for the Evolutionist, but also for the students of Sociology and of child-life in particular, and for all lovers of "Nature Study." There are numerous illustrations from photographs.

THE FLOWING ROAD

Adventuring on the Great Rivers of South America

By CASPAR WHITNEY

24 inserts and maps. 8vo. Cloth. $3.00 net. Postpaid, $3.20.

J. B. LIPPINCOTT CO., Philadelphia.

Professor Hugo Münsterberg's

PSYCHOLOGY AND INDUSTRIAL EFFICIENCY

This is Professor Münsterberg's latest and most important contribution to the practical application of psychology in the problems of every day life. After an introduction on "Applied Psychology," the book is divided into three sections:

1. THE BEST POSSIBLE MAN
2. THE BEST POSSIBLE WORK
3. THE BEST POSSIBLE EFFECT

The book will be of unique helpfulness to all who are interested in manufacturing and transportation or in the management of business enterprises, while students and teachers of psychology and sociology everywhere will find it one that cannot be overlooked.

$1.50 *net*. Postage 13 cents.

OTHER BOOKS BY PROFESSOR MUNSTERBERG

PSYCHOLOGY AND LIFE. $2.00.

Cornelius Weygandt's — **IRISH PLAYS AND PLAYWRIGHTS**

This volume follows the development of the much-talked-of movement which has given Ireland a real native drama. It treats of the plays of W. B. Yeats, Edward Martyn, George Moore, J. M. Synge, Lady Gregory, and other of the younger dramatists of note.

Fully illustrated, $2.00 net. Postage 12 cents.

Anthony M. Ludovici's — **THE LETTERS OF A POST-IMPRESSIONIST**

Being the Familiar Correspondence of VINCENT VAN GOGH

The only first-hand account of the notable group of men known as Post-Impressionists, their ideals and their work, which has yet appeared. It is full of human interest and should receive a warm welcome.

Illustrated. $2.00 net. Postage 12 cents.

Elizabeth Kendall's — **A WAYFARER IN CHINA**

Among contemporary travel books, Miss Kendall's account of a journey across southwestern China to the edge of Thibet, thence to Hankow down the Yangtse and north to the Siberian railway by the Russian railroad through Mongolia, will take a position of unique value and interest.

Illustrated. $2.50 net. Postage 17 cents.

Francis E. Clark's — **OLD HOMES OF NEW AMERICANS**

The large and growing public which has taken such intense interest in the phase of the immigrant problem so brilliantly stated and depicted in Mary Antin's "The Promised Land," will find Dr. Clark's first-hand study of the old homes, in another part of Europe (Austria-Hungary, Dalmatia, etc.), of our foreign-born citizens, a most interesting and instructive volume.

Illustrated. $1.50 net. Postage 11 cents.

Bradford Torrey's — **FIELD DAYS IN CALIFORNIA**

The late Mr. Torrey's experiences and adventures while bird-gazing in California, told with his customary charm. Fully and handsomely illustrated from photographs. $1.50 net. Postage 12 cents.

ENGLISH PEOPLE OVERSEAS — By A. Wyatt Tilby

This important, authoritative series will be read with much interest in this country. In scholarly but interesting fashion it studies the migrations of the English people to various parts of the world—the threefold incentives to these migrations, trade, religion, and adventure; the effect that the Anglican race has had upon the native peoples among whom they have settled; and the history of the colonies.

"He has written chiefly for the general public, but his books will be of service to teachers and pupils as well. The author finds three main incentives to migration: trade, religion, and adventure. Emphasis is placed on the work of the missionary, the heroic struggles of these Christian pioneers are not forgotten; but more attention is given to their great work for civilization in the darker places. The author also deals with the question of what the effects of Anglican rule in the tropical lands have been; and his conclusions appear to be thoroughly sane." —*History Teachers Magazine.*

HARVARD UNIVERSITY

ANNOUNCES THE ORGANIZATION OF THE HARVARD UNIVERSITY PRESS ON JANUARY 15, 1913

Syndics of the Press

ROBERT BACON, A.B., CHAIRMAN
GEORGE FOOT MOORE, A.M., D.D., LL.D.
ARTHUR EDWIN KENNELLY, S.D., A.M.
GEORGE LYMAN KITTREDGE, A.B., LL.D., LITT.D.
CHARLES HERBERT THURBER, PH.D.
EDWIN FRANCIS GAY, PH.D.
WALTER BRADFORD CANNON, A.M., M.D.

Director of the Press

CHARLES CHESTER LANE, A.M.

THE OFFICE OF THE PRESS IS AT NUMBER 2 UNIVERSITY HALL, CAMBRIDGE, MASSACHUSETTS.

Kühnemann's Schiller

Translated from the German by **KATHARINE ROYCE**, with an introduction by **JOSIAH ROYCE.**

In two volumes. The set, $3.00

This life of Schiller reinterprets the permanent significance of the poet Schiller for the literature of the world.

It shows clearly the relation of Schiller's dramas to dramatic poetry—ancient and modern.

It explains the evolution of Schiller's powers, ideas, and poetry.

IN MANY

Public Libraries

The Office Clerks are instructed to cut out the advertising columns of THE NATION as a guide for the Purchasing Committees.

"We buy *every* book you advertise," writes one of the best known librarians in the U. S.

To many libraries and to many individuals, books advertised in THE NATION are at once recommended as desirable.

"At McCLURG'S"

It is of interest and importance to Librarians to know that the books reviewed and advertised in this magazine can be purchased from us at advantageous prices by

Public Libraries, Schools, Colleges and Universities

In addition to these books we have an exceptionally large stock of the books of all publishers—a more complete assortment than can be found on the shelves of any other bookstore in the entire country. We solicit correspondence from librarians unacquainted with our facilities.

THE FRANCO-PRUSSIAN WAR

AND ITS HIDDEN CAUSES

By EMILE OLLIVIER

Translated with introduction and notes by George Burnham Ives.

The real causes of the Franco-Prussian War as set forth by the head of Louis Napoleon's so-called Liberal ministry. *With 8 portraits. xxxvii+520 pp. $2.50 net; by mail $2.65.*

Little, Brown & Co., Publishers, Boston

School Advertising in The Nation

THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes —lawyers, physicians, bankers, and other professional men— and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

SPECIAL RATE—Ten Cents a line net for thirteen times
(Minimum space three lines)

Orders may be forwarded through any responsible advertising agency, or directly to
THE NATION, 20 Vesey Street, N. Y.

THE GREAT ART GIFT-BOOK OF THE YEAR

ART By Auguste Rodin

(Translated from the French of Paul Gsell by Mrs. Romilly Fedden.) With over 100 illustrations in photogravure and half-tone. Buckram, $7.50 net; three-quarter levant, $15.00 net; carriage additional. A book which takes its place at once as the most important art book in years. It covers practically the whole range of art, and abounds in memorable analyses of the works of the masters of painting and sculpture, ancient and modern. *Send for descriptive circular.*

APPLETON'S NEW PUBLICATIONS

"The ablest work since Grant's Memoirs."—*The Nation.*

UNDER THE OLD FLAG

By
General James Harrison Wilson

The famous commander's recollections of three wars are told in simple truth regarding men and events. They shed new light on many phases of the Civil War, the Spanish-American War, and the Boxer Rebellion, upon which historians differ so radically.

OPINIONS OF THE PRESS AND OF FAMOUS AMERICANS

The Dial—
"The best work of its kind in recent years."

Chicago Tribune—
"A valuable historical document."

Boston Globe—
"Picturesque and fascinating recollections of an active and brilliant career."

General Adelbert Ames—
"It is a remarkable writing. I know nothing like it."

Senator S. M. Cullom—
"I learned more about the actual movements of the army from this work than I have from any other book."

General E. F. Winslow—
"It is intensely interesting."

General O. H. La Grange—
"It is great. You write as well as you fought."

General D. McM. Gregg—
"I have found it wonderfully interesting."

UNDER THE OLD FLAG

Two vols. Cloth, gilt top. Uncut edges. $6.00 net, per set.

NOW READY

The American Year Book—1912

A work of accurate information by authoritative writers on everything of importance with which America has been associated during the past year. A complete, impartial history of the happenings of the *present*—the only work of its kind. A reference work of especial value to every American citizen.

Over 800 pages. Price, $3.50 net.

Hail and Farewell: Salve

By George Moore.

"Salve" is the work of a genuine word artist and the beauties of his style and the originality of his mental processes will charm the reader on every page.

Cloth, gilt top. $1.75 net. Postpaid, $1.89.

Social Life in Old New Orleans

Reminiscences of Eliza Ripley.

Mrs. Ripley, a belle of New Orleans 70 years ago, records her recollections of the quaint French city.

Illustrated. $2.50 net. Postpaid, $2.70.

Sociology in its Psychological Aspects

By Charles A. Ellwood, Ph.D., Professor of Sociology, University of Missouri.

A work dealing with the origin of society and the theory of social order and progress.

$3.00 *net. Postpaid,* $3.16.

Principles of Educational Practice

By Paul Klapper, Department of Education, College of the City of New York.

A systematic analysis of the principles of education with practical applications of educational theory.

$1.50 *net. Postpaid,* $1.62.

Newspaper Reporting and Correspondence

By Grant M. Hyde, B.A., Instructor in Journalism, University of Wisconsin.

A text-book of journalism presenting the fundamental principles of newspaper writing.

$1.50 *net. Postpaid,* $1.62.

The New Competition

By Arthur J. Eddy.

An important work by a prominent attorney upon the subject of competition and co-operation in business.

$2.00 *net. Postpaid,* $2.14.

Railroad Finance

By Frederick A. Cleveland and F. W. Powell.

The various methods of financing railroads are described in every detail. $2.50 *net. Postpaid,* $2.70.

Democracy and the Church

By Samuel G. Smith, D.D.

Dr. Smith presents Jesus as the author of the ideals of Democracy and the Church as the historic institution in securing their realization. $1.50 *net. Postpaid,* $1.62.

CIRCULARS OR FULL DESCRIPTION SENT UPON REQUEST.

The Nation

NEW YORK, THURSDAY, JANUARY 30, 1913.

The Week

It is reassuring to note the growth of sentiment in Congress, at any rate in the House, in favor of taking the short road out and repealing the clause of the Panama act which frees coastwise vessels from Canal tolls. The perception is sharpening on all sides that the thing is nothing more or less than a subsidy. It is not strange that the consistently anti-subsidy Democrats in Congress should feel indignant at the way in which they have been tricked in this matter. Their National Convention at Baltimore was similarly fooled, for somebody smuggled into the platform a plank favoring remission of tolls at Panama. The thing was never discussed, either there or during the campaign, and we presume that Mr. Bryan would be the first to repudiate the binding nature of a party pledge which nobody knew anything about and which was somehow foisted upon his platform committee.

To save money in the wrong place is not a new practice in Congress, and it is not a surprise that the House followed its Committee on Indian Affairs in refusing the request of the Secretary of the Interior regarding the appropriation for hospital, sanitation, and medical work among the red men. The appropriation has been $90,000, but investigation has revealed a much worse set of conditions among the Indians than in the country as a whole. While the percentage of deaths due to pulmonary tuberculosis in the registration area of the United States, which includes twenty-one States, is 11, among the Indians it is 32. The death-rate from all causes among these peoples is above 30, or more than double that in the area noted. These facts led Secretary Fisher to recommend in his annual report that the appropriation for hospital and related work among the Indians should be increased to $405,000. These figures, however, frightened the thrifty members of the House Committee on Indian Affairs, and they declined to add a single cent to the amount at present allowed. It is possible for the Senate to correct this error by amending the Indian Appropriation bill when it comes up for consideration.

Lorimer does not sit in the Senate, but his influence is threatening to keep any one else from sitting there after March 4 as a representative of Illinois. For in order to elect a Senator the Legislature at Springfield must first choose a Speaker of the House and other officers. Nor can the duly elected Governor of the State be inaugurated until this task has been performed, for the Legislature must first canvass the vote on State officers, and it cannot do this until it has organized. Hence two Governors are uneasily waiting at Springfield, and two Senatorships are in the balance, because a score of "Lorimer Democrats" steadfastly refuse to sully their good names by voting for an anti-Lorimer candidate for Speaker. By the patriotic aid of the twenty-five Progressives in the House, one of the Democratic candidates climbed to within eight votes of the goal on the fifty-sixth and fifty-seventh ballots, but this so far is the high-water mark of the contest. A deadlock of a somewhat similar sort was threatened four years ago, when Gov. Deneen, fearing that the House would arbitrarily declare his election void on uninvestigated charges of fraud, and proceed to seat Adlai Stevenson in the Governor's chair, got the friendly Senate to refuse to enter the hall of the House to canvass the vote until an agreement had been made in reference to the methods to be followed in attacking the legality of his election.

Missouri will have struck a mighty blow for pure government as soon as the Legislature at Jefferson City enacts Representative Stark's bill providing that lobbyists employed about the State Capital shall wear a distinctive uniform. After all, the first step in combating any form of disease, private or social, is to isolate it and describe it. It is lurking evil that eats at the vitals of the republic. Put the lobbyists in uniform, and members of the Legislature will shun them like the pest. Pass another law compelling grafters to wear uniforms. For the lobbyists it has been suggested that a brown suit, red cap, and green cravat would be appropriate. The grafters might be compelled to wear white duck as a satiric commentary on their sinful natures. Adopt a series of distinctive garbs for venal newspaper men, government contractors, log-rollers, pension hunters, and the various species and sub-species of reactionaries, and the people of Missouri will henceforth be secure against insidious assaults upon their rights and their liberties. It is the most thorough application yet of the principle of being "shown."

The special message on legislation to correct Stock Exchange abuses, sent by Gov. Sulzer to the New York Legislature, is considerably less drastic in its proposals than there had seemed reason to expect. It suggests, in fact, that the more carefully the Governor has examined the specific proposals for a change, the more he has found himself confronted with reasons against hasty and sweeping legislation. He denounces manipulation of prices, undertaken for the purpose of creating fictitious values and tempting the public to buy or sell on such a basis; but he recognizes that the visible methods used to achieve such ends may be hard to distinguish from the methods used, for example, to support the price of a given stock when sudden panic has seized on the present holders of it. He calls attention to certain undoubted evils occasioned in connection with "short selling"; yet he finds it necessary to add that these evils do not arise simply because men offer for sale what they do not at the moment possess, but because they misuse the perfectly normal machinery of sales for future delivery. So even of what seemed to be the central consideration of all—the incorporation of the Stock Exchange.

Nothing is easier than to say, "Charter the Exchange as a corporation, and then let the State insist on obedience to its rules." But observance or non-observance of such rules is a matter surrounded with questions of technical construction. Under the present organization and by-laws of the Stock Ex-

change, a member is subject to discipline for conduct "detrimental to the interest or welfare of the Exchange." This is a broad and sweeping provision, and it was intended to be so. All conduct which injures the clients of the Exchange is detrimental to its interests, and has always been so interpreted. The governing committee possesses absolute power to decide when a member's conduct is subject to that clause, and to inflict at once the penalty prescribed—from which there is no appeal. Let the Exchange be incorporated, and the offending member may appeal to the courts to construe the nature of his offence. It is doubtful if wrongdoing which lies on the border-line of the prohibitions can be reached at all with the facility now possible, and it is certain that infliction of the penalty will be belated.

By taking much to heart the report of the Joseph Fels Fund Commission about the financing of the single tax movement in large part by one man, the Chicago *Evening Post*, a Progressive organ, comes perilously near lèse-majesté. The report shows that, during three years, the Philadelphia millionaire has given to the cause $115,000, while "all other contributions" have totalled only $60,000. Mr. Fels was not troubled by this, but he and the members of the Commission were alarmed to find that "all other contributions," instead of increasing, have been falling off. In the vernacular adopted by the report, "there has been a disposition to 'let Fels do it.'" Hence there is to be a change. Hereafter, the Commission will furnish money only in amounts equal to those raised in the localities concerned. Thus it hopes to avoid "the pauperization by a rich man of the clearest, most fundamental, most intelligent democratic movement in the history of the world." But what relation can be imagined between this situation among the Single Taxers and that among the Progressives? Yet the Chicago newspaper remarks that "the Progressives can hardly be too democratic in their methods of raising funds, nor too careful about cultivating 'angels' in their movement." We trust that Mr. Perkins and Mr. Munsey will protest against this implied reflection.

Two strikes have been under way in New York city. The number of workers affected by the garment strike has been estimated as well above 150,000, at one time. The number of men affected by the waiters' strike is said to be about four thousand. The garment strike has witnessed several outbreaks of disorder, but none of them has been serious; and considering the vast army of workmen who have now been idle for a number of weeks, the strike may be called a peaceable one. The waiters' strike has been conducted under the auspices of the I. W. W., with emphasis on the picturesque elements of stone-throwing and other forms of that delightfully fascinating new fad, sabotage. The garment strike is well along towards settlement on a basis of substantial gains to the employees. The waiters' strike has collapsed within less than a week. So once more the lesson has been taught and learned that violence as a factor in collective bargaining is disastrous to the cause of labor. The leaders of the I. W. W. come out of their latest adventure with little credit. The tactics by which they are supposed to differ from the old-fashioned trade-unionists have yet to be justified. They won at Lawrence and at Little Falls only through invoking that public sympathy which in theory they affect to despise.

The Birmingham, Ala., *News* prints an amazing table of the homicides in Jefferson County during the last year. From December 29, 1911, to December 29, 1912, there was a murder *every week day in the year!* What other community in the whole civilized world makes so terrible a showing? No mining camp that we are aware of; no wild, debauched frontier settlement can compete with this appalling record. Moreover, it is getting worse. In 1909, 1910, and 1911 there were all told 356 murders; in 1912 there were 306, and 1913 starts off with ten murders in nineteen days, besides eleven deaths from unknown causes. Thus Jefferson County, with 226,476 inhabitants, surpasses even the murder-record of New York City; this one county long since passed the record of annual murders for the entire United Kingdom, including London. A column, says the *News*, could be consumed in analyzing the cause of this horrible record, but the main trouble is that nobody fears the law, which is without majesty in this American community. In 1912 only a single man was executed for murder, and he, needless to say, was a negro. Only three white men were convicted of first-degree murder in 1912, and their cases are still pending on appeal. As for remedies, the *News* can only ask whether, somehow or other, something cannot be done to arouse public opinion.

The punishment to be meted out by the Amateur Athletic Union to James Thorpe, so recently crowned with the title of the world's greatest athlete, partakes of the solemnity of excommunication. Not only are Thorpe's Olympic trophies to be returned to the Swedish authorities for redistribution, but the prizes he has won in this country are to be taken from him, and, worst of all, his records, which to the athlete mean his bid for immortality, are to be expunged from the official lists. It may seem that the penalty, though necessary under the rules, is disproportionate to the offence, if the original nature of Thorpe's transgression be considered, namely, his course in playing summer baseball for money. But Thorpe's real offence consists in his keeping silent regarding his ineligibility under a rule which is well established. Knowing himself to be disqualified for competition at Stockholm, he should have spared us the inevitable criticism which will now be directed against us from quarters where the misdeeds of American athletes are a favorite subject of comment. It required a great deal of effort on the part of fair-minded sportsmen on both sides of the Atlantic to allay the mutual recriminations which broke out here and in Great Britain after the Stockholm games. Now a good deal of the work will have to be done over.

The British protectionists are in a sad plight. They have thrown the "food taxes" overboard, but their rejoicing over that performance is more like the delight that "Hans in Luck" found in his successive bargains than anything else that we can think of. The London *Economist* points out that the *Daily Mail's* placard, "Death of the Food Taxes," is "just what the *Daily News* might have had on the occasion of any Liberal victory during the last nine years," and that the *Mail*, the *Times*, and the *Telegraph* have been ardent advocates of the Chamberlain Imperial Preference policy, of which taxes on foreign food supplies formed the cornerstone. It can be

but a short time before the "tariff reformers" will find that with that project abandoned their whole stock-in-trade is gone. And this is not only because it will be impossible to make up in the manufacturing centres for the loss of the support of the agricultural interests; it will also be because, apart from special interests, the one argument against free trade for England that has had any weight is the argument that it had been ruinous to agriculture, had cut down the sturdy yeomanry of the country. Well, if free trade had been doing this by simply refusing to protect British agriculture from foreign competition, what shall be said of a policy which, besides refusing that encouragement to agriculture, actually stimulates manufactures by means of protective taxes? It looks as though the time were soon coming when the Unionist party will find as much relief in giving up all that is left of the protectionist programme as it has seemed to find in the abandonment of the food taxes.

Violence as part of British suffragist tactics will be more than ever unwise after the events of the last few days. Mrs. Pankhurst and her associates will maintain that they have been tricked by the Government; but that is a charge which can hardly commend itself to fair-minded men. If the entire proceedings in the House of Commons were simply a bit of elaborate stage setting by Mr. Asquith, who foresaw the Speaker's vital ruling on the Grey amendment to the Franchise bill, then Mr. Asquith must be a stage manager who is willing to pay a pretty steep price in order to obtain his effects. For even with the explicit reservation that the members of the Government were at liberty to take sides in the debate, there was always an element of danger in revealing the existence within the Cabinet of such sharp differences of opinion on any subject as prevails, let us say, between Sir Edward Grey on one side and Lewis Harcourt on the other. The latter's attack on votes for women was so savage that it could not help being something of an attack on the general position of the Cabinet. As such it was welcomed by the Opposition. There is no reason for doubting that the Prime Minister was willing to have the troublesome issue fought out once for all, and that only the Speaker's ruling threw the question of woman suffrage, as well as the original problems involved in the Franchise bill, out of court.

LONDON, January 23.—Board of Trade regulations issued to-day, to become operative on March 1, provide that British seagoing ships shall carry lifeboats and life-saving appliances for all on board.

This is of course due to the Titanic disaster. But why did the British Government's Board of Trade let matters drift until a calamity occurred so terrible as to arouse the attention of the whole civilized world? We shall not attempt to explain. But if we were to adopt the methods current nowadays for the explanation of everything that is wrong in the world, we should say offhand that it is due to the heartlessness of capital, the utter disregard of the needs of the poor by those who are in the high places of the world, the failure to recognize that all men are brothers, the putting of the rich man's dollar above the poor man's life. However, seeing that a couple of hundred men lost their lives on the Titanic who had paid high prices for its luxurious accommodations, there must be a screw loose somewhere in that explanation; and seeing that probably not a soul of them made any inquiry about the lifeboats, and that the same has been true of thousands and thousands of rich men who have been crossing the ocean all these years, we are forced to the conclusion that when things in this world are not what they should be, the cause is not always to be found in stony-hearted wickedness.

The manifold and far-reaching effects of the Balkan War will call for frequent comment from now on. One feature that may be already pointed out is that the present happy state of affairs reflects great credit on the diplomacy of Sir Edward Grey. It was from the British Foreign Minister that the suggestion came of a conference of ambassadors that should be prepared to stand by and render assistance to the peace plenipotentiaries in case of distress. In the last resort it would be, of course, the will of the Powers that would determine the broad outlines upon which peace was made. But it is plain that if there had been no parallel series of negotiations among the representatives of the Powers in London, the break between the Balkan allies and Turkey over the question of Adrianople would have brought about a much severer crisis than actually resulted. Valuable time would have been lost in bringing the European Governments together upon a common plan of action, and in the complicated interchange of views among so many capitals the chances of misunderstanding and headlong action would have been multiplied. As it was, the London peace conference was virtually a joint session of the official peace plenipotentiaries and of the representatives of the Powers. In this specific matter British diplomacy has acquitted itself with conspicuous credit.

The most romantic figure of contemporary history comes from the land of Aladdin, Sindbad, and Ali Baba. The career of Enver Bey is romantic, not after the modern habit we have of speaking of the romance of science, of bridge-building, and of the glucose products. It is romance of the old-fashioned, heart-thrilling kind, in which youth slays monsters and is rewarded with the hands of beautiful princesses, and dons secret disguises and rides into the face of death on a white charger, and wins the cheering adoration of the multitude. In the summer of 1908, two young Turkish officers, stationed at Monastir, raised the flag of revolt against Abdul Hamid and took to the mountains. The two officers were Niazi Bey and Enver Bey. The former has gone back into honorable obscurity. The latter has remained the darling of fate. When the counter-revolution broke out in Constantinople, Enver Bey was with the army which marched upon the capital under the command of Shefket Pasha. When the Constitution was reëstablished under a new Sultan, a niece of the royal house was given to Enver Bey for his bride. He went to Berlin as military attaché. When the war in Tripoli broke out it was Enver Bey who was sent to Africa to rouse the enthusiasm of the Turkish troops waging a hopeless fight against the Italians. Last week came the crowning chapter in a career of romantic glory. To lead a handful of mutineers against the palace of the Ministers, and, pistol in hand, to secure the resignation of a Cabinet and the possible reversal of a policy that may affect the welfare of two continents—for a parallel to this scene one must almost go back to Paris and the early days of one Buonaparte.

SECRETARY KNOX'S NOTE.

Secretary Knox's reply to the protest of the British Government, in the matter of the Panama tolls, assumes an air of mild wonder what the fuss is all about. We haven't done anything yet. The act of Congress, to be sure, authorizes the exemption of our coastwise vessels from Canal tolls, but they are not yet, in fact, exempted. One would almost expect the Secretary, in pursuance of this line of argument, to point out that the Canal is not yet finished, and perhaps never may be; that our ships may all sink before reaching the entrance; and that possibly they may not accept the remission of tolls even if it is offered. The whole drift of Secretary Knox's note is that of avoidance. He insists that the issue is not yet raised. If British shipping is ever, in reality, discriminated against by our Canal regulations, then it will be time enough to inquire into the facts and submit the matter to arbitration. Congress has the power to violate the Hay-Pauncefote treaty, if it pleases, but has not yet done so, according to Mr. Knox, by any overt and concrete act; so why not wait till it does?

So far Philander C. Knox, Secretary of State. But not in this way reasoned Philander C. Knox, Attorney-General, when he urged the Supreme Court to dissolve the Northern Securities Company, on the ground, not that it had actually suppressed railway competition or had raised rates, but that it had acquired for itself the *power* to do so. In the Government brief, whereon the name of Philander C. Knox stands first, the Court was asked to strike down, before it was exercised, "the power to operate the roads in harmony and stifle competition." At that time it was the counsel for the Northern Securities Company who argued as Secretary Knox does now. They had not done anything yet. Why not wait till they did? But the Attorney-General and the Supreme Court would not hearken to that. A dangerous power had been asserted, and it must be denied and destroyed *in limine*. It was enough then for Mr. Knox that the "direct and necessary effect" of the assumption of power showed what its purpose was, and proved that it must be grappled with before it had been actually exercised.

We do not deny that Secretary Knox's note in rejoinder to Sir Edward Grey is adroitly written. It is the plea of a skilled lawyer. But it is, when all is said, a plea in avoidance. It does not meet the main issue squarely. Nothing but preliminaries and contingencies does it deal with. We do not say that it is a sparring for time, but one cannot help suspecting that Mr. Knox will experience a certain relief in being able to turn over the actual merits of the controversy to his successor in office. Whoever the next Secretary of State may be, we hope he will not adopt one position that Mr. Knox rather absurdly takes in this note. He speaks of the extraordinarily generous treatment of the world's shipping by the United States in the scale of tolls fixed for the use of the Panama Canal. We are to charge $1.25 a ton. But that rate will not suffice to pay interest and the cost of upkeep. Hence, says Mr. Knox, our Government will really be "in the position of subsidizing foreign vessels." The Secretary is astonished at our own moderation. We might have charged, he seems to think, $3 or $5 a ton, and then what would foreign ships have done? The answer is that they would have given the Canal a wide berth. Prof. Emory Johnson's estimates and calculations pointed out from the first that there was a point in the tolls above which the Canal would repel traffic. The rate fixed was believed to be all that the traffic would bear; and for Mr. Knox to plume himself on our not having made it much higher is a bit ridiculous.

What one misses in the Secretary's note is, not only a resolute meeting of the real question in debate, but the evidence of any deep moral and patriotic feeling in reference to the complaint that the nation has been guilty of sharp practice. He discusses the possibility of Congress and the President violating a solemn treaty as coolly as if it were a question of ignoring a municipal ordinance. Yet precisely this sense of humiliation and resentment at the thought that Congress has put the country in an attitude of bad faith, has caused all the agitation and evoked the protests from the best men in the land. It was this feeling of hurt national honor that moved so ordinarily impassive a man as Senator Root to express himself with so much passion in his speech in the Senate. Such intensity of language would, of course, be out of place in a diplomatic note, but room ought to have been found for something of the sentiment inspiring Mr. Root's words. And his absolutely unanswerable argument for arbitration of the matters in controversy, in case the act of Congress giving rise to them is not repealed, comes very much nearer, we are convinced, to representing the real opinion of the people than do Mr. Knox's guarded and qualified offers. Said Senator Root:

> I realize, sir, that I may be wrong. I have often been wrong. I realize that the gentlemen who have taken a different view regarding the meaning of this treaty may be right. I do not think so. But their ability and fairness of mind would make it idle for me not to entertain the possibility that they are right and I am wrong. Yet, Mr. President, the question whether they are right and I am wrong depends upon the interpretation of the treaty.
>
> Gentlemen say the question of imposing tolls or not imposing tolls upon our coastwise commerce is a matter of our concern. Ah! we have made a treaty about it. If the interpretation of the treaty is as England claims, then it is not a matter of our concern; it is a matter of treaty rights and duties.
>
> Sir, we have another treaty, made between the United States and Great Britain on the 4th of April, 1908, in which the two nations have agreed as follows:
>
> "Differences which may arise of a legal nature or relating to the interpretation of treaties existing between the two contracting parties, and which it may not have been possible to settle by diplomacy, shall be referred to the Permanent Court of Arbitration, established at The Hague by the convention of the 29th of July, 1899, provided, nevertheless, that they do not affect the vital interests, the independence, or the honor of the two contracting states, and do not concern the interests of third parties."
>
> We are bound, by this treaty of arbitration, not to stand with arrogant assertion upon our own Government's opinion as to the interpretation of the treaty, not to require that Great Britain shall suffer what she deems injustice by violation of the treaty, or else go to war. We are bound to say, "We keep the faith of our treaty of arbitration, and we will submit the question as to what this treaty means to an impartial tribunal of arbitration."

Secretary Knox does not shut the door on arbitration. But his references to it are hedging and temporizing. His note, in general, is of an evasive spirit. It merely stops a gap. It does not pierce to the centre.

SIMPLICITY AT WASHINGTON.

Woodrow Wilson's objection to the Inaugural Ball seemed to be chiefly due to the expense, and the injury done to the public service by the use of the Pension Building. In announcing that he should not go to Washington in a special car,

and should stay at a hotel, like any other citizen, until he entered the White House, he was, it is true, but following precedent. Yet taking these things in connection with his refusal to accept Mr. Taft's offer of a Government vessel to carry him to Panama, we cannot but hope that this foretells a desire on Mr. Wilson's part to observe while President true democratic simplicity. That would be in accord with his attitude hitherto. As president of Princeton, he was modest, unassuming, and accessible; as Governor of New Jersey, his door has been open to all who had legitimate business with him, and nothing that savored of fuss and feathers, or display, military or civil, has been in evidence.

To foreigners accustomed to elaborate European court ceremonial, the White House often appears to be the expression of a perhaps austere republicanism. Yet to those who recall the President's residence in the days of Mr. and Mrs. Grover Cleveland, there has been a marked change. At that time there was no large staff of army and navy officers in uniform in attendance at receptions, with the chief duty of telling the women guests to stand when the President entered or left the room. Servants in livery were lacking, and guards were few; but if there was a touch possibly of the *bourgeois*, the very simplicity of it all could but impress visitors profoundly, notably those from abroad. We have in mind a distinguished German, familiar with all the courts of Europe, who, in company with a well-known citizen, found his way to Mr. Cleveland's office without previous appointment, after being challenged only by the doorkeeper and the secretary. True, the American who went with him was well-known to the White House and Mr. Cleveland. But the absence of uniforms and flunkeys, of ceremonial of every kind, was what astounded this foreign visitor. Nothing else in all America so impressed him with the fact that here was a great and true democracy. All the glitter of the Viennese court faded in comparison.

Since then the work of the President has enormously increased, and his responsibilities as well. There must be more attendants at the White House and more secretaries. But to-day, as in 1885, no amount of gold lace, of liveries, of military show, can magnify this office, or is needed to add to its dignity. Nothing can be so impressive as lack of affectation in men who carry the heaviest governmental burdens of the world. Mr. Wilson will find opportunities to check here and there dangerous tendencies. Under Mr. Roosevelt began a serious abuse—the misuse of vessels of the navy. Without warrant of law, three ships were maintained for the use of the President, his family, and the Secretary of the Navy—the Mayflower, the Sylph, and the Dolphin. To those who recalled the abuse heaped upon Mr. Cleveland for going off on the Dolphin, or one of the lighthouse tenders, on a week-end fishing trip, the indifference to the Rooseveltian policy was nothing less than amazing. If the President is to have a yacht, Congress should appropriate for it. Then we should not have our Presidents setting an example of lawlessness, and the navy would not be deprived of the services of officers and men who are needed on the fighting ships of the service, for whose manning there is an annual demand for more men and more officers.

Mr. Taft has gone even further than Mr. Roosevelt, in that he has used for his trips to Panama both battleships and cruisers. The regulations require that officers shall not take aboard any women passengers; but the commander-in-chief, to whom all look to set an example of obedience to law, has ignored it, and has not hesitated to withdraw ships from their regular duties. Meanwhile, the Mayflower has been tied up at the dock in Washington, her officers paid for sea service, and her chief use has been for teas and dinner dances, or occasionally she goes to sea with an inspection board of army and navy officers.

To some all this may seem a small matter when the Government is spending billions; in reality, it is important, for every example of this kind, by the man at the head, is the excuse for junketing or petty grafting by those below him in the service. Congress now appropriates handsomely for the President's travelling expenses; yet we trust that Mr. Wilson will draw on this fund most sparingly. Mr. Taft's travelling record is such that no one can rival him. Nothing, we are sure, has injured him more than his incessant moving about. Mr. Wilson will surely enhance the dignity of his office if he sticks to the White House and has people come to him, and makes so few speeches that each and every one will be a notable event certain to attract the widest possible attention.

To one matter in connection with the Presidency Congress might well devote its attention. A simple summer home in some cool region might well be purchased. Governor Wilson will plainly miss the summer headquarters the State of New Jersey provides at Sea Girt. But here, too, no grand mansion nor vast estate is needed. With all the idle people of wealth now crowding into Washington as winter residents—it is said that there are now three classes of multi-millionaires there: those from Pittsburgh, the South African, and all the others—there never was a better opportunity for the President of the United States to set a noble example of dignified, simple living.

ROOSEVELT AND THE IDAHO CASE.

Both before and since the election Mr. Roosevelt has had hard things to say of the Supreme Court of Idaho. Its action in holding some local editors for contempt, he fiercely denounced. But he had previously used language fully as severe in speaking of its decision of an election case last October. With the contempt proceedings we have here no concern. The judges may or may not have been wise in haling newspaper railers to court. But the other matter is still important. From Mr. Roosevelt's savage expressions many people got the idea that the Idaho Supreme Court had been guilty of a high-handed judicial outrage. Few people seemed to know what the facts were. We had the curiosity to send for the complete record of the case, and a reading of it enables one to see what justification, or absence of it, there was for Mr. Roosevelt's scarification of the Court.

Let us begin with his restrained and judicial characterization of the action of the Idaho judges. On October 12, 1912, he issued a statement at Chicago, in which he said it was "impossible to protest too strongly against what is literally the infamy of this decision." It was "utterly reactionary conduct by a reactionary court," and was "absolutely without warrant of law." Furthermore, it was "an attempt to beat the cause by trickery and chicanery." "The decision

was against the law, against equity, against justice, and against the whole course of decisions in all our American courts."

So much for Mr. Roosevelt's poetry; now for the prosaic facts. Under the laws of Idaho there are three ways in which candidates may be nominated for office so as to be entitled to a place on the official ballot. One is by the direct primary of a "political party," in case the latter at the last previous election cast at least 10 per cent. of the total vote of the State. Under this there is no possible claim for the Progressive party; it did not cast any votes at all at the last preceding election. The second method is by Convention of "any organization of electors," if such a Convention be held on the same day that the direct primary election occurs. That was July 30, last year, and on that day a sort of Progressive Convention was held at St. Anthony. But it was really a mass meeting, called explicitly to organize the Progressive party in Idaho, and to send delegates to the Chicago Convention of August 5. The Idaho court held that this St. Anthony "convention" was not one within the meaning of the statute; but it is immaterial whether it was or not, for no attempt was made to file a ticket as coming from that body. The sole reliance of the Idaho Progressives was upon the third method of making nominations, and that is by petition. An effort on their part to get their nominees for Congress and for Presidential electors upon the official ballot as named by petition, was what the Supreme Court frustrated by its decision.

Now, what was the law relating to nomination by petition, and what were the facts? The law provides that candidates may be nominated by petition, provided the requisite number is obtained of signatures—variously prescribed for different offices—of qualified electors who have not joined in the nomination of any other person for the same office. But here comes the crux of the case. The Idaho statute relating to nominations by petition contemplated only "State offices." It did so by general description and also by specific detail—so many signatures for this office, so many for the other. For the nomination of Congressmen and Presidential electors the Idaho laws made other provision. They could not come under the section covering nomination by petition, unless they were "State officers." The Progressives, in their desperate legal straits, gravely contended that Congressmen and Presidential electors were, in fact, State officers; but the Court had no difficulty in showing that law and Constitution and precedent were dead against that contention—Roosevelt, justice, to the contrary notwithstanding. To quote the language of the unanimous decision of the Idaho Supreme Court:

> Having treated "candidates for Congress" throughout the direct primary election law and statutes of the State as separate and distinct offices, which they are, from "State offices," and then having omitted candidates for Congress and Presidential electors from section 385 of the statute, which authorizes nomination for State offices by petition, it is evident that the Legislature has not intended to authorize the nomination of candidates for Presidential electors and members of Congress by petition. . . . The rule is too well recognized and understood everywhere to even require repetition that "the expression of one thing is the exclusion of another."

On the basis of that exposition of the law of Idaho, the Supreme Court ruled that the Progressive nominations by petition for State offices should be placed on the official ballot, but that the nominations for Congress and for Presidential electors should not.

The Supreme Court of Idaho did not say whether it thought the law wise or foolish. It merely pointed out in a long and calm opinion what was the necessary intendment of the statute. It is not probable that Roosevelt had ever read the Idaho election laws. It is certain that he had not read the full text of the decision of the Court which he branded as "outrageous," for it was not printed until after his Chicago explosion. What happened in Idaho was very like what happened in California. The sudden organization of its Progressive party, a thing never contemplated by the lawmakers, revealed defects in the election statutes. In Idaho they operated, under interpretation by the courts, against the Progressives, and Mr. Roosevelt screamed about the frightful injustice. In California, as interpreted by the judges, they operated against the Republicans, and Roosevelt had never a word to say. As for the Idaho case, the plain tale of the law and the facts and the reasoning of the courts is all that is necessary to show how ill informed Mr. Roosevelt was, as well as how reckless, cruel, and incendiary.

A SISYPHUS AMONG THE SCIENCES.

There is something pathetic in the delight with which Psychical Researchers have greeted the acceptance, by one of our leading universities, of an endowment of $10,000 to promote the studies they have at heart. They do not hope for much from the work to be done with the modest income of this foundation, but they prize the respectability that is expected to come from the recognition thus accorded to their aspirations for a place in the scientific world. It may seem cruel to question the soundness of this expectation. But surely there is no magic power in a university charter to effect what a generation of countenance and support by a number of men of great intellectual eminence has been unable to compass. The name of Henry Sidgwick alone, as the first president of the Society for Psychical Research—not to mention notable associates—was far more calculated to give standing to its work than any mere official act of acceptance of a fund could be; and even more to the purpose was the high character of the reports and discussions in the early years of the Society, among which those of Mrs. Sidgwick are particularly worthy of mention. A large number of persons who had previously refused to take questions of spiritualism or mind-reading or the like seriously, felt that at last a proper attempt was made to deal with them.

Well, thirty years have gone by, and where does the Society stand? Has it commanded growing interest, or won increasing appreciation of its labors? Quite the contrary. Outside the circle of those who are addicted to anything that smacks of the supernatural, the reports of the Society for Psychical Research attract almost no attention; people have given up looking for anything conclusive, either positive or negative, in its proceedings. And the reason is plain enough. There is one mark of scientific vitality which it requires no special study and no special skill to recognize—the mark of cumulative achievement. Where there is a genuine kernel of truth, and many eager and earnest minds are at work in developing it, we find an addition here, a correction there, a new method or a new instrument introduced, sources of error at first troublesome gradually removed,

the goal of yesterday made the starting-point of to-morrow. The process may be slow, there may be painful setbacks; but there is the sense that something is building up, that we are not everlastingly compelled to begin at the beginning. And after thirty years of respectable and patient work by many highly intelligent persons, Psychical Research is, in a scientific sense, precisely where it was at the beginning. There is, to be sure, an enormous mass of detached observations, and of records of remembered or alleged experience; but no part of this mass stands out as a solid residuum, a starting-point for future work.

The chief difficulties under which the Psychical Researchers labor are easily named. In the first place, they alone among the cultivators of science, or of would-be science, are continually confronted with the necessity of guarding against fraud. Secondly, in this inherently difficult task they handicap themselves by submitting to conditions which make the discovery of fraud still more difficult. These conditions they regard as imposed by the nature of the phenomena they are studying, for the precautions necessary to complete surveillance are supposed to hinder the phenomena from taking place; but if this be true, it is most unfortunate, since the hard-headed man of science will prefer the simpler hypothesis that what is prevented from taking place is not the alleged phenomena but the frauds to which their appearance is due. But possibly all this might not be fatal were it not for a third circumstance. Even in the standard sciences, it is essential to the firm establishment of anything new to the science that the experience on which it is based be capable of exact repetition by any competent observer or experimenter; but the experiences of the Psychical Researchers, though having to make head against a tremendous presumption of fraud or malobservation, never get themselves strengthened by this kind of repetition.

It is easy, however, to account for the state of mind of those Psychical Researchers who have become convinced of the reality of the "supernormal" phenomena. When they witness a "supernormal" phenomenon against the production of which by fraud or illusion a great deal of precaution has been taken, they are impressed with the feeling that the probability of any actual fraud or illusion is very small; and they fail to balance this antecedent improbability against the incomparably greater antecedent improbability of the phenomenon being genuine. As a matter of fact, the first probability is by no means extremely small, as witnessed by the undisputed fact that a very considerable proportion of experiences held at the time to be convincing by observers as good as any now at work, were afterwards demonstrated to be the result of fraud or illusion. But, so far from reckoning this probability as one in ten, or one in a hundred, or one in a thousand even, many Researchers are apt in practice to think of it as absolutely zero. Dr. Ivor Tuckett, writing in *Bedrock*, neatly turns against them a phrase coined by the man who has done more than any one else in recent years to keep alive the Psychical Research movement, when he says that any noticeable manifestation by them of "the will to believe" must operate as a disastrous diminisher of the weight of their testimony. And when we add that we are constantly treated to exhibitions of credulity, ranging all the way from Sir Oliver Lodge's firm belief in "the movement of a distant chair, visible in the moonlight, under circumstances such as to satisfy me that there was no direct mechanical connection," to the stories cropping up periodically about knives or violins flying through the room, or the spirit of William James talking rubbish to a Researcher, it is easy to see why the attempt to gain for Psychical Research a respectable standing has been like the task of Sisyphus.

WHAT DO WE READ FOR?

"Our magazines," wrote the librarian of a college fraternity recently, "are chosen to meet the demands of college men for information in the lines of work in which they are engaged, or else to form reading for recreation purposes." This idea that the ends of reading may be comprehended under a sharp division between information and recreation is not the possession of students alone, but is held and preached by some, at least, of those who are officially in charge of education. A State high-school inspector in the Middle West took pains a while ago to impress it upon a gathering of city school superintendents, and also to point out some of its practical consequences. The one kind of reading, he remarked, is illustrated by that which the lawyer does in his office when he goes over the law and the precedents, the doctor when he turns the pages of his medical works, the merchant when he studies the outlook for prices, the housekeeper when she takes up an unfamiliar recipe. All such reading has one common characteristic—it is purely intellectual:

> These people neither laugh nor cry over what they read; but slowly and carefully, word by word, sentence by sentence, and paragraph by paragraph, they master the thought. Every possible meaning must be read into every word of the law, or the lawyer may lose his case; if the housekeeper reads two instead of three spoonfuls, the cooking will be a failure; and the farmer may incur a positive loss if the statements of the article are not thoroughly understood.

The other kind of reading is of a very different nature. It is emphatically emotional, and because of this immense difference "we turn to it as a relief and a rest when the mind is thoroughly tired" by the effort required by the first kind.

Now, as most literature, strictly so called, is strongly infused with emotion, the logical consequence of this analysis is extremely unfortunate, for any reading to which one turns as a relief when the mind is thoroughly tired will fail of its purpose if it makes any heavy intellectual demand, and accordingly "literature" becomes synonymous with "light reading." We see the same tendency carried to even greater lengths in the drama, where the great motive is frankly "entertainment." What room is there, then, for the book which, although intellectual, does not deal with law or medicine or theology or agriculture, and although emotional and imaginative, cannot be read as a relief and a rest when the mind is thoroughly tired? Well, for such a book there is no room—except, to be sure, in the colleges which do not count, and in the outworn curricula of our high schools, where, according to the inspector already quoted, the matter is one deserving more attention than it is receiving. We have thus a very modern evolution of De Quincey's literature of Power into a literature of Relaxation.

As this officer sees it, there is a simple yet fundamental principle by which our pedagogical authorities should be guided in this field. It is this: "What

are the best people of the community reading?" The most we can hope, he adds, is that our boys and girls will read "about the same" after they leave school. Are these people, then—to put the question more specifically—reading the classics of our school lists, or are they reading the books and magazines of to-day? Here is the answer, and its corollary: "If, as is no doubt the case, it is the latter, we should certainly be giving a large place (I do not say the entire place) to the study and reading of current literature." We hope that lovers of the classics will be duly appreciative of the courtesy of that parenthesis—so long as it is suffered to remain. But the pressing duty is clear:

> The young people should know something of the great magazines and of the kind of reading matter which may be expected in each. . . . A training which will lead the young people to select healthful standards and influential magazines is absolutely necessary if we are to train for the best citizenship.

One would think that, with current literature forming the predominant part of parents' reading, pupils might be trusted to absorb sufficient knowledge about it at home. One might even hazard the notion that the standard of reading in a community, particularly a comparatively new community, might not be the ultimate standard for the schools of that community. Why should not the school have the ambition to refine and broaden the literary taste of the growing generation, however unflattering the result to the sensibilities of the "best people" of the older generation—if, indeed, they were not the first to welcome the advance? But this is to talk like one who does not know the difference between intellectual reading and reading to which one turns as a relief and a rest when the mind is thoroughly tired.

The gravest aspect of this whole position is perceived only when it is realized that English is, for the mass of pupils, the one definite source of culture. Latin has been virtually banished, Greek they never had, and history is taught more and more as a kind of science, with emphasis upon sources and facts, rather than upon the human element in it. And now we are told that in English, too, the classics are in the way of the moderns. It is apparently necessary to begin at the bottom, and to ask what an education, what reading is for. Milton had the idea that a great book was something more than an intellectual or an emotional product, or even a combination of the two. To him, it was "the precious life-blood of a master spirit, embalmed and treasured up on purpose to a life beyond life." This would remain true, were every teacher of English as inadequate for his task as some of them must be confessed to be—would remain, that is, if it had been true in the first place; for, alas, the "Areopagitica" is but a classic.

DANTE'S "NEW LIFE."

Il gran teologo—the great theologian—the early commentator who so described Dante was after all nearest the truth. From first to last Dante was a student and declarer of the word of God. If as artist in words he proclaimed himself apprentice of Virgil, as apostle of the Word he draws over and over again analogy between himself, follower of Beatrice, and St. Paul, follower of Christ. If Beatrice were *merely* the Florentine maid and later matron, of whom Boccaccio tells, so to liken service of her with service of Christ would seem an extravagance; Dante, I think, would have held it a blasphemy. But if we substitute for Beatrice that which he tells us plainly her name signifies, *blessedness*, all incongruity ceases.

That blessedness, fulfilled in the vision of God, is the theme of the "Divine Comedy" no one doubts. It is the regulative ideal behind the argument of the "Essay on Monarchy" and of the "Banquet." There are, Dante tells us in the former work, two ends set for mankind, to wit, earthly blessedness, attainable by man under the guidance of philosophy followed in the peace maintained by God's temporal vicar, the Emperor; and heavenly blessedness, attainable by man hereafter, but here meditated in the light of things revealed according to the sanction of God's spiritual vicar, the Pope, and pursued with faith, hope, and charity. And the Wisdom, which is the theme of the "Banquet," is likewise twofold, that which is of the intelligence of man, philosophy, guiding to earthly blessedness, and that which is of the intelligence of God, theology, guiding to heavenly blessedness. In other words, the way to earthly blessedness lies in the fulfilment of the moral virtues in the active life, the way to heavenly blessedness lies in the fulfilment of the theological virtues—faith, hope, and charity—in the contemplative life; and in proportion as heavenly blessedness transcends earthly, so the contemplative life transcends the active. And again, the avowed purpose of the "Treatise on Vernacular Eloquence" is to pattern a fit garment of words and music for high themes of "salvation, love, and virtue"—for the "poetry of God," as Boccaccio finely defines theology. For by love Dante here intends no vain and amatorious passion, but charity, the love of God which is the joy of blessedness.

Now if through all Dante's other writings so runs this one theme of man's quest of blessedness, might we not reasonably listen for some accent of it in his "New Life," the very title of which seems to imply a regeneration, a conversion—a "being born again, not of corruptible seed, but of incorruptible, by the word of God"? And the expectation is heightened when we find Dante at once calling Beatrice his "beatitude" (*beatitudo, beatitudine*), or blessedness. Indeed, remembering his play on the names Giovanna and Primavera, we may well surmise that he either chose the name Beatrice outright, or at least preferred it to its corruption Bice, for its etymological kinship to beatitude.

Of course, many have suspected allegorical intent in the "New Life"—sometimes with singular results, as when Dante Gabriel Rossetti, convinced that Beatrice stood for the Empire, anagrammatized the *Amore* of the "New Life" into *Amo Re*, "I love the king." In general, I believe, these interpreters have accepted the issue that, if the "New Life" be an allegory, Beatrice cannot have been a real person, and so Dante's love-story must be a mere fiction. Now that is a distinctly distasteful idea. We should lose perhaps our last truly *grande passion*, that dearest idol of the tribe of sensibility. Signor Carducci, probably head of the present school of interpretation of the "New Life," challenges doubt of Dante's real love for a real girl called Beatrice with the same knightly heat as Warton put into his defence of the truth of Surrey's love for Geraldine, or Grosart of Spenser's love for Rosalind, or Swinburne of Shakespeare's love for the Dark Lady. Who dare say that much learning cools the heart?

Fortunately, the issue is a false one. Beatrice may have been real, and Dante's youthful love in earnest (whatever one means by that), and yet the experience as recorded in the "New Life" be allegorized.

There are indeed some apparent objections. The "New Life" consists of thirty-one poems connected by prose, partly narrative, partly expository. The poems were not written for the work, but occasionally and at different times. Moreover, many of them, by themselves, convey no hint of allegorical intention. But the design of the work as a whole may appear in the separate parts as much and as little as the design of a mosaic in the separate pieces of colored stone or glass that compose it. These are so chosen and fitted as to bring out the design. Similarly, having

later realized the providential *design* in his experience of love, Dante may have chosen from a not inconsiderable body of love-poems those which could fairly bring out that design. For Dante and scholastic thinking generally, the "moving cause" of anything is its final cause. If from profane love he had been led by purifying stages to holy love, some glimmer of holy love must have been present, though at the time not recognized, even in profane love. So precisely Beatrice tells him in paradise (v, 7-12). And if this redeeming somewhat was present in the actual experience, it should appear in his record of the experience; or if in his then blindness he had failed to indicate it, he had the right later to inread or insert it.

The second objection is that Dante in the "Banquet" (I, i, 111 *et seq.*) calls his "New Life" more "fervid and impassioned" than the "Banquet." But Dante's actual contrast is drawn between the two works in respect not to meaning but to method. Having said that in the "Banquet" the "viands," or passionately expressed odes, are to be made digestible for the mind by "bread" of allegorical interpretation, he adds: "And if in the present work [the 'Banquet'] . . . the handling be more virile than in the 'New Life,' I do not intend thereby to throw a slight in any respect upon the latter, but rather to strengthen that by this." Now how, it may in deference be asked, may the "New Life" in any way be "strengthened" by the allegorical interpretations of the "Banquet" unless at least in principle these apply? To my indifferent understanding the alleged objection to allegory in the "New Life" appears rather to be a fairly clear hint from Dante himself not only that there is allegorical design in the "New Life," but that it is in accord with that of the "Banquet" itself.

Other objections might be met—such as that Dante was too young or too ignorant at the time he composed the "New Life" to carry through a progressive philosophical allegory. In other words, the "first friend" of Guido Cavalcanti, subtle metaphysician and author of an allegorical ode on Love unexhausted by generations of commentators, was too ignorant of the first principles of accepted Catholic doctrine to present them under the color of a real or feigned love-story. For that, and only that, is what I hold that he did. And, again, the same man who, as we are told, could not at thirty do thus much in spite of the incentives of literary fashion and personal emulation, yet could within fifteen years conceive and flawlessly execute the most learnedly comprehensive and subtly intricate allegory ever written.

Apart, however, from all antecedent probability, the final test of any allegorical interpretation is whether or not it works. Assuming provisionally that we are justified in looking for a continuous allegory in the "New Life," can we find it? I think we can. Entire convincingness, however, follows rather from cumulative detail than from any general consideration, and cumulative detail is impossible within the plan of the present article. I here merely outline an interpretation for the consideration of Dante readers, reserving fuller and more technical exposition for a more appropriate place.

On its face, the "New Life" tells the story of a purification by successive stages of Dante's love of Beatrice. In the dramatic design there is obvious symmetry. The central event is Beatrice's death; and on either side of that there is a striking parallelism in the action. For nine years the young Dante worships the living Beatrice from afar, mute and unrecognized. Then she deigns to greet him; and in her *salute*, or "salutation," he says, he sees his "blessedness," and is filled with the spirit of "charity." With the best of intentions, however, he turns his outward attentions to another lady, gentle and very pleasing, as "a screen of the truth." This unreal worship continues for "some months and years," until the lady leaves Florence, when for the same reasons he gives his heart to another. And so verisimilar is his devotion towards this second "screen" that Beatrice, scandalized, denies her salutation. Dejected by the loss of her grace, Dante in a vision is counselled by Love to abjure "shadows" (*simulacra*) of the "love which is nobleness," and to confess his true love, Beatrice. And Love weeps for the present degradation of his servant. But in vain Dante sues for grace. Beatrice and her ladies only "mock" him. At last he is racked by a "battle of thoughts," some humbly urging the beneficence of his love, others stubbornly objecting its humiliations and apparent hopelessness. But at last, attaining the spirit of renunciation, no longer suing for her grace, he resolves to seek a blessedness that cannot fail him in contemplating and praising her; and gradually he finds it. Indeed, disciplined at last to this novel kind of love, he finds it no longer bitter, but "sweet" to his heart; and is so happy in the "grace" of Beatrice's ennobling beauty, that his heart cries for "more grace" (*più salute*).

Instead, apparently, the source of his blessedness is dried up. Beatrice dies. He has lost, it seems, the grace of her beauty forever. And so in his forlornness, he accepts lovingly the consolation of another lady. Again, his intentions are good. The Consoling Lady is so gentle, so like the lost Beatrice in color and demeanor; "noblest love," he assures himself, must abide with her. But the expected peace does not come; rather he is torn by a new "battle of thoughts," some justifying his earthly consolation, some declaring it most "base" as faithless to Beatrice. Again, by a vision—this time of Beatrice, very likeness of the Love who before had appeared—Dante is shamed from his shadow-love, and in agony of penitence professes once more and for always only Beatrice. And in reward he receives in a vision again the sustaining grace of her visible presence in that higher life where he may yet see her face to face.

Now, I dare say the reader of this summary of the story may think at once of Rossetti's "Blessed Damozel" wooing humanly her lover to her side, or of Goethe's tender-hearted Gretchen humanly pleading with the Virgin for her erring lover. He may find in the "New Life" only that idealization of womanly influence for good so familiar to us after the pseudo-platonism of the Renaissance and of the romanticists summed in Goethe's now hackneyed lines—

> Das Ewig-weibliche
> Zieht uns hinan.

But to Dante, I think, that romantic sentiment would have appeared preposterous. For his philosophy and that of his school woman was simply inferior or unfinished man. His master, Guinicelli, feigning himself rebuked by God himself for finding semblance of Him in "vain love" of woman and directing to her praise due to Him and the Virgin, makes the excuse that the lady's "angel face" was merely a reminder of the divine beauty. In fact, the excellence of any of God's handiwork might have served—the beauty of the stars, for instance. Indeed, in the "Banquet" Dante, following also Aquinas, says as much (III, ii, 50 *et seq. Cf.* Aquinas, *Comm. I Cor.*, xiii, 4). Now the highest excellence under heaven is human reason, and it is precisely in defect of reason that woman is, according to Dante, inferior to man; he explicitly denies her even "virtue," so far as that is the operation not of "a certain estimable emotion" but of reason. It would be obviously absurd, then, for man, superior in his highest faculty, to suffer himself to be led anywhere by woman, his inferior in just that faculty. I think it is safe to say that for Dante it was not Beatrice the woman who drew him "upward and on,"—even if there was a woman called Bice whom he loved.

But suppose, granted her existence, that her name and "angel face" reminded him of blessedness, his ultimate good, then, that relationship once established, analogy might easily be drawn between his profane desire of the woman and his holy desire of blessedness, and the course of the profane desire be

so told as to imply the course of the holy desire. Let us see.

The literal story of the "New Life," as outlined above, has two moments in which Dante's desire of Beatrice is potentially fulfilled: first, just before her death, when, as he says, "her virtue wrought in me" so that "even as Love was hard to me at first, so now doth he dwell sweet in my heart"; secondly, in the final vision of her in paradise, when his "pilgrim spirit," reaching whereto it desires, contemplates dimly "through her splendor" his lady in glory. Accordingly, if Beatrice signifies blessedness, these two potential fulfilments are respectively of blessedness in this life and in the next. The one way to both fulfilments is "holy love, or charity" towards men and God. By the grace of Beatrice—the salutation hoped for—"no enemy was left to me," declares Dante, "but rather a flame of charity possessed me which made me pardon whomsoever had offended me; and to him who had then asked of me concerning any matter, my answer would have been simply: *Love!* with a countenance clothed in humility." By the grace of Beatrice—the salvation hoped for—(since *salute* means both "salutation" and "salvation") his whole care is to be with her "who gazeth in glory on the face of him, *qui est per omnia sæcula benedictus.*" "Thou shalt love the Lord thy God. . . . Thou shalt love thy neighbor as thyself. . . . On these two Commandments hang all the Law and the Prophets."

Thus by desire of the earthly Beatrice, earthly blessedness, Dante receives human charity which fulfils the moral law by overcoming not only sin, but the temptation of sin; and by desire of the heavenly Beatrice he receives divine charity which unites man with God and is the joy of the blest. It is, as we have seen, the dual message of the "Banquet," the "Essay on Monarchy," the "Divine Comedy."

But the way of true love never runs smooth. Human nature attains blessedness, earthly and heavenly, only by a "way of sighs." Human desire is strong; human understanding weak, ever mistaking shadows for realities. Too well Dante served those shadows of "noble love," those *pleasing* ladies, "screens" of his *blessed* lady. Pursuing inordinately earthly "pleasures," he lost for a time the hoped-for grace of blessedness in this life. Then, that blessedness potentially attained, not at once realizing that it itself is but the shadow of heavenly blessedness, he abides in the shadow of the active life, the fallaciously Consoling Lady, until by divine grace light is given to disperse the shadow and to lead heart and will and mind to desire and meditation of true blessedness.

As I have said, I do not expect this bare outline to carry conviction; but I venture to assert that body and weight can be given it by side-hints and continuous accordance of detail. Certainly, by such interpretation, if justified, the "New Life" acquires new importance as conveying Dante's essential message; and, I believe, also richer literary sanction. Conceived as a love-story colored by "the mystic apotheosis of woman," it is open to the sarcasm of Karl Vossler, a recent German critic: "There is a foppish and modish cast to this youthful work which has made it especially dear to all æsthetes." But conceived as an allegory of religious conversion, its ecstatic intensity, its swoonings and tears, genuflections and exaltations, cease to appear fantastic and improbable, for such is the confessed behavior of the religious convert of all ages; as a work of art it is so, and probably so only, true to life.

NEWS FOR BIBLIOPHILES.

The first editions of the writings of Charles Dickens hold a permanent place in the hearts of book-collectors and on the shelves of their libraries. What is perhaps the best Dickens collection ever brought together is the one now on exhibition (to continue until March 8) in New York, at the Grolier Club's house in East Thirty-second Street. The books exhibited are, for the most part, loaned by members of the Club, though some items are from the collection of the late Harry E. Widener. The catalogue, compiled by Ruth S. Grannis, the Club's librarian, is a book of 228 pages, describing 342 items. While not primarily a Dickens bibliography and while not complete, owing to the omission of a few items (generally of minor character) not in the exhibition, it is, in fact, the best printed guide for the Dickens collector thus far issued. A few books are described which are not included in any of the earlier Dickens Bibliographies. Perhaps the most important of these new discoveries is an issue of the "Battle of Life" (1846), with a title differing from, and apparently earlier than, the three issues heretofore known. After the illustrative title-page, "A Battle of Life," had been engraved, the publishers, or the author, decided that a further explanatory phrase, "A Love Story," was necessary, and the variations of the four issues are brought about by changes in this sub-title. In this newly discovered variety, which seems to be the first, the three words, "A Love Story," are printed from type, below the illustration. In the second issue "A Love Story" is in a simple scroll, engraved upon the lower part of the plate below the illustration. In the third issue the scroll is altered, and the figure of a cherub supporting it is added, as well as a publisher's imprint, in a single line. The fourth differs from the third only in the absence of the line of imprint, which has been removed.

Owing to the fact that a large remainder of the sheets were discovered some years ago in a printer's warehouse, Dickens's first play, "The Village Coquettes" (1836), is no longer included among the great rarities, although the separate issue of the "Songs, Choruses and Concerted Pieces" must be so considered. The copy of the latter which is exhibited is a presentation copy to J. P. Harley, who acted one of the parts when the play was first produced at St. James Theatre in December, 1836. It is loaned by Mr. Morgan. Only slightly less rare (when perfect, with the frontispiece by H. K. Browne) is Dickens's second play, a farce, "The Strango Gentleman" (1837). The copy exhibited, loaned by Frederick R. Halsey, is perhaps the most valuable extant, as it contains Browne's original drawing for the frontispiece. In 1871 Chapman & Hall issued a facsimile reprint, but without the frontispiece by Browne, which is so exact that no typographical variations can be discovered. Miss Grannis indicates some slight variations in the positions of corresponding words on two sides of a leaf, discovered by holding the paper up to the light, but we doubt if these would be constant in all copies. Any collector before buying a copy of "The Strange Gentleman" without the frontispiece would do well to insist upon a pedigree for it.

Dickens wrote another play, "Is She His Wife?" which was acted at St. James Theatre in 1837, and, without much doubt, printed the same year, though no copy is now known. The Boston publisher, James R. Osgood, once owned a copy, which he described as "demy 8vo. 32 pages," and from which he made a reprint in 1877. Osgood's copy of the original was destroyed in the great Boston fire of 1879. There are in existence some three or four copies of an undated pamphlet edition, 22 pages only, of uncertain origin and date, but ascribed to 1873. The first of these seems to have been discovered in 1902. More definite information about it ought to be forthcoming.

Another dramatic piece, "Mr. Nightingale's Diary," is almost as rare as "Is She His Wife?" though printed fourteen years later. Osgood's copy, from which he made a reprint in 1877, was also destroyed in the Boston fire, and for a long time the only copy known was the one in the Forster collection in the South Kensington Museum. The Grolier Club exhibit contains Wilkie Collins's copy, afterwards Augustin Daly's, now Mr. Halsey's, and it is said that one other is known.

Few Dickens collectors are familiar with the three Royal Literary Fund pamphlets printed in 1858: (1) "The Case of the Reformers in the Literary Fund. Stated by Charles W. Dilke, Charles Dickens, and John Forster"; (2) "Royal Literary Fund. A Summary of Facts. Together with a Report of the Proceedings of the last Annual Meeting, March 12, 1858"; (3) "Royal Literary Fund. The Answer to the Committee's Summary of 'Facts.' By C. W. Dilke, Charles Dickens, and John Forster." That Dickens was the actual author of the first and third is virtually certain, and the second, drawn up by a committee of the other faction of the Society, contains, in the report of the annual meeting, a speech by Dickens.

First editions of all the regularly published books are shown in the exhibition, including the novels as issued in monthly parts. The "Pickwick" is a particularly interesting copy, the covers of Nos. 1 and 2 bearing the legend "With Four Illustra-

tions by Seymour," and that of No. 3 "With Illustrations by R. W. Buss." Only a very few copies with these covers in correct state have survived. The covers generally read simply "With Illustrations."

As is well known, most of Dickens's manuscripts are in the South Kensington Museum, to which they were bequeathed by John Forster. From the few important manuscripts not in the Forster collection the Grolier Club has been able to procure for its exhibition portions of "Pickwick" and "Nicholas Nickleby" and the entire manuscript of two of the Christmas books, "The Christmas Carol" and "The Battle of Life," besides several shorter pieces, articles contributed to periodicals, a speech, the petty cash book kept by Dickens when a clerk in a lawyer's office in 1828, various autograph letters, etc.

A miniature on ivory, two portraits in oils, and several pencil sketches and water-color drawings are shown, as well as a few relics. A chair from the dining-room of Gad's Hill, Dickens's office slate, his paper knife, and the calendar which was upon his desk at the time of his death, give a personal touch to the exhibition which, though a little belated, is, we believe, the best of the numerous loan collections brought together in England and America to mark the centenary of Dickens's birth.

Correspondence

DISPROPORTION IN COLLEGE CULTURAL COURSES.

To the Editor of The Nation:

Sir: Studying through college catalogues, the open-minded teacher finds himself with a growing amazement at the disproportion in time, effort, and nature of work existing among college cultural courses. The lack of proportion seems to be largely, but not wholly, due to the use of the semester system. Illustrations from the catalogues will lay bare the error, and constant mindfulness of the semester system will reveal what seems to be one of the chief causes.

The policy of too many departmental heads in colleges seems to be to treat all subjects alike. For example, an English literature curriculum before me offers more than twenty three-hour-a-week semester courses. In it the history of English literature receives the same amount of time—and presumably the same amount of attention—as eighteenth-century prose; the drama (1590-1640, exclusive of Shakespeare) as much as "Poetics"; "Beowulf" as much as Browning. Another curriculum offers a dozen three-hour-a-week year courses. The majority of these courses are just fragments of literature—all so-called periods of literature seem to be regarded as equally fertile in cultural crops. A third offers twenty-five two-hour-a-week semester courses. In it "Beowulf," Milton, fourteenth-century literature, drama, the novel, Shakespeare, history and principles of versification, nineteenth-century poetry, nineteenth-century prose, receive each two hours a week during a semester.

That all fields yield like quantity and equal quality of crops is hard to believe. For instance, a class studying the novel (in still another college) meets three times a week for a semester. It reads seventeen novels—a requirement necessitating the reading of more than 500 pages a week. The *studying* in such a course will be neither prolonged nor intensive. But aside from undue length of assignments (which always means hasty reading), and aside from what of value a student may or may not have got when he has completed the work, is not such a course a violation of the æsthetic sense of enjoyment? The works of our standard novelists are to be read, if read appreciatively, in small bits; they are not to be gobbled down. The life in them is not in tabloid form; it is spread out—like life itself—and varied. Would it not seem that the nature of such a study lends itself not to a three-hour-a-week course through one semester, but better to a two-hour-a-week course through the year?

A course in Victorian poetry gets the same amount of time, three hours a week during a semester. Students "study" the works of Tennyson, Arnold, Rossetti, Morris, Browning, Swinburne, as "leading figures of the nineteenth century," in order to "trace the principal currents of nineteenth-century thought." Which course, this or the one in the novel, each receiving the same amount of time, and, presumably, of attention, contains the greater cultural value? However, without asserting the predominating value of one over the other, ask two questions: Which is the more suitable for *study?* and, Which lends itself better to the semester system?

The nature of such a course demands that the work be both intensive and extensive. For working-material the student has fifteen or twenty short poems chosen from each writer's poetry and extracts from his longer, more philosophical poems. So big is the demand and so inadequate are the selections that teachers, feeling guilty, refer the students to learned and highly specialized volumes dealing with the subject. Through these the student may browse, forgetful, or almost forgetful, of the poet's poems.

When we are thus hastily shoving a student over the surface of a few selections, can we expect him to "grasp as a whole" the work of any poet—much less understand the poet's "philosophical attitude towards life" and his "reflection of the thought of his time"? If the course is to be thus comprehensive and thus philosophical, the student must have plenty of the original material to work, must have time for study, must be taught to reflect, and must have time for reflection. (And, by the way, he must *not* be deprived of the value and joy of discovery and of original work.)

Should it not seem that such a course with such an aim would be better treated in many semesters? If the novel is worth one semester—measuring cultural values in semesters—would not such a course be worth many semesters?

So the disproportion goes. Courses seem to be constructed, not ordinarily in consideration of their sterility or fertility, but in consideration of their time-grouping or clustering; if a number of writers lived at about the same time, they are to be studied together, almost without regard to the relative cultural values of their writings. Groups, one is tempted to make the deduction, must be of equal cultural value; and the individual writings making up each group must be of less value than the time-clusters. Such reasoning is unsound. Such apportioning of studies to time and to kind and amount of material suggests an unthinking desire of the instructor to "cover so much ground."

Harold G. Merriam.

Beloit College, January 18.

STRAINING AT A GNAT.

To the Editor of The Nation:

Sir: In the editorial on "The Efficiency Nostrum" in your issue of January 16, there appears to be a misunderstanding of what was attempted recently by the assistant controller at Harvard. There seems to be no ground for supposing that his inquiry suggests a tendency towards installing at Harvard or anywhere else a system requiring periodically "each professor to make report of every hour that he spent upon his work, and have his pay doled out to him accordingly." Data as to disposition of time were sought "as a basis for *pro*-rating salaries," not *re*-rating them. It was contemplated using the figures "for the purpose of distributing salaries," which does not mean assigning or allotting them to individuals. It is the accountant's, not the economist's, sense of the term distribution which was evidently employed. Many industrial concerns "prorate" or "distribute" the salaries and other general expenses each month, or each "period" of accounting, to the different departments of the business ("to the various classified functions," to quote the assistant controller), and that practice has no effect on the amount of the salaries, present or future, whatever.

Charles W. Mixter.

Philadelphia, January 24.

AREN'T I?

To the Editor of The Nation:

Sir: In the issue of January 23, J. M. Hart asks *Nation* readers whether he is justified in rebelling at the use of "Aren't I" in Book II, chapter iii, of Wells's "Marriage." In my opinion, Mr. Hart is not justified.

In the sentences, "My dear! Aren't I a feminist? Don't I want women fine and sane and responsible?" the phrase is a mere piquancy of speech. Trafford, the speaker, "the latest word in British science and culture," is perfectly conscious of his solecism. He is speaking intimately to his wife and employs the expression with artistic carelessness, just as Mark Twain uses "don't" with a singular subject to procure humorous effect.

There is a subtlety in the adaptation of words to emotions that is much more easily felt than expressed. Mr. Hart asks: "Is there anything to prevent our saying Am I not?" "Am I not" is an embarrassment to all lovers of graceful speech. In dignified discourse it does very well, but in intimate conversation it is depressingly awkward. If I were a woman whose husband said, "My dear! Am I not a feminist? Don't I," etc., I should find in his question a certain argumentative superiority instead of affectionate sympathy.

There is no doubt that *Aren't I* is wrong, and Wells knew it was wrong and Trafford

knew it was wrong, and the readers of the *Nation* know it, and so do I. But we like it. And we are sorry that Mr. Hart considers the use of *Aren't I*, without reservations, "indiscriminate jabbering or scribbling," because we think he misses some of the joys of life. M. I. HASKELL.

Hampton Institute, January 25.

Literature

EMILY BRONTË.

The Three Brontës. By May Sinclair. Boston: Houghton Mifflin Co. $3 net.

Miss Sinclair has written her study of the Brontës in a fierce glow of indignation against those who would trace the beginning of Charlotte's power to an ill-fated passion for M. Héger, the Belgian schoolmaster, or would attribute Emily's great work to her caitiff brother, Branwell, or in any other way would deflect to some alien source the inspiration that sprang spontaneous in the breasts of the divine sisters. She has done a good work in laying those ghosts of criticism, and she has written an interesting book, although a reader here and there may feel that her language is keyed a trifle too high, is even hysterical in places, and may ask whether her peculiar tone of exultant praise is not due to her conception of the Brontës as rebels against the limitations imposed on the feminine intellect, rather than to a just literary appreciation of the Haworth novels. To connect the homeliness of Jane Eyre (who, after all, was probably not so plain as she paints herself) with the emancipation of woman has, at least, its humorous aspect.

More particularly, Miss Sinclair has centred her admiration upon Emily, who, rather than any dull male of Brussels, was the awakener and sustainer of Charlotte's genius: "'Wuthering Heights' was the fruit of a divine freedom, a divine unconsciousness. It is not possible that Charlotte, of all people, should have read 'Wuthering Heights' without a shock of enlightenment; that she should not have compared it with her own bloodless work [in 'The Professor']; that she should not have felt the wrong done to her genius by her self-repression." Hence, the glorious liberty of "Jane Eyre," and hence a new phenomenon in letters. We are gravely assured that, until Jane confessed her love to Rochester in the orchard, "passion between man and woman had meant animal passion"; and "it was this thing, cast down, defiled, dragged in the mud, and ignored because of its defilement, that Charlotte Brontë took and lifted up. . . . She showed it for the divine, the beautiful, the utterly pure, and radiant thing it is, 'the very sublime of faith, truth, and devotion.'" One wonders a little why, in this leap-year hymn to Liberty, the point should have been overlooked that, in a still more specific way, "Wuthering Heights" was the original; for there, too, the avowal of love had been left to the female characters. But the reader is likely to be more interested in Emily's epic venture than in this dubious praise of unrepressed passion, which, by the way, Jane Eyre would utterly repudiate, or, rather, has nobly repudiated in word and deed.

"The Complete Poems of Emily Brontë," edited by Mr. Clement Shorter in 1908, contained, besides the verse already well known, the sixty-seven poems privately printed in 1902 and a new group of seventy-one poems then first made public from the notebooks which had come to the editor from Charlotte's husband. There is undoubtedly something extravagant in Miss Sinclair's praise of Emily's verse as a whole; a considerable part of this product is of an immature, school-girlish character, which tends rather to obscure the genius of the writer and might better have been left unpublished. But Miss Sinclair has made one discovery which, if not very valuable intrinsically, does in a way throw an interesting light on the working of Emily's mind. Scattered among the new poems she has detected a whole group of inventions which she regards as the "fragments of a Titanic epic," on which the poet was brooding from 1834, when she was about fifteen years old, until 1845, two years before the publication of "Wuthering Heights." The theme is traced by the recurrence of certain fanciful names, such as Gondal, Zamorna, Almedore, and from the apparent importance of the first of these the poems are styled by Miss Sinclair the "Gondal Chronicles." Whether Emily ever had the plan of uniting these *disjecta membra* into a single epic, may be doubted; it is, however, perfectly clear that for eleven years her imagination was dwelling in a strange fictitious land, among the Gondal folk, and was haunted by fairy rumors of revolutions and embattled armies, of exiled heroes, and forsaken ladies. It is all a wild medley of Byronism and Ossianism and balladry, the sort of thing, except for the occasional vigor of conception and language, which one would expect to find inhabiting the mind of a romantic, lonely, half-educated girl, but astonishing in the mind of a woman who had already written "The Old Stoic," and may even then have been plotting the story of a miraculous novel. A few of these newly printed Gondal ballads are themselves of stirring beauty, and it is a fair conjecture that some of the poems published in the two collections of Emily's verse made by Charlotte drew their theme from the same imaginary land—for instance, "The Visionary":

Silent is the house: all are laid asleep:
One alone looks out o'er the snow-wreaths deep,
Watching every cloud, dreading every breeze
That whirls the wildering drift, and bends the groaning trees.

Cheerful is the hearth, soft the matted floor;
Not one shivering gust creeps through pane or door;
The little lamp burns straight, its rays shoot strong and far;
I trim it well, to be the wanderer's guiding star.

Frown, my haughty sire! chide, my angry dame;
Set your slaves to spy; threaten me with shame:
But neither sire nor dame, nor prying serf shall know,
What angel nightly tracks that waste of frozen snow.

What I love shall come like visitant of air,
Safe in secret power from lurking human snare;
What loves me, no word of mine shall e'er betray,
Though for faith unstained my life must forfeit pay.

Burn, then, little lamp; glimmer straight and clear—
Hush! a rustling wing stirs, methinks, the air:
He for whom I wait, thus ever comes to me;
Strange Power! I trust thy might; trust thou my constancy.

It is a fair conjecture that these stanzas, with their style halting between the sublime and the naïve, are the expression neither of an actual passion idealized, as some would have us believe, nor of a pure mysticism, which Miss Sinclair would compare with the Divine Love of Juan de la Cruz. In the writer's imagination these snowy moors of Yorkshire were no doubt here blended indistinguishably with "Gondal's mists and moorlands drear"; the haughty sire and prying serf were at once symbols of the restraint in the Haworth parsonage and actors in some scene of her epic dreams; and the visiting Power was a creature strangely combining the abstract spirit of rebellious mysticism and some exiled wanderer that sought his lady love on Zamornah's howling plain, or in some other equally fantastic land.

It is a common thing to speak of Emily as a Stoic or Pagan, and in support of such a view to quote the great lines:

Yes, as my swift days near their goal,
'Tis all that I implore;
In life and death a chainless soul,
With courage to endure—

or the stanzas beginning, "No coward

soul is mine," or the wooing words of the Night-Wind:

> And when thy heart is resting
> Beneath the church-aisle stone,
> *I* shall have time for mourning,
> And *thou* for being alone.

But from Paganism or Stoicism, in any precise use of the terms, she was really removed by a whole world. Power of endurance she had, sympathy with nature she had, but the spirit beneath it all was that of romantic rebellion rather than Stoic *apathia*, and her true father was Byron rather than Marcus Aurelius or Epictetus. When by chance the true Pagan note does come out strongly, the result is a commonplace, as in the close of one of the new poems (No. xl):

> True to myself, and true to all,
> May I be healthful still,
> And turn away from passion's call,
> And curb my own wild will.

The lines are commonplace, because they do not belong to the writer. They do not express her temper in life. They were belied by her passionate will when she came to die, and by the pitiful rebellion of her spirit against the frailty of the flesh, causing agony to herself and wringing from her sister Charlotte the cry of distress: "Moments so dark as these I have never known." Mrs. Gaskell tells how Charlotte shivered at recalling the pang she felt when, "after having searched in the little hollows and sheltered crevices of the moors for a lingering spray of heather—just one spray, however withered—to take in to Emily, she saw that the flower was not recognized by the dim and indifferent eyes." And the closing scene is equally fitting and symbolical. Emily's fierce bulldog, Keeper, "walked alongside of the mourners, and into the church, and stayed quietly there all the time that the burial service was being read. When he came home, he lay down at Emily's chamber door and howled pitifully for many days." Fitting incidents these, for when we think of her in life, it is with the image in our mind of the slight, unyielding figure, a mere girl, abroad on the lonely moors, with face set against the wind, and by her side the savage guard and companion. The other sisters loved their home in the moorland, but to Emily it was very existence, and in her brief absences she pined for it as the prisoner yearns for liberty. "Every morning when she woke," wrote Charlotte of the unfortunate time in Brussels, "the vision of home and the moors rushed on her, and darkened and saddened the day that lay before her."

But, again, let us not mistake the nature of Emily's passion for her beloved moors. It certainly was not Stoic, nor was it in any sense Pagan: Virgil or Horace would have deemed it a madness. Neither had it that touch of mysticism which springs from the contrast of the earth's stability with man's ephemeral generations; there was little or nothing in it of the neo-Paganism of Thomas Hardy's description of the bonfires on Egdon Heath—"the great inviolate place," unaltered amid the successive destinies of mankind, with "an ancient permanence which the sea cannot claim," and with a message of peace for "the mind adrift on change and harassed by the irrepressible New." Emily Brontë was too inexperienced in life to bring to the moors any such worship as that; she brought to them rather her own spirit of romantic revolt, and in their lonely winds and empty spaces found what seemed to her a sympathetic mood. With the help of the Gondal poems, it is not difficult to conjecture in a way the kind of thoughts and emotions upon which she brooded in her solitary walks. The feeling that preyed upon her soul was more an inarticulate, almost sullen, clamor against the inhumanity of an unknown destiny than any definite rebellion against the particular circumstances of her life, and no inconsiderable part of it, one suspects, sprang from a kind of emptiness of heart, from the stirring within her of deep emotions which had no specific object of attachment. Out of that vague rebellion and those unfed emotions, and out of the memories of romantic reading, her genius went creating a world of her own, peopling it with heroes and heroines of strange names and malignant fates and lamentable utterance. It seems all very girlish, yet in the girl's brain there dwelt intermittently a power of imagination and insight and a faculty of penetrating expression, which made of her immature musings the prophecy and at times the reality of true and courageous literature:

> No coward soul is mine,
> No trembler in the world's storm-centred sphere:
> I see Heaven's glories shine,
> And faith shines equal, arming me from fear.

From the Gondal and more personal poems to "Wuthering Heights" the step is not great, either in time or in mood; and in the novel we find the same spirit prevailing of vague romantic revolt, the same depth of inexperienced emotion, the same creative faculty, more concrete now, but still half-inhuman. The style and sentiment of the book are occasionally crude and even feeble, yet, withal, the story, from the opening scene, grips the attention, and as a whole is undeniably successful in conveying to the mind of the reader what was in the mind of the author. To place it above "Jane Eyre" as a creation is to ignore the greater elements of art, but in its own way it is undoubtedly one of the miracles of literature—more miraculous, indeed, than admirable. Its very suddenness, so to speak, is astonishing. The impression it gives is such as might come to one who was lost on the moors in the thick obscurity of night, moving apparently in an absolute solitude, when out of the darkness came a flash of light and passed again into the darkness, revealing for a moment before the dazed eyes of the wanderer a group of actors, human and more than human, noiselessly engaged in some deed of terror. There is no connection of the plot and characters of the story with a surrounding world; all about it is opacity. The origin of the hero is unknown; he has but a single name, Heathcliff, and is brought into the little group of actors from the unexplored outside and for unexplained reasons. For a while, when he has been baffled by the marriage of Catherine and Edgar, he disappears again into the outlying shadows. And at the end he fades into death by a kind of unaccountable suspension of the faculties—"I have to remind myself to breathe," he exclaims, "almost to remind my heart to beat!" His passion has burnt itself out, and oblivion falls upon the scene like a black curtain. And within that circle of impenetrable darkness, he moves as a creature whose emotions are derived from another world than ours. "How did you contrive to preserve the common sympathies of human nature when you resided here?" writes Heathcliff's young bride to the old servant. "I cannot recognize any sentiment which those around share with me. . . . Is Mr. Heathcliff a man?" And at the end the servant herself, who tells the story, asks: "Is he a ghoul or a vampire? . . . Where did he come from, the dark little thing, harbored by a good man to his bane?"

There has been some discussion in regard to the master passion of the story: to one critic it is the working of heredity; to Miss Sinclair it is a spiritualizing love which takes possession of a soul and casts out every other feeling. But how, it may be asked, can such a feeling be properly attributed to a being who, from beginning to end, is represented as scarcely human? The fact is the author herself was too little attached to the world of men to give articulate expression to any such tie between man and woman. But out of her self-devouring heart and her rebellious soul she drew the understanding of one passion, scarcely human indeed, though it sometimes visits mankind, the most terrible and blinding passion the world knows, the passion of sheer, enduring cruelty. That is the emotion, as yet vague and unnamed, that comes

to the reader when, with the fictitious writer of the story, he is first introduced into the haunted chambers of "Wuthering Heights." That is the spring of Heathcliff's diabolical treatment of Hareton and his wife and his own pitiful son. Even the love of Heathcliff and Catherine, after her death, is turned in the survivor's heart into a spectral inquisition: "She has disturbed me night and day, through eighteen years," he cries, "incessantly—remorselessly—till yesternight—and yesternight I was tranquil. I dreamed I was sleeping the last sleep by that sleeper, with my heart stopped and my cheek frozen against hers. . . . She showed herself, as she often was in life, a devil to me. And since then, sometimes more, and sometimes less, I've been the sport of that intolerable torture." Cruelty, and not love, cruelty of the living and of the dead, is the master passion of the book. If one were looking for a parallel to the sufferings of those who are the sport of this inhuman passion, it would be found in the diabolism that surrounds Webster's Duchess of Malfi:

I'll tell thee a miracle;
I am not mad yet, to my cause of sorrow.

CURRENT FICTION.

Clara: Some Scattered Chapters in the Life of a Hussy. By A. Neil Lyons. New York: John Lane Co.

Facing the title-page of this book is a list of works "by the same author," classified under the headings Romantic and Unromantic. After reading "Clara," which falls under the romantic category, we find ourselves wondering what this Mr. Lyons is like when he is being unromantic. There are passages and chapters here of as unvarnished realism as ever came from the pen of a newspaper-bred cockney. Some of them are rather shocking—notably The Mile End Sensation. That fragment is among the "interludes" which have nothing to do with Clara. But she herself lives in a world of spades which are to be called frankly by name, and is a hussy according to all known rules. She is a thief, a free lover, a disreputable and contented dweller in the slums. She has "done her bit" in prison, and the father of her son is, during the episodes here recorded, performing a similar office for society. The parents are married—to third and fourth parties. But that has nothing to do in one way or another with their devotion to each other or to their boy. The story of Clara's marriage as she tells it is realistic and squalid enough in point of detail. She marries a cur of the streets in order to avenge his unspeakable treatment of his dead wife. The sole incident of the honeymoon consists in a horse-whipping administered by the bride, followed by the permanent disappearance of the groom. But Clara's action here, as always, is essentially romantic. She is a champion of the weak, a friend to the downcast, a humorist without feeble sentimentality. Life never for a moment loses its zest for her, by reason of its own succulence, and there is always a dream in the distance to sweeten present good. From the book as a whole one gets an impression of uncertainty—of a brilliant young journalist trying his hand at various moods and modes. Several of the chapters might better have been omitted, as of small account in any way. But about the person of Clara herself there is no uncertainty—a real creature and a lovable.

Miriam Lucas. By Canon Sheehan. New York: Longmans, Green & Co.

Like all of Canon Sheehan's stories, this one has a quaint and individual flavor; but unlike several of them, it has very little else to commend it. The plot is melodramatic, the situations are forced, the persons are unreal: the hero a flabby figure, the villain a monster, the heroine a bore. It is always a risk for this writer to undertake an elaborate and sustained narrative. His sketches of Irish character are engaging, and once at least, in "The Intellectuals," he produced a longer work of distinct merit. That book owed its charm to the fact that it did not attempt sustained narrative. It was little more than a series of dialogues strung upon a slender thread of incident—a species of "Autocrat of the Breakfast Table" with Irish setting and personnel. The present story involves a large number of characters, a continual shifting of scene, and a confusion of themes. The shadow of the author of Waverley hangs over the opening pages. A lonely neighborhood, a great house furnished with a curse and a prophecy, and inhabited by a beautiful girl about whose birth hangs a mystery; a guardian who covets her person and her inheritance; a gallant young gentleman of established social position who stumbles upon her to some purpose; his worldly mother—here are familiar materials. A new point of attack or a fresh method of treatment might excuse their rehandling. The only novelty in Canon Sheehan's use of them is his presenting them, in all their antiquity, alongside certain industrial and social materials whose modernity makes them appear more hopelessly obsolete than ever.

Miss Philura's Wedding Gown. By Florence Morse Kingsley. New York: Dodd, Mead & Co.

What would our fiction be without the spinster of New England? Her existence as a type is quaintly due to a surplus of the sex in that snug corner of America. It is, we are told, because there are not enough husbands to go around that we find so many charming maidens of a certain age in the Yankee villages. But it is never too late to hope: in fiction at least, they are always hoping, and there is always at least a chance for them. Men become widowers. The boy lover whose budding passion has been nipped by parental interference, or blighted by ambition to see the world, returns to his old home and his old love.

And there is always the parson. Miss Philura, sticking womanfully to her post, is rewarded by this chief of matrimonial prizes. Her "transfiguration" has been recorded in an earlier story The theme of this narrative is considerably slighter, a mere feminine drama of dress. The short of it is that Miss Philura ardently desires a white wedding-dress which she has no means of buying. At a meeting of an "Ontological Club" she has heard a lecture about the Encircling Good, from which faith might win whatever it sufficiently desired. She applies for a white gown, and obtains it, through channels somewhat less than mystical. The little story is not too far-fetched: the village dialect uncommonly good.

Concerning Sally. By William John Hopkins. Boston: Houghton Mifflin Co.

In "The Clammer" and later stories, this writer has produced work of rather studied quaintness. The present novel shows less of mannerism. Its quality is, however, distinctly feminine, and we imagine few men will care for it. Sally herself is one of those distressingly wise, capable children whom juvenile fiction is wont to hold up as models for both young and old. At twelve Sally is the real head of her family. She knows more than her father or her mother about the conduct of life. Her mother is a lady, but rather a fool. Her father is a university professor, but very much of a rascal. It is for Sally to instruct the one and spy upon the other, and, with the aid of her creator (we mean Mr. Hopkins), to show herself the intellectual and moral superior of—her betters. The type is familiar. In boys' stories it has long held the stage. Sadly, with a sense of misspent youth, must the shade of Rollo look upon these heroes, free not only to defy, but to admonish their more or less contemptible elders. The heroine of the "story for girls" has acquired this license more recently; but she has acquired it. Lecturing her parents is the breath of her nostrils.

The present story is not professedly a story for the young. Sally grows up physically, and is admitted to be an adult during a considerable portion of the narrative. The point is that, morally and mentally, she cannot grow up, since she has sprung full-grown from the head of Mr. Hopkins. Fox Sander-

son, for whom she is clearly destined from the beginning, is a fit running-mate—a preternaturally wise and virtuous undergraduate, who will never be anything less than wise or more than an undergraduate. We do not feel that Mr. Hopkins is writing from the shoulder about people whom he feels to be real. The rascally professor is impossible, not because he is both a professor and a secret gambler, but because we are expected to believe that in his character of gambler he is naturally cruel to his wife. It is the kind of story which, all the more on account of its clevernesses of detail, provokes again the query, Why should anybody in this day go to the trouble of making a novel out of whole cloth?

THE FRANKLIN OF JAPAN.

Just Before the Dawn: The Life and Work of Ninomiya Sontoku. By Robert Cornell Armstrong, M.A. New York: The Macmillan Co. $1.50.

Japan's debt to her own past is very imperfectly understood by Americans. Her military achievements are obviously too considerable to be fortuitous, and we readily attribute them to inherited traditions of training and obedience, but we have much to learn of those moral and mental qualities which the nation owes to a similar inheritance. The illusion that the Japanese are somehow different from ourselves in essential traits of humanity ought to be dispelled by Mr. Armstrong's study of the Franklin of Japan. His translations from the abundant native literature on the subject show the common farmer at work in his old-fashioned way. It is a revelation of the influence there of the type of homespun philosophy which our country folk like to call hard-headed, and brings these people singularly close to our own.

Barring the rather flabby imagery of his title, Mr. Armstrong's book is an excellent piece of work. The world owes too much to missionaries abroad to criticise their literary taste severely, but they seem to moult the feathers of early Victorian taste in metaphor with strange reluctance, and they are regrettably apt to leave to librarians the painful task of cross-reference and explanation made necessary by meretricious titles. The "Dawn" in this case means the time preceding the Meiji era of enlightenment in Japan, not the earlier periods of Jimmu or Shotoku, which were equally years of dawn in the same sense. The predicament of Japan after two centuries of Tokugawa tyranny is one of extreme interest to the student of society, for in no other case has a hermit-nation programme been attempted upon the same scale and under such favorable conditions. The empire at the time of Queen Elizabeth's death was probably richer, more populous, and more cultured than England. Its people were saved from anarchy in that year by the effective concentration of power in the hands of one master, but internal peace and protection from foreign interference were produced at the price of complete stagnation. When Ninomiya, a peasant with ideas of his own, began his work two hundred years later, economic decay and social corruption had reduced a flourishing country to impotence. The contrast to the fortunes of Great Britain in the same period offers an impressive object-lesson to students of history.

This situation is briefly outlined in the earlier chapters of the book. It has an interest all its own; but the lapse of an eager people, deprived of any scope for their energies, into luxury and vice which debauched even the serfs on the soil and paralyzed the resources of the country, is only one feature of its contents. A second is found in the fact that in one of the most consistently aristocratic communities ever organized the impelling spirit of reform came from the lower classes. The subject of this volume, who died about the time that Commodore Perry's treaty was ratified, was one among several reformers from the common people who labored for the relief of poverty in their generation. His chief claim to the admiration of his compatriots comes from his power of organization and from his refusal to dispense alms to the unemployed. His doctrine was the simple doctrine of work and thrift, and in his steady insistence upon this idea, as well as in the homely aphorisms by which he enforced his teachings, he continually recalls Poor Richard. The Japanese sage, like the Yankee, knew no short-cut to prosperity; it must be reached by constant effort and submission to methods which experience recommended; doles and charities were only hindrances to the able-bodied. For this reason he entertained the same ironical contempt for Buddhism that Franklin had for Christianity. As an institution he objected to the church because it harbored drones and encouraged useless speculation. But the value of morality as distinguished from religion was not ignored. "He believed," we are told, "that while it was a good thing to reform the individual, it was a better thing to unite men in the interest of the country and society in general. Hence came the organization of Hotoku, with its twofold object: first, to develop morality; second, to promote industry and economy. The plan of the society was to lay aside a fund from which loans could be made to members and others who were struggling with debt or other unfavorable circumstances, and which could also be used to improve poor or neglected homes or villages, to start new industries and enterprises, and for public works." *Hotoku* (literally, "reward for grace") societies number above six hundred in Japan to-day, exerting an ever-increasing influence among farmers and artisans, and supplying at once an ideal and a practical purpose to multitudes who are generally unmoved by spiritual inducements.

A third feature of this volume, which should command the attention of students of Japanese society, is the philosophy which underlies Ninomiya's system. Though he approached his problem from the economic rather than the religious side, he was as far from Rousseau as he was from the priests:

> If we depend only on natural law [he declared], and are led astray by mere animal passion and lust, human life, with all that is peculiar to it, will be destroyed. Though there are no paths on the ocean, the ships have definite channels they must follow or be dashed to pieces on the rocks. So, though it is *natural* for man to desire delicate food and extravagant clothes, he must control mere passion and live well within his means. This is the way of humanity. To sow our grain is natural, but if we wish to make the grain profitable we pull up the weeds around it. It is not *natural* to pull up the weeds. So, following natural desire we must labor, but when natural desire clashes with duty it must be restrained.

It was, therefore, with no fear of inconsistency that, despite his disbelief in prevailing superstitions, he appealed to the supernatural succor of a temple god when it was necessary to deal with vice and evil habits. The appeal, even to a vain belief, served his purpose and he employed it as a restraining influence.

With his almost fierce emphasis upon the necessity of work for every one went the shrewdness and humor which inevitably attend the efforts of every effective philosopher. His sayings were not strikingly original, but they were propounded in original ways and applied to circumstances that were new. His method of teaching people to help themselves and refuse Government aid in an age when all looked to the state for guidance, constitutes his chief claim to originality. The enduring influence of his propaganda demonstrates, moreover, that there is a true democratic element in Japanese society, and that his people are susceptible to precisely the same weaknesses, promptings, and vulgar truths as ourselves.

A History of the Modern World, 1815-1910. By Oscar Browning. Two volumes. New York: Cassell & Co. $7.50.

To one interested in recent or contemporary European history Mr. Browning's work is a fascinating stimulant. The reader feels that it is not the colorless compilation of a Dryasdust, but the personal expression of a distinct individuality who has opinions of his own. It contains much quiet humor and some

sarcasm; many *reussi* phrases, and some moralizings worth pondering. The style, with its staccato sentences, is always lucid, and often enlivened by judicious quotations from the actual words of the great statesmen of the nineteenth century.

As the Alpine climber, who toils up the long ascent and reaches at last the summit, turns to look back upon his arduous course and survey the panorama of peaks which he has passed, so Mr. Browning—himself an Alpine enthusiast—who for thirty years has been toiling with students at the University of Cambridge and with historical investigations, and who for nearly seventy years has been closely watching history in the making, now turns at last to survey the events of a century. His point of view is that of an Englishman and an advanced Liberal. It is this English point of view, supported with good accounts of the growth of the British Empire, the extension of the suffrage, and the course of progressive legislation in England, which lends these volumes a thread of unity and helps bind together what is necessarily a broad and somewhat disjointed subject.

The peaks of modern European history which Mr. Browning chiefly delights to study from his summit of ripe experience and reflection, are the great moves in the field of diplomatic and military history. These are subjects which, when treated briefly, are usually neither interesting nor clear; from Mr. Browning's pen they are both; they are the subjects in which he is at his best. His narrative is always easy and interesting to follow, and his judgments are fair and statesmanlike. In addition to the inevitable chapters on the great wars which resulted in German and Italian national unity and in the carving up of Turkey, there are excellent accounts of such less obvious subjects as the Indian mutiny, the Afghan War, Khartum and the Sudan, the Zulu and the Boer Wars, the Chinese-Japanese, Boxer, and Russo-Japanese conflicts, as well as upon the American Civil War and the Spanish-American War. But from his summit Mr. Browning does not see, or at least does not adequately describe, the fundamental causes and the permanent results of all these wars. For instance, to get a start for his discussion of the Civil War in America he has only the briefest account of the slavery question; and after the assassination of Lincoln absolutely nothing appears to have happened in the United States until the blowing up of the Maine in 1898. He describes the Franco-Prussian War in detail, but gives no account whatever of the constitutions of the new French Republic and the new German Empire which resulted from that war. After devoting fourteen chapters, out of a total of sixty-seven, to the wars in the Balkan Peninsula prior to 1878, he drops the Near Eastern Question completely, merely remarking, "The whole story of the Treaty of Berlin enforces the melancholy reflection that the world, after all, is governed with very little wisdom." He does not tell us how that treaty has been violated by nearly every Power that signed it, how it is responsible for the situation which led to the recent outbreak, nor how, thirty years after it was signed by Abdul Hamid, the Turkish Revolution put an end to his abominable despotism.

Similarly, also, as the mountain-climber cannot see the villages in the valleys and forgets for the moment all the insistent sociological problems of the world beneath him, so Mr. Browning seems not to see the life of the people. It should seem to be an ill-proportioned History of Modern Europe which contains such a full account of so many wars as those mentioned above, and yet says virtually nothing of the advance of the industrial revolution in the countries of Europe, of the organization of socialistic political parties, of old-age pensions and sick insurance, of the Hague Peace Conferences, and of Modernism. This, however, is part of the secret of the delightful impression of freshness and individuality which his volumes make.

As a text-book for classroom use Mr. Browning's work is altogether inferior to such an excellent recent book as that of C. D. Hazen; for there are no maps, no bibliographical apparatus, and no proper sense of proportion; but the letter-press is excellent, careful reading is made easy by good catchwords in the margin, and for the teacher, the general reader, and so-called "collateral reading" in colleges, it is informing and stimulating. This is particularly true of the excellent chapters on the Balkan troubles. Here Mr. Browning severely scores Disraeli and Salisbury for their ignorance of real facts of geography and ethnology, and for the political blindness which led them to tear up the Treaty of San Stefano in 1878 and substitute for it the many absurd and impractical terms of the Treaty of Berlin. Salisbury afterwards admitted that he was wrong, and his admission has been made more glaringly evident by the events of the last six months; but it was a poor reparation for a disastrous error for him to say, as he did, some years later, that he had "put his money on the wrong horse."

The Wilderness of the North Pacific Coast Islands. By Charles Sheldon, author of "The Wilderness of the Upper Yukon." Illustrated. New York: Charles Scribner's Sons. $2 net.

Trails, Trappers, and Tender-feet in Western Canada. By Stanley Washburn. With 80 illustrations from the author's photographs. New York: Henry Holt & Co. $3 net.

Mr. Sheldon's volume opens with the record of a trip to Vancouver Island, in the autumn of 1904, in search of a bull wapiti for the scientists of the United States Biological Survey, who were interested in determining the relation of the Vancouver wapiti to the *Cervus Roosevelti* of the Olympics. The search was not successful, but the record makes attractive reading and carries much incidental information on various topics of natural history. In the spring of 1905 Mr. Sheldon spent several weeks hunting for the big bear of Hinchinbrook and Montague Islands, Alaska. On the basis of five specimens, sent to the Biological Survey at Washington, a new species has been officially recognized, with the appropriate title of *Ursus Sheldoni*, of Montague Island. An appendix gives a full description of this bear, from the pen of Dr. C. Hart Merriam, who is inclined to regard the coast region of Alaska as the original home from which the big bears of America have radiated. During the autumn of 1906, Mr. Sheldon visited Graham Island, of the Queen Charlotte group, to solve the mooted problem of the existence of caribou there. Though he did not succeed in setting eyes on a single caribou, unmistakable tracks were discovered in sufficient numbers to remove all doubt, and two years later two half-breed Indians shot three specimens, the skins and skulls of which were procured for the Provincial Museum, in Victoria. Its natural habitat, however, is in the dryer interior regions, and in the opinion of the author the small group that has existed in the Charlotte Islands is in process of rapid extinction. In the closing chapter Mr. Sheldon drops the more scientific attitude for a sketch of a two months' outing with his wife, on Admiralty Island. The ambition of the trip was to place a bear to the credit of Mrs. Sheldon's rifle, but the fates did not will the success which is supposed to come so regularly to an inexperienced woman in such matters. As we are told that she fell into a deep pool and succeeded in keeping her mouth and her rifle above the surface until Mr. Sheldon could get hold of her, the conclusion suggests itself that she was not quite unsophisticated enough to get a bear simply by way of "a woman's luck."

Mr. Washburn's book smacks all the way through of the style and vocabulary of the college student which he was in the later nineties, when his trips into the western Canadian wilds began. There is no pretence to the scientific quality which one finds in Mr. Sheldon's pages, and in his enthusiasm for Charles M. Hays and the conception of the Grand Trunk Pacific, his rhetoric at times runs perilously near the realm of the exploiter. His enthusiasms are apparently unbounded in many directions,

but two sharp limits are detected—one, the ascent of high mountain peaks, and the other the penetration of any fastness whatever which compels the use of his own shoulders as a substitute for the pack-horse. "I pronounce it the supreme limit of wretchedness and misery, this making a pack-horse of one's self. . . . At first the forty, fifty, or sixty pounds seems light enough, but after the first half-hour it is like lead, and by noon it is a millstone, while when night comes it is a great black nightmare, hanging to one like the Old Man of the Sea to Sindbad the Sailor." After what has been said above, we must do Mr. Washburn the justice to record his warning statement that misrepresentations have led distant and confiding purchasers to pay high prices for land virtually worthless, and that those who wish to obtain a stake in the fertile and highly promising land that certainly does exist in the regions described should see their purchase with their own eyes before letting their money go.

Notes

The President and Fellows of Harvard College voted, on January 27, to establish the Harvard University Press, for the publication of works of a high scholarly character. For some years the University publication office has issued a few special works. The present intention is to organize and extend this activity. Among the books in preparation are volumes by the late Prof. James Barr Ames and by Profs. George Foote Moore, Eugene Wambaugh, Arthur E. Kennelly, George L. Kittredge, Charles H. Haskins, George A. Reisner, and W. B. Munro. The board of syndics who will decide on the books to be published are Robert Bacon, chairman; Professors Moore, Kennelly, Kittredge, Gay, Cannon; and Mr. Charles H. Thurber, of Ginn & Co. The director of the Press is Charles Chester Lane. The establishment of the Harvard University Press recalls the fact that the first printing press in America was a gift to Harvard College in 1639, which was set up in the house of President Dunster. On it were printed the "Bay Psalm Book" and John Eliot's Indian Bible.

By arrangement between the University of Cambridge and the University of Chicago the following periodicals will be issued in America, in the future, under joint imprint: the *Modern Language Review; British Journal of Psychology; Journal of Agricultural Science; Biometrika; Parasitology; Journal of Genetics; Journal of Hygiene.* Several new books in the Cambridge list are also to be taken over at once and published in this country under joint auspices, including: "The Life and Letters of Lord Hardwicke," by Philip Chesney Yorke; "The Duab of Turkestan," by W. Rickmer Rickmers: "The History of Romanesque and Byzantine Architecture," by Thomas Graham Jackson, and "The Genus Iris," by William Rickatson Dykes.

Through the Century Co. Mr. Oscar S. Straus will bring out in April "The American Spirit."

Cassell & Co. issue this week two books by anonymous authors—"Cleek: The Man of the Forty Faces," a detective story, and "Princess Mary's Locked Book."

M. Gueschoff, Prime Minister of Bulgaria, has written the introduction for Lieut. Wagner's "With the Victorious Bulgarians," which Houghton Mifflin Co. has almost ready.

Edwin G. Lawrence's "How to Master the Spoken Word," announced by McClurg for February, deals with oratory from the time of Gorgias to the present day, and is intended to serve as a text-book.

The following are some of the Oxford books in preparation by Frowde: "Aristarchus of Samos," by Sir Thomas Heath; "Opus Epistolarum Des. Erasmi Roterodami, Tom. III, 1517-1519," edited by P. S. Allen; "Antigonos Gonatas," by W. W. Tarn; "The Life of Porphyry, Bishop of Gaza," translated by G. F. Hill, and "Selected Essays of Plutarch," translated by T. G. Tucker.

Longmans, Green & Co. are bringing out: Drake's "The Wondrous Passion" and Sir Rider Haggard's Zulu romance, "Child of Storm."

E. P. Dutton & Co. have a long list of spring announcements. It includes in fiction: "American Nobility," by Pierre de Coulevain, in a new translation by Alys Hallard; "The Fear of Living," by Henri Bordeaux, translated from the seventy-fourth French edition by Ruth Helen Davis; "The Quest of Glory" and "God's Playthings," by Marjorie Bowen; "A Slice of Life," by Robert Halifax; "Seven Scots Stories," by Jane Findlater; "Crossriggs" and "Penny Monypenny," by Jane and Mary Findlater.—Miscellaneous: "Essays in Biography," by Charles Whibley; "The War Drama of the Eagles," by Edward Fraser; "The Philosophy of Ruskin," by André Chevrillon, translated by Andrew Boyle; "The Influence of Baudelaire in France and England," by G. Turquet-Milner; "The Nature of Woman," by J. Lionel Tayler; "The Everyman Encyclopedia," edited by Andrew Boyle in twelve volumes, of which Vols. I and II are now ready; "The China Year Book for 1913," by H. T. Montague Bell; "Prayers, Ancient and Modern," by William Angus Knight; "Yang Chu's Garden of Pleasure," translated from the Chinese by Prof. Anton Forke, with an introduction by H. Cranmer-Byng; "Dante and the Mystics," by Edmund G. Gardner; "The Sea and the Jungle," by H. M. Tomlinson; "Shakespeare's London," by T. Fairman Ordish, new edition, and the following numbers of the Channels of English Literature series: "The English Novel," by Prof. George Saintsbury; "English Lyric Poetry," by Ernest Rhys; "English Dramatic Poetry," by Prof. Felix Schelling; "English Elegiac, Didactic, and Religious Poetry," by the Rev. Dr. H. C. Beeching; "English Satirists and Humorous Literature," by Oliphant Smeaton; "The English Essay and Essayists," by Prof. Hugh Walker; "English History and Schools of History," by Prof. Richard Lodge, and "English Criticism," by J. W. H. Atkins. A few of the volumes in this spring list have already appeared.

A comprehensive "History of India," from the earliest times to the present day, on the model of the "Cambridge Modern History," is in preparation by the Cambridge University Press. The work will be in six volumes, divided equally among the three main periods—Ancient India, Muhammadan India, and British India.

A book by Swinburne on Dickens, consisting of an article which appeared in the *Quarterly Review* of July, 1902, and certain manuscript additions by the poet, will be published immediately by Chatto & Windus.

Prof. C. M. Andrews will shortly issue the third and concluding volume of his "Guide to the Manuscript Materials in London Archives."

Professors Fraser and Squair have prepared a "Shorter French Course," which is about to be issued by Heath.

February 1 is the date set by Putnams for the publication of the following titles: "The Hero of Herat," by Maude Diver; "Ashes and Sparks," by Percy White; "Little Cities of Italy," Vol. II, by André Maurel, translated by Helen Gerard; "The Romance of the Rothschilds," by Ignaz Balla, and "The History of Modern Philosophy," by Prof. A. W. Benn.

Forthcoming books in Doubleday, Page & Co.'s list include: "Virginia," by Ellen Glasgow: "The Devil's Admiral," by Frederick Ferdinand Moore, and "Precious Waters," by A. M. Chisholm.

Sturgis & Walton promise for March: "Lanagan: Amateur Detective"; "Auction Pinochle," by A. P. George, and "Little Mamselle," a juvenile story by Mrs. Augusta H. Seaman.

Descriptive notes of a journey through Dalmatia, Montenegro, Bosnia, and Herzegovina by Assistant Prof. Kenneth McKenzie of Yale, the opening article of the December number, just issued, of the *National Geographic Magazine,* give a vivid idea of the great variety in land and people of a small part of the Austrian empire. This article is followed by pictures of scenes in the Tyrol with explanatory text by D. W. and A. S. Iddings. An intricate racial problem for American ethnologists, the origin of the blond Eskimo discovered by V. Stefansson, is discussed by Major-Gen. A. W. Greely, with numerous extracts from the reports of various Arctic explorers. The account of the ascent of Mount Sinai to see the sun rise and set, by the Rev. S. Prentice, jr., is illustrated by the reproduction of thirty-four unusually interesting and striking photographs.

Harpers have reissued Woodrow Wilson's life of "George Washington," first published in 1896, now printed with the proud legend on the title-page under the author's name: "President of the United States."

The "Poems of Robert Bridges," which we noticed in the *Nation* last week, are now issued by the Oxford University Press in an edition printed on India paper.

The address of Mr. Justice Swayze, of the Supreme Court of New Jersey, at the dedication of the Washington statue at Newark, November 2, 1912, has been privately printed, but deserves general circulation and attention. Within a small compass the characteristics of the greatest constructive American have been noted and a philosophic view of his official capacity set forth. So clear and felicitous is the style and so true the estimate, that extracts

from this essay might well form reading lessons in any course of history, and the paper as a whole find a place in the best collection of comments upon the first President.

It is a little difficult for the Oriental mind to grasp the truths of the Christian religion as understood in the West, and many of our official interpreters are making a dark glass more opaque. A Japanese Buddhist, who is looking into Christianity, recently said to the writer of this note, "What for the ministers do they always tell what Browning think?" It would not do to say that the ministers are the only ones that know. Nor that the poet is more impressive than he who set forth the mystery of the logos—because less generally understood. It was an awkward question. But at this moment there came to hand A. Austin Foster's "The Message of Robert Browning" (Doran). Mr. Foster answers the question in a commentary on ten or a dozen most significant poems: Browning is a Poet-Prophet whose message is comparable with that of the Hebrew prophets, but is brought up to date in form and feeling. As these studies were first published in the *Scottish Standard Bearer*, and, in one instance, heard with favor by the Aberdeen Diocesan Society, we suppose they may be confidently recommended to the Oriental as a key to the modern sermon.

"Carmen Sylva and Sketches from the Orient," by Pierre Loti, in a translation by Fred Rothwell, is a discreet, rather than a thoroughly representative, selection from the works of our recent visitor (Macmillan). These half-dozen sketches of the accomplished Rumanian Queen and her court, Constantinople in 1890, African serpent-charmers, a Japanese temple in the forest, and Japanese women in 1890, illustrate adequately Loti's descriptive talent. But, as they were carefully prepared to avoid offence, they fail to convey the full tang of his sensual melancholy. The more highly colored pieces read like superfluous leaves from his novels, and the "Carmen Sylva," though not without effective strokes, is done in his least characteristic vein of pink-and-white sentimentality. As long ago as 1863, Flaubert, Gautier, and the Goncourts foregathered apropos of one of Sainte-Beuve's articles, and agreed that the great critic did not comprehend their exoticism—a word in which they distinguished two meanings, of which the first was the "taste for the exotic in space, *le goût de l'Amérique, le goût des femmes jaunes, vertes*, etc." It is this *goût* for dark and tawny skins in a setting of palm trees, cherry blossoms, or desert sands that Loti has felt and exploited in literature. It is wildly asserted that he has sounded the soul of the Orient, but what is meant is that he has tasted and retasted in all the ports of the world the intoxication of the bizarre, has broken all taboos, and has revelled in the sweet bitterness of spiritual expatriation. The Orient of Loti's books is imaginary territory annexed to the Oriental paradise of the Romanticists in Paris; it is his own creation, a sentimental sailor's dream of geishas and cherry blossoms. "It almost seems," says this sounder of national souls, "as though Japan would lose its *raison d'être*, were it not for the *mousmé*. . . . Besides, in Japan, nothing is of much consequence; nothing is very serious, neither in the past nor, *à la rigueur*, in the present." This of the fiery stoics that took Port Arthur, a nation reared in the austere discipline of an ancient chivalry, the land of Ito, Okuma, and Nogi! One finds what one seeks, whether in Tokio or in Paris. When one has recovered from the intoxication of Loti, one may read with special profit the "Bushido" of Nitobé.

Gen. Jubal Anderson Early's "Autobiographical Sketch and Narrative of the War Between the States," has now been published, nearly twenty years after his death, and is furnished with notes by R. H. Early (Lippincott). Gen. Early's narrative deals with the Civil War campaigns and battles in Virginia, Maryland, and Pennsylvania. It is impersonal in a marked degree. Probably it would have been less so if Gen. John B. Gordon's "Reminiscences" had been given to the public before Gen. Early's death, for Gordon held Early responsible for the failure to press the retreating Union forces on July 1 at Gettysburg, as well as for neglect to turn Grant's flank in the Wilderness and for inactivity in not driving home the Confederate victory over Sheridan's army at Cedar Creek before the Union forces had time to overcome the effects of their first panic. Considerable portions of the book suggest in style a restatement of official reports. Apparently begun soon after the close of the war and written with caution as to Southern feelings, the criticism is confined to Northern policies and acts. The pages justifying the Southern treatment of Union prisoners of war could have been spared, as the claims made do not accord with the reports of Confederate officers sent to inspect the Andersonville prison. The accounts of battles make little attempts to understand or set forth the Northern side of a movement. For instance, Meade's successful charge at Fredericksburg, which cut the Confederate line, the charge of an unsupported division, the reader might suppose from Gen. Early's account had been made by the First and Sixth Army Corps, Franklin's whole command.

Although Early fought in most of the great battles of the East, his principal service was his campaign in 1864, when he carried the war from the upper Shenandoah Valley to Maryland and came near capturing the city of Washington. Throughout, he displayed great energy, skill, and self-reliance. Stonewall Jackson could not have done better, and, perhaps, never did as much. That with his small force of some 10,000 men, he should have played for so long a time with Sheridan and his army of 40,000 men and have come so near routing the Union forces opposed to him, is a tribute to Early's audacity or evidence of Sheridan's timidity. Early's own explanation is as follows: "The events of the last month had satisfied me that the commander opposed to me was without enterprise and possessed an excessive caution which amounted to timidity." The book is less for the general reader than for students of Civil War history. In appearance it is a credit to the publishers.

The great difficulty in dealing with Catullus in such a publication as the Loeb Classical Library (Macmillan) is to conceal the poet's nastiness without leaving too many hiatuses in the translation. In achieving this feat Mr. F. W. Cornish, who is already experienced in popularizing Catullus, has been very successful. Sometimes a paraphrase conveys the true meaning to those versed in the classical ways of satire and pleasure, while on the surface the words are sufficiently decent. Elsewhere a phrase or a passage is frankly omitted, and the omission indicated by points. A few of the naughtiest poems he has turned over to the general editor, Dr. W. H. D. Rouse, who has exercised on them an extremely nimble wit to good purpose. In all cases the Latin text is complete and intact. In general, Mr. Cornish's English is an excellent medium for those who turn to it for help in reading the Latin. We cannot say that it has independent qualities of a high character. For example, such a phrase as "how many kissings of you" (No. vii) may convey quite accurately the meaning of "quot mihi basiationes tuæ," but it can scarcely be regarded as elegant; nor does the attempt to be poetical seem entirely happy in such a line as "remains to be slept the sleep of one unbroken night."

Tibullus and the "Pervigilium Veneris" are included in the same volume with Catullus, the former being the work of Prof. J. P. Postgate, the latter of Prof. J. W. Mackail. The English version of Tibullus and the poems that pass under his name is thoroughly serviceable, though occasionally the more delicate sentiment of the original is missed. Perhaps the most romantic verse in Latin is that in the *Paraelausithyron*, I, ii, 25:

En ego cum tenebris tota vagor anxius urbe,

which becomes merely feeble and trailing in its English form: "Lo, I in my wanderings in distress through all the city in the dark."

In dealing with the "Pervigilium" Professor Mackail has allowed himself considerable license in amending the text and in arranging it in symmetrical stanzas. His version, too, is liberal, and attempts to convey the romantic tinge of the original. As an example of his cunning work, the first stanza may be quoted:

To-morrow shall be love for the loveless, and for the lover to-morrow shall be love. Spring is young, spring now is singing, spring is the world reborn. In spring the loves make accord, in spring the birds mate, and the woodland loosens her tresses under nuptial showers.
To-morrow shall be love for the loveless, and for the lover to-morrow shall be love.

The refrain may give some offence at first blush for its very free handling of precious words, but we are not sure that the flavor of the original has ever been better conveyed.

Of A. S. Way's Euripides, the third and fourth volumes of which now appear, something has already been said in our notice of the first output of the Loeb Library. The letters which have come to us on the subject, and some of which we have printed, indicate that the weight of opinion is strongly against the use of metrical translations. It seems to us even more important that in future issues of Greek authors a thicker paper should be used, with correspondingly fewer pages to the volume. The interest in the publication is manifestly great, and the consequences may be far-reaching.

"Our Country Life" (McClurg), by Frances Kinsley Hutchinson, is a rapturous

account of the joys of life as lived at a country house by "the Enthusiast," "the Constant Improver," and their relatives and friends. "The big house" (it replaced a "tiny cottage") is situated on an island in "our dear" Wisconsin lake, which otherwise nameless lake is nine by three miles in extent. So far as one can judge from the numerous reproductions of photographs, the house, together with the surroundings, is unusually attractive and conveniently arranged; to say more would be hazardous, since the author tells us little. Most of the book consists of incoherent chatter about the petty pleasures and large exhilarations that make the author's life in "God's glorious out-of-doors" inexpressibly wonderful, so wonderful, indeed, that she tells us at intervals that her "emotions had risen almost to the breaking point." The burden of the book is, Come to the woods and waters, and feel the peace of nature steal over you; but curiously enough the influence of nature on the author is for the most part highly intoxicating. Thus, sleeping out of doors brings, not repose, but "revelation," in a pseudo-mystical sense. As for the style—one sentence will suffice: "I did so want one yellow bed, for I am afraid I must confess that is my favorite color, and this seemed a reasonable request."

The Rev. Eben Burt Parsons, D.D., for more than twenty years secretary of the faculty and registrar of Williams College, died last week at Williamstown in his seventy-eighth year. Dr. Parsons was the compiler of "The Obituary Record of Williams College."

Science

Among the science books in Dutton's spring list are "The Sheep and its Cousins," by R. Lydekker, and "Medical Benefit in Germany and Denmark," by I. G. Gibbon.

The January number of the *Geographical Journal* opens with a charmingly simple account by Capt. Roald Amundsen of his conquest of the South Pole in 1911. Of one region passed through during the ninety-nine days' journey he says, "I have never seen a landscape more beautiful, more wild, and more imposing." The greatest height reached was 10,750 feet, though mountain peaks 15,000 feet high were seen. The lowest temperature observed was —74.2° Fahr. and the mean temperature for the year —14.8° Fahr. During the twelve months the expedition was on the ice there were only "two moderate storms." "A Geographical Interpretation of Missouri" is the title of an article by Fred. V. Emerson of the University of Missouri, in which he describes, with diagrams and pictures, the three strongly contrasting physiographical divisions of the State. An account of the exploration and survey of the 141st meridian, the International Boundary between Alaska and Canada, is given by Mr. D. H. Nellas, the leader of the survey party, and the natural features and life of Southern Nigeria are described by Mr. A. E. Kitson, for five years principal of the mineral survey of that colony.

Miss Belle Beach, author of "Riding and Driving for Women" (Scribner), is well qualified to speak on this subject. The daughter of a lady who has been an instructor in riding for many New York ladies, she has of course ridden from her childhood, and has herself taught riding for several years. She says modestly: "That which takes me but a moment to tell has taken me years to learn." Her book is the result of her own experience. The reader may not always agree with her, but he will find what she has to say worthy of serious consideration. The volume deals with such topics as Hands, Form in Riding, Riding Astride, Hunting, Show-Ring, Four-in-Hand, Tandem Driving, Bits, Harness, etc. There are a great many pictures which are, as a rule, excellent. We are not of Miss Beach's way of thinking about riding astride, which, as we should expect, she rather disapproves of, nor in what she has to say about docking, which she favors, alleging a number of practical considerations. But we are very sure that people do not dock horses for any other reasons than those of looks. On the question of its inhumanity the author remarks that a long-tailed horse in harness cannot keep off flies with his tail. We do not quite see that. Then she says that a docked horse can be turned out in summer with a sheet on. Very true, but what a nuisance that must be for the horse! Has the author ever ridden or driven a horse in Virginia mountains in October when the first frosts have come? The big horse-fly common in that country, when chilled by the frost, will light on the coat of a horse, and, feeling the warmth, will stick there and bite until the unhappy animal is frantic. In England, it is said that pasture can be got cheaper for docked horses than for long-tailed horses, because they are prevented by flies from eating as much as long-tailed horses. Miss Beach's argument that all horses should be docked because they may be driven as tandem leaders, and tandem leaders behave badly when they get the reins under their tails, does not seem convincing. Not very many horses are driven as tandem leaders. If a tandem leader does get his tail over the reins, the groom can get down and go to his assistance, which he has to do pretty often in any case. Hunters are not docked any longer. And yet the horse to be ridden in the hunt is driven to the meet in the lead of a tandem.

Prof. Charles A. Ellwood's text-book of social psychology, "Sociology in Its Psychological Aspects" (Appleton), is one of the books which suggest that, if economics is the dismal science, sociology must be the dull science. The dismal science makes each of us a cog in a machine; sociology makes us just one of a species. And not only is sociology jealous of the individual; so intent is she upon the biological continuity of man with the lower species, so unmindful of the significance of our self-consciousness, that she deprives even the race of its human distinction. One is not surprised, therefore, that "society" becomes a colorless generality; and sociology an elaboration of empty methodology. Mr. Ellwood fills 123 out of 395 pages with this deadly stuff, while telling us that the time is not yet ripe for a science of sociology—which, being interpreted, seems to mean, If you had a brother would he like cheese? The special purpose of the book, which in a general way is not badly fulfilled, is to exhibit the functional theory of consciousness in its application to social relations. According to this theory, developed chiefly by Professor Dewey upon the basis of James's chapters on Instinct, Emotion, and Will, consciousness is a biological function, the sole purpose of which is to readjust the organism to a change of environment by restoring order among the conflicting instincts; the instincts supplying all the impulses to action. By substituting persons for instincts we get a social organism and a social psychology. One consequence of the theory seems to be that much of what we call culture is a waste product; or at least we do a vast amount of thinking, talking, writing, and the like that we may by chance discover one idea useful for race-conservation. Mr. Ellwood comforts us with the reflection that this is "nature's method" of producing "a superabundance so that actual functional needs will be certain of being met."

But, though Mr. Ellwood also treats this consequence of the theory as one of its "limitations," he fails to ask what other meaning this superabundance may have; and in general his presentation is lacking in firmness of conviction and clearness of outline, perhaps in a sure grasp of the functional theory. Otherwise it is difficult to understand "the large part [*sic*] which instincts play in our social life" (203); or how "the element of instinct seems to dominate more in woman's life than in man's" (236); or why we have in man "no definite, hard and fast instincts, such as characterize the lower animals" (207); or the presence of intellect, feeling, and some other things, *by the side of* instinct. According to James, and according to the logic of the theory, *all* conduct, of men or animals, men or women, has its basis in perfectly definite instincts; human instincts differ from those of the lower animals only in being vastly more numerous; and emotion and reasoning are simply cases of the conflict of instincts.

Drama and Music

E. P. Dutton & Co. have in press "Towards the New Theatre," by E. Gordon Craig.

We have received the following additions to the Tudor Shakespeare (Macmillan), which is prepared under the general supervision of Professors Neilson and Thorndike; "The Two Gentlemen of Verona," edited by Prof. Martin W. Sampson; "Twelfth Night," edited by Prof. Walter Morris Hart; "Measure for Measure," edited by Prof. Edgar C. Morris; "All's Well That Ends Well," edited by Prof. John L. Lowes; "The Taming of the Shrew," edited by Prof. Frederick Tupper, jr.; "Timon of Athens," edited by Prof. Robert Huntington Fletcher, and "Venus and Adonis, The Rape of Lucrece, and other Poems," edited by Prof. Carleton Brown. All are as neatly prepared as their predecessors, and the only sin of the introductions is their brevity. From this charge the last-mentioned volume may be exempted. Professor Brown has discussed the difficult bibliographical questions connected with the Poems with commendable fulness. Professor Sampson, too, has done something towards relating the important personages in "The Two Gentlemen of Ve-

rona" with the later representatives of their types in Shakespeare. More might properly have been said of Helena, of Katherina, of Isabella, and of Timon. The editors of this edition too often convey the impression of wishing to "play safe" rather than of desiring to relieve the elementary student of his perplexities.

The production of "The New Secretary," in the Lyceum Theatre, afforded a striking illustration of the mischief that may be done to a foreign play by a clumsy adapter and unintelligent stage management. The original French comedy, by Francis de Croisset, has been running in Paris for a twelvemonth, and has been the object of much critical commendation. Dramatically considered, the story—which tells how a highly gifted young secretary rescues his foolish millionaire employer from the clutches of a pair of plausible rascals and wins the heart and hand of a lovely and disdainful heiress by confronting her with a pride greater than her own—is not in itself very valuable. It provides two excellent theatrical situations, but is conventional in design, and not too credible. The success which it has won at home is clearly due to the freshness and vitality of the principal personages and the brightness of the dialogue, qualities which are still perceptible where the English artificer, Cosmo Gordon Lennox, has not departed too far from his original. Unfortunately, it is only at rare intervals that the flat commonplace of Anglicized small talk is relieved by a flash of Gallic wit or cynicism. The first act, which is almost entirely conversational and explanatory, suffers especially from this maladroit interpretation. When the action really begins to excite interest, the poor quality of the dialogue might be of less consequence if it were not for the absurd overemphasis given to it by incompetent performers. Wilson Hummell, to whom is entrusted the important figure of the arrogant, wilful, shallow-pated millionaire, reduces it to burlesque, and destroys the illusion of every scene in which he is concerned. The representatives of some youthful aristocrats are scarcely less conspicuous offenders against propriety and probability. Marie Doro is altogether unequal to the part of the heiress. The excellent work done by other players—Charles Cherry, who acted the hero with admirable spirit and fine tact; Ferdinand Gottschalk, whose swindler was a brilliant bit of eccentric comedy; Mrs. Whiffen, who was delightful as a fond grandmother, and Claude Gillingwater, who was capital in the part of a domesticated cynic—was robbed of half its efficiency by their marplot associates. The net result of the representation was that a clever comedy of modern manners was converted into a nondescript play of third-rate calibre.

Gladys Unger's new play, "The Son and Heir," has started in the London Strand Theatre this week. It was completed two years ago, and the title originally selected for it was "The Eldest Son," but in this choice the author was forestalled by John Galsworthy. Pride of race, or of family, is the subject handled in both pieces, but the treatment is widely different. Miss Unger's protagonist is a bluff, hearty, but narrow-minded country squire, prepared to sacrifice all the remaining members of his family to the son and heir, who sooner or later must fill his place and carry on the old traditions. This is his one aim in life, and it is this policy which, when pushed to an extreme, stirs his oldest daughter to rebellion and an indignant refusal to accept the conditions imposed upon her, her sister, and her long-suffering mother.

"Pearls" is the name of a little one-act "thriller" which the young English dramatist, Stanley Houghton, has written for Arthur Bourchier and Violet Vanbrugh, who are playing it in vaudeville. A fashionable couple just returned to their luxurious apartment—the wife from the opera and the husband from a club—talk of their desperate financial straits. Presently the wife discovers a wonderful pearl necklace which in some way unknown to her has been entangled in her draperies. She is sorely tempted to keep it, but her husband says that the trinket must be returned promptly to the owner, whom he knows. The loss had been reported at his club, he says, and some woman was under suspicion of having stolen it. He is about to start out with the pearls in his pocket when there is a knock at the front door, and, looking out, he recognizes the police. After a few moments of hesitation he resolves to face the music. The door is opened and a policeman enters to say that he has found a kitchen window open.

J. T. Grein has published some details of his plans for the revival of the Independent Theatre in London:

Europe is full of remarkable plays, and there are also a few plays of the old répertoire that deserve revival in 1913, because they will be more appreciated and better understood than in the distant days of the dramatic daybreak of the nineties. Such plays are: De Banville's "Kiss," Edward Brandes's "Visit," van Nouhuys's "Goldfish" (translated by A. Teixeira de Mattos), George Moore's "Strike at Arlingford," Dr. Todhunter's "Black Cat," and Ibsen's "Wild Duck." As for new plays, my quiver is full.

The Comédie Française is proceeding vigorously with its action against M. le Bargy, the well-known actor, who has followed the example of defying its regulations set by Sarah Bernhardt, Coquelin, and others. It has served a fresh notice upon him of his liability to a fine of $400 for each performance, in France, outside the house of Molière, in which he may take part. Nevertheless, he continues to act in "Les Flambeaux," at the Porte St. Martin. The case will come up soon in the courts, and doubtless will attract much public attention. M. le Bargy declares that he would return to the Française if certain abuses in the management were rectified. He complains that the chief performers are continually absent on foreign engagements. It appears, however, that he has been one of the most conspicuous truants. Maurice de Féraudy, one of the oldest associates of the Française, says that the institution is suffering from a glut of sociétaires, and that it will always be in trouble until it gets rid of half of them.

The municipality of Berlin is considering a project for building a large theatre for the working classes on land recently occupied by slums in the very heart of the city. All the slum buildings have been cleared away, and the theatre is to form an architectural centre of the new district which is to be built. The proposal of the Town Council is that the sum of 2,000,000 marks be set apart as a first instalment, to be followed by further sums of three millions, or a total of nearly a million and a quarter dollars. The Society which is to carry out the undertaking pledges itself to build a theatre to seat 2,000, to produce only approved plays, and in the course of every year to give at least ten afternoon performances for school children at a price not to exceed fifteen cents per ticket.

It has been definitely settled that Paderewski is to return to America next season for an extensive tour throughout the country, which will be under the direction of Charles A. Ellis. He has not been in America since the winter of 1908-09, when he spent a few weeks in the East. His principal object in coming to America at that time was to have his Symphony performed by the Boston Symphony Orchestra. He has not made an extended concert tour in America since the season of 1907-08. Since that time he has had a very successful tour in South America, and an equally successful tour in South Africa, while giving many concerts in Great Britain and on the Continent. Paderewski will arrive in America in September, and will open his tour with a series of concerts in Eastern and Western Canada. He will be here until April, and will play in the neighborhood of one hundred concerts. Mr. Ellis has also made arrangements whereby he will have the direction of a season's tour of Fritz Kreisler, the greatest of violinists. He will arrive in America towards the end of October, and stay until spring. Both Mr. Kreisler and Mr. Paderewski will give concerts along the Pacific Slope and in the South, as well as in the Northern and Eastern States. Under Mr. Ellis's management Geraldine Farrar, of the Metropolitan Opera Company, will give a limited number of concerts in October, before the opening of the opera season. These concerts will be given chiefly on the Pacific Coast.

Boston admirers of the late Samuel Coleridge-Taylor, the noted English composer and conductor, have started a movement for a memorial fund as a testimonial to Mrs. Coleridge-Taylor and her children, whose need for help at this time is great. Contributions to the fund for his family may be sent to Mrs. Alexina Carter-Barrell, No. 100 Boylston Street, Boston, Mass.

"Die toten Augen," or "The Dead Eyes," is the title of a new opera by the famous German composer Eugen d'Albert, which will be produced at the beginning of next season. The text is by Hans Heinz Ewers, and the theme one of poetical sadness. The new work will be staged in one long act. The central figure is that of a blind young Greek woman, who lives on the scene and in the time of Christ's entry into Jerusalem. The New Testament incident forms the background of the whole work. The Saviour himself will not be portrayed in person, His presence being expressed by the music and the phantasy of the work. Touched by the healing hand of Christ, the blind woman regains her sight, and her eyes, filled with the light of love and passion, fall first upon a magnificent Roman, whom she believes to be her husband. Her husband, however, is really a most repulsive

figure, and it is in giving expression to the conflict of emotions in the woman's heart when she discovers her mistake that the music of the new opera finds its vent. The finale takes place at sunset of the same day. The woman, troubled and disturbed in spirit, stands gazing into the glory of the western sky until she again becomes blind, and with her loss regains her peace of heart.

Cosima Wagner is indefatigable in her efforts to perpetuate the "Parsifal" monopoly at Bayreuth. A dispatch from Berlin dated January 22 stated that Crown Prince William heads the list of signers of a petition which has been presented to the Reichstag asking for the enactment of a special law to extend the copyright of "Parsifal," which expires this year. The Crown Princess is second on the list, and the Imperial Princes follow. The appeal is made on the ground that Wagner wished to have his last work reserved for Bayreuth alone. The strangest thing about the affair is that Frau Wagner and her adherents, who are so very anxious to carry out his wishes in this matter, so thoroughly disregard his other intentions regarding Bayreuth. He strongly deprecated the idea of commercializing Bayreuth—of making money with "Parsifal"; yet that is what his widow does. After the last festival but one she admitted a profit, yet for the next festival she raised the price of seats from $5 to $6 each. It is not likely that the Reichstag will yield her point, for if it did, the result would be that all opera houses in Europe except those in German cities would be able to produce "Parsifal."

Augustus van Biene, who died upon the stage last Thursday at Brighton, England, was a man of decided talent, both as actor and musician. He was born in Holland in 1850, and began life as a street player on the 'cello. In this capacity he attracted the attention of Sir Michael Costa, who encouraged him to develop his natural ability, and found him orchestral employment. In time he became a successful soloist, organized concerts, and at one period was manager of the Gaiety Theatre, in London. In 1892 he made a hit in "The Broken Melody," a sentimental piece of his own composition, in which, as an old musician, he was able to display his skill as composer and instrumentalist. For twenty years he travelled all over the world with this piece, presenting it in regular theatres and—in a condensed form—in music halls. Recently, it appears, he had sought relief from the monotony of his work in a new piece, on the old lines, called "The Musician," and it was in this that he died, with his beloved 'cello in his hands. He was well known in this country.

Gustave Carl Luders, composer of light music, died a week ago at his home in New York City. He was born in Bremen, Germany, in 1865. He studied piano, violin, and composition under Henry Petri, later concertmaster at Dresden, and came to this country in 1888. Mr. Luders's best-known operettas are: "The Burgomaster," "King Dodo," "Prince of Pilsen," "Woodland," "The Shogun," "Mlle. Napoleon," "The Grand Mogul," and "The Old Town." His latest work was "Somewhere Else," produced at the Broadway Theatre only last week, on which occasion he was present in the audience, and, apparently, in good health.

Art

ALMA-TADEMA.

LONDON, January 18.

The Winter Exhibition at Burlington House, instead of being the Academy's winter-garment of repentance, as it was once described, threatens to become the cemetery of dead Academic reputations. When an Academician happens to die in the course of the year, he is eagerly seized upon to replace the old masters—of whom the Academy is tiring—or to share the winter show with them. We have had Leighton and Millais and Watts, the most prominent, and certainly nothing was added to—rather something was taken away from—their fame. Only a year ago it was Abbey who suffered. And now it is Alma-Tadema, and, of all, he comes least well out of the ordeal.

This is not because every effort has not been made to represent him adequately. The collection, which fills four galleries, could scarcely be more representative. The earliest work goes back to his very infancy, and a chalk drawing of foliage, said to have been made when he was but four years old, is so careful and precise that it is difficult to believe it belongs to quite so childish a period. There is a portrait of himself done when he was sixteen, and one of his mother painted a year later. There are pictures belonging to his student days under Gustav Wappers at Antwerp; and pictures that show the influence of Baron Leys, his second and only other master; and pictures, following one another in a long succession, that he exhibited at the Royal Academy, from his coming and settling in England in 1870, down to last year, the year of his death—pictures that won for him popularity and fortune and honors to a degree in which he had few rivals, probably none who survive him, except perhaps Sir Hubert Von Herkomer. The trouble is really that he is too adequately represented. So many of his works hung together reveal most lamentably his weakness and his limitations, while his better qualities are not of the kind to out-balance them.

For his pictures were machine-made; there can be no question of it. It is careful, serious, painstaking machinery—this seriousness was his strong point as a painter—but it was machinery all the same. You have only to look at that little drawing of leaves and blossoms to see that, from the beginning, he spared himself no pains, that he did his work honestly, that he was no charlatan, no lover of short-cuts. The portrait of himself as a youth, seated, his sketching traps on his lap, a curtain and a pillar in the background, shows careful study and observation, though not so much of nature as of the old Dutch portraits that must have been familiar to him. Already an improvement is seen in the small head of his mother, in which, indeed, there is more of an attempt to render the quality of flesh than in many of his more mature portraits. The Corner of a Courtyard in Amsterdam and the Old Staircase at Antwerp, just a little later in date, are full of the same care now applied to architectural subjects, though in neither is there a suggestion of light or atmosphere, in neither anything more than a dull prosaic statement of architectural facts. The motives are those of masters who were his countrymen, but the treatment is without a suggestion of the fine qualities, the fine insight, that transformed the most ordinary material in their hands into a splendor of color and tone, a poem of sunshine and shadow. If the pains Alma-Tadema never spared himself in anything he undertook to do characterize his first performances, so also do the commonplace vision, the mechanical technique, the exchange of nature for statistics, that make this long series of his pictures so terribly monotonous and uninteresting to-day. That he strayed further and still further from nature was not altogether due to his training under Baron Leys, though the master no doubt drew the student's attention more and more to historical subjects, so that from the early sixties he was already preoccupied with Rome and Romans, rather than with Holland and Dutchmen or Belgium and Belgians. The Pyrrhic Dance, A Roman Amateur, Tarquinius Superbus, A Roman Picture Gallery, were the characteristic subjects of these years. But Tadema left to himself would most likely never have seen, as his great countrymen saw before him, the beauty that beautiful paint beautifully applied can give to the simplest, homeliest, things in a painter's daily life. Terborch, Jan Steen, Ver Meer, Metsu, and a host of others had had their imaginations stirred, their brushes inspired, their love of nature and the real awakened, without going further than their own rooms or their own back yards. And they had had modern successors who could prove themselves great painters, and yet retain their love for life as they knew it. Brakeleer, the Belgian, little known if at all out of Belgium, had already developed his way of expressing the beauty and splendor of color and tone; Matthy Maris, Tadema's fellow-countryman and contemporary, was beginning in his early work to reveal himself as the legitimate descendant of the great Dutchmen.

There are in the collection landscapes and portraits of Tadema's maturity which explain his attitude before nature when he was under no obligation to reconstruct, or record, that which he did not know and never could know.

The landscapes are small in size, notes of a bit of open country, or a few haystacks by a river bank, or a woodland, or a line of red roofs above a distant hedge, and they are all marked by the same commonplace way of looking at things, the same lack of invention, the same absence of air and light and life, the same uninteresting brush-work. And the portraits are as unimaginative, as uninspired, as uninspiring, the pose as a rule as banal as that of the photographer, the costume given in its unredeemed ugliness, and not made beautiful by the expression of the character in its ugliness, the figure never in its envelope of atmosphere, the whole dry, inanimate, flat. Two or three exceptions might be pointed to: The Misses Alma-Tadema as Children, two little girls in white frocks and aprons, a portrait group in which there is more than the usual sense of character and life; the large three-quarter length of Miss Anna Alma-Tadema, too well-known to be described again, hard and tight and frigid, but with a hint of harmony in the arrangement of the grays; and the, I fancy, still better known My Doctor—his brother-in-law, Dr. Washington Epps—sitting by the bedside of the patient of whom nothing is seen save the hand on the white bed clothes, the doctor's fingers on the wrist as he looks down at his watch, the head studied with more, if possible, than Tadema's accustomed care and elaboration. Even with these exceptions, however, the portraits confirm the general impression one brings away of conscientious but dull mechanical workmanship.

If Tadema could rarely suggest life, or see with originality and charm the figures before him, it is not to be expected that he could succeed better with the figures he had never seen and had not the genius to imagine. He impressed the public by his classical subjects, for they seemed, to the unlearned, brimful of learning. He was extolled as a scholar among painters, an artist who made the old world real for us. What he did actually was to search the classical dictionaries and archæological textbooks, and put down his idea of what the classic world, seen through them, must have been. Fortunately for him, the old Roman could not come back to say what he thought of Tadema's baths and forums and temples and amphitheatres, while I am pretty sure, to-day, when Tadema's name has lost a little of its old glamour, I am not alone in thinking that if the classic world and classic life were as he has reconstructed them, then we have reason to be thankful for having lived too late to see them for ourselves. Among his earliest works is The Parthenon at Athens, dated 1869, in which he labored to paint the frieze as he supposed it must have looked when the original color was fresh and vivid on the marble, but if there is in his version a shadow of the truth once claimed for it, one can only marvel how the Greeks ever got their fame as an artistic nation; upon the scaffolding just below the frieze, figures are grouped, and the catalogue explains that they are Phidias, Pericles, Aspasia, Alcibiades, and Socrates. Call them what you will, they have less life than the marbles above. And so it is with all the figures, as you examine one painting after another. Lay figures again form the inanimate procession in his Finding of Moses. And, again, lay figures compose the audience—whom Tadema, in an ecstasy of statistics, declared to number five thousand—and fill the Imperial box in his Caracalla and Geta. Nor is there more life and reality in the smaller pictures: those arrangements of white marble, blue sea and sky, blossoms and costumes which were hailed as Tadema's masterpieces, and which he could not paint fast enough to satisfy his insatiable public. I think in these, really, the commonplaceness of his outlook is the more apparent because he did not disguise it under some Biblical or classical incident or legend. A youth with a ring in his hand, or jewels in a casket, or spring in the blossoms, give the clue to the sentimental anecdote the British public loves, explaining the figures and justifying the marble. And the blue sky above, and the blue sea beyond, and the blue mountains in the distance are reduced to no less obvious conventions. And the white marble, the famous white marble, looks as white marble never looked in the open air where a real sun shines and real shadows fall. These little paintings, praised for their light and their truth, smell as strong of the studio as the big Coliseums or the big Egyptian landscape. Tadema's house in St. John's Wood was, if anything, more notorious than his canvases. The golden stairs, the studio with its treasures, the pseudo-classical rooms, the decorations by the masters of a short day, were for long in everybody's mouth, coloring and magnifying and enriching his reputation. But all put together could not, in the end, serve that reputation so well as one piece of real marble—and not marble evolved from his inner consciousness—studied in real sunlight and not in the atmosphere and light of the most splendidly appointed studio in the world.

I think Tadema himself realized that his greatness was a little dimmed in the eyes of the world before he died. He could sometimes be so bitter that it was clear he heard with apprehension the younger generation of critics and artists knocking at the door. But the least enthusiastic in his regard cannot but be astonished at the way his reputation has vanished since his death. As many of the criticisms of the exhibitions in the leading London papers as I have seen have all been patronizing, if not worse, so much so that already one voice has been heard in protest, calling upon the critics to remember his consummate draughtsmanship and impeccable technique. The adjectives are more than a trifle exaggerated, though it would be folly to deny Tadema's care and conscientiousness as draughtsman and technician. He allowed himself no slovenliness, no indolence. He did not, like those who now excuse themselves as Post-Impressionists, make a virtue of incompetence or save himself trouble and call it expressing his individuality. His drawing was academically correct, if personally inexpressive. He would have scorned the immortal game of bewildering the bourgeois by eccentricity, or of scoring success by sheer accidents. He paid such close attention to the quality of his pigments that his paintings, far from emulating old masterpieces before their time, have preserved almost too much of their original freshness. But care and conscientiousness cannot create genius, even though genius in art has been before now defined as genius for hard work.

N. N.

Mr. Joseph Pennell's lithographs of the Panama Canal, which are now on exhibition at the Sala Leonardo da Vinci in Florence, have been purchased by the Italian Government for the Uffizi Gallery. The Government has also purchased Mr. Pennell's lithographs of the Grand Cañon and the Yosemite.

We have received the first number of a new quarterly, *Art in America*, which is edited by Mr. W. R. Valentiner of the Metropolitan Museum and published by F. F. Sherman. It will be devoted chiefly to objects of art of Mediæval and Renaissance periods owned in America. This first number presents, besides the editor, such distinguished contributors as Dr. Bode, Mr. Berenson, and Professor Marquand. Dr. Bode describes two very early Rembrandts, Tobias and Balaam, one dated 1626. Mr. Berenson associates a small Nativity in the Johnson collection with the style of Pietro Cavallini. Professor Marquand treats of a portrait bust of Francis owned by Mr. George Blumenthal. Mr. Valentiner ascribes the much-discussed Sleeping Cook of the Widener collection to Esaias Boursse, and detects the hand of this little-known Dutch painter in some other half a dozen pictures owned in America. Joseph Breck provides a *catalogue raisonné* of works by Tiepolo in the Metropolitan Museum. Professor Mather ascribes to Matteo da Sienna a splendid pair of *cassone* panels in Mrs. C. P. Huntington's possession, and a similar piece in the collection of the Earl of Crawford, London. Perhaps the most important work of art reproduced in the number is an exquisite Madonna by Carlo Crivelli which has recently been acquired by Mr. Philip Lehman. The picture is briefly discussed by Professor Mather and dated about 1482. This incomplete survey will suggest the scope of the new magazine. Its make-up is somewhat scrappy as yet, but

if it continues to procure first publication of so many fine works as grace this number, it will be indispensable for all art libraries and serious students. The form is an in-quarto agreeably printed in a single column of clear type. The annual subscription is four dollars.

Among recent acquisitions to the Metropolitan Correggio's canvas of Four Saints is easily the most important. Painted in his twenty-first year it cannot represent the glory of his mature style, yet it is in every way a gracious composition. Since no example of equal importance and quality is ever likely to come into the market, the Museum should be congratulated on an excellent purchase. Two wooden statues, an Annunciation, though crudely repainted, represent a rare and impressive type, dating presumably from the late thirteenth century; the surmise may be hazarded that these are Bavarian sculptures or from some provincial school in north Italy under Bavarian influence. Numerous minor acquisitions in stuffs, pottery, etc., testify to the activity of the Department of Decorative Art. It is a shock to find in the new acquisitions room such thoroughly banal paintings as those by Alexander Harrison and Albert Herter. To be sure these are gifts, but a large part of the business of a great museum is to look such gift horses as these quite fearlessly in the mouth.

Louis De Coppet Bergh, architect, died on Tuesday in Washington. He was born in New York in 1856, and after an education in the public schools, he studied in Europe at the Military Gymnasium, Ostrowo, Prussia; at Lausanne, and at Stuttgart. Returning to New York, he became expert architectural and sanitary adviser to Mayor Strong's City Commission. He was the author of "Safe Building," in two volumes, and "Safe Building Construction."

Finance

THE "INVESTIGATIONS," AND AFTERWARD.

Since the markets quieted down from the particularly agitating financial influences of the summer, there has been somewhat more consideration of the question, just how far the matters which Wall Street financiers have put to the front as causes of disturbance are bound to exert that influence. This is undeniably an era of "inquiries" and "investigations." Commissions to look into something are distinctly the order of the day, and the results of their examinations, as reported in the daily papers, challenge the reader's attention more instantly than anything in the headlines, unless it may be a district attorney's hunt for the identification of the "man higher up"—which, after all, is very much the same sort of thing. But now that the "Money Trust Sub-committee," on whose inquiries public attention has so long been riveted, has closed its investigation and begun to prepare its formal report to the House Banking Committee and to Congress, discussion as to the tangible results of such inquiries in legislation becomes more to the point.

The testimony before a commission, such as the public has become accustomed to, makes several definite appeals to the public interest. It is usually well staged. The witnesses are apt—on occasion, at any rate—to be the men to the story of whose lives the ten and fifteen-cent magazines have been devoting pages. There was a time, for instance, a year or more ago, when three or four publications of that nature were simultaneously depicting Mr. Morgan's career, in serial form, to their respective readers. This testified to the valuation placed on the general topic as "copy" by the editors. Every reflective person knows how much of its vogue and prestige Mr. Thomas W. Lawson's "Frenzied Finance" owed to the notion, prevalent among village statesmen and occupants of city third-floor backs, that its author had been one of the triumvirate (Morgan - Rockefeller - Lawson) which managed the Money Trust and monopolized American finance, but had turned State's evidence against his guilty copartners and was confessing to the public.

What more natural, therefore, than that this public should now, in its simple way, conceive that the criminals were at length actually in the dock with a prosecuting attorney baiting them? The Pujo Committee's counsel himself fell victim to this notion during the early stages of the inquiry; though it is fair to say that the later cross-examinations have pretty much abandoned the Old Bailey method. But the question naturally worries the quiet and impartial watcher: What will be the result when all these investigations are completed?

There is undeniably a timid apprehension, in many quarters of business and finance, that the public and the legislators are hungry for blood; or, to change the metaphor, that they will insist on the present machinery of trade and banking being torn down and rebuilt in accordance with new and sudden happy-thoughts. Nobody, to be sure, has imagined a Terror with high finance to the lamp-post and the guillotine; the revolution which uneasy minds conceive is more like that in which, under the general uproar for a new order of things, the legislators of a certain momentous period were so bent on change for the sake of change that even the names of the months and week-days had to be reformed and the year 1789 became Year I, because there was nothing worth remembering before it. In fact, it must be admitted that the mood of to-day, which induces women of good society to fight in the streets to prove their capacity for the ballot, labor leagues to demand that the employees run their industries and hire their present employers, grave conventions to discuss the plan of Government regulation as to whom one shall or shall not marry, and what sort of children he may have, and even the staid and respectable hotel waiters to indulge in frantic riot, appears on its face to embody a general demand for a world turned upside down.

But the American people have never shown disposition to translate angry demands and denunciation into offhand statute law. After the uproar and excesses of the stump, the cheap magazines, and the penny newspapers, the practical work in matters of the sort is placed where it belongs—in the hands of legislators who must look behind and ahead, who must bear the responsibility for after-effects of what is done to-day, and who are quite well aware that the public which to-day is demanding action will be the first to denounce and punish its representatives at Washington, or Albany, if their precipitate action brings about bad results. It is this sober second thought—such as invariably, in our history, has followed the most frantic demands for parting company with institutions of the past—which may be relied upon in the public measures which follow the present controversies.

We are now on the verge of this second period, when public men must decide, not what to say, but what to do. The moderating influence of this consideration is already visible in Gov. Sulzer's cautious and self-restrained message regarding Stock Exchange reform by legislation—the answer of the responsible executive to the irresponsible newspaper clamor for haphazard innovation in Stock Exchange affairs. It will be visible when, later on, the report of the Money Trust Committee comes formally before Congress; if not in the report itself, at any rate, in the Congressional discussion of it.

This does not mean that nothing will be done to correct or restrain possible abuses in either of the two directions. There will quite conceivably be legislation of the sort. There was such legislation after the searching and sensational life insurance inquiry of 1905. It introduced some much-needed reforms—not through destroying existing institutions, but through squarely prohibiting future misuse of policyholders' funds by Wall Street promoting syndicates. Whatever legislation occurs, as a sequel to the present inquiries, is likely enough to take a leaf from the book of the proposed new corporation laws for New Jersey—which, in response to excited controversy based on the gravest sort of known abuses under the older laws, propose to destroy nothing and to tear down nothing, but to put a stern and positive veto on future recourse to de-

monstrably evil and dangerous practices which have grown up and flourished under the bad finance and improper corporation laws of the past fourteen years.

A Notable New Novel
Laurence Housman's
King John of Jingalo

While this is a clever satire on England to-day, King John's lovable personality dominates the book. We learn how he became an authority on history, consented to his son's romantic love match, had a bomb thrown at his carriage and was arrested and thrown into jail. *$1.35 net; by mail $1.45.*

SOCIAL WELFARE IN NEW ZEALAND

By HUGH H. LUSK

This book sums up the results of twenty years of progressive social legislation in New Zealand, and seeks to interpret its significance to the United States and other countries. It is a work of the kind long desired by sociologists and political economists—a work based on Government statistics and data not accessible till 1912. The author was for ten years a member of the New Zealand Parliament. *12mo, $1.50 net.*

EXPERIMENTS IN INDUSTRIAL ORGANIZATION

By EDWARD CADBURY, part author of "Women's Work and Wages" and "Sweating." With a Preface by W. J. ASHLEY, Ph.D., Professor of Commerce in the University of Birmingham; formerly Professor in Harvard University. With Folding Table. Crown 8vo. Pp. xxii+296. $1.60 *net* (Postage 12 cents).

This account of actual experiments in a large business deals with the selection, education, and training of employees, departmental organization through committees, and the relation of the character and welfare of employees to business organization and efficiency. It is addressed to the practical business man, the social worker, and students of the relations between Labor and Capital. "A very remarkable story."—*N. Y. Journal of Commerce.*

Modern Science and the Illusions of Professor Bergson

By HUGH S. R. ELLIOT, Editor of the "Letters of John Stuart Mill." With a Preface by SIR RAY LANKESTER, K.C.B., F.R.S., etc. Crown 8vo. $1.60 *net.*

The First Twelve Centuries of British Story:

A Slight Sketch and Criticism of the Social and Political Conditions of the British Islands (herein called Britain) from the Year 56 B. C. to the Accession of Henry II. to the Throne of England in 1154 A. D.

By J. W. JEUDWINE, LL.B. (Camb.) of Lincoln's Inn, Barrister-at-law. With 21 Sketch Maps and 3 Photographic Reproductions of Mediæval Maps. 8vo. Pp. lx+436. $4.50 *net* (Postage 19 cents).

Science and the Human Mind:

A Critical and Historical Account of the Development of Natural Knowledge.

By WILLIAM CECIL DAMPIER WHETHAM, M.A., F.R.S., Fellow and Tutor of Trinity College, Cambridge; and CATHERINE DURNING WHETHAM, his wife. Crown 8vo. Pp. xii+304. $1.60 *net* (Postage 10 cents).

Travel Pictures: The Record of a European Tour.

By BHAWANI SINGH, Raj Rana Bahadur of Jhalawar. With Photogravure Portrait and 96 Illustrations from Photographs by the Author. 8vo. Pp. xiv+287. $2.00 *net* (Postage 18 cents).

This work represents the first attempt which has as yet been made by an Indian Ruling Chief to describe the impressions derived from a prolonged tour in the United Kingdom and Continental countries.

A New Government for the British Empire.

By F. W. BUSSELL, D.D. 8vo. Pp. xiv+108. $1.25 *net* (Postage 10 cents).

A Little Book of Bird Songs.

Rhymes and Tunes by LOUISE MURPHY. With Many Border Illustrations. Oblong 4to. *Boards.* Pp. 40. $1.00 *net* (Postage 6 cents).

Cardinal Manning. The Decay of Idealism in France. The Institute of France. Three Essays.

By JOHN EDWARD COURTENAY BODLEY, Corresponding Member of the Institute of France. With Photogravure Portrait. 8vo. Pp. xx+288. $3.00 *net* (Postage 15 cents).

Mr. Bodley was first associated with Cardinal Manning on the Royal Commission on the Housing of the Working Classes, and in spite of fifty years' difference in their ages, their friendship became so intimate that the Cardinal designated Mr. Bodley as his biographer. Although that plan was not carried out, their intercourse was so close during the last seven years of the Cardinal's life that Mr. Bodley's reminiscences are of unusual value and interest. The second essay is a philosophical study of certain social and ethical conditions in France, which are, in Mr. Bodley's opinion, transforming the national temperament and characteristics of the French people.

The Wondrous Passion.

By the REV. F. W. DRAKE, of St. John's Church, London. With an Introduction by the BISHOP OF LONDON. Crown 8vo. $0.90 *net* (Postage 7 cents).

Pauline's First Reading Book

About Tom and Jane and Their Naughty Friend

By LADY BELL, author of "Fairy Tale Plays," etc. Sq. Cr. 8vo. $0.60.

The Glory After the Passion:

A Study of the Events in the Life of Our Lord from His Descent into Hell to His Enthronement in Heaven.

By the REV. JAMES S. STONE, D.D., Rector of St. James's Church, Chicago. Crown 8vo. Pp. xii+393. $1.50 *net* (Postage 12 cents).

An endeavor to help those who would retain the Catholic Faith, and who yet realize that modern thought forces new interpretations of old truths. The author holds that the chief thing to fear is the conservatism that clings to the wreckage of exploded theories. No one need be anxious for the truth itself. At the same time, the author has kept in mind the devotional and practical aspects of these subjects, and has sought to make the treatment of them useful in more ways than one.

Birmingham Studies in Social Economics and Adjacent Fields.

Edited by Professor W. J. ASHLEY, Ph.D., formerly of Harvard University; Dean of the Faculty of Commerce and Chairman of the Social Study Committee in the University of Birmingham.

I. Environment and Efficiency: A Study in the Records of Industrial Schools and Orphanages

By MARY HORNER THOMSON, Woodbrooke Settlement. With a Preface by J. RENDEL HARRIS, LL.D., Director of Studies at the Woodbrooke Settlement. 8vo. *Paper Covers.* Pp. x+100. $0.75 *net* (Postage 5 cents).

II. The Public Feeding of Elementary School Children: A Review of the General Situation and an Inquiry into Birmingham Experience.

By PHYLLIS D. WINDER, Birmingham Women's Settlement. With a Preface by Councillor NORMAN CHAMBERLAIN, M.A., Chairman of the Attendance and General Purposes Sub-Committee of the Education Committee of Birmingham, and Chairman of the Central Care Committee. 8vo. *Paper Covers.* Pp. xii+84. $0.75 *net* (Postage 5 cents).

III. The Social Policy of Bismarck: A Critical Study, with a Comparison of German and English Insurance Legislation.

By ANNIE ASHLEY, M.A., University of Birmingham. With a Preface by GUSTAV VON SCHMOLLER, Professor in the University of Berlin, Member of the Prussian State Council and of the Prussian Upper House. 8vo. *Paper Covers.* Pp. xii+95. $0.75 *net* (Postage 5 cents).

THE MASTERS OF MODERN FRENCH CRITICISM

By Irving Babbitt

The work from first to last has life and strength as well as insight and justice. . . . A very entertaining as well as instructive survey of the intellectual life of France during the 19th century.—*Chicago Inter-Ocean.*

Professor Babbitt is one of the most unmistakably masculine thinkers we have in this country. The perusal of this study of modern criticism is tonic indeed.—*Independent.*

He has the habit of suggesting important ideas, and his writing is never trivial. For this power of stimulating thought, for his wide and scholarly knowledge, and for his keen perception of the essentials of men and of ideas, Professor Babbitt deserves to rank among the foremost critical essayists of the time; and his latest book is an enlightening and inspiring contribution to English critical literature.—*Bellman.*

Professor Babbitt's survey is a wide one and is made with a fine discrimination of values, courage and brilliancy. His philosophy is not in any sense esoteric. It is for the multitude and ought to be prescribed for it as a rule of thought and action.—*Philadelphia Telegraph.*

By JOHN MASEFIELD.

Awarded the Royal Society's prize of $500. "Incomparably the finest literature of the year." ***$1.25 net.***

STORY WRITING

PITKIN. The Art and the Business of Story Writing

By WALTER B. PITKIN (*School of Journalism, Columbia University*).

The principles, laws, and technique of story construction. ***$1.25 net.***

ETHICS

PARMELEE. The Science of Human Behavior

By MAURICE PARMELEE (Professor of Sociology, *University of Missouri*).

Of vital interest for the study of human nature and conduct. ***$2.00 net.***

AGRICULTURE

AGEE. Crops and Methods for Soil Improvement

By ALVA AGEE, M.S. (Director School of Agriculture, *Pennsylvania State College*).

Invaluable to the practical man for all matters concerning crops and the improvement and conservation of soils. *Illustrated.* ***$1.25 net.***

O'KANE. Injurious Insects: How to Recognize and Control Them

By W. C. O'KANE (Professor of Economic Entomology, *New Hampshire College*). ***$2.00 net.***

Complete information on how to know and control all insects inimical to farming interests. *Illustrated.*

WING. Milk and Its Products

By HENRY H. WING (Professor of Dairy Husbandry, *Cornell University*).

A new work based on Prof. Wing's popular standard book, embodying the most recent information on improved machinery and principles of modern dairy practice. *Illustrated.* ***$1.50 net.***

BLAKESLEE and JARVIS. Trees in Winter

By A. P. BLAKESLEE (*Connecticut Agricultural College*), and C. P. JARVIS (*Storrs Agricultural Experiment Station*).

Valuable, comprehensive information on the care of trees, their selection, location, and planting, and their protection from injury. *Illustrated.* ***$2.00 net.***

INDUSTRIALISM

STEVENS. Industrial Combinations and Trusts

By WILLIAM S. STEVENS, Ph.D. (*Columbia University*).

Traces the historical development of the Trust movement in the United States and discusses the problems emanating therefrom. ***$2.00 net.***

BROOKS. American Syndicalism: The I. W. W.

By JOHN GRAHAM BROOKS, Author of "As Others See Us," "The Social Unrest," etc.

A suggestive interpretation of modern industrial problems. *Ready shortly.* ***$1.25 net.***

PROSODY

WHITE. The Verse of Greek Comedy

By JOHN WILLIAMS WHITE, Ph.D., Hon. Litt.D., Hon. LL.D. (Professor of Greek Emeritus, *Harvard University*).

A complete and lucid analysis of the development and structure of Greek poetry, with special application to Comedy. ***$4.00 net.***

SPEECH

SCRIPTURE. Stuttering and Lisping

By E. W. SCRIPTURE, Ph.D., M.D. (Director of the Research Laboratory of Neurology, *Vanderbilt Clinic*).

A work which meets the needs of parents, physicians, and teachers. *Illustrated.* ***$1.50 net.***

HEREDITY

WALTER. Genetics: An Introduction to the Study of Heredity

By DR. HERBERT EUGENE WALTER (*Brown University*).

A forceful account for the general reader interested in evolution, breeding, and heredity. ***$1.50 net.***

EARLY FICTION OF 1913.

STEPHENS. The Crock of Gold

By JAMES STEPHENS, Author of "The Hill of Vision."

A fantasy novel of indescribable charm.

"Not another book like this in English literature."—*London Standard.* ***$1.25 net.***

CROCKETT. Patsy.

By S. R. CROCKETT, Author of "Love's Young Dream," "The Raiders," etc. ***$1.25 net.***

A stirring romance of Galloway in the years of smuggling and adventure, told in Mr. Crockett's best vein.

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. N. Y.

The Nation

NEW YORK, THURSDAY, FEBRUARY 6, 1913.

The Week

The ratification of the income-tax amendment by the requisite three-fourths of the States puts an end to the notion that the Constitution of the United States is virtually unamendable. Even the circumstance that it has taken four years to obtain that ratification loses most of whatever significance it might otherwise have had, when we recall that a leading factor in bringing about this delay was the objection raised by Gov. Hughes—an objection having no relation to the actual purpose of the amendment, but based on the fear of serious and unintended consequences which, in Mr. Hughes's judgment, might flow from the particular wording of the amendment as passed by Congress. The amendment providing for popular election of Senators is having a much smoother course through the State Legislatures, and will in all probability become part of the Constitution in the very near future.

No doubt the Democratic Congress will promptly make use of the new Constitutional power. It is to be hoped that in doing so it will exercise the degree of judgment and wisdom that so important a measure calls for. The question of the point at which exemption ceases will be more critical, perhaps, than any other; and along with this will go the question of discriminating rates for great incomes, or for incomes from investments as distinguished from incomes from personal effort. All these things are deserving of the most careful and sincere thought that the leaders in Congress, and the incoming President, can give to them. Another aspect of the matter, which concerns less the tax itself than the general fiscal policy as affected by the tax, is the question how burdens in other directions may be reduced in consequence of the addition to the national revenue which the income tax will provide. It will be a great thing for the Democratic party if it shall be able to point to distinct achievement in this direction, of sufficient magnitude to be a real relief to the public.

If fifteen judicial nominations by the President now awaiting ratification by the Senate should be confirmed, Mr. Taft will have appointed 114 Federal judges during his Administration, or almost exactly three-fifths of the entire Federal bench, including five members of the Supreme Court. At the time of Mr. Taft's candidacy much stress was laid upon the opportunity that confronted the incoming President to shape the history of the immediate future by the character of his judicial appointments. Mr. Taft is said to regard his appointments to the Supreme Court as among the most important achievements of his Administration. Yet the tendency four years ago was to assume too readily that, by the mere act of designating certain men to be judges, the President could determine the character and spirit of the courts for some time to come. The conception was almost of a clock-work Supreme Court that had only to be set in motion to keep on ticking at a predestined pace. Actually, our entire judicial procedure to-day is patently shaping itself under the influence of no particular man, but of the times. Had Mr. Roosevelt appointed five judges to the Supreme Court during the last four years, we doubt if the court's record would have been appreciably different from what it is.

Monday's decision of the United States Supreme Court, in the Government suit against the United Shoe Machinery Company, upholds the lower court's decision in favor of the company. It is not in all respects final, because the contention of illegality in the company's requirement that manufacturers using its machines shall use those of no other makers was not before the court. But the court has taken occasion, in its opinion on the other questions actually before it, to lay down some important principles. In particular, it expresses its mind on the general problem of "Big Business"—large combinations of manufacturing establishments — considered in itself. On this point the opinion is clear and emphatic. It thus puts the case:

> The disintegration aimed at by the statute does not extend to reducing all manufacturers to isolated communities of the lowest degree. It is as lawful for one corporation to make every part of a steam engine and to put the machine together as it would be for one to make the boilers and another to make the wheels.

This dictum has obvious bearing on the controversy aroused by the Tobacco Trust dissolution, in which opponents of the official disintegration plan contended that none of the units into which the dissolved Trust was divided should be any more "completely equipped" for its own part of the business than the independent competitors in that field. Neither the Attorney-General nor the courts sustained this contention, but it was made the basis of an attack on the decision and on the court which rendered it—an attack in which Mr. Roosevelt uproariously participated, with one of his luminous declarations of policy to the effect that such a Trust ought to be "absolutely disbanded." The Supreme Court, not being at liberty to rest on such convenient generalizations, has now defined with some definiteness the conditions under which Big Business is, and the conditions under which it is not, repugnant to the law.

Child-labor legislation is spreading over the country with a rapidity greater than its most sanguine advocates could have expected a few years ago. In Texas a bill has been introduced in the Legislature which is described in the Galveston *News* as "practically a copy of the model child-labor law drafted by the National Child Labor Committee." We are hearing a great deal less nowadays than we did two or three years ago of the impossibility of obtaining reform legislation of this character in the several States owing to fear that those adopting it would suffer in the industrial competition with States having less humane enactments. Indeed, the potency of an awakened public opinion, and its superiority to such obstacles as this, have been manifested not only in this but in other kindred ways. The story of workmen's compensation acts is of the same character; these will soon be as much a matter of course as the official (or "Australian") ballot came to be within a few years after it began to replace the old-time ballot handed out by party workers. There are drawbacks in our system of self-governing

States, but there are vital benefits, too; and the drawbacks are seen, by such experiences as these, to be not so portentous as is sometimes represented.

It is easier to kill a man in many counties in Texas than to give or sell him a drink. . . . We are providing ways and means to hustle men into jail or to take from them their money for small offences, but the way is broad and easy for the man who shoots his neighbor down.

These words from the Houston *Post* are pointed with the declaration that "the able representatives from Dallas County are eagerly engaged in preparing traps to catch the little fellows, but there were sixty-seven homicides in that town last year, and it is a certainty that the great majority of the men who committed them have been given trivial sentences, have been acquitted, or will be acquitted." This Texas newspaper winds up its indictment of conditions in the Lone Star State by asking whether the Legislature cannot do something to mitigate them. The picture thus drawn is not so black as that presented by the Birmingham, Ala., *News*, upon which we commented last week, but it must shake any lingering belief in the high morality of our agricultural as compared with our urban centres. Lawlessness is a national crime. As for a remedy, perhaps the Texas Legislature can do something in response to the appeal made to it, but a few stern judges and juries could do infinitely more. Nor can we believe that they would find themselves going counter to public sentiment.

Already is Col. James Hamilton Lewis, Democratic primary nominee for Senator from Illinois, beginning to enlighten the country. He has been reading Government reports, and has found some startling information. "There are now existing in this nation," he declares, "under the designation of agents, 46,000 individuals who serve as spies, detectives, investigators, watchers, decoys, betrayers, silent accusers, and secret slanderers of everything which pertains to the citizen in America." Not content with this deadly enumeration, he resorts to impassioned metaphor. "These individuals, like imps," he goes on, "surround the cup from which the citizen drinks, shadow the table at which he eats, darken the threshold over which he lives, and sit like a thing of evil over every department of his undertaking." To feed and clothes these 46,000 demons in human form, we spend $5,000,000 a year. With what result? "Big business stands in fear; little business in despair." We have not space to reprint his rhetorical comparison between Italy, Spain, and Russia on the one side, and the United States, with these "spies, decoys, and betrayers," on the other. Nor are we altogether sure what he wants the country to do about it. We can only look forward to the day when the Senate will forget that there is or ever was such a prosaic institution as a calendar, in its absorption in the Illinois Colonel's handling of the English language.

While Boston is beginning to look forward to the tercentenary celebration of the landing of the Pilgrims, the second city in the country continues to take note of the passing of citizens whose memories spanned almost the entire period of its existence. When Edwin Oscar Gale arrived in Chicago in 1835, the town, which had been incorporated two years before, had an area of three-fourths of a square mile. Its public buildings consisted of a brick Episcopal church, a brick bank building, a brick "court house or clerk's office," a jail, a small post office, and three district schools. The leading industries were a foundry, a steam grist mill, a steam sawmill, a brewery, and a soap and candle factory. In 1837 the town became a city. It also took a census, which showed a population of 4,107. Mr. Gale had long disputed with the late Fernando Jones the title of "first Chicagoan." Both men, then very small children, got to Fort Dearborn on the same day, by the same boat, the Illinois, sailing from Buffalo, but Mr. Gale made the claim that, owing to a desire to land on his birthday, the youthful Jones remained on board the boat over night, while his destined rival stepped ashore early in the evening.

The new Grand Central Station in New York is not only a great work of art, but it is an achievement in engineering which is in some respects without parallel. To architects we shall leave any technical comparison of the new building with the Pennsylvania Station. Some will prefer one, some the other. Some will object to the color of the ceiling in the great concourse of the Grand Central; and some will dwell upon its greater convenience and compactness. But there can be only one voice about the way the engineering difficulties have been solved while the handling of the 800 trains that daily enter and leave the terminal went on. That was a traffic problem of a magnitude which no one else has had to encounter, and that it has been solved without costing a passenger's life must go down as one of the marvels of the time, as a wonderful achievement of engineers and operating men.

New York may well be proud that this new edifice has been added to its growing list of noble structures. The throngs that pass through its doors ought, however, not to lose sight of what has been done for their safety and comfort in the yards beyond. Here is a most amazing application of science to mechanical and technical problems of the utmost difficulty. Nowhere else, it has been well said, are the wonders of railway electrification so clearly exhibited. All trains are handled by means of an interlocking switch device made as perfect mechanically as is humanly possible. Everywhere there are devices to guard against the mistakes of the fallible human element. In the two interlocking switch-rooms the train directors handle their traffic without seeing the trains they send to one platform or another, or expedite through the "throat" of the station to the Harlem River. Far above the tracks will tower clubs, hotels, theatres, exhibition rooms, and office buildings. The old open railway yard is a thing of the past. More than that, the railway has found that this new real estate on steel stilts will pay a magnificent return and eventually, through a sinking fund, wipe out the entire yard expenditure. Here again the company has shown eminent public spirit, for it has limited the height of the buildings to be erected on the new Park Avenue to six stories, and the others to twenty. All this construction is to be carried out in accordance with an harmonious architectural plan. Below the buildings will be the ceaselessly active but invisible terminal, marking in its every department the foremost advance of American technical enterprise.

In most discussions concerning the drift of population from the country to the cities, the tendency is to assume

that the results have been as harmful to the farms that have lost population as to the cities that have gained it. On the one hand, we are asked to consider the overcrowded town, with its slums, its high rents, its high food prices, and its over-supply of labor. On the other hand, there is the empty countryside crying aloud for labor. But now and then some courageous person arises to assert that the legend of the abandoned farm is just a legend. A detailed inquiry into the causes of rural depopulation as an element in the problem of high prices is going on under the St. Louis *Republic*. In two counties out of less than half a dozen studied, the investigators found that wealth and the general well-being have been steadily on the rise, while the population has been declining. In one county the population decline was 19 per cent. between 1900 and 1910; in the second county it was 12 per cent. A change from tobacco-growing to stock-raising, with decreasing opportunity for labor, accounts for the decline.

From Monday morning's printed interviews with Prof. Henri Bergson, it appears that when the eminent French philosopher arrived in New York harbor his ship was boarded by newspaper men who asked him for his views on at least the following subjects: Laughter, American philosophers, syndicalism, Col. Roosevelt, Gov. Wilson, the Balkan War, seasickness, and woman suffrage. There must have been minor topics brought forward by the ship news men which Professor Bergson contented himself with dismissing in a word or two or with a smile. But the list we have given is sufficient to demonstrate how completely the New York reporter vindicates Professor Bergson's theories of a purposeless, spontaneous creative force, that formulates its questions as it goes along.

Iowa is one of the States with "land-grant" colleges. She did not build them up in connection with the State University, but, like Montana and a few other States, spread a set of institutions widely over the State. Each went regularly to the Legislature to ask for all the money it dared, and each proceeded to develop itself without reference to the others. Six years ago a joint legislative committee was appointed to investigate the situation. It reported, as we read in the *Review of Reviews*, unanimously in favor of a single governing board for the University, the College of Agriculture and Mechanic Arts, and the State Teachers' College. Such action has been taken. Two duplications were regarded as especially harmful: that of the engineering department at the College of Agriculture and of the College of Applied Science at the University, and that of instruction in liberal arts at both the University and the State Teachers' College. These duplications were got rid of by discontinuing the College of Applied Science at the University, and making the Teachers' College a normal school.

"The end of fraternities in high schools is inevitable." These are not the words of some principal or member of a school board, but of the head of a high school fraternity, upon arriving in Denver for the purpose of annulling the charters of the four chapters in that city. The fight against fraternities in high schools has been long, and the issue by no means certain until very recently. Chicago pupils tested the matter out not long ago by a kind of strike which came to include two thousand boys and girls, but even this organized opposition did not dismay the Superintendent, Mrs. Ella Flagg Young, and her associates, and in a few days the rebels were suing for peace. For the existence of fraternities in high schools it has been hard to see any reason, except imitation of the colleges, and the parents must be few who still hold with their children in admiring an institution that has served rather to create artificial distinctions and to supply an unprofitable mode of activity than to yield any real benefit.

Is there any inner meaning discernible in the suffragette hatred for plate-glass? The range of Pankhurstian battle tactics has widened so as to include various forms of arson and assault and battery, but the smashing of shop windows still seems to be the favorite form of protest, as it is the earliest. Glass, of course, has several properties that are not enumerated in the dictionaries, among these being its ready accessibility to the suffragette hammer, the highly disturbing noise it produces as it crashes down to a Bond Street sidewalk, and its comparative inexpensiveness. It is estimated that $25,000 worth of glass has been broken in London in defence of woman's rights. Obviously, this is a ridiculous sum when compared to the amount of resultant noise that has been heard round the world. But there is also a symbolic meaning to glass. It typifies civilization, and at the same time the conventions upon which civilization rests. The Bond Street shopkeeper has only a transparent wall an eighth of an inch thick between him and the world; yet under ordinary circumstances that is enough to make his house his castle. Along comes the suffragette hammer to remind him that his security is based only on the voluntary abstention of civilized man from the use of force. Let elemental passions be let loose, and a plate-glass window is reduced to its original dictionary definition of a substance eminently fragile.

Peace to-day would be scoring her victories if only there were the leaders to guide the armies of peace. This is the contention of the veteran correspondent, E. J. Dillon, who usually is not given to taking a sentimental view of the forces and motives that determine international relations. In the London *Telegraph* Dr. Dillon discusses the paradoxical character of the situation arising out of the Balkan War:

> How, for example, will he explain on the one hand the will of each of the European States to maintain the general peace, even at a heavy sacrifice, and, on the other hand, the fear felt by them all that something—they know not what—may at any moment occur which will precipitate a sanguinary war? For if one and all they are resolved to keep the peace, it is manifest that they wield the requisite power to carry out that resolve.

One answer Dr. Dillon does find to his own question, "the lack of a leading European statesman, capable of storing up and utilizing the vast peace forces at present scattered over Europe. We lack a Cavour or a Bismarck." But here the writer obviously falls into error. He forgets that he is at the present moment in the heart of a crisis, and is comparing his impressions with the impression created on us by Bismarck's or Cavour's completed, rounded out career. In their day these two men also had their uncertainties and their anxieties and their fears with regard to the future. The point is that the spectre of a general European war no longer haunts the public mind.

THE PRESIDENTIAL TERM.

Few expected—apparently not even Senators expected—that a two-thirds vote in the Senate could be got for a Constitutional amendment changing the length of the President's term of office. The debate had dragged on through the week without arousing much interest; various alternative proposals had been urged but voted down; and the Washington correspondents predicted failure for the whole movement. Yet on Saturday, by barely one vote more than the number necessary, the resolution was adopted favoring an amendment limiting the Presidency to a single term of six years.

For that plan there are, in the abstract, good arguments, as there are many against it. But it is obvious that concrete and even personal motives entered into the Senate's discussion and final action. It was not an alteration in our frame of government, ideally considered, that most of the Senators debated and voted upon. They had their eyes fixed rather upon political motives. They were thinking of individuals. No one can doubt this who followed the speeches or noted the alignment on the final roll-call. All the Democratic Senators, save one, voted for the amendment. All the Progressive Republicans in the Senate were against it. A majority of the regular Republican Senators were for the amendment; only eight or ten opposed it. Such a division on party or personal grounds is plainly of great significance. It is upon this fact, and upon its implications, that the attention of the country will be directed, certainly at first, and perhaps continuously. As the subject is brought up in the House and, if the amendment passes there, is discussed by the State Legislatures, the immediate concern will be about, not the theoretical merits, but the immediate consequences of the proposed change in the Constitution.

The people will be quick to grasp the fact that the amendment, in its present form, is virtually *ex-post-facto* legislation. Fixing the Presidential term at six years, it provides that "no person who has held the office by election, or discharged its powers or duties, or acted as President, shall be eligible again to hold the office by election." This looks directly at Theodore Roosevelt. There was no concealment about this. It was freely revealed in the debate. It stood out in the actual vote. Every Senator with Roosevelt sympathies was strongly against the amendment. What some of them said, and what all of them doubtless felt, was that this was an attempt to make it forever impossible for him to become President again. In so far as this was held to be a denial of his existing rights under the Constitution, we agree that it has the air of sharp practice. The *Nation* will not be suspected of a desire to see Mr. Roosevelt once more in the White House. But if the people wish to place him there, nothing in the law of the land, as it is on the statute books to-day, would prevent their doing so; and it will look like a hardship to him, and unfair treatment, to adopt an amendment which expressly shuts him out. By a simple change in phraseology this could have been avoided. If the amendment had been made to read, "no person who, *after the adoption of this amendment*, shall have held the office," etc., no one could have alleged that an effort was being made to rule Roosevelt out. His stoutest opponents will not wish another candidacy for him to be made impossible by anything like a trick or snap judgment

Equally unfortunate would be the practical effect of the proposed amendment in the case of Gov. Wilson. If the change in the Constitution were to be adopted before 1916, it would automatically extend his term till 1919. But what could have been further from the minds of the people when they elected him for four years last November? Everybody must feel the incongruity and unfairness of suddenly making four mean six. Take it the other way round. When Wilson was a candidate and was elected, he was entitled, under our political practice and under the law, to look forward to eight years in the Presidency, provided he succeeded during the first four. But now it is proposed to deny any such possibility and, by so much, to take away the motive which has always been operative in a President assuming office. It is not a question of personal injustice to Gov. Wilson; he will not have a word to say on that head; but why should the effort be made to amend the Constitution in such a way as to involve all these irregularities and inconveniences in effect, with this semblance of unfair play? It is hard to defend laying a rash hand on our charter of government when it is obviously not a general principle that the innovators have in mind so much as two personalities.

Our judgment is that these considerations will so affect the public mind, as discussion of the matter goes on, that there will be small chance of the proposed amendment's procuring adoption by three-fourths of the States. The plan, whatever its speculative merits, will not appeal to the rough sense of justice. People will say: "Let us start fair. If we ought to make the Presidential term six years, let us do it deliberately, and not in such a way as to seem to be squinting at two men. Leave them out of the account. Argue the proposal so as to sink personalities out of sight, and then we will tell you what we think of it."

GOVERNING ALIENS.

President Taft's heat over the Democratic proposal to do in the Philippines precisely what we have done, to our national credit and honor, in Cuba is not easy to understand. It is gratifying, however, to note that he bases his antagonism squarely on the ground that it will be most unjust to the Filipinos to promise that eight years hence we shall withdraw from the archipelago. It is something to give up talking of our having to stay forever because of the blood and treasure we have expended. But if we withdraw, it will terribly injure them; all the structure of government we have so laboriously built up would crash to the ground; the natives would quarrel among themselves; wily and unscrupulous politicians among them would seize the offices; the various tribes would fight one another, and the only outcome would be anarchy. Thus runs the argument, and to strengthen it Mr. Taft declares that the Democrats should not be bound by their platform pledges, asserts that they are ignorant of the problem, and calls on all American teachers, missionaries, and officials to testify to the correctness of his position.

Well, even among them there is a difference of opinion. The *Nation* has recently received two letters from American residents in Manila, claiming to speak for others as well, who desire our withdrawal from the archipelago. One of the writers boldly declares that he is ready to "undertake to procure the

signatures of one hundred Americans who, like myself, have resided here for from twelve to fourteen years, to a statement of belief that Mr. Taft's first-hand knowledge of the Filipino people is nil." This he explains by saying that Mr. Taft, as Governor-General, never came in touch with the masses of the Filipino people, only with the servant class, or the wealthy political and social leaders. Then this writer states the situation very clearly in these words:

> It is, however, disingenuous on his part to attempt to convey the impression that there *may* be a time in the indefinite future when the Filipino will be equipped to carry on the functions of self-government. He knows that so fast as they arrive at our standards, we shall as continuously advance our ideals to the sole end of forever frustrating their honest ambitions. By daily and increasing exploitations of their country, we know that we are intrenching ourselves for all time. The intelligent native realizes this, and uses his poor efforts to offset the work of the publicity agents we maintain in the United States, whose salaries we compel him to pay.

That is, indeed, the truth of history. The conqueror and exploiters invariably find reasons for remaining in the subjugated land. About every army officer who left Cuba after our last intervention insisted that the Cubans could not govern themselves six months before anarchy would prevail. They have survived an abominable and a corrupt Administration, to choose in its place another, headed by the Cuban probably best fitted for the Presidency. Again, with all respect to Mr. Taft, missionaries and officials are not good witnesses. The missionaries think of the converts to be made, and few officials can forget that if we leave the islands, they must seek new positions. As for the business men of the exploiter type, they are the worst advisers of all. It is far better, in a case like this, to intrench one's self upon the principle to do the just and right thing, and leave to fate the result. And the principle at stake is the right of the Filipinos to govern themselves as badly or as well as they wish; through dictators and bosses if they please. Few people who remember the excellent native government which Admiral Dewey's officers found and described in 1898, and are aware of the admirable conduct of the present Filipino Assembly, will believe that anarchy will result if, eight years hence, after twenty-two years of American rule, we withdraw, after neutralizing the islands and establishing, perhaps, a friendly, sympathetic Minister-resident to advise the islanders.

As for the permanent value of our own work in the archipelago, Mr. Taft would do well to read the beginning of a remarkable article on Oriental Justice by the Councillor of the British Embassy at Washington, Mr. A. Mitchell Innes, in the current *Hibbert Journal*. Himself of long experience as colonial administrator in Egypt, he has written one of the wisest and most moving interpretations of Oriental character we have ever read. But he begins by frankly admitting that, after all every Englishman has seen accomplished, "there remains a mysterious bar to complete success. He knows that the administration we have striven to set up has not really taken root, and would *crumble to dust* to-morrow if our hand were withdrawn." Mr. Mitchell then gives a clear exposition of the Oriental method of justice, with its picturesque emotions, its warmth of personality, and its inseparability from religious emotion, which is so wholly different from our own cold, formal method of justice, made to fit classes of crime but not the individual criminal. What Mr. Innes admits of English colonial management, that, after centuries, it has never successfully grafted Anglo-Saxon forms of government on Orientals, is true, and will be true of ourselves among the Malays. A century hence, if we remain blind to our own and the Filipinos' best interests, we, too, shall have to confess that our government would crumble to dust should we withdraw. But a hundred years hence we should find troops of government officials certain that the time had not come to free the Filipinos. The way to free the Filipinos, whom we hold against their will, is to free them; to fix a definite date, and then to put officials there who are determined to make as good a job of setting up a Filipino government as Col. Goethals has done at Panama. Where there is a will there is a way—the way of justice, the way of good will.

A POSTAL SUPERSTITION.

The installation of the parcel-post system has given rise to a pointed illustration of that religious dogma of the Post Office which has always enveloped in a mystic awe the subject of written matter sent through the mails. "Ignorance of the parcel-post rules on the part of their customers," one reads in a recent news item, "has been causing the department stores a good deal of loss." One suspects what is coming. "Many persons in sending back merchandise to be exchanged or credited have written either on the outside or the inside of the parcel a message to that effect." For this bold and indeed unnatural crime the Government of the United States inflicts a punishment ridiculously inadequate; for, instead of causing the arrest of the offender, or even confiscating the goods, it merely exacts the double of first-class rates. It is comforting to know, however, that the imposition of this mild penalty is insisted on in all cases. It is stated that one shop received back from a manufacturer a parcel on which a fine of $8.62 had to be paid, and that another has been paying on the average $25 a day in these penalties.

Now of course this kind of thing will become infrequent as the rules of the parcel-post system become familiar. But we are tempted to wonder whether, out of the scores of high officials of the Post Office Department, anybody is asking whether all this pother is necessary. Why should it be impossible for a person returning a parcel to write on the parcel itself what it is most natural and convenient to put there and nowhere else? We do not assert that there is absolutely no immediate gain to the revenue of the Post Office in compelling Mrs. Blank to write a separate letter to inform Messrs. Smith & Brown that she is returning a package to them. But we do say that the prohibition of written matter of this kind is caused not by any calculation of the effect on the postal revenue, but by unthinking adherence to a mere superstition. Postal administration has developed an inveterate instinct of unreasoning hostility to written matter, or, let us say, a specific mental disease which may be termed grammataphobia. It was only after a great deal of struggle that permission was granted to write "Merry Christmas" in a Christmas package; and to break further through the wall that shuts out written matter from packages of printed matter or merchandise is still regarded as little short of sacrilege.

The truth is, of course, that the amount directly gained by the Post Office through insisting on this rule is too trifling to be worth bothering about;

while on the other hand it is plain that any such annoying restriction tends to obstruct the business, and thus in all probability causes in the long run a very considerable *loss* of revenue. It is a nuisance to the public, and this of itself ought to be a matter of some concern to the authorities; and it is unsound from the point of view of postal business. It may be set down as certain that no wide-awake private corporation carrying on the business of the Post Office would adopt any such rule, and that the Government itself would not adopt it but for the fact that the policy controlling written matter is regarded as so sacred and unalterable that the reason for it is never looked into.

With a very slight restriction, written matter could be allowed in all third and fourth-class packages without causing any substantial loss of revenue on the face of things, and with every reason to expect that in reality it would cause a decided gain of revenue. But this is peculiarly true in regard to the parcel post, since the lowest amount of postage for any parcel is five cents. Is it to be imagined for a moment that there would be any considerable loss of letter postage if people were allowed to put written matter into parcels, when five cents is the minimum rate, and this applies only to points within the fifty-mile zone?

It happens that a curious perversion of a different, but analogous, kind has also occurred in connection with the parcel post. Not only written, but also printed, matter is forbidden; so that, for instance, one cannot send a book along with other things in a parcel. A Fifth Avenue shop wished to enclose in all its packages a printed warning not to write on returned packages anything but the name and address of the receiver and the sender, but it had to obtain from the Post Office authorities a special authorization to do this. Yet the rate for printed matter throughout the United States is only one cent for two ounces, or eight cents a pound; so that the difference between the printed-matter rate and the parcel-post rate is not very serious at worst. And furthermore, it seems a little ridiculous to discriminate *against* books in the postal rates, when we have hitherto always discriminated in their favor. Postmaster-General Hitchcock, in his recent report, urges that the distinction between third-class and fourth-class matter be abolished; he states that this was recommended by the Department prior to the enactment of the parcel-post law.

But why not further simplify by letting people put into the parcels any mailable matter they choose? Has anybody figured out the probable effect of this on the postal revenue and expenditure? Is there any reason for not effecting this simplification except want of thought? It would be a great comfort to everybody; and if both this simplification and a proper simplification of the zone plan were adopted, the popularity of the parcel post would be vastly augmented—to the benefit of the people, and, we are convinced, to the advantage of the postal revenue.

HUMORS OF ENGLISH POLITICS.

The new Siege of Londonderry has its serious political importance, but the sardonically humorous aspects of it are the most striking. For at the very moment when the House of Lords was throwing out the Home Rule bill, the Irish Nationalists were wresting the Londonderry seat from the Unionists. But Londonderry is in Ulster, and it was to save Ulster from the horrors of Home Rule that the Unionists have been straining all the resources of oratorical threatening. "Ulster will fight, and Ulster will be right." Yet everybody has known all along that this province of Ireland is almost equally divided politically. Thus the proposal has been that Ulster should have the privilege of resisting the wishes not only of the great majority of the Irish people, but of nearly half of its own inhabitants. The recent bye-election will go far towards putting the finishing touch of absurdity to this whole contention. For with the winning of Londonderry the Irish Nationalists now have an actual majority of all the members of Parliament for Ulster. This outcome is a stroke of Irish humor of which even the most stolid Unionist must perceive the delicious timeliness.

The Derry election was no joke. It was bitterly fought. The constituency was canvassed and tabulated until the party workers knew just how every voter stood. And the Unionists felt beforehand a dejection as marked as the confidence of the Nationalists, for they knew well how severe a blow to them would be the loss of the seat. The dispatches tell of the extraordinary exertions made by both sides. But the Nationalist majority of 57 was really discounted in advance; and now that it is assured, its comic bearings will be appreciated throughout the kingdom. There have been complaints by Unionist speakers in the House of Lords that the campaign against Home Rule had been "listless," and that the people did not seem to be aware of the danger to the Empire. It is safe to say that they will hereafter appear even more indifferent to the wails and defiances of Ulster. By gaining one seat there the Nationalists have done more than defeat their opponents—they have turned the laugh on them.

Other recent political occurrences in England have caused a good deal of mirth. The circumstances attending Mr. Bonar Law's surrender of the food taxes, which he had just solemnly vowed he would never surrender, and at the same time consenting to retain the leadership which, in one vital point, the great majority of his own party had rebuked, were of a sort to appeal to the satirist. Mr. Law himself was serious enough. Always a man who jokes "wi' deeficulty," he could be excused for missing the fun of the situation. And it must be said that he displayed a manly spirit. He frankly told the Unionist party that, since a change of programme had been forced, this "should be accompanied by a change of leaders." However, as he had been begged to remain, and assured that his retirement would be "fatal to the best interests of the party," he felt it his duty to comply with the request made of him. He seems to have adopted for his own the sentiments of Captain Reece of the "Bab Ballads," in his speech to the crew of the Mantelpiece:

> By any reasonable plan
> I'll make you happy if I can;
> My own convenience count as *nil*;
> It is my duty, and I will.

A repudiated leader still making a pretence of leading is naturally an inviting target for shafts of wit and sarcasm. Mr. Bonar Law has been transfixed by his full share of them. One of the sharpest-tipped was aimed at him the other day by Mr. Lloyd George while making a congratulatory speech on the successful operation of his Workingmen's Insurance act. He maliciously extracted from Hansard the following pre-

diction made by Bonar Law less than a year ago in reference to this very insurance act: "I venture to express the belief that although honorable gentlemen on the benches opposite were very proud to have it called an act because it had become law, it will never come into operation." Lloyd George cited this as a gratuitous and falsified prophecy, and then slyly added that it would not be fair to hold Mr. Bonar Law entirely responsible; for "it may be that he was speaking only as the leader of the party, and was not necessarily expressing his own personal view."

Another bit of humor, unconscious this time, was contributed by the *Spectator*. It said of Bonar Law's abject surrender of his own convictions, when he found them in opposition to the "larger opinion" of his party, that "nothing could be more straightforward and more manful, in a word, more honest." Then, almost in the same breath, it spoke of a Unionist who would *not* give up his convictions. This was Mr. Austen Chamberlain, who, as his father's son, knows something about food taxes and their necessary place in the scheme of protective duties and imperial preference. When others retreated, Mr. Chamberlain refused to do so, saying proudly: "I cannot turn my back upon myself." But this merely proves to the *Spectator* that Mr. Chamberlain is "an honest and independent man"—fully as honest, we suppose, as Mr. Law, who did the exact opposite.

THE FEMINIST MIND.*

In general, the literature of feminism neither enlarges the mind of the reader nor increases his self-respect. It is therefore a pleasure to point to the invigorating little book in which (rather unexpectedly, perhaps) the historian of Standard Oil stands for the business of being a woman. Miss Tarbell writes from the standpoint of a mind well-stocked and well-ventilated, and her argument for the distinctiveness and dignity of woman's business is an appeal to woman's intelligence. Along the same line, Ellen Key is more vaguely impressive, but not less open-minded and free from sex-jealousy. Miss Tarbell's is the scientific and business-like mind, while Ellen Key is more Teutonically philosophical. Her "Woman Movement," however, though full of just observations, adds on the whole little to her former books, and mainly strengthens the impression, not always confirmed by the character of her followers, of a truly large-minded woman endowed with a splendid naïveté; which enables her to combine in perfect good faith a fervid belief in the ideals of the home, the family, and conjugal love with an extreme radicalism in the matter of freedom of divorce. Mrs. Coolidge's "Why Women Are So" approaches more nearly the type of feministic literature, in spite of a conscientious striving to be impersonally scientific. Why *are* women "so"? Because social conditions (mainly masculine) have made them so. Woman's business is not distinctive. Women are sillier (yet finer) than men, but this is because the removal of industries from the home (a wearisome repetition in all the woman-books) has left them nothing worth thinking about; and she looks forward to the time when the man will come home early in the afternoon and take a hand with the wife, who has also spent the day abroad, at the sweeping and the dishes. Altogether, the book is a rather gloomy argument for the suffrage, from the standpoint of either sex, and we are not reassured when we learn that "the elect among women" include Mary Baker Eddy. M. Finot's "Problems of the Sexes" is another sociological study embracing the whole subject of feminism. M. Finot presents an array of learned authority, but he is himself the victim of a rather weak sentimentalism which leads him so far as to declare that, if women were to hold the places now occupied by men, a few years would see all the problems in which men have failed—depopulation, alcoholism, criminality, misuse of public money, etc.—solved without delay. "The Advance of Woman," by Jane Johnstone Christie, is a hopelessly superficial book under an ill-fitting title. Either "the decay of woman" or "the fable of the matriarchate" would better fit the argument. "Woman Adrift" is full of interesting information about the suffrage-movement in England, but poor Mr. Owen turns out rather weak. His appeal to woman, rather his command to mind her own business, cannot be addressed to her intelligence, since of this he has his doubts, and the appeal to nature falls flat when nature is off duty. Yet Mr. Owen is not a dull man. His laborious argument is relieved here and there by choice bits of grim humor. The difficulty is that this subject of feminism has a weakening effect upon the mind—a truth which I am doubtless now about to illustrate *in propria persona*.

I.

Discarding the tangle of considerations in which the subject is enveloped as a whole, I shall limit the discussion to one immediately relevant question: Have women yet manifested the kind or grade of intelligence which would justify us—us men, of course—in giving them the suffrage? or, more generally, in expecting any aid from their counsel and advice? I do not ask, Is it just—abstractly just? That question seems to me unimportant, and, moreover, not well based. The celebrated argument of the cultivated woman and the illiterate negro or foreigner loses most of its force when we remember the position of the cultivated man. He, indeed, is not rated below the negro or foreigner. No, he has the honor of being rated just equal. Altogether, it is rather difficult to see why, under present conditions, any woman should regard the franchise as a privilege; and one would think that intelligent persons of both sexes should be interested, first of all, in making the suffrage stand for some degree of character and intelligence. In the meantime, if we are to pursue the argument of justice, we must remember that the suffrage is not granted to all males, but only to those assumed, however wrongly, to have reached the stage of mental maturity. And this compels me to disclose my general conclusion. When we speak of men, women, and children, we usually follow the order given. Now, intellectually, I would not say that women are children; neither are they men. The best formulation that I can find for the feminine mind—a most difficult and elusive subject—is that it corresponds closely to the masculine mind *just before* the presumptive stage of maturity. The masculine mind goes on to maturity; the feminine mind seems hardly to get beyond the stage of adolescence.

Perhaps I should say "the feminist mind," for the formulation will not be true of all women; nor will it fail to include many men. Hence, I am not raising the odious question, whether women are "so" by nature, but whether they are so *de facto*. *De facto* I should say that the formulation fits the feminine average, or type. Nor can I assent to the "flattering unction" that the intelligence of woman is only different, being intuitive where the masculine intelli-

gence is rational. For if intuition is to be distinguished from reason, then it must be noted that virtually all the greater works of intuition, as displayed in art and in scientific invention and discovery, are so far to the credit of men. Hence, I shall not pretend to speak from a point of view either impersonal or asexual. Intelligence, as I understand it, is masculine intelligence. Logic is what the light-hearted Mrs. Gilman would call "man-made logic." Man-made logic is indeed imperfect, but woman-made logic is up to the present time virtually non-existent or, what is the same thing, a contradiction in terms.

II.

We are told that politics will be purified by the introduction of woman's superior morality. This superiority I must contest because I hold that morality and intelligence are one and the same. To say, for example, with the writer of a recent magazine article, that the issues in which women are interested are moral rather than political, is to state a fact, but to state it wrongly. It is true that in the suppression of the liquor evil and the "social" evil women have shown a consuming zeal. Nay, in these as in other militant campaigns they have demonstrated their readiness to burn the house down to enforce the special demands of morality. I have nothing to say for the social evil except that it presents a complicated problem, but the liquor evil is more of an open question. We shake our heads over "the European drinking habits," but the truth seems to be, as suggested by the per capita consumption, not that we are markedly more abstemious, but only that our drinking habits are more vicious and disreputable. This is the characteristic result of a fanatical zeal, which refuses "to compromise with the devil," combined with a deep-seated political corruption. To the discerning mind it should be evident that the root of our liquor evil lies in the impossibility of finding public officials who will enforce the license laws, or any other laws, as long as they have something to make out of it. As compared with the sin of drunkenness, this seems to me to be the deeper immorality. It is the sin that raises the more serious questions concerning national character. But this belongs among the "political issues" which, I think it fair to say, have hardly yet impressed the feminine consciousness.

When it is said that politics will be "purified" there is usually a failure to distinguish between masculine and feminine conceptions of "purity." For the woman purity is mainly chastity; for the man it means, first of all, to be incorruptibly honest. It would be interesting to know upon what ground we are to expect Mrs. Grafter to become critical of Mr. Grafter as long as Mr. Grafter remains a good husband; or why Mrs. Floater should be less ready to turn an honest two dollars than Floater himself. The authenticated fact seems to be, as recorded by masculine observation, that, woman for man, on the same social level, the woman, as a rule, is less deeply offended by a breach of trust and at the same time less alive to the fact when the evil results are somewhat remote. Moreover, I believe that one of the evils of our political life is the predominance of the eternal feminine in our national point of view. Only too often has "the good husband and the kind father" served to disguise the pliant instrument of corrupt politics. That the argument will lose its force under woman suffrage is too much to believe.

Women are credited with a superior capacity for self-sacrifice. Here, again, I am obliged to say that self-sacrifice seems to me to be an unintelligent conception of virtue. But many who disagree will admit that it is hardly a relevant business virtue or a very solid basis for the adjustment of political rights. Those, however, who deal with women in business are not impressed by their self-sacrifice, but rather by their failure to comprehend the elementary principles of justice. It is a rather rare woman who can view a transaction between A and B as a fair game in which each must good-naturedly expect the other to stand for himself. Indeed, to the mere man it seems that nothing is so clearly feminine as a complete failure to see that there is another side to the case, or to see any aspect that is not immediately obvious and personal. Accordingly, when the department store protests that it exists only to extend courtesy, especially the unlimited courtesy of changing your mind, the feminine customer hardly pauses to reflect that the heavy expense of this policy is provided for in "the cost of doing business"; and thus one outcome of the principle of self-sacrifice is a beautiful, unconscious communism, whereby we bear one another's burdens and enjoy economic waste and moral confusion.

Feminism is romanticism in public life and in business, and romanticism is the characteristic product of the adolescent mind. The high-minded youth is filled with a kind of idealism which calls for a "crusade" against some giant evil, but which, while aspiring perhaps to an heroic self-sacrifice, and possibly even to an heroic chastity, is apt to be strangely blind to obligations well supported by benefits received. To a clear-minded man a few years of rough experience bring the sobering conviction—not that the idealism of youth was too fine for daily life; this is to misconceive any really intelligent masculine point of view—rather, indeed, that a truly fine and exacting idealism would be shown in a nice and comprehensive fulfilment of the obligations arising out of the immediate business of life. Women as a rule miss the rude enlightenment. Even the militant suffragists do not succeed in getting it. This is the explanation of "why women are so." Yet, in the face of this explanation, we find all the feminine writers insisting upon the finer intuitions and the finer sympathies of women as against the coarser reasoning processes of men. Under this provocation I feel called upon to say that the liveliness of feminine intuitions and sympathies is not commonly a mark of creative imagination or deeper insight, but only of a certain naïve freedom from the restraining considerations that would be presented by a broader view of the case—in a word, that feminism, like other forms of romanticism, is the mark of an undeveloped self-consciousness.

III.

Those who imagine that this one-sidedness is confined to the unemancipated have not carefully analyzed the feministic literature—or, perhaps, I should say that those women who display it least are those who have been emancipated without proclamation. The demands for "independence" in feministic literature are characterized by an entire failure to consider the extent of independence actually enjoyed by men. The same thing is illustrated in the very interesting demand for "wages for wives." The idea may be found in Cicely Hamilton's sordid, but courageous, "Marriage as a Trade," the purpose of which is to show that in marriage women engage in a vile occupation for mere "subsistence wages." Who has failed to encounter the statement that the middle-class wife toils early and late for the wages of a servant? Mrs. Coolidge lays stress upon the idea of compensation, and I think it is she who points to the sacrifice made by a woman who in marriage gives up a salary of twelve hundred a year.

Now, if it be meant that husband and wife should agree upon a regular allowance for the wife's private use, this seems so manifestly business-like and reasonable that one is compelled to wonder why it bulks so large in feministic literature. On the other hand, at the present rate of wages, I believe that, in most middle-class families (with an income of twenty-five hundred or less), the wife's allowance could not exceed a servant's wages. But to assume that a servant's wages is all that she then receives shows a naïve ignorance of bookkeeping. Two considerations are omitted from the debit side of the account: First, that her "board," including, as it does, the possession of the whole house, is far more expensive than the servant's; secondly, that she is chargeable for half of the cost of maintaining her children. This important item I have

never seen mentioned. Indeed, upon this point there is a strange confusion in feminist thought. Apparently, the responsibility for the children belongs to the husband ("she bore him so and so many children"), while the property in them belongs to the wife—they are always *her* children. But if the responsibility, then the property; and then the old law giving the husband absolute control of the children, a law of which the feminists still bitterly, and belatedly, complain, turns out to have been just. If, again, the property, then the responsibility; in this case the whole cost of their maintenance should be charged against the wife. But if we decently halve both the property and the responsibility, it will be seen that, in the middle-class household, the wife receives, in her own person and in those of her children, just about half of the family income. And if we remember the wages paid to women, it will be clear that there are few women who do not receive higher wages as wives than they could earn outside of the home.

In the meantime, I think it is only a rather foolish man who would complain of the sacrifice he made in marrying. When a middle-class man marries he knows that his income is mortgaged for life, mostly for the benefit of other persons. But if his family life is reasonably happy, he is well assured that it pays, and that he is getting the only worth his money could have for him. To a mature mind this is a source of solid satisfaction, and between two mature minds the consciousness of obligation mutually fulfilled strengthens the bond of sympathy. To the feminist mind the idea is sordid. Feminist ethics craves sacrifice. In feminist literature the wife is either a "parasite," like Mrs. Gummidge, or a defrauded partner. That she should both be worth what she gets and get what she is worth seems intolerably prosaic and colorless.

IV.

Feministic literature is full of the narrowness of domesticity and the drudgery of housekeeping. Assuming that housekeeping is drudgery, there are still two considerations commonly omitted: First, of course, the other side of the case: is housekeeping greater drudgery than the work of most men in business? Obviously, this is the determining question in the formulation of a reasonable complaint; and the omission is the more surprising because most of the work open to women in business is drudgery of the clearest kind. My own opinion, based upon a rather varied and instructive apprenticeship in business and a few brief and awkward experiences as cook and housekeeper, would be that the position of cook and housekeeper in one's own house is preferable to almost any of the positions open to women in business, or to most men; and this precisely from the standpoint to which women commonly appeal, the standpoint of a cultivated mind. But, since this is only a man's view, I prefer to quote from a spirited contribution "From an Average Woman" to the *Atlantic* for April, 1909:

> For five years after graduation [from a New England college], I was a business woman, very happy in my work; but I have been far more happy in my five years of married life, and more independent than when in business. I have a housekeeping allowance and one for my personal needs, as regular as my salary used to be; I have the control of my time, my work is not so monotonous, and my workshop is what I choose to make it. . . . I believe that housewives do not have a monopoly of the drudgery of life. My personal definition of drudgery is compulsory work that one does not know how to do well. . . . Nor is the varied work of the household more monotonous than heating one iron bar after another, hour after hour, day after day, for instance, or adding up one column of figures after another.

"How to do well"—this suggests the second omission. Not that housekeeping is not done well, according to present methods, but rather that it is not regarded as a worthy subject for the application of ideas. The man entering the kitchen is impressed by the contrast with any decently organized carpenter-shop or machine-shop. Kitchen tools are of the grade found in the small boy's tool-chest. Kitchen machinery suggests toy machinery. We must allow for the unspecialized complexity of the kitchen-task, yet it seems to me that it still offers many tempting invitations to the exercise of mechanical inventiveness. And if the servant-problem is really insoluble, we clearly face the alternatives of making the home manageable from an engineering standpoint or of abandoning it. But not only are women as a rule lacking in mechanical knowledge; like many men whose intellectual discipline is not yet complete, they despise it. In this they suggest the familiar type of undergraduate who is confident of his ability to discuss metaphysics and ethics, while cheerfully explaining that he is unfitted for elementary physics or plane geometry. It hardly occurs to him that a real inability to grasp mechanical ideas marks an incapacity for abstract thinking—that is to say, for thinking. For if mechanical science is not a final test of intelligence, it is at least an elementary test.

There is, however, another reason for the unscientific attitude of women towards housekeeping. Most of its tasks have already been removed from the home laboratory, they tell us; we buy our bread from the baker; soon we shall order the whole dinner from the cook-shop (doubtless table and all). But this only brings to light what I conceive to be the central issue. Who will then control the preparation of the dinner and see to it that the whole meal is not as unappetizing as the baker's bread? This question opens a wide range of considerations of which, in the literature before us, Miss Tarbell is the only one to give any clear account.

The removal of industry from the home—to repeat the old story—was only the first step in the process of removing it to the other end of the earth. Under present conditions the producer and consumer are about as remotely acquainted with each other as if they lived in different worlds. One result is to increase the cost of distribution so shockingly as really to raise the question whether the organization of industry is, after all, worth while. But another result is that the consumer has no longer any control of the producer. In the small towns the retail merchants are frankly distributing agents. If you ask them a question about the goods that they offer, all that they can tell you is that the article in question "is made by a very reliable firm." Truly, it is an interesting situation. We work hard for our dollars, and we guard them jealously, yet we pay them out with only a vague notion of what we are getting in return. The result is that a wise man is compelled to repudiate the pretension of choice in order that he may not feel like a fool as he walks home with his purchase under his arm.

To state the case compactly, I think that many of us would be ready to cease gibing at women's clubs, and even to become subscription-members, if only these or some other women's clubs would adopt Miss Tarbell's suggestion and address themselves to the problem of consumption. The first step would be to supply us with intelligent information based upon trustworthy investigation; but this would doubtless lead to some direct control, through coöperative societies, of the processes of production. I need not dwell upon the range of the field. The problems of consumption are precisely as broad as the problems of production, and they demand the same degree of scientific knowledge and judgment.

Let all this be as Utopian as you please; it will serve to point the fact that, while "the uneasy woman" is chafing at the restraints of domesticity and calling loudly for a rather indefinite "career," here at her door lies a neglected public work of unsurpassable importance and dignity. And at *her* door, I say; for, though industry has left the home, she is still the chief purchasing agent, and, as always, the director of consumption. Nor is it quite an answer to say that the problems in question have scarcely yet been generally recognized; they are specially the woman's problems. In the meantime the bent of her mind is shown by societies such as the Consumers' League, which,

leaving the consumer out of account, gives its attention chiefly to the welfare of saleswomen and factory-women. I shall be the last to say that these objects are not good. Nevertheless, the predominance, indeed the exclusiveness, accorded to them is precisely typical of what I have called the adolescent quality of the feminine mind. To quote Miss Tarbell again, the important thing seems always to lie elsewhere—never at home.

Here, of course, I shall be met with the triumphant reply that for all this the woman must have the vote. But this I shall dismiss as an illusion, though it is not a specifically feminine illusion. It is part of the great scientific-socialistic illusion of our time to the effect that social problems are to be solved by getting them out of the social consciousness into a government bureau. I am not questioning the value of a government bureau. But with a bureau for each department of industry, the vital need would still be for popular enlightenment and for independent discussion and criticism; and a society, or societies, which should to any degree represent and command the confidence of the purchasing power, could speak with an authority which no government bureau ought to exercise. It is doubtless true that, as Miss Addams says, women are hampered in their philanthropic programme by the lack of the suffrage. This is because, not quite excusably, perhaps, men are not immediately interested. "If," writes Miss Tarbell, "two years ago, when the question of the higher duty on hosiery was before Congress, any woman or club of women had come forward with carefully tabulated experiments, showing exactly the changes which have gone on in late years in the shape, color, and wearing quality of the 15-, 25-, and 50-cent stockings, the stockings of the poor, she would have rendered a genuine economic service." With this kind of an argument to offer women will never need the suffrage; and when they render the economic service they may count upon a genuine interest in their philanthropic programme. But, then, I should say, the whole question will be on a different footing. WARNER FITE.

NEWS FOR BIBLIOPHILES.

The M. C. D. Borden library will be sold at the American Art Galleries afternoons and evenings of February 17, 18, and 19. The two volumes of the sale catalogue contain only 838 lots. It has been the usual custom at auction sales to break up long collected sets of first editions and to sell the volumes separately, even when the sets were uniformly bound; but in the present sale the long sets, even the Dickens with its hundreds of valuable drawings inserted, are to be sold as single lots. In some cases some of the very rarest items are to be sold separately. The bulk of the Thackeray set, 73 vols., will be sold as one lot, and afterwards "The Second Funeral of Napoleon," "Floro et Zephyr," "The Snob," "The Gownsman," and a little volume, "Unpublished Verses," with the autograph manuscripts of the poems and drawings inserted, will be sold separately. The first five editions of Walton's "Complete Angler" are to be sold as one lot, but the four folios of Shakespeare are sold separately.

The catalogue is handsomely printed and has numerous illustrations of bindings and title-pages. The cataloguer has studiously avoided pointing out any imperfections. In the case of the First Folio, the most valuable book in the library, the size is given (12 11-16 by 8 5-16 inches); but there is not one word as to the condition of the copy, nor any word as to its history or former ownership. With the First Folio more than almost any other book, market value depends upon condition. The book, as a book, is not "excessively rare," but on the contrary it is probable that more copies, good, bad, and indifferent, are in existence than of most other books of its period.

What is probably the rarest book in the library is the little pamphlet, "Penny Whistles," by Robert Louis Stevenson. This is an early or trial issue of "A Child's Garden of Verses," and is a pamphlet of 22 pages, without any title-page, but with imprint at end, "Cambridge, Printed by C. J. Clay, M. A., & Son, at the University Press." It seems to have been printed before October, 1883.

Something of the history of the development of this little volume of poems for children can be traced in the published letters. In March, 1883, Stevenson sent to Henley "the MS. of Nursery Verses, now numbering XLVIII pieces or 599 verses," and gave instructions about the printing and illustrations. "I do not want a big ugly quarto. I want a refined octavo, not large—not larger than the Donkey book, at any price." In the same letter he suggested various titles: "Nursery Verses," "Nursery Muses," "New Songs of Innocence," "Rimes of Innocence," "The Jew's Harp," and "Penny Whistles for Small Whistlers," with a final conclusion: "it is perhaps better, as simply Penny Whistles." It seems to have been that manuscript which was put into type, as the printed "Penny Whistles" contains forty-eight pieces, though the number of lines is 603 instead of 599.

In April, 1883, Stevenson wrote to Mrs. Sitwell: "I have struck out two, and added five or six; so they now number forty-five. When they are fifty, they shall out on the world." In October, 1883, he had received from Colvin an "interesting copy of P. Whistles," with criticisms, to which he replies with some fervor: "If you don't like 'A Good Boy,' I do. . . . 'Twinkled' is just the error; to the child the stars appear to be there; any word that suggests illusion is a horror. . . . Bewildering and childering are good enough for me." And he adds: "I will delete some of those condemned, but not all. I don't care for the name 'Penny Whistles'; I sent a sheaf [of names] to Henley when I sent 'em. But I've forgot the others. I would just as soon call 'em 'Rimes for Children' as anything else."

In June, 1884, he sent four additional pieces to Colvin, and wrote: "It will now make quite a little volume of a good way upwards of 100 pp." On January 2, 1885, he sent to W. H. Low "the first sheet of the definitive edition" of the "Child's Verses," with the hope that Low would undertake to illustrate the volume. In February he wrote to John Addington Symonds, "My Child's Verses come out next week."

Mr. Bixby, of St. Louis, owns a series of manuscripts of the Verses, twenty-two in number, on seventeen pages. Among them are four pieces not included in the published volume. The privately printed pamphlet in the Borden library contains five others, in all nine pieces which were omitted from the "Child's Garden of Verses."

Aside from the Borden copy no other copy of "Penny Whistles" seems to be definitely placed.

The autograph manuscript of Stevenson's "Catriona," published in America as "David Balfour," is the most important manuscript of his which has been sold at auction. It is written in his characteristic small hand on 214 foolscap pages.

There are other important manuscripts in the collection, the most interesting being Tennyson's "Nimuë," on 31 pages. The name, "Nimuë," was altered to "Vivien," and the poem was published in "Idylls of the King" in 1859. There is one printed copy known of an early trial issue, in the British Museum, with the title, "Enid and Nimuë."

There are two important Swinburne manuscripts, "Chastelard, a Tragedy," on 115 pages of foolscap, and "A Song of Italy," 46 pages, the latter accompanied by the printer's proof sheets with a few manuscript corrections by Swinburne.

The Borden library is notable for the large number of elaborately tooled modern bindings, the work of the Club Bindery, the Doves Bindery, Miss Prideaux, Stikeman, Chambolle-Duru, Gruel, Zaehnsdorf and Riviere, and others. There are also two books from Jean Grolier's library, each bearing his well-known motto, "Jo. Grolierii et Amicorum."

Correspondence

AREN'T I?

TO THE EDITOR OF THE NATION:

SIR: Professor Hart's spirited remonstrance in the *Nation* of January 23 against "*Aren't I* a feminist?" reached our breakfast table just as we were discussing the fineness of the line which separates elegance from vulgarity in speech. For the following reasons I am disposed to favor the Oxford graduate's suggestion that this peculiar locution is due to what the grammarians call an "epenthetic" *r* in what the comparative philologists call an "hypothetical" *an't*.

When the mercury falls far below zero, I say: "I fear the pipes will *burst*." My wife says: "I fear the pipes will *buhust*." My son says: "I'm afraid the pipes will *bust*." If we should be awakened in the night by the fall of water and plaster, I should cry: "The *worst* has happened." My wife would cry: "The *wuhust* has happened." My son would cry: "The *wusst* has

happened." When I had lighted the lamp, I should be tempted to exclaim: "I will be *curst!*" My wife would be tempted to exclaim: "I will be *cuhust!*" My son would exclaim: "I will be *cusst!*" I am correct. My wife is elegant. Why does my son cross the line?

At this point I drop my family. But I will say that I have never known a person, however elegant, who could remove *r's* from one place without setting them down in another. It appears to be a law of compensation in the lingual world that the *r* lost by *honah* shall be restored to *harnah;* you *cahrnt* escape from the *opuhration* of this *lawr, howevruh* you may try. There is nothing shocking in the example which excites Professor Hart's wrath, except the spelling. Mr. Wells has merely recorded a "fonetic" fact. And when all the spelling reformers have done their worst, the *wurd* or *wuhud* or *wud* which they record in the dictionary will serve only as a new point of departure for the variations of elegance on the one hand and vulgarity on the other. For that reason I am a conservative. OBSERVER.

Chicago, January 24.

TO THE EDITOR OF THE NATION:

SIR: In your recent issue of January 23, Prof. J. M. Hart complains rather bitterly of Mr. H. G. Wells, because, in his book called "Marriage," he has the sentence: "My dear! *Aren't I* a feminist?" Mr. Hart seems to fear that the English language is going to the dogs; feels obliged to consider "the question whether we Anglo-Americans are losing all sense of grammar," and asks somewhat pathetically: "Shall we all jabber and scribble indiscriminately?"

I haven't read "Marriage," but I suppose that the person who says *Aren't I* in that book is English. Mr. Hart seems not to know that the expression is in common use by educated people in England. It is an Anglicism, it is true, but the author was certainly justified in making an Englishman speak as he would naturally, even if ungrammatically.

As for the elaborate derivation for *Aren't I,* offered by Mr. Hart's Oxford friend, he is right in having his doubts about it. I think *Aren't I* is a simple analogical expression produced by *Aren't you,* backed up as it is by *Aren't we, Aren't they.* The analogy has not been extended to the third person singular (*Aren't he*) because there already existed an abbreviation in good use for *Is not he,* viz.: *Isn't he.*

Mr. Hart asks: "Is there anything to prevent us from saying *Am I not?*" Of course there is not, but in ordinary conversation *Am I not* seems to many people clumsy and pedantic. For all the other similar exprcssions we have abbreviations such as *Can't I, Won't I,* etc., but for *Am I not* there is no abbreviation in use but *Ain't I* (except the much abused expression in question). *Ain't I* is now held to be vulgar in England—although I believe there was a time when it was fashionable—and so, many Englishmen say *Aren't I.*

There is no cause for alarm: it does not seem likely that any American will ever say *Aren't I,* but Englishmen must be allowed some eccentricities. There is no more reason that they should be obliged to say *Am I not,* than that they should say *Is he not,* etc.; and if many people went about talking like that, it would be an intolerable nuisance, would it not?

J. E. SHAW.

Baltimore, Md., January 27.

ASPIRATION AND GENIUS.

TO THE EDITOR OF THE NATION:

SIR: There seem to be a number of people in the world who have had an experience similar to that which you describe in your editorial on "Patrons for Genius" (January 9). Here is another.

I, too, have been an egotist, and imagined myself a neglected genius, but have been unsuccessful in proclaiming myself to the world. If any one had patronized me, I fear that it would have been an unprofitable investment. I have now largely outgrown my boyish hopes of fame and publication, though the same irrepressible impulse still urges me on to aims and ideals apparently beyond my reach. It seems to thwart me in my worldly business and to summon me whenever I begin to become involved therein. It seems to lead me through life to the tune of martial music that will not let me rest, while beyond, I seem to hear the melody of the spheres. Yet it has led me to no tangibly successful result. No matter; my effort is the development of my soul in its conquest of life, and its birth struggle into higher spheres where all its aspirations will finally be fulfilled somewhere in its eternal career, though it achieve no substantial or durable distinction here. Perhaps it may attain some measure of success here also; man's greatest accomplishments are often consummated only after a lifetime of preparation and endeavor, and without expectation of reward and glory.

My youthful mind was first awakened by a profound and mystical sentiment of wonder at itself, and the mysterious magnificence of the universe. In this stage of its development it wooed the Truth through the simple process of intuition, and, if it had then yielded itself to some settled faith, and pursued some simple, definite theme with which it might harmonize and organize all its impressions and experiences, it might ere this have reached some successful consummation. But learning with its various sciences, facts, and doctrines, like a kaleidoscope, broke the light of the mind's intuition into diverse hues, which it has been unable to combine again harmoniously into anything significant. I became lost and bewildered in a multitude of fragmentary impressions, and the result of my thought and my effort has been a scattered mass of notes, essays, poems, and incomplete articles, each, perhaps, inspired with a breath of Truth, but none endowed with the full soul that is essential to success. I had certain purposes, but was not able to bring my scattered conceptions together in them.

I have failed to realize the dreams of youth, but they have remained with me and occupied my leisure moments in the ten years of struggle for subsistence that have since elapsed. I have just spent a year's time in going over the efforts of former years; have revised, refined, organized, concentrated my various notes and articles under proper subjects, but still have produced nothing noteworthy. I shall go on as I have done, labor for bread when I must, cherish my dreams when I can, and all the time gain new strength and experience in the struggle to bring my dreams nearer to success when I again have the time to devote myself fully to them. There is ecstasy in the progress of the soul, though it miss the glory of human recognition.

I am glad that I have had no patron. Too much external assistance is not good for the mind, for it needs to be driven into itself for refuge and inspiration. I rejoice that in the struggle of existence the vainglorious conceits of youthful egotism have been transformed or expelled, and that I have been drawn out of my isolation into a broad, intimate, and happy sympathy with all humanity. Yet I rejoice also that I still possess that indomitable egotism, chastened and etherealized. Although I want no patron, I do often long for some form of endeavor at which unrecognized and uncrowned dreamers might live and still work towards their aims, instead of being compelled to engage in occupations at variance with their ideals.

I left home and friends to follow my muse into strange regions where I might be independent of custom and opinion. I walk entranced as if in a higher sphere where bodily wants and ills vanish and I may live on a crust and dreams. I stop and labor in various industries to gain means of sustenance on the way, but the power that rules me will not allow me to become involved in any ordinary business long enough to achieve success. I am a failure in a worldly sense. Little matters it so long as the soul develops and aspires and identifies itself with the Eternal Progress. E.

Birmingham, Ala., January 14.

BERGSON AND THE CHURCH.

TO THE EDITOR OF THE NATION:

SIR: In his article on Bergson (*Nation,* November 14, 1912), Professor Babbitt has said that his interest lies "in the contention that Bergsonism and similar tendencies are on their constructive side 'humanistic' or 'religious,'" and since there is so much talk just now in church circles about Bergson, this note may be acceptable. It may seem unnecessary to say that the Christian tradition, while appreciating to the full the flux and turmoil of the "Many," leads men above all to the "One"; for its heroes are those who, passing through great tribulations in this present world, enter that peace which the world cannot give, and which is only found, as Dante has said, "in his will." Yet this truth needs to be expressed with emphasis; for I have heard, to take a concrete example, Bergson's distinction between intuition and intellect described as Pauline. Now, though St. Paul did have a "vital impulse" on the road to Damascus, nevertheless he devoted three years to "vital control" in Arabia. The proportion in time is significant. In a flash, in a moment, in a twinkling of the eye, came the intuition; and then in three, long, solitary years came the stern examination and severe reflection.

The experience of the apostle has been also the experience of Christianity. Appreciating profoundly the vital impulse, the immediate contact with the Eternal, it has also rigorously emphasized the vital control, the discipline of severe thought, the

rule of an ordered life. Here it is one with Platonism. It has gloriously confessed, as in Schleiermacher, that religion is rooted in feeling, but it has also sternly insisted upon the government of reason and the sovereignty of the will.

The Church *welcomes* Bergson's attack upon scientific dogmatism, but it understands quite clearly that her tradition leads men through time to the Eternal, through the Many to the One, through man to God.

WARREN S. ARCHIBALD.

Pittsfield, Mass., January 29.

A FORERUNNER OF THE MODERN SLEEPING-CAR.

TO THE EDITOR OF THE NATION:

SIR: In his "Ansichten vom Niederrhein" Georg Forster, writing from Brussels in the spring of 1790, describes briefly a carriage factory which he thinks is "probably the only one of its kind in Europe." Among other things he refers to the high, well-lighted rooms of the factory, to the regulations which are posted on the walls, and to the system of fines and rewards which is in force. But what impresses him particularly is the fact that in the travelling-coach, which is there produced, the limited space is utilized to an "almost incredible degree." He declares: "For a person who is forced to undertake frequent prolonged journeys, I know nothing more indispensable than a *Reisewagen*, such as I have here seen, within which one finds assembled a table, a bed, and all conceivable conveniences." We are further informed that Mr. Simon, the proprietor, has usually from twenty to thirty of these vehicles in stock and that he sells his product largely to the various European courts.

C. H. IBERSHOFF.

University of Wisconsin, January 26.

Literature

A NOTABLE FAMILY.

Michael Heilprin and his Sons: A Biography. By Gustav Pollak. New York: Dodd, Mead & Co. $3.50 net.

Three lives of singular beauty and amplitude are unfolded here. The first twenty years of Michael Heilprin's life were spent in Russian Poland, and he was a lad of seven when the Polish Revolution of 1830 occurred. His biographer tells us that he who usually poured himself out unreservedly in friendly talk "was comparatively reticent concerning his experiences in Poland." Nevertheless, they remained an important influence in his life. In 1842, his parents and their family, including himself and his wife, removed to Miskolcz, Hungary. The love he conceived for the land of Kossuth, Petöfi, and Deák, never abated, and from him it passed to his children. An ardent supporter of the Hungarian Revolution, he was appointed secretary to the literary bureau of the Department of the Interior under Minister Szemere, and shared the fortunes of the Hungarian Government until its collapse. Escaping capture by the Austrians, he spent a short time in France, returned to Hungary, and then joined Kossuth in England, whence, in 1856, he emigrated to the United States with his wife and children.

After two years of teaching, in Philadelphia, he was connected with Appletons, revising the two editions of their Cyclopædia. Except from 1863 to 1865, when he kept a bookshop in Washington, as he had in Miskolcz, he lived in and near New York. During his residence in Washington he began to produce that notable body of anonymous critical work which constitutes his chief contribution to literature. Much the larger part of it appeared, from 1865 to 1888, the year of his death, in the *Nation*. He was, above all, a scholar and a sage, one to whose learning and wisdom there clung no mustiness of the closet. He was attracted by such disparate fields as Biblical science and modern European politics and history. His contributions to Appleton's American Cyclopædia are amazing in variety, number, and value. Any article of those reprinted in the book illustrates his ability to marshal a stupendous array of facts and to develop from them a philosophy of history and life. Minute geographical knowledge, dependent on a rare memory, earned for his reviews of the Franco-Prussian War the admiration of a professional strategist. In the several periods of his life he used, with fluency amounting to eloquence, German, Polish, Hungarian, and English, as the languages of intercourse, and he was master of a dozen literatures in their original languages. Only a scholar with his profound and sympathetic understanding of Hebrew could have made the spirited English translations of Biblical passages that appear in the two volumes on the "Historical Poetry of the Ancient Hebrews."

His private life ordered itself peacefully. One feels in this record of it that the goings and comings of his family were unhurried. His children, reared in his spirit, were all five his collaborators. The wife and daughters were, besides, eyes to him on the frequent occasions when his own failed him. Love of nature, of music, of literature, of social intercourse, were his sources of enjoyment; Jewish scholars, political heroes, men of letters and science, the coterie of Hungarian refugees, and the unfortunate of all nations, were his associates. His force was not derived from institutions or organizations; he enjoyed thorough independence. His tolerance forbade propagandism of his vegetarian principles, and his modesty made him considerate of a child's individuality. Private woes found him patient; private contrarieties, humorous. And in his boundless enthusiasms he was the most lovable of men.

His end was hastened by superhuman exertions in behalf of the Jewish refugees from Russia after 1881. They turned to him instinctively for counsel and succor. He knew the rock whence they were hewn, and was mindful of the conditions that had rendered them homeless. He could and did interpret their sorrows and their ideals to themselves as well as to others. When they were assailed in a public gathering of Jews, he rose and said simply, "I am a Polish Jew. I belong to that despised race." Before their importunities he himself became a fugitive, fleeing to a suburban home, at Summit, N. J. The impetus he gave to the movement for agricultural settlements is his lasting achievement in their behalf. Its present success is due partly to his personal efforts, joined with those of other public-spirited Jews, partly to the striking memorial (p. 214) drawn up by him at the suggestion of Mr. Oscar S. Straus. The latter resulted in the American Baron de Hirsch Fund, with its intelligent provisions.

The sons, Louis and Angelo, whose biographies fill the second half of Mr. Pollak's volume, were of the father's spirit as well as of his flesh. Their knowledge was as comprehensive and detailed as his own. The father's cheerful endurance was in Louis emphasized into the gentlest form of stoicism, in Angelo heightened on the one side into captivating gayety of spirits, on the other into the intrepidity of the investigator of Mont Pelée and rescuer of Peary. The father's love of nature reappeared in Angelo as the creative force of one of the foremost American scientists. Both, indeed, were endowed with originative faculties. Angelo was the inventor of several mechanical devices, and his musical sense was noteworthy. His pictures in oil colors, especially those representing the eruption of Mont Pelée, won the commendation of connoisseurs, and among the family treasures are crayon sketches of landscapes by Louis. Neither brother had had more than the most elementary instruction in the technique of painting, and Louis was handicapped by eyesight so weak that he was never able to read longer than a few minutes at a time. Yet through the devotion of his sisters he was equipped with the varied information that qualified him to be, at twenty-two, assistant encyclopædist to his father, later sole reviser of two encyclopædias, compiler of the Historical Reference Book, and, with his brother, of Lippincott's World Gazetteer. Besides, he gave attention to engineering and transportation problems, to educational discussions, and, like his father, to the questions connected with the Danubian Principalities and the Ottoman Empire. When one has said that he was born in 1851 and died in Febru-

ary, 1912, the external events of his life have virtually been summed up. The rest was all spiritual—invincible modesty, fortitude, intellectual achievement, charitable endeavor, devotion to civic tasks.

But Angelo had a career full of stirring incident and public honor. In 1876, the revision of the Cyclopædia having been completed, he went to Europe to study the natural sciences under Huxley, Judd, Etheridge, and Vogt. After a visit to his own Hungarian and his father's Russian home, he settled in Philadelphia. What followed is fresh in the memory of the reader: his connection with the Academy of Natural Sciences in Philadelphia as curator-in-charge, professor of invertebrate palæontology, and professor of geology; the lectureship in physical geography at the Sheffield Scientific School of Yale University; the West Greenland expedition; the Peary relief expedition; the three visits to Martinique; the travels in Bermuda, Mexico, Alaska, the Klondike, and British Guiana; his untimely death, in 1907, at the age of fifty-four; his long list of works on geology, palæontology, and related subjects, written in a fluent, lively style. Worldly allurements had no more power over him than over the others. Like them, he responded to civic claims, and was unfaltering in danger and affliction.

The biographer, Michael Heilprin's son-in-law, has accomplished his labor of love with the loyalty and restraint that would have won the approval of his subjects. The value of his memorial is enhanced by sketches of the father, sister, and brother of Michael Heilprin, all remarkable in their way, though less in the public eye than the main figures. It is particularly gratifying that some of the scattered articles by the three writers have been perpetuated here. Else we should have had, in signed form, only two works from the pen of Michael Heilprin, both Biblical, the "Historical Poetry of the Ancient Hebrews," mentioned before, and "Bibelkritische Notizen," issued posthumously.

CURRENT FICTION.

This Stage of Fools. By Leonard Merrick. New York: Mitchell Kennerley.

One Man's View. The same.

Now that Mr. Merrick has fairly dawned upon us in America, we are doubtless fated to read him to his last—and his first—word. "This Stage of Fools" represents him in an early phase. Very few of the short tales which make up the book are of merit. They are like the first stories of most other writers—random studies in various directions—experiments casually undertaken on the off chance that they may or may not amount to something. The young Mr. Merrick, like the young Mr. Kipling, shifts between conscious "cynicism" and unconscious sentimentalism. Unlike him, he is uncertain and roving in manner, and lacks the touch of genius which made "Plain Tales from the Hills" something quite different from a reprint of brilliant "copy." Two or three of the tales grouped under the title "This Stage of Fools" are striking in one way or other, but chiefly as clever practice, by a new and doubtful hand, at the somewhat overplayed game of fiction.

"One Man's View," on the contrary, is the work of a practiced writer. The theme might have been chosen by Henry James. Heriot, a successful English barrister approaching middle age, is thrown into contact, during a holiday, with a girl who, first among all girls, takes his fancy. Mamie Cheriton is the stage-struck daughter of a well-to-do American. She likes Heriot, but will not marry him, till the bitterness of her failure to set foot even upon the lowest rung of the theatrical ladder leaves her, passive for the moment, in his hands. She becomes attached to him, but he proves a humdrum husband, and they have few interests in common. The speechless tête-à-tête of domestic life bores her. Interest in the stage revives, she aspires to be a playwright, and, with one thing and another, easily falls prey to a real master of the craft, a popular playwright who pretends interest in her work because he covets her person. (Is it becoming a convention with novelists that the playwright is a cynic and a voluptuary?) Elopement and divorce are followed by the death of the villain, and poor Mamie is condemned to a drab existence in a dingy Bloomsbury boarding-house, with a kind-hearted but otherwise insufferable aunt. Five years later her father's death brings her to America.

Meanwhile Heriot has applied himself grimly to his task, has become M.P. and Solicitor-General, and, feeling the emptiness of his home, is inclined to marry again. A well-bred and in every way eligible partner presents herself. He tries to say the necessary word, but cannot; and on a steamer returning from America finds the wreck of his wife, ill, disheartened, not expecting or wishing to live long. The circumstances bring freedom of speech, it becomes clear that their mutual love, which has lived and grown in spite of all, is the one thing worth living for, and Heriot again gives his name to the woman who has never ceased to be the wife of his heart. That this romantic act on the part of a cold, hard-headed Englishman (as the world has seen him) should be made to seem reasonable and right—that Mamie's recovery of health should be made to seem a blessing—are feats which attest the skill and power of Mr. Merrick's interpretation.

The House of Peace. By Michael Wood. New York: Longmans, Green & Co.

The story-teller is supposed to be son of an English couple of shady reputation. Their country house is frequented by a gambling set, but shunned by the county families. Their mother lives upon pleasure and excitement; the father, a dull, good-natured materialist, never interferes with her. The son, by remote heredity, is born a mystic and a devotee. To him in adolescence comes as tutor a young man of birth and breeding, dropped from society for a single fault, but sound in heart and mind. The pair become devoted, but the tutor, though he remains in the household for eight years, at once arouses the antagonism of the mother. The cause is trivial, but in time the woman's hatred becomes an obsession. She swears to accomplish his ruin, commits a crime in order to throw the weight of it on his shoulders, and hounds him even in prison with such diabolical skill that he comes out a physical and mental ruin. Meantime, the son, assailed by spiritual foes, is brought to the verge of insanity, when chance throws him into the hands of a more robust mystic, who has founded a House of Peace—a retreat for the life of contemplation. Here the young devotee finds himself at home—achieves peace. And hither at last wanders what is left of his old friend and teacher, to spend in safety and content the few days that remain to him. It is left for the woman who has virtually murdered him to be dealt with: she also is destined to find light and peace. We are to regard her story as an instance of demoniac possession. The tone of the whole narrative is a trifle strained. The reader must determine for himself whether its net effect is of spiritual force or of morbid religionism. One figure, that of Father Standish, master of the House of Peace, stands out, strong and sane, against the somewhat wavering background.

The Shadow. By Arthur Stringer. New York: The Century Co.

A better name for this high-tensioned tale of crime and retribution would have been the "Chase." Mr. Stringer's police hero is precisely not of the type of detective who attains his end by the critique of pure reason. This is simply a story of a mad pursuit, in which the game is always within sight of the hound, and the interest consists solely in the mere physical breathlessness of the chase, plus the speculation as to how soon the victim will feel the fangs of the pur-

suer. In this mad flight the author has inserted the necessary breathing spaces in the form of dramatic episode. There is a fight in a Macao opium den which is as ruddy a bit of slaughtering as we remember coming across for many a day in fiction. Gradually as the story advances, the psychological element twines itself into the narrative of train schedules and sudden death, until towards the end Mr. Stringer's Blake, from a common and efficient "bull," changes to something of an elemental force. The New York policeman ends up as a very distinct likeness to Victor Hugo's Monsieur Javert in "Les Misérables." Mr. Stringer's style usually presents a rich ornateness which is in piquant contrast to the grisly subject-matter. But in the present instance, and in the early chapters especially, this pretty affectation is carried to a wearying extreme. As the author warms to his own tale the mannerism sloughs off.

WILLIAM VAUGHN MOODY.

The Poems and Plays of William Vaughn Moody. Boston: Houghton Mifflin Co. 2 vols. $1.50 each.

The first of these volumes contains Moody's poetry, including his poetic dramas; the second, his two plays in prose. Each volume has a portrait by way of frontispiece; and the entire edition is prefaced with an introduction by Prof. J. M. Manly. On the whole, it is a commendable edition of a very creditable body of literary work. To be sure, Professor Manly's introduction hardly closes with the subject in its critical aspects—perhaps, it is just as well that it does not, for not only is admiration more becoming on the part of a friend, but it may be that criticism is as yet so premature as to seem in any case little better than impertinent. Nevertheless, the publication of such a collection appears to call for that kind of tentative appraisal which is alone possible at the moment.

That Moody has produced a quantity of meritorious work is not to be denied; nor is the quality of that work to be minimized or slighted in any wise. At the same time the actual amount which has anything like a fair chance of permanent and enduring success, is comparatively limited. From such a list it would be necessary to omit the two plays in prose—"The Great Divide" and "The Faith Healer." Notwithstanding the vitality of the naked human motive, they both lean too heavily upon what is, after all, only accidental and momentary: their vesture is liable to change and fashion. While in print they show certain dramatic weaknesses which were no doubt responsible for the stage failure of "The Faith Healer" and which seems to have affected the longevity even of "The Great Divide." In spite, then, of whatever ability Moody may have shown in his prose dramas—and it must not be assumed from this hasty analysis that such ability was small or inconsiderable—still it is upon his poetry that the permanency of his reputation must depend.

From this point of view, again, it is necessary to dismiss his poetic dramas also—"The Fire Bringer," "The Masque of Judgment," and "The Death of Eve." There is no use in quibbling over words; but as a matter of characterization it is only fair to say that drama is a misnomer for these products of the imagination. They are gigantic and grandiose symbols of a semi-metaphysical speculation, like the "Prometheus Unbound." Indeed, "The Masque of Judgment" is very like Shelley's "Prometheus"; it has the same impalpability and inactuality, the same tantalizing inconclusiveness and irrelevance. In justice to the poet, however, it should be added that the three pieces were intended to form a trilogy, whose thesis, according to Professor Manly, consists in the necessity of man to God as of God to man. Unfortunately, the last number, "The Death of Eve," was never completed, and remains a fragment in one act. No doubt, the intelligibility of the entire performance has suffered from this circumstance; but it is hard to believe that in any case the trilogy would ever have attained to the lucidity and convincingness of great poetry. As it is, it is very curious, often very cunning, full of technical stratagems, interspersed with noble lines; but strangely inaccessible and reticent.

What remains, then, is the poet's lyric verse, to use the rather rough classification usual in English. And here, there can be no question, Moody is at his best. To be sure, his lyrics, like his poetic dramas, are somewhat lacking in transparency and immediacy. The image has come in many cases to override the idea until it is no longer a figure but a symbol. In this way there is something almost allegorical and even enigmatical about much of his verse, like "The Quarry" and "The Beast," or even "The Moon-Moth." Even the "Ode in the Time of Hesitation," fine poem as it is, perhaps one of Moody's finest, suffers from a similar drawback. It is so hard to revive the circumstances and passions which inspired it—the circumstances and passions of 1900—that even now its appeal is remote and abstract. The fact is that Moody's quality is never simplicity; his significance lies rather in his manner of reproducing a complicated state of consciousness even in the presence of plain and familiar objects. In this respect he is curiously modern and representative. As a result his sentiment frequently seems dubious and equivocal, as in his lines to his mother's picture, called "The Daguerreotype," which is full of ambiguous and unsettling suggestions. In a certain kind of subject, however, this clash of incongruous moods produces an effective sort of irony—a kind of grim cosmical humor—which is, after all, Moody's most original and powerful note. This is the case in particular when the contrasting points of view are physical and moral; when from contemplation of the natural order as interpreted by science, the poet shifts suddenly to the vision of humanity, with all its infirmities and perplexities. Such chords occur again and again, in "Gloucester Moors" and elsewhere; but their most conspicuous illustration is found in "Old Pourquoi," and still better in these stanzas, called "The Menagerie":

And suddenly as in a flash of light,
I saw great Nature working out her plan;
Through all her shapes from mastodon to mite
Forever groping, testing, passing on
To find at last the shape and soul of Man. . . .

Here, round about me, were her vagrant births;
Sick dreams she had, fierce projects she essayed;
Her qualms, her fiery pride, her crazy mirths;
The troublings of her spirit as she strayed,
Cringed, gloated, mocked, was lordly, was afraid,

On that long road she went to seek mankind;
Here were the darkling coverts that she beat
To find the Hider she was sent to find;
Here the distracted footprints of her feet
Whereby her soul's Desire she came to greet. . . .

Helpless I stood among those awful cages;
The beasts were walking loose, and I was bagged!
I, I, last product of the toiling ages,
Goal of heroic feet that never lagged,—
A little man in trousers, slightly jagged.

Germany and the Next War. By Gen. Friedrich von Bernhardi. Translated by Allen H. Powles. New York: Longmans, Green & Co. $3 net.

The German Emperor and the Peace of the World. By Alfred H. Fried (Nobel Peace Prize). With a preface by Norman Angell. New York: George H. Doran Co. $2 net.

Friedrich von Bernhardi, a German general and military writer of some distinction, thinks that the time has come to reawaken the war-like instincts of his countrymen. Knowing that "the Germans are born business men," he tries to convince them that war alone has made possible the tremendous industrial and commercial development of their country. Victorious wars, he argues, have never disturbed business life.

His philosophy, however, does not permit him to base his advocacy of war solely on material grounds. War, according to him, is "the greatest factor in the furtherance of culture and power," and military service "develops the intellectual and moral qualities generally," whereas the desire for peace has rendered "most civilized nations anæmic." Thus the task "which Providence has set before the German people as the greatest civilized people known to history" becomes plain. With Treitschke as his political guide and prophet, and with the help of the law of the survival of the fittest, the elaboration of the General's thesis offers no difficulties. German infallibility in war, under proper conditions, being assumed, the only question before Gen. Bernhardi's countrymen is, Shall they always have a big enough army and navy to catch the enemy unawares?

There seems to be some doubt in the author's mind as to the nation with whom Germany will have to wage the next war, but none as to need of its being "war to the knife." It may be France, or Russia, or both combined; but in all probability it will be England, as to whose policy Gen. Bernhardi cherishes no illusion. "We must realize to ourselves that it is guided exclusively by unscrupulous selfishness, that it shrinks from no means of accomplishing its aims, and thus shows admirable diplomatic skill." The only flaw from England's point of view which he discovers in British diplomacy, was "the unpardonable blunder of not supporting the Southern States in the American War of Secession"—an oversight which resulted in the present "difficulty of her relations with North America."

There is nothing very surprising in all this talk, with which the Blatchfords in England, the Bourgets and Déroulèdes in France, and the Homer Leas in our own country have made us familiar. Gen. Bernhardi's appeal to his countrymen contains the usual amount of biological and economic nonsense, not unmixed, we submit, with fantastic military strategy. We hear that "international arbitration denies the inexorability of natural laws," and are told that "a pronounced superiority of our [the German] air-fleet over the English would contribute largely to equalize the difference in strength of the two navies more and more during the course of the war." Gen. Bernhardi thinks it necessary to fortify his position by seemingly apt quotations from Schiller and Goethe, in some of which a warlike meaning, entirely foreign to the original, is conveyed by the juxtaposition with his own text. Thus, immediately after saying that "the instinct of self-preservation leads inevitably to war," we have Goethe's lines, bunglingly translated as

> That which thou didst inherit from the sires,
> In order to possess it, must be won,

where the original, *erwirb es, um es zu besitzen*, justifies no such interpretation as the General would give it. As against the warlike and intensely patriotic Goethe of Gen. Bernhardi's imagination we venture to call up the Goethe who said (we translate from Eckermann's "Gespräche"):

> How could I, to whom the question of culture and barbarism alone is of importance, hate a nation (the French) which is among the most cultured of the world, and to which I owe so large a part of my own culture? National hatred is indeed a peculiar thing. It is always found most pronounced and violent where civilization is lowest. But there is a stage of culture where it vanishes altogether, where one stands, so to say, above all nations, and feels the happiness and the sorrows of a neighboring people as much as if they were part of one's own. This degree of culture was in accord with my nature, and I had become confirmed in these views before I had reached my sixtieth year.

In his volume on "The German Emperor and the Peace of the World" Herr Fried, the leader of German pacifists, describes the gradual development of William II from a "war lord" into a "peace-maker." He does not, however, depict him as, even in his later years, a uniformly consistent and uncompromising apostle of peace. After enumerating many of the Emperor's most striking utterances on the subject of war and peace, Herr Fried is still forced to admit that "the Emperor William is a problem that must be explained," and that he appears to him essentially an "inexplicable paradox." This cautious attitude is not conducive to the making of an inspiring book, but it was nevertheless worth while to place before the world, in a certain progression, facts showing the peaceful inclinations of one of the most powerful of modern rulers. Perhaps the most unequivocal remarks of the Emperor in support of his present attitude were made in his London speech, in 1907, when he declared it to be his duty not only to maintain peace, but to "promote" it and "place it upon a firm footing." This, at all events, marked great progress since the days of the first Hague Conference, in 1899, when, as is well known, but for the vigorous representations of Mr. Andrew D. White to Count Muenster and Count von Bülow, and through them to the Emperor, his opposition to arbitration would have defeated the main purpose of the conference.

All in all, the world cannot withhold from William II the credit of having hitherto kept Germany in the paths of peace, in spite of strong provocation, both from within and without, to resort to arms on more than one occasion. It may be doubted, however, whether his course will commend itself to German patriots of the stripe of Gen. Bernhardi, who must look upon his monarch as something of a traitor to the German cause.

Mémoire de Marie Caroline, Reine de Naples. Publié par R. M. Johnston. (Harvard Historical Studies, Vol. XVI, Documentary Series, I.) Cambridge: Harvard University. $2.

More than half a dozen years ago, when Professor Johnston was writing his "Napoleonic Empire in Southern Italy," he made some use of a couple of mysterious manuscript volumes which he had discovered in the Biblioteca Nazionale at Naples (number X. AA. 19, 20). No one knew where they had come from nor when they had been acquired by the library, probably not earlier than about 1880, Mr. Johnston thinks. They were entitled, "De la Révolution du royaume de Sicile. . . . Par un témoin oculaire bien instruit des faits et qui en a soigneusement recueilli les détails." Further study has confirmed Mr. Johnston in his original belief that this anonymous "témoin oculaire" was none other than Marie Caroline herself, that extraordinary and unfortunate Queen of Naples. He thinks that she composed this memoir in order to present her case and that of her family to the Congress of Vienna; she did, in fact, journey to Vienna, but died there a few weeks before the Congress actually convened. In his preface he is at pains to present so many arguments in favor of his theory of the Queen's authorship, that one at first almost suspects that he is trying hard to bolster up a poor case. And, in fact, his argument, so far as based on the style, which is not that of a native French writer, on the handwriting, a page of which is reproduced in facsimile for comparison with a facsimile letter unquestionably written by the Queen, and on certain passages which coincide with the known sentiments of the Queen, does not carry conviction. On the other hand, the minute descriptions of events in which the Queen took part and of which she unconsciously gives certain circumstantial details of a kind no one else would be likely to know or record, the way in which she always refers to herself in the third person, and certain other internal evidences, leave no room for doubt that Mr. Johnston is quite right in believing that Marie Caroline herself wrote this important memoir now edited as the first volume of a documentary series of the Harvard Historical Studies.

Marie Caroline, one of the ill-fated children of Maria Theresa, and sister of Marie Antoinette, had, in 1768 at the age of sixteen, been married to the Bourbon, Ferdinand IV of Naples. She soon proved so much more energetic and domineering than her husband, that he

became a puppet in her hands. Forced by the French, in February, 1806, to flee from Naples to Palermo, the royal pair were supported in Sicily against Napoleon and Murat by the arms and subsidies of Great Britain, whose agent for the purpose was Sir William Bentinck. Scarcely had the alliance been signed between Great Britain and Sicily, when Bentinck and Marie Caroline began a bitter fencing contest for domination over the King and the island of Sicily. Bentinck believed the Queen to be in treacherous correspondence with England's enemies; this Marie Caroline emphatically denies in her memoir; she, on her side, believed that Bentinck was acting beyond his instructions from England and was trying to annex Sicily as a British possession; it is not clear on which side lay the real truth. But, at any rate, Bentinck had the advantage of possessing money and troops. The weak King was induced to resign his authority into the hands of a regent, a new constitution for Sicily modelled on that of England was hastily adopted, and the poor Queen, defeated and sick, was exiled from the island as the only sure means of ending her opposition and intrigues. At the moment set for her departure she made a last effort to avoid exile by invoking a bleeding tooth and a bilious fever and demanding delay for the arrival of a doctor; but the English captain sent by Bentinck took out his watch and gave her just thirty minutes to get on board the ship which was to take her to Constantinople on her way to Vienna. Naturally, in her memoir "this furious woman with a rapid utterance" and an easy-flowing splenetic pen does not fail to express her opinion of "ce maudit Bentinck." After referring to him variously as despot, tyrant, satrap, vandal, and as insolent, insulting, immoral, ombrageux, farouche, énergumène, implacable dans ses vengeances, and écumant de rage, she concludes, "Je regrette seulement de ne pas trouver de termes assez énergiques pour le caractériser comme il mériterait de l'être."

The memoir as a whole, in spite of its special pleading, is a valuable addition to our knowledge, not only of Bentinck and Marie Caroline, but also of the course of events in Sicily during the Napoleonic period. Mr. Johnston has added further to its value by an explanatory preface in French and by supplementary notes drawn from Bentinck's papers at Welbeck Abbey and from some material in the British and Neapolitan archives, as well as from the numerous *pièces justificatives* with which Marie Caroline herself had fortified the second volume of her manuscript. It is a pity that the index is merely an index of persons and not of subjects, for the memoir contains much of interest in regard to finance and constitutional government, besides local Sicilian politics and international relations during the Napoleonic period.

John Stuart, Earl of Bute. By J. A. Lovat-Fraser, M.A. Cambridge University Press. New York: G. P. Putnam's Sons. 80 cents.

The difficulty of writing contemporary history is well illustrated by our rapidly changing interpretation of the measures and men of eighteenth-century politics. The events of that century were so closely connected with the development of the nineteenth, the older animosities were so closely related to the factious strife of the latter-day politics, that it was impossible for even the most historical-minded writer to judge the earlier times dispassionately. Only to-day does a clearer vision begin to correct the partisan thunderings of Edmund Burke and the gossiping denunciations of Horace Walpole.

The Earl of Bute has suffered more than any of his political associates from the acceptance of contemporary denunciation. After he had undergone the vituperations of the pamphleteers in the years from 1760 to 1763, his apparent place in politics was finally established by the brilliant pen of Edmund Burke in his famous pamphlet, "Thoughts on the Causes of the Present Discontent," wherein Bute was denounced as the secret and evil genius of George III, the power behind the throne, the manipulator of the strings of the puppet Ministers. Later historians have too generally forgotten that the pamphlet was the platform of a defeated faction, a platform which had undergone the severest criticism and revision by the factious leaders before its publication.

One may pass over the justification of the Earl of Bute by earlier Tory historians, since their work was due to partisan zeal, although their portrayal of his character and activities was more nearly correct than was that of their Whig opponents. The first true estimate of this victim of factious warfare was made in a small pamphlet by Dr. von Ruville in 1895 and was expanded in his great "Life of William Pitt." In spite of British criticism of this work on account of the alleged depreciation of Pitt, Von Ruville's analysis of the political world of the eighteenth century is becoming more and more the point of departure for further investigations; and this essay by Mr. Lovat-Fraser is an attempt to popularize the new portrait of the much-maligned Earl of Bute, a portrait which is generally accepted by modern historians.

The Earl was a fresh figure in the world of politics at the close of the reign of George II and was viewed with suspicion by the "standpat" politicians of the great Whig families who, since the death of Queen Anne, had been united in a ring for the control of government and of opportunities for graft. Besides the followers of the Prince of Wales, of whom the Earl of Bute became the leader, there was also outside the ring the small body of discontented Whigs, who looked to William Pitt for leadership. Since the fortune of these two factions depended on the overthrow of the ring, it was natural that they should unite; and the reorganization of the Ministry in 1757, which gave Pitt the golden opportunity to display his talents as Minister during the Seven Years' War, was the consequence.

When George III succeeded to the throne in 1760, Lord Bute came into a position of great power, which gave him the opportunity to carry out reforms supported by his royal master and the Princess Dowager. Bute was an enthusiast and a dreamer. To the loyal attachment of a Scotch clansman to his leader, he joined a dilettante's love of reform. He would play the part of a second Sully to George the Third's Henry IV. His enthusiasm awakened in the rather sluggish mind of his master dreams of being a great reform king. It was the age of "enlightened despotism," and why should not the young King become the regenerator of the British world, the organizer of a vast empire upon which the sun did not set? He would become the founder of an imperial system in the Far East and would create fresh centres of British population on the banks of the Mississippi; and the whole should be united by the development of a new ideal of monarchy.

The new monarchy was the foundation upon which the magnificent structure was to be raised; and to this idea the King and his Minister gave their first attention. Their text-book had already been written. Bolingbroke's "Patriot King" was to be put into practice; the world should see a king rising superior to parties and choosing his Ministers for merit alone, who would receive the universal approval of the people because they promoted only those measures that made for the *summum bonum* of the whole.

But first a very practical problem in politics confronted the Earl of Bute; he must annihilate the political ring of the Whig aristocracy. For his purposes conditions were favorable. The ring had been broken, after the death of Pelham in 1754, into numerous factions, each struggling to gain the upper hand. Bute's solution of the problem, in fact, did not lead to the visionary government of Bolingbroke, but created a new faction, that of the court, which was bound together by the strong hope of lucrative sinecures. Of this court faction the nucleus was the "king's friends," to which were added indepen-

dent or unattached Whigs and many Tories; and by it George III was enabled to take an independent part in the game of politics. In time it became so strong that, by uniting with only one other faction, it controlled a majority in both Houses. In the history of practical politics this is the one achievement of the Earl of Bute.

Bute himself was not made on an heroic plan. To put in operation his dreams of reform, or even to carry out the destruction of the Whig ring, required a man of "blood and iron," but the Earl was a weakling, rash and timid by turns. Lord Shelburne, who knew him well, called him the greatest political coward he ever knew, and the estimate is supported by the act of Lord Bute in laying down his Ministerial dignity in 1763 before he had actually started to put through his measures. Such a man could not long remain the manipulator of the political strings, and before the year expired he was politically dead. His last interference of any moment in the affairs of state was in August, 1763, when he attempted to organize a Ministry under William Pitt, which seems to have been regarded by him as the nearest approach to his ideal attainable. The fiction of his continued interference in politics for many years has been perpetuated by the credulity of Whig historians; the only justification for it is in the fact that the engine which he created in the court faction increased in strength, and under the hands of George III and Lord North attained preëminent position in the Ministry.

Notes

The University of Chicago Press is about to issue an English edition of August Bebel's autobiography entitled "My Life."

During the month Macmillan will bring out three novels—"One Woman's Life," by Robert Herrick; "Vanishing Points," by Alice Brown, and "The Impeachment of President Israels," by Frank B. Copley.

New books which will be published in February by Forbes & Co. include: "Divorcing Lady Nicotine," by Henry Beach Needham, and "Women as World-Builders," by Floyd Dell.

The announcements of Longmans, Green & Co. include: "Organized Democracy" (American Citizen series), by Frederick A. Cleveland; "Confessions of a Convert," by Monsignor Robert Hugh Benson; "Sermon Notes," by Cardinal Newman; "The Ministry of the Word," by Canon W. C. E. Newbolt; "A Book of Devotional Readings from the Literature of Christendom," edited by the Rev. J. M. Connell; "Anti-Christ and Other Sermons," by John Neville Figgis, and "Catholicism and Life," by the Rev. C. H. Sharpe.

The following novels are promised this month by Little, Brown & Co.: "The Maiden Manifest," by Miss Della Campbell MacLeod; "Day of Days," by Louis Joseph Vance, and "On Board the Beatic," by Anna Chapin Ray.

The Century Co. is bringing out: "Pippin," a tale of London streets by Evelyn Van Buren; "The Story of Panama," by Farnham Bishop, and a new book of short stories by Jack London, called "The Night Born," from the title of the first story.

Among Scribner's forthcoming books are the following: "The Penalty," the first novel by the short-story writer, Gouverneur Morris; "The Heart of the Hills," by John Fox, jr.; "Witching Hill," by E. W. Hornung; "Helen Redeemed, and Other Poems," by Maurice Hewlett, and Christopher Hare's "Maximilian the Dreamer: Holy Roman Emperor, 1495-1519."

Gov. Woodrow Wilson's book "The New Freedom" will be issued shortly by Doubleday, Page & Co.

The same house has in press: "The Spirit of American Literature," by John Albert Macy, and "Composition," by Prof. Arthur Wesley Dow.

Within the next few weeks Holt will have ready: Henri Lichtenberger's "The Evolution of Modern Germany," and selections of Bruno's "Le Tour de la France," edited for schools by Prof. V. E. François.

The World Book Co., of Yonkers, will bring out immediately "How New York City Administers its Schools," by Ernest C. Moore, professor of education at Yale.

February 26 is the date set by Houghton Mifflin Company for the following publications: "Pan-Germanism," by Roland G. Usher; "W. A. G.'s Tale," by Margaret Turnbull; "The Reasonableness of the Religion of Jesus," Dr. W. S. Rainsford; "Goethe's Key to Faust," by William P. Andrews; "Sappho and the Island of Lesbos," by Mary Mills Patrick; "Mohammed, the Great Arabian," by Meredith Townsend; "With the Victorious Bulgarians," by Lieut. Hermenegild Wagner, and "Australasia," a new volume in the English People Over Seas series, by A. Wyatt Tilby.

W. J. Watt & Company promise for next week "A Song of Sixpence," a novel by Frederick Arnold Kummer.

Among the books shortly to come from the Putnam press are included: "The Adventures of Miss Gregory," by Perceval Gibbon; "The Burning Question," a novel, by Grace Denio Litchfield; "Along the Road," by A. C. Benson; "Montaigne's Essays," selected and edited by Adolphe Cohn; "Rabelais's Gargantua and Pantagruel," in the translation of Sir Thomas Urquhart and Peter Motteux, selected and edited by Curtis Hidden Page; "The Political Debates Between Abraham Lincoln and Stephen A. Douglas," with an introduction by George Haven Putnam; "Mishnah: A Digest of the Basic Principles of Jewish Jurisprudence," translated and annotated by Hyman E. Goldin, and "Comparative Religion" (Cambridge Manuals of Science series), by F. B. Jevons.

Mr. A. V. Dicey has completed a study of the Home Rule bill, in which, while showing sympathy for Irish parties, he contends that the bill just passed is ineffectual and dangerous. The volume, called "A Fool's Paradise," will be an addition to Murray's Questions of the Day series, and will be issued immediately.

The Proceedings, just issued, of the meeting held in Washington, last April, by the American Society of International Law, contains a translation of the paper read by that venerable authority, Professor Fiore, of Naples. He asserts that the future of international law rests in large measure with Americans. Senator Lodge, remembering that since the Jay Treaty, in 1794, eighty-four arbitration agreements have been entered into by the United States, makes the point that every treaty under which an actual settlement has been reached is more important than any number of general treaties that merely promise arbitration. He thinks that to force a nation into arbitration is not likely to be successful. Judge George Gray, though agreeing in a general way with Senator Lodge, cannot conceive of any controversy arising between two highly civilized Powers which could not be peaceably settled. While the Senate is not criticised, the rights of that body seem to him to have been sufficiently safeguarded to remove general treaties from the dangers which Mr. Lodge foresees. On one point he is quite definite: after an award has been made, to submit to a popular vote the question of a possible withdrawal from the consequences of the award, would result in anarchy. He brands as a delusion the theory that the law of the land, once it is announced by the Supreme Court or by any other tribunal provided for under the Constitution, can rightly be reviewed by the people. Democracy has been rendered practicable by the determination of the people to limit their own power. Under no other method has a democratic government proved to be stable.

To those who are willing to take their Montessori at second hand, Mrs. Dorothy Canfield Fisher's "A Montessori Mother" (Holt) may be recommended as a readable and pleasing book containing much common sense and not more nonsense than must be expected from an enthusiastic disciple. The book has the advantage of bringing the Montessori doctrine home to the mother, to whom, indeed, it chiefly belongs, and also of suggesting many ways in which it may be put into practice in the ordinary household without the use of formal "apparatus." To some mothers it may seem more than ever clear that Dr. Montessori has placed her trade-mark upon what has been recognized as common sense, with an omission only of the common-sense qualifications; but they will probably conclude that common sense is not less acceptable under the guise of "the Montessori method." It is somewhat interesting to hear that Dr. Montessori is no longer regarded as an authority in Italy, only one small school, or "children's house," being now completely under her charge.

Commenting on an earlier section of the "Oxford English Dictionary," we observed that though the new work far surpassed all predecessors in the number of illustrative quotations, yet in the proportion of quotations to recorded words it had not outstripped Johnson's. The double section before us, however, SENATORY-SEVERAL (Frowde), by Henry Bradley, with its 2,119 words and 14,620 quotations, leaves even Johnson well to the rear, with his 186 words and 906 quotations. This number is notable as containing the longest article in the Dic-

tionary, that on the verb *set*, which in its remarkable variety of senses and idiomatic combinations runs to about 55 columns. Though a large percentage of the words are of Latin stock, there are a few trophies from the gorgeous East, such as *sepoy, serai, serang, seraskier, serdab, serpet*, to remind one that the relation between, say, the East India Company and the English language and literature would be a pretty subject for extended inquiry. The most curious word in the section is Horace Walpole's coinage, *serendipity*, which, he says in a letter of 1754, he formed on the title of "The Three Princes of Serendip," from the faculty of the heroes for "making discoveries, by accidents and sagacity, of things they were not in quest of." Besides Walpole's the only use of this word cited is from E. Solly's "Index Titles of Honor," 1880, where it is employed in Walpole's sense. But Miss E. B. Sherman devotes an entire essay to "Serendipity" in her "Words to the Wise" (1907), and argues that the sense should be extended to include the mysterious faculty of finding things for which one is seeking—finding them by "sublimination."

To the student of *Kulturgeschichte* the group of derivatives from *sentire* is of extraordinary interest, for it carries us into the heart of the ancient conflict between soul and body, Christian theology and naturalism, ethics and æsthetics. It does not startle us at all to-day to read "that *sensuous* pleasure is a possibility, is . . . a thing to give God thanks for" (E. R. Tennant, 1909). We recall Arnold's declaration (1880) that "Keats, as a poet, is abundantly and enchantingly *sensuous*." Five years earlier Lowell spoke approvingly of sensuousness, though with a nice distinction: "A poet is innocently *sensuous* when his mind permeates and illumines his senses; when they muddy the mind, he becomes sensual." In 1870 Emerson had said that "a poet, in verse or prose, must have a *sensuous* eye." We recall Rossetti's sonorous confession that he could not tell his lady's body from her soul. And if we looked no further than the literature of the nineteenth century, we might easily suppose that sensuous pleasure had, with certain reservations, always been in "good and regular standing." But we are halted abruptly in 1814 by a passage of Coleridge's in Farley's Bristol journal, to the effect that he had "reintroduced the word sensuous, used, among many other of our elder writers, by Milton." And the Oxford editor tells us further that "Coleridge seems to have been mistaken in saying that it occurs in 'many others of our elder writers.'" The only passages which he adduces before Coleridge are from Milton, and he remarks in a note that the word was "apparently invented by Milton, to avoid certain associations of the existing word *sensual*, and from him adopted by Coleridge; evidence of its use in the intervening period is wanting." We are a little skeptical. Though the "Oxford Dictionary" does not mention the fact, Johnson records the word in his edition of 1755, where it is defined as "Tender; pathetick; full of passion," and illustrated by a passage from Milton's treatise on education which ran through many editions in the eighteenth century. In this connection it may be added that Milton's use of the word has been widely advertised by Arnold's quotation at the beginning of his essay on Keats; and, secondly, that Arnold misquotes both the words and the sense of the passage. "Poetry," says Arnold, "according to Milton's famous saying, should be 'simple, sensuous, impassioned.'" Now the words occur in a discussion of the proper order of studies in a boy's curriculum. Milton does not in this magisterial fashion say that poetry *should* be "simple, sensuous, impassioned"; he merely suggests that as it is "*more* simple, sensuous, and passionate" than logic [or rhetoric?] it should probably precede logic [or rhetoric] in the course of studies.

Let us return to our senses. Without questioning whether a reader of higher serendipity might not put his finger upon Coleridge's "elder writers," let us ask what forces were whitewashing the black original depravity of the senses between Puritan Milton and Platonic Coleridge. The answer lies partly in the history of the word *sentiment*, and the inquiry leads us to the School of Taste. Six years after Milton's passage on education, Hobbes, in 1650, writes that "Sensuality consisteth in the Pleasure of the Senses" (Moral and Political Wks., ed. 1750, p. 23); but in another place (p. 15) he says that "there are two Sorts of Pleasure, whereof the one seemeth to affect the corporeal Organ of the Sense, and that I call *sensual*. . . . The other Sort of Delight is not particular to any Part of the Body, and is called Delight of the Mind." When stern theologians thundered against all pleasures of unredeemed flesh as carnality and indulgence of the senses, the disciples of Shaftsbury took refuge in that "Delight" of the mind which they asserted lies just midway between sensation and intellection. As John Gilbert Cooper put it, "that *internal Sense* we call Taste . . . seizes the Heart with Rapture long before the Senses, and Reason in Conjunction, can *prove* this beauty," etc. ("Letters Concerning Taste," 1755, p. 7.) At the close of his book Cooper gives a little fable of the birth of the nymph "Calocagathia," who "became as she grew up the chief Favorite both of Gods and Men." In the service of this nymph it became necessary to develop the peculiar eighteenth-century *sentiment* and *sensibility;* to compose endless poems on the pleasures of imagination, memory, hope, friendship; and, most important of all, to establish what the eighteenth century called the *sentimental* and we call the *æsthetic* morality. What, then, the elder writers call *sensual* pleasures the eighteenth century called pleasures of *sensibility*, and we call *sensuous* pleasures.

It is to be regretted that the eighteenth century uses of these words have not been more diligently and copiously collected. For example, Warton, "Essay on Pope," 1756-82, furnishes the first instance of *sensibility*, meaning "capacity for refined emotion; delicate sensitiveness of taste"; but opening the *Adventurer* almost at random, we come upon this under the date September 11, 1753: "The tenderness and elegance of which scarcely need be pointed out to those who have taste and *sensibility*." Furthermore, all the quotations under this word from eighteenth-century writers—Warton, Cowper, Sterne—use the word as if the thing were very desirable to possess, and Byron, 1807, is the first witness to speak of "sickly *sensibility*." As a matter of fact, the periodicals contemporary with Cowper and Sterne are full of the keenest criticism of sensibility, and the *Lounger* of August 6, 1785, anticipates Byron's epithet by twenty-two years: "Reason condemns every sort of weakness; but passion, enthusiasm, and *sickly sensibility* have dignified certain weaknesses with the name of amiable"; similar examples from the same periodical could be multiplied. The first dictionary example of *sentiment*, meaning "an epigrammatical expression," is from Sheridan's "School for Scandal," 1777; we find an example twenty-one years earlier in the *World*, December 23, 1756: "He concluded his harangue with a string of proverbs, mottoes, and *sentiments*." In the sense of "refined and tender emotion," the Dictionary quotes Cowper, 1784: "New-fangled *sentiment*, the boasted grace of those who never feel in the right place." Beside this it is interesting to set this from the *Lounger* of February 18, 1786: "*Sentiment* and feeling, however, had their day, but are now almost quite out of fashion." Under *sentimental* again the eighteenth-century examples cited are favorable, while in the *Mirror* of April 25, 1780, we find already an indictment of that "*sentimental* morality" which refers "our actions to the determination of feeling." The Dictionary's first instance of *sentimentalist* is 1793; we anticipate that by eight years with this from the *Lounger*, June 18, 1785: "In morals, as in religion, there are not wanting instances of refined *sentimentalists*, who are contented with talking of virtues which they never practice, who pay in words what they owe in actions; or, perhaps, what is fully as dangerous, who open their minds to impressions which never have any effect upon their conduct." The interesting paper in which this passage occurs is directed against the novel "of that species called the *Sentimental*." It closes with a declaration which has lost none of its point by the lapse of a century: "Of youth it is essential to preserve the imagination sound as well as pure, and not to allow them to forget, amid the intricacies of Sentiment, or the dreams of Sensibility, the truths of Reason, or the laws of Principle."

"A Colonial Governor in Maryland" (Longmans), by Lady Edgar, is a discursive treatment of colonial affairs in Maryland during the twenty years from 1753 to 1773, with Gov. Horatio Sharpe as the central figure. Those colonial Governors in the eighteenth century who seriously attempted to carry out their instructions to the letter generally resigned or were recalled after a few years. Governors were expected to enforce the colonial system if it could be done without raising a disturbance in the colony, but their first duty was to make the colony prosperous and contented, to the end above all that the English merchants should have no cause to complain of decreasing orders for English commodities. From this point of view Sharpe seems to have been successful enough, with the result that he remained in his post for sixteen years. Partly for this reason, the story which Lady Edgar has to tell is rather colorless. She has had access to the Sharpe correspondence, contemporary newspapers, and to "private sources," and the

chief value of the book is in the letters and other contemporary material which she has printed. Indeed, her own task has been mainly to connect by fairly obvious comment a considerable amount of source material, some of which is already well known and easily accessible. One is inclined to think that students of colonial history would have been better served by an edition of Sharpe's correspondence simply. But the book is probably meant for the general reader rather than for the historian. At all events, it is admirably well adapted to those who like to dip, not too far, into the "sources"; who like to take their history leisurely, with wide margins, and seasoned with excellent illustrations of old colonial houses. It is a book which every Colonial Dame will possess as a matter of course, and one which the professed historian will find occasionally useful

"The Battleship" (Dutton), by Walter Wood, is the most recent word on a now world-engrossing topic. The book is handsomely got up and admirably illustrated. There are many photographs, besides artistic drawings in black and white and reproductions of charming water-colors by Frank H. Mason, R.B.A. The author traces the development of the battleship from the Great Harry, A. D. 1515, to the present day in popular and, at times, gossipy style. The chapters on Beef and Beer and Women in Battleships deal seriously with matters already somewhat familiar to the readers of Smollett and Marryat. It is with regret that attention is called to the statement that "the Americans certainly did not sanction the presence of loose women on board their men-of-war." A distinguished Admiral of our navy, now deceased, told the reviewer that almost the first duty assigned him as a midshipman in the early thirties of last century was to take ashore in a ship's cutter a number of these wretched creatures. He refused this duty, saying, to his credit, "He'd be blanked if he would." Admirals' and captains' families cruised on occasion in her Majesty's ships long after the date Mr. Wood gives for the abolition of this practice. The chapter At Sea and in Harbour brings a vanished past before us in a delightful way. Although Mr. Wood, as an Englishman, writes for Englishmen, there is no reason for his claiming as a Scotchman a graduate of the United States Naval Academy who fought on board the Chinese Chen Yuen in the war with Japan. "All new warships" are not "fitted with turbines." Some of our latest battleships have reciprocating engines. While the most recent ship is usually the most formidable, there are many who do not think with the author that pre-Dreadnoughts are useless, and who wish they could agree with him in believing "these monsters have reached finality in size." Sanity in design cannot be expected so long as bigness rather than carefully thought-out practical efficiency is sought. Avowedly prepared for the general public and not for the technical student, this book is well worth reading for its story of the growth of the battleship from the Henry Grace à Dieu to the Orion, last year's most formidable addition to the British fleet.

Anne Warner French, writer of novels, essays, and short stories, died last Saturday in the south of England, at the age of forty-three. Her writings include: "A Woman's Will," "Susan Clegg and Her Friend, Mrs. Lathrop," "The Rejuvenation of Aunt Mary," later dramatized, "Susan Clegg and Her Neighbor's Affairs," "Seeing France with Uncle John," "Seeing England with Uncle John," "An Original Gentleman," and "Your Children and Mine."

Science

THE GEOLOGY OF NEW ZEALAND.

SYDNEY, Australia, January 7.

New Zealand is the paradise of the geologist, as it is of the physiographer and the tourist. It has still active and dangerous volcanoes. It is constantly being shaken by earthquakes. It has regions of hydrothermal springs, geysers, and fumaroles. Its gorges are magnificent and appalling. Its mountain ranges are sublime. Its fiords rival those of western Norway. Its "far-flung hills" contain representatives of almost every possible variety of igneous and volcanic rock, and almost every known metal. Its stratigraphical formations present a series of unsolved problems. Its coast-lines illustrate every stage of topography, from youth to age. No other country of like dimensions has equal scientific attractions.

The first serious students of the subject were foreigners; as the Germans acknowledge with pride, they were Germans. Dr. Ernest Dieffenbach was employed by the famous New Zealand Company as its naturalist, and he made a beginning on the geology of the North Island. Ferdinand Hochstetter came out as the geologist of the Austrian Novara Expedition, and his work on the geology of New Zealand is still valued. He was accompanied in his geological tours by a German immigrant—"the jolly, joyous Haast," as he calls him—who was to settle in New Zealand, produce a classic on the geology of Canterbury province, become a professor there, and curator of the admirable museum. Even now the Germans are still enchained by the southern wonderland, and the most compendious treatise on its geology has been recently produced by Dr. Karl Winter, of Heidelberg.

The New Zealanders certainly cannot be accused of neglecting the subject. Their Geological Survey has minutely examined a great part of the two larger islands, and furnished ample data for theorizers. Professor Park's treatise was reviewed in these columns two years ago. Now his colleague, Professor Marshall, of the Shackleton Antarctic Expedition, has again gone over the whole ground, and included the chief results of recent research.*

The differences between the two authors and the various schools leap to the surface at the outset. Professor Park is sanguine, and holds that, in regard to the stratigraphical succession at least of the sedimentary formations, a general agreement has been virtually arrived at. That is not the impression the reader receives from Professor Marshall, who lays stress on the difficulty in discovering the age of the rock-formations. Most of the older rocks are wholly non-fossiliferous, and therefore lack the requisite determining characters. The difficulty is increased when, as is the case in New Zealand, the sedimentary formations have been subjected in a very high degree to metamorphism. Their original characters are thus destroyed; new ones are adopted; and these depend chiefly on the chemical composition of the rocks. The palæontological test is equally unsatisfactory. Structures are lost, fossils disappear, and formations that were originally different get to resemble one another. Sometimes fossils lingered on and still lived when others of later development arrived. In a single formation fossils belonging to two different periods in Europe are found together in New Zealand. Lastly, the earth-movements that so greatly affected all the older rocks were peculiar to New Zealand, and divided the sediments into natural groups that were not the time-equivalents of parallel deposits in Europe. It is therefore not surprising that different observers have come to different conclusions on the order of the stratigraphical succession in New Zealand.

Professor Marshall's detailed argument must be sought for in Dr. Winter's German treatise, where it is elaborated at length, but his general conclusions can be stated in a few propositions: (1.) He condemns the attempts of Sir J. Hector and Capt. Hutton to correlate the successive New Zealand systems with the successive European systems; and here most geologists will doubtless agree with him. (2.) To all appearance, he would sweep away the whole of the Palæozoic formations, so far as they are believed to represent equal intervals of time or equal thicknesses of sediment with the parallel formations in Europe. (3.) On the contrary, they merely stand for rock-systems separated by apparent unconformities, and have no necessary relation, of either time or space, to the European systems. (4.) The stratified rocks of which the chief mountain-ranges in New Zealand consist were deposited throughout almost the whole of the Mesozoic age; and this is his main contention. (5.) Another great series of rock-formations was deposited during a general regional depression in the Tertiary or Kainozoic age. These propositions are right in the teeth of geological orthodoxy, and are likely to arouse keen opposition.

**Geology of New Zealand.* By P. Marshall. Wellington, N. Z.: The Government Printer.

Such is the distinctive feature of the argument, but the duel between the rival geologists extends through the volume. Does Professor Park, in an ingenious argument, describe the block-mountains, which New Zealand has in common with the United States and Germany, as owing their relative elevation to the subsidence of their basins, Professor Marshall explains them by elevation of the mountains. To Park, New Zealand is "the remnant of a submerged continent of great antiquity." To Marshall the ocean contours show clearly that it is "only the higher emergent crest of an extensive submarine ridge." Marshall steadily opposes the unconformities alleged by Park and his school, and he declares that his extensive observations have failed to reveal them. He offers a special explanation of their apparent existence. It is substantially the same as has already been given to account for the irregularities of the stratigraphical succession, and it is based on the peculiar palæontological evidence.

For once our rival geologists are in agreement. Bonney, Heim, and other distinguished glacialists deny that glacial action can create new topographical features. After prolonged examination of a district in New Zealand that exhibits profound traces of glaciation, Professor Park leans decidedly to the view of Sir A. Ramsay, while Professor Marshall is convinced that "the main features of the grand scenery of our lake and fiord region" have been thus produced. "The magnificent cliffs that hem in the valleys, the flat floors of the valleys themselves, the steps that are formed in these floors, and the lofty waterfalls that leap over the sides all appear to be necessary results of glacial erosion." J. C.

During the month D. Van Nostrand Co. will bring out "The Civil Engineers' Pocket-book," by Albert I. Frye.

"A Table for Two, Good Things to Eat," by Ella Eldene, and "Making the Farm Pay," by C. C. Bowsfield, are in preparation by Forbes & Co.

To their Garden Library series Doubleday, Page & Co. are adding "Modern Strawberry Growing," by Prof. Albert E. Wilkinson.

The following Cambridge books are announced by Putnams: "The Earth, its Shape, Size, Weight, and Spin," by J. H. Poynting; "The Atmosphere," by A. J. Berry; "Geometrical Drawing," with notes and examples by W. H. Blythe, and "Makers of British Botany," a collection of biographies by living botanists, edited by F. W. Oliver.

The military department of *Petermann's Mitteilungen* for December describes, with an admirable map, the geographic and commercial relations of Servia with the Adriatic. There is also in it a sketch of Mongolia with relation to the Russian interests. Other articles are on southern Indo-China and German East Africa.

The last number of the *Deutsche Rundschau für Geographie* contains a description of the vilayet of Kossovo, lying on the Servian frontier, from a military point of view by Capt. G. Kuchinka. A valuable series of facts giving the statistics and geographical distribution of the world's sea-borne commerce is contributed by Prof. A. Oppel, of Bremen. Of the ten different tables one shows the dock capacity of 152 places.

We have to record the death, last week, of two British scientists, both noblemen. Walter Foster, created Baron Ilkeston in 1910, was born in 1840, and was educated at Trinity College, Dublin, and at the Royal College of Surgeons of Ireland. At one time he was professor of anatomy and afterward of medicine at Queen's College, of which he was emeritus professor when he died. He was best known to the general public because of his activity in Parliament, in which he was a member of the Liberal party. Among his works on medical subjects are "'Method and Medicine," "Political Powerlessness of the Medical Profession," and "Public Aspects of Medicine."

The Earl of Crawford, head of the ancient house of Lindsay, was born in 1847, and studied at Eton and Trinity College, Cambridge. Later, when a member of Parliament, he was largely responsible for the stamping out of cholera with which England was threatened in the nineties. The British Medical Association awarded him its gold medal for his distinguished services. Heart disease was his specialty.

Drama and Music

THE THEATRICAL SITUATION.

It has long been matter of common knowledge that theatrical business generally is in a bad way. Whether or not a "panic" is imminent, it is not at all necessary to decide. Such an occurrence might not be without its alleviations for theatre-goers, as it would put an end, temporarily at all events, to much speculative production of an entirely worthless kind, and help to put the stage upon a sounder financial and artistic foundation. A survival of the fittest might reasonably be expected. But, whatever may happen, it will be well to remember that the existing conditions in the theatre are the result, not so much of external and fortuitous influences, as of a radically vicious system—a system that has choked artistic and fostered speculative competition—and that commercial crises are likely to be recurrent, more severe and more mischievous, until that system is broken up.

That New York has, for the moment, more theatres than are needed—more theatres, in fact, than there are plays to put into them—is an obvious fact. But that is a condition which will soon pass away. Old theatres will disappear or be devoted to different uses, and equilibrium will be restored. The really significant fact is the enormous development of the cheaper and less intrinsically worthy forms of entertainment at the cost of the higher. There never was a time when so much money was expended by the public on theatre-going as today. But the masses are drifting more and more towards the lightest forms of entertainment, to farces, to spectacle, to melodrama, to musical comedy, vaudeville, and especially to the moving-picture plays of various degrees. What is the reason of this? There can be only one. It must be that they find there more satisfactory entertainment of its particular kind than is to be found elsewhere. This is the root of the matter, and it is the logical result of the syndicate and long-run systems, which have kept the most capable writers out of the dramatic field and stopped the production of accomplished actors. It has now come to a pass where for superior plays and players we are dependent almost wholly upon foreign sources.

It is the ideal theatre, of course—meaning by that phrase any form of drama that makes its appeal to truth, beauty, or intelligence—that has suffered and is suffering the most. The list of good plays, of one kind and another, that have failed during the last ten years, simply on account of incompetent performance, would be a very long one. The old classics, both comic and tragic, have been laid aside, not because people will not go to see them, for people will and do whenever there is a chance—witness the successes of Julia Marlowe and Edward Sothern—but simply because it is almost impossible now to collect a company to present them with decency. The same difficulty applies to the representation of any modern drama requiring, on the part of its interpreters, special faculties of emotional eloquence, distinctive style, or psychologic insight. Individual managers, it may be admitted, do the best they can with the material at their disposal. They themselves are the victims of the system which they created and which is now proving too strong for them. Being without plays or players of the first class, they are perforce compelled to make the best of what they have. But the best of second-rate drama, and of that there is still an abundance, will not in the long run hold its own against the lighter and cheaper shows which are good of their kind. There are many signs that the more serious theatre is falling into disfavor with the public on account of its frequent failure to live up to its pretensions.

That there are plays on the stage today which are meritorious in their degree, are fairly well presented, and provide good and wholesome entertainment, need not be denied. There are several which are of extraordinary merit. But their proportion to the great bulk of theatricals is exceedingly small, and were it not for the importations, even this would dwindle. The managerial

problem is how to recover lost ground; how to attract new dramatists or start the old writers into new grooves, and how to refill the depleted ranks of trained players. England is showing them what the real stock company can do in the way of inspiring playwrights and giving form to their conceptions. Possibly they may yet learn to profit by that example before it is too late. A theatre upon the highest plane would court competition and defy panic.

Five plays are included in the volume of "New Comedies," by Augusta, Lady Gregory, to be brought out in the spring by Putnams. They are "The Bogie Men," "The Full Moon," "Coats," "Damer's Gold," and "McDonough's Wife."

Probably in no country, to such a degree as in France, have the stage and a woman's smile been so bound up with the deeds of distinguished men of all professions. This is what makes "My Autobiography," by Mme. Judith, the French actress, which has just been published by the Putnams, in an English translation by Mrs. Arthur Bell, decidedly more than a survey of her own art. The work is full of intimate sidelights on French history and literature from the revolution preceding the Second Empire to the foundation of the republic after the Franco-Prussian war. Mme. Judith's close acquaintances included her great rival Rachel, Prince Napoleon, Charles Blanc, Victor Hugo, Alfred de Musset, Alexandre Dumas, father and son, and a number of others almost as well known. Having a bent for the stage even as a child, she was soon placed in the dramatic school of Father Félix, parent of the famous Rachel. His methods were successful even if drastic. When the child could not put as much feeling into her lines as was desired, he would retort, "You can't, can't you! We'll see." "Then he would go and take down a cat-o'-nine-tails that hung on the wall, and give me some cruel cuts across the legs." And when the child, between sobs, repeated the lines, he rewarded her with "Come, that's better, you see you *can* put more feeling into it." Victor Hugo told Mme. Judith that considering his great powers of visualization, he ought to have been "a painter, or perhaps an engraver. I see nature in black and white. I should have liked, in fact I ought, to have been a second Rembrandt." His self-assurance was seldom guarded. When somebody at dinner quoted De Musset, he remarked, "Yes, he has immense talent. He boasts that there are some who consider him as good a poet as I am." At the end of the meal Hugo gave a strange exhibition:

He put a whole orange, rind and all, into his mouth, and then managed to thrust as many pieces of sugar as possible into his cheeks. This achieved, he began to scrunch it all up with his lips tightly closed. In the midst of this operation he swallowed down two liqueur glasses of Kirsch and a few minutes later opened his mouth wide. It was empty! No one made any attempt to imitate him.

As for the elder Dumas, Madame Judith cannot remember when she didn't know him. He was an institution in Paris, and, according to her, the most popular man in Europe. Such was his popularity that one could insult a stranger on the street without giving offence, merely by saying, "I beg your pardon, I took you for Alexandre Dumas, with whom I have an account to settle." Dumas could never think of himself, apparently, as being more than eighteen. Once the author saw him jump up on a post van and say to the driver, "I, too, am a man of letters." To which the driver responded, "That is quite true, Monsieur Dumas." He was known by all classes. Mme. Judith never saw him embarrassed but once. That was when a company of distant relatives of his arrived from San Domingo with Barnum's Circus, and descended upon his household. They promised to return the next day, but Dumas bribed the trainer of two bears to station the animals in the dining-room—with good effect. The retreat of the negroes was precipitate.

Miss Gertrude Kingston will soon resume the reins of management at her own London theatre. She will begin with the production of a light comedy by the Italian playwright, Baracco, which has been adapted for the English stage by Gilbert Cannan. The piece has been named "Three." The story is laid in Italy.

Haddon Chambers is at work upon his new piece, an adaptation of Anne Douglas Sedgwick's novel, "Tante." The principal feminine part will be played here by Ethel Barrymore.

The members of the London Play Actors' Society have chosen for their next production Björnsen's comedy, "A Gauntlet," translated by R. Farquharson Sharp. The performance will take place at the Court Theatre on February 16 and 17.

Arthur Chudleigh will soon produce in London a stage version, made by Cicely Hamilton, of Edgar Jepson's novel, "Lady Noggs."

A correspondent of the London *Times* furnishes an account of the Grasmere Dialect Play, which has now acquired the dignity of a long-established institution. He writes:

Despite the heavy snow, there was a large audience at the first night of the annual Grasmere village play. When, twenty years ago, Miss Charlotte Fletcher wrote the first dialect play she could hardly have foreseen the constantly increasing interest in this annual event. This year's play, entitled "A Will and a Way," is a repetition with some rewriting of one given in 1909. The interest lies in the simplicities of village life presented, in the quiet humor and refinement, and the various incidents which combine to give a vivid picture of life in the Dales.

According to A. B. Walkley, Dr. Vollmoeller's "Turandot," just produced in the St. James's Theatre, London, is much more Italian than Chinese, being in fact a close transcript of the old play of Carlo Gozzi, founded on a legend whose origin was Persian.

The *Manchester Playgoer* is published in the interests of the repertory theatres and the artistic and literary drama. In the first article, Gordon Craig—editor of the *Mask*, of which the new paper promises to be a lively rival—objects sharply to the opinion of John Palmer, expressed in the *Playgoer*, that the work of Professor Reinhardt is greatly superior to that of Mr. Craig and his followers. It appears that Mr. Craig regards Professor Reinhardt as being something in the nature of an apostate, who has abandoned sound artistic principles to achieve success by short cuts. He thinks that the standard of theatrical art is much higher than it was ten years ago, but that the credit for this must not go to Reinhardt or the Russian ballet, but to Leonardo, Blake, Flaubert, Whitman, Pater, Ruskin, Nietzsche, and their followers. Everything depends upon the point of view. George Calderon has an article upon the four walls of the stage, which affords a curious illustration of the tendency of younger theatrical writers to overlook qualities in the older standard writers which they hail as divine revelations in the works of modern exotic playwrights. But there is some sturdy common sense in Holbrook Jackson's remarks about improving the theatre.

"The Man Who Killed" is one of the latest sensations at the Théâtre Antoine in Paris. It is an adaptation from a novel of Claude Farrère, by M. Frondaie, and contains any number of thrills. The scene is laid in Constantinople. Sir Archibald Falkner, a British diplomat of the most cynical baseness, wishing to get rid of his wife, concocts a plan with an unprincipled secretary, Prince Cernuwitz, to entrap her. Lady Falkner is beloved by Col. de Sévigné, a gallant French soldier, who happens to climb up to the window of her room—for the first time—on the very evening for which the husband and Cernuwitz have set their trap. From a place of concealment he sees Cernuwitz make unwelcome love until Sir Archibald breaks in, loads her with reproaches, and forces her, under penalty of prompt exposure before her children, to sign a full and false confession. After Cernuwitz has departed, De Sévigné, issuing from his hiding place, and unseen by anybody, kills Sir Archibald with a dagger, recovers the confession, and carries it off. Soon afterward he receives a visit from Lady Falkner, in great agitation, to implore his protection for Cernuwitz, who, she declares, has earned her everlasting love and gratitude by killing her tyrant. De Sévigné is too much of a gentleman to disabuse her, and has promised to do his best for her lover when the Chief of Police, his most intimate friend, enters, followed by Cernuwitz. The latter swaggeringly proclaims that he is under suspicion, but the Chief denies this, saying that one of his spies had seen the murderer, a notorious scoundrel, enter and leave the room, had tracked him to his home, and arrested him. For this and many other capital crimes he would straightway be executed. Lady Falkner now undergoes another revulsion of feeling, as she realizes that De Sévigné was her deliverer, and, although she declares that hereafter she can have no place in his heart, the intimation is that they will come together in the near future.

Holt will publish this month "Opera Stories," by Filson Young.

"Charles Dickens and Music" is the title of a book that has just appeared in London. The author found references to more than a hundred songs in Dickens's novels, besides allusions to musical art, singers, and instruments.

Dr. Muck is rapidly recovering from the illness which prevented his going with the Boston Symphony Orchestra on its annual Western trip the past week. At one of the next pair of concerts, which will be given

In Carnegie Hall on February 20 and 22, he will introduce to New York a symphony by Lenval, which is shortly to have its first performance in America at a Boston Symphony concert in Boston.

Massenet left all his manuscript opera scores to the library of the Paris Opéra. Mme. Massenet, who during the lifetime of the composer was guardian of these scores, has asked Antoine Banès, who is in charge of the library, to come and examine them. The collection consists of twenty-five scores, including "Ariane," "Esclarmonde," "Sapho," "Hérodiade," "Le Jongleur de Notre Dame," etc. All that is lacking of his dramatic work are two youthful operas, which are supposed to have been burned with the Opéra Comique in 1887.

It is reported that the principal number in Mascagni's new opera, "Parisina," is a duet which lasts twenty-five minutes. The score calls for a chorus of 280. The first performance is to be given at Milan.

No less than one-ninth of the compositions printed in the Bach editions are not by that master, according to Johannes Schreyer. Along with the Luke Passion Music, the authenticity of which has been questioned by other critics, he rejects the transcriptions of the Vivaldi violin concertos, nearly all the works in Volumes VIII and IX of the Peters organ edition, the piano concerto in D minor, the concertos for three pianos in C major and D minor, a large number of other piano pieces, and several cantatas. The grounds which he advances for these repudiations are of an exclusively technical character—defective fugal structure, mistakes in composition, such as conservative fifths and octaves, and so on. Schreyer's opinion is worthy of respectful consideration, for he is one of the best-known Bach scholars in Germany. He edited the organ compositions of that master and wrote a book, "Von Bach bis Wagner," in which he traces the evolution of harmony.

The Russian baritone Baklanoff, who was heard in America some years ago, and who has become a prime favorite with the Vienna public, has placed the opera house of that capital in a rather difficult dilemma. He is engaged there for a part of the season, and as member of the Imperial troupe is under contract to sing his various rôles in German. But after several unsuccessful attempts in this direction, he has declared that, although he speaks and writes the language with considerable fluency, he is unable to master it sufficiently to substitute it for the Italian, French, and Russian texts to which he is elsewhere accustomed. As he is one of the few artists at the Vienna opera house who attract the public on their own merits, the quandary presents itself of allowing him to cancel his contract or of breaking with the traditions of the house and allowing one of the members of the troupe to use a foreign language.

Eugen d'Albert, who, after a lapse of nearly ten years, has once more emerged as a pianist, and whose recitals in Germany and Austria have evoked much the same interest and enthusiasm that used to be bestowed on Rubinstein some thirty or forty years ago, has arranged a series of dances by Beethoven, "Ecossaises," which he has played to the evident delight of his audiences.

Art

Centaurs in Ancient Art, The Archaic Period. By Paul V. C. Baur. Berlin: Karl Curtius. $10 net.

The centaur, a creature half horse, half man, plays an important part in Greek art, especially during the archaic period. He occurs with great frequency not only on Greek vases, but on monuments of every description, showing that he had become a thoroughly familiar figure to the Greek artist. An exhaustive study of the subject was much needed, and Mr. Baur is to be congratulated on the contribution he has made to classical archæology by undertaking this difficult task and accomplishing it successfully.

Mr. Baur has arranged his material in three divisions, according to the three main types of centaurs—those with equine forelegs, those with human forelegs, and those with human forelegs ending in hoofs. Within these divisions he has classified the monuments on which centaurs occur, as far as possible chronologically and according to the locality from which they come. The whole is arranged in catalogue form with a detailed description of each scene, while a concluding chapter gives in concise form the main results of the author's investigations.

With the material at our command so clearly set forth, every student of centaurs, or rather every archæologist working on a subject bearing on centaurs, will henceforth have his task greatly facilitated. One of the important results of the book is that several erroneous theories regarding the development of the centaur type have now been conclusively disproved. Thus, it had become an almost universally accepted theory that the centaur was first represented with human forelegs, out of which type the equine-legged creatures developed, but Mr. Baur shows that the centaur with equine forelegs occurs in the Orient as early as 2000 B. C., while on the very earliest monuments of the geometric period both types occur side by side, sometimes on the same monument.

The question of the origin of the centaur is an interesting one. Mr. Baur comes to the conclusion that he is of Oriental origin where he was at first purely decorative or was supposed to have power to ward off evil; that he was introduced into Greece not before the geometric period, and that the legends and myths of the Greeks grew round the art type in an attempt to explain it. He also points out the somewhat remarkable fact that in the Minoan and Mycenæan periods not a single monument with the representation of a centaur is known, though almost every other fantastic combination of animal and man occurs.

In the actual make-up of the volume there are several points which could have been improved. First of all, the absence of an index is regrettable. The book is full of valuable information, scattered in the text, and constant comparisons are made with other monuments. It would certainly have increased the usefulness of the book if this information had been made more easily accessible. Perhaps a minor point is the fact that neither the consecutive numbers given to the monuments treated nor the occasional headings are made to stand out properly, which is a drawback for rapid consultation. The illustrations are good, but too few. In a work of this character it would have greatly helped the reader to have before him a copious number of pictures, even if for the sake of cheapness they had been somewhat inferior and only good for actual identification.

That "the 'kivers' of the mountain woman are to her what ancestral portraits and family silver are to the woman of the lowlands" has occasionally been shown at exhibitions of arts and crafts of the Berea College fireside industries. The full story of the American coverlet Eliza Calvert Hall (Mrs. E. C. Obenchain) tells in a "Book of Hand-Woven Coverlets" (Little, Brown). The story is alluring, as the author found when fairly engaged in her extensive researches. "A friend once sent me thirty photographs of coverlet designs. In a burst of enthusiasm over their beauty, I began to write this book." A commendably thorough quest of data followed. It concerned especially the itinerant weavers who, before Lancashire and New England products had penetrated the interior, used to go from family to family to weave the year's supply of clothing. Of their art, the double-woven "kivers" were the fine flower. The unique merit of Mrs. Obenchain's book is that it memorializes these heretofore unrecorded activities. "If I find an 'oldest inhabitant' in any old town," she writes, "I can always gather a few facts that bring me very near to the professional weaver." She has rescued from oblivion such an artist as the late Sam Gamble, Irish weaver, emigrant about 1830 to Glasgow, Ky. Gamble "regularly made the rounds, weaving cloth for the different families, and tarrying longest where the hospitality of John Barleycorn offered the best inducement." The peach brandy was especially fine at Alanson Trigg's house,

And here he would linger for months, plying his trade with the assistance of Aunt Rose, the "black Mammy," who spun the thread, filled the bobbins and threaded the sley. The woollen woof was made from the fleece of sheep that grazed on the neighboring hillside, and probably the cotton thread, too, was a home product. The music of Sam Gamble's shuttle delighted the whole family, for to the negroes it meant new clothes at Christmas time; to the mistress it meant fleecy blankets and gay coverlets, and all these were colored with dyes made from barks and roots of trees that grew around the Old Place.

The hand-weaving thus practiced in all

the country west of the Alleghanies down to the Civil War has persisted in the mountains, where, as at Berea, an effort is here and there made to foster it. The "kivers" themselves, virtually eternal, for in the writer's words, "I find it hard to think of any lawful usage wearing out a double-woven coverlet," are now often treated ignominiously, instead of being preserved, as on artistic grounds they might be, in museums and private collections. "Those old blue and white coverlets!" says one. "Why, last summer, when I was at home, down in Georgia, the dog was sleeping on one under the back porch." "I had another one," observes another hostess. "It was red and green, but I did not know the value of it, and I sold it to a negro woman for a dollar, *and never got the dollar.*" The magnitude of such tragedies as the foregoing is revealed by the author's very delightful colored illustrations.

Edouard-Bernard Debat-Ponsan, the French artist, died last week in Paris at the age of sixty-five. Although he had painted a number of portraits, among them one of Gen. Boulanger, he was known mainly for his pictures of religious subjects, many of which are in museums and cathedrals of France. He was a chevalier of the Legion of Honor and a member of the Society of French Artists.

Finance

WHY WE ARE SENDING GOLD TO EUROPE.

When this country's agricultural production and industrial activity swelled to almost unprecedented magnitude last autumn—with our merchandise export trade breaking all records, and our surplus of exports over imports rising in November thirty million dollars above the highest previous figure for that month—it was very generally taken for granted that Europe would have to send us gold in quantity. Early predictions of the amount likely to come ranged from $25,000,000 to $50,000,000. The import movement, in fact, began, and about $10,000,000 came; then it was stopped abruptly, by the intimation that if our market were to continue to draw gold from London, the Bank of England's official discount rate would be raised to the abnormally high figure of 6 per cent. As a matter of fact, all European banks were guarding their gold reserves, in view of the very tight money market abroad and the possibilities of international collision, as an after-result of the Balkan War.

It was then inferred in many quarters that, once the special demands of the busy season on the money markets were terminated by the "year-end settlements" of December 31, such relaxation in foreign money rates would occur as to admit of resumption of the gold movement to America. Instead of this, New York has sent to Paris, since the beginning of the year, no less than $11,000,000 gold—more than we received from Europe in the autumn—and, in addition, has sent some $8,000,000 to South America, virtually for the account of London.

There have been various explanations proffered for this unexpected movement, coming as it did in the face of a continued heavy export trade in merchandise. Europe sold back to us, during the Balkan War disturbance, great blocks of the American securities which it had bought in the three preceding years, and those had to be paid for, whether in merchandise or gold. At a time when Austria was threatening Servia and European money markets were frowning on Vienna's appeals for credit, New York bankers had taken $25,000,000 short-term Austrian bonds, and the money thus lent had to be remitted. Both of these factors operated to push exchange against us and stimulate exports of gold. They would hardly have achieved that purpose, however, but for two other highly interesting facts in the financial situation.

The first is the international money market. Usually, the Wall Street lending rate is well above that of the European markets. In the last week of December, Wall Street's two-month discount rate, at 6 per cent., compared with 4¾ at London, 4⅛ at Paris, and 5¼ at Berlin. This week, the Wall Street rate for the similar period has gone below 3¾ per cent., comparing with 4 11-16 at London, 4 at Paris, and 4¾ at Berlin. Our rate is, in fact, at the moment virtually the lowest of any market in the world. That fact may not mean that the rest of the world will be hurrying to New York to borrow; but it unquestionably means that a good many temporary loans, placed by American borrowers abroad before December 31, are being paid off and transferred to the New York market.

But another and most unusual cause has contributed both to the high money rates abroad and to our export of gold to Europe. It is now universally recognized that the trouble with the European banks and with the European money markets runs largely back to the outright hoarding of cash by the common people, in enormous sums, through fear of war or of some undefined financial catastrophe that might come out of the threats of war. Recently published estimates by European experts name the extraordinarily high figures of $150,000,000 as the amount thus hoarded in Austria-Hungary, $65,000,000 in Germany, and $130,000,000 in France.

While guarding carefully their own gold reserves, and in some cases (as at Paris) refusing to pay gold over the counter, the Banks of France, of Germany, and of Austria-Hungary have, combined, increased their note circulation $225,000,000 over the circulation of this time last year. That increase was evidently necessitated, in large degree, by the hoarding of metallic currency. In no other year on record has there been so great an aggregate increase. Last year these banks, in their statements of the last week in January, showed total increase of only $71,500,000 over the same week in 1911. But such expansion in loans and liabilities needs new supplies of gold to support it, if not to provide for customers who may wish to get coin for ordinary uses—payment by banks in that form having lately, at Paris, been almost suspended.

For a population that is one and a half times as large as that of the United States, the hoarding of $345,000,000 in Austria-Hungary, Germany, and France has not exceeded by a very large margin the amount of money estimated by the Secretary of the Treasury to have been hoarded in the United States in the panic period of 1907. Mr. Cortelyou estimated, in his special report to the Senate, that $296,125,000 cash had been hoarded in this country during the last three months of 1907, and he calculated that $111,000,000 thus disappeared from sight in New York city alone. But there are marked differences between the present-day hoarding of Europe and that of the United States in 1907. In 1907, people in this country were first seized with doubt as to the solvency of all credit institutions; then they learned that the banks would not pay them currency over their counters; next, they heard of a "premium on currency." None of these conditions exists, except to a very limited degree in France; moreover, the curious contrast exists that our own people hoarded only paper money, whereas Europe is hoarding only coin. But our hoarders of 1907 never suspected governmental credit, and that is just what the hoarders of 1912 have vaguely feared.

In our own case, the hoarded cash of 1907 poured rapidly back into the market as soon as panic ceased; the banks resumed full payments to depositors, and the "currency premium" disappeared. Whether the European hoarders will be as prompt and businesslike when the Balkan trouble is finally adjusted is, perhaps, not entirely certain. But there will be a change.

SOCIAL WELFARE IN NEW ZEALAND
By HUGH H. LUSK
This book sums up the results of twenty years of progressive social legislation in New Zealand, and seeks to interpret its significance for the United States and other countries. It is a work of the kind long desired by sociologists and political economists—a work based on Government statistics and data not accessible till 1912. The author was for ten years a member of the New Zealand Parliament.

THE TECHNIQUE OF PAINTING
By Charles Moreau Vauthier
8vo. *With numerous plates in color and black and white.*
$3.50 net. By mail, $3.75
The author analyzes the methods of all the masters from Apelles to the Impressionists of yesterday and the "Futurists" of to-day. Numerous colored plates illustrate his observations, and each of these reproduces a fragment of the picture on the same scale as the original, showing its handling, its coloring, its impasto, and the direction of the brush strokes. A reduction in black and white gives the entire picture.

LETTERS AND MEMORIALS
OF
Wendell Phillips Garrison.
Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net postpaid.

HOUGHTON MIFFLIN CO.
BOSTON NEW YORK

THE GREAT ART GIFT-BOOK OF THE YEAR

ART By Auguste Rodin

(Translated from the French of Paul Gsell by Mrs. Romilly Fedden.) With over 100 illustrations in photogravure and half-tone. Buckram, $7.50 net; three-quarter levant, $15.00 net; carriage additional. A book which takes its place at once as the most important art book in years. It covers practically the whole range of art, and abounds in memorable analyses of the works of the masters of painting and sculpture, ancient and modern. *Send for descriptive circular.*

School Advertising in The Nation

THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes —lawyers, physicians, bankers, and other professional men— and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

SPECIAL RATE—Ten Cents a line net for thirteen times

(Minimum space three lines)

Orders may be forwarded through any responsible advertising agency, or directly to

THESE are the lowest prices at which books of this quality have ever been offered. They can be low because of the great demand which makes enormous editions possible. The books are carefully edited, are printed on good paper, are attractively bound and are of the most satisfactory size for the bookshelf, or to carry in a bag or coat pocket.

E. P. DUTTON & COMPANY, 31 West 23d Street

The Nation

NEW YORK, THURSDAY, FEBRUARY 13, 1913.

The Week

It is now clear that the Democratic leaders in the House do not propose to bring up at this session the Constitutional amendment fixing the term of the President at six years, without eligibility for another election. The ostensible reason is lack of time. With so many important matters crowding for consideration these last weeks, those in control are reluctant to give up the two or three days that would be necessary to discuss and adopt the amendment. But the real reasons are scarcely concealed. The Democrats are unwilling to accept an amendment which would explicitly rule out the possibility of another candidacy for Mr. Roosevelt. The shameless creatures say that he put their party in power last year, and that they are counting upon his doing it again in 1916. Anyhow, they are not going to be such fools as to prevent a split in the ranks of their opponents. Such a course in regard to the amendment would certainly test the long-suffering of the Progressives. They denounced the original form of the amendment as an outrage; but its abandonment, for the reason given, would be an insult.

It is plain that Mr. Taft is fully conscious of the importance that will attach to his action in approving or vetoing the Immigration bill now before him. Last Friday's hearing at the White House took on the form almost of a judicial proceeding, and the President has rounded out the oral pleas with a study of formal briefs submitted on both sides. The momentous nature of the proposed legislation consists in this fact, that for the first time the principle, not of the regulation of immigration, but of the restriction of immigration, is to be made the policy of the land. Little pretence is made that the literacy test in the bill is really intended as a qualifying test. Its aim is not to sift out, but to shut out. The sifting process is accepted by the advocates of the bill because the country is evidently not prepared for a policy of downright exclusion; but it is a concession accepted with the plain hope of larger things to come. There is no need here to point out once more how the reading test, in so far as it operates as a restrictive measure, will run heavily against a class of sturdy immigrants whom this country can ill spare. The salient point to-day is that, with this reading test put into the law of the land, the writing test and other onerous sifting and restricting processes will not be slow in forthcoming. Mr. Taft may well hesitate before he associates his name with the breaking of a great American tradition.

To whom will go the benefit accruing from toll-exemption in the Panama Canal? Prof. Emory R. Johnson made this point plain in his address of last week before the City Club of Chicago. If patriotism demands that we repudiate our international agreements, it is a patriotism that drapes its protecting folds over the coastwise steamship lines exclusively:

> Only such producers and traders as use vessels which they own or charter for the shipment of full cargoes will profit by the exemption of the coastwise shipping from tolls. Probably 99 out of every 100 shippers will pay the same rates whether there be tolls or not. The rates charged by the several steamship lines will be the same. The charges will be regulated by agreements among the competing companies and will be fixed primarily with reference to what the traffic will bear, and only secondarily, if at all, with reference to the cost of the service to the carriers.

True to the type of protective and bounty legislation, toll-exemption is the kind of patriotism that cherishes one per cent. of the people at the expense of the ninety-nine.

Apart from complexities of detail, the question before the House of Representatives on Saturday, when it passed the Webb Liquor-Shipment bill, was whether the Federal Government should or should not create avoidable difficulties in the enforcement of State laws prohibiting the sale of liquor. Whether the Webb bill is, in any particular, open to Constitutional objection, or whether in any respect it goes too far, we are not prepared to say positively; but it appears to have been carefully drawn to accomplish its professed object—namely, coöperation between the power that controls interstate commerce and the power that controls sales within a State in carrying out its legitimate purposes. However strong may be one's own objections to prohibition, they furnish no just ground for opposition to a bill of this kind. If the State has a right to enact a law prohibiting the sale of liquor within its boundaries, it is absurd for the Union of States to put factitious obstacles in the way of the enforcement of the law.

Despite a vigorous agitation in the newspapers, only one-fourth of Cleveland's 100,000 voters went to the polls last week to register their desires regarding a new charter for the city. However, as three-fourths of those who did go voted in favor of a commission to draft a new plan of government, Mayor Baker and his associates will proceed with the work of framing a charter to give Cleveland home rule. The new charter will have to be submitted to a popular vote. Tuesday's election was the first to be held in an Ohio city under the amendment passed last autumn permitting cities to adopt a home-rule charter. The fight in Cleveland goes back a dozen years to Tom Johnson's time, but in its latest phase it is non-partisan, the Committee of Nine which named the ticket of fifteen commissioners being made up of representatives of all parties, and the fifteen successful candidates for the commission having received the endorsement of the Democratic, Republican, and Progressive leaders. There was an opposition ticket, but it, too, was non-partisan. It represented those who desired more specific pledges concerning the exact form of charter that should be drafted. The result, even in the face of the small vote cast, and of the fact that fifteen hundred city employees spent part of the day working for the successful ticket at the polls, is one more tribute to the continuing influence of Tom Johnson in what is now the sixth city in the country.

It appears that there is, even in education, an irreducible minimum. The revival of the old-fashioned spelling bee,

of which one reads now and then, points in this direction, and the same conclusion is reached by a Western advertising man, who calls for night spelling schools for artists. His use of the term "artist" is a trifle loose, perhaps, but this does not weaken the force of his assertions. He is gravely troubled by the amount of bad spelling that is offered to him in the course of his day's work. He goes so far as to say that he thinks that not one "artist" in ten can spell correctly. His own staff seems to be a unit in putting *i* before *e* whenever *e* should come before *i*. "Show me," he exclaims, "an artist who can spell 'separate' correctly." And he winds up with a harrowing tale of a drawing of some articles of food, under which the designer had carefully written "stake," and which, when the advertising man returned it with a blue ring around the offending word. was slightly altered by the "artist" and re-labelled "ham and eggs." But was not the possession of such ingenuity worth all the spelling-books ever written?

The tragedy of the Antarctic has shocked the world. Hitherto seekers for the South Pole have fared far better than those adventurers who risked their lives to achieve the Farthest North. No such loss of life is recorded in the annals of the Southern ice-world as is now reported. And what makes it the more affecting is the fact that Capt. Scott and his comrades, who perished so pitifully, had started their brave dash to the pole —in ignorance that Capt. Amundsen had preceded them by a month. To perish in the hour of what must have been a wonderful triumph is tragic indeed. Now, it is to be hoped, there will be no more such undertakings; future exploration, Arctic or Antarctic, ought to be devoid of the spectacular. The slow, careful progress of the expert investigator interested more in the scientific results of his expedition than in anything else is what the world needs. To nothing else should individuals or governments contribute. But we mean no criticism of Capt. Scott by this. He will rank high among the great explorers, for he showed himself worthy of the best British traditions, and of the navy of which he was such an ornament. Moreover, all of his expeditions resulted in great scientific gains and important additions to the sum of human knowledge.

The pursuit of William Rockefeller by the Pujo Committee was conducted amidst public bewilderment and has terminated amidst something like general disgust. It has been an open secret in well-informed circles that any information Mr. Untermyer could hope to elicit from Mr. Rockefeller he could have obtained better from other sources. Or if Mr. Rockefeller's testimony was imperative, his statements could have been had in the form of a written deposition in reply to such questions as the Pujo Committee might have seen fit to frame. Of a prolonged examination on the stand, such as other prominent witnesses before the Committee have been subjected to, there could have been no question in the case of Mr. Rockefeller. It was agreed on all sides that the state of his health made such a thing impossible. If the Committee and its counsel were after the rather easy glory involved in baiting a Rockefeller, they have found themselves sadly disappointed. They have no excuse for a piece of cruel and inhuman treatment.

It has been sometimes suspected that Harvard athletes now and then let their thoughts turn lightly to the hope of beating Yale; that there are men at Yale who occasionally ponder over the desirability of winning from Princeton; and that at Princeton similar vague aspirations will formulate themselves ever and anon with regard to Yale and Harvard. It has remained for the Cambridge athletic authorities to set down in unmistakable terms what has hitherto been merely a suspicion. In explaining why Dartmouth has been dropped from Harvard's football schedule for the coming season, the *Alumni Bulletin* says:

> The reasons which have convinced our football committee that it would be unwise to play a game with Dartmouth next year are simple and are not new. The chief ambition of Harvard in intercollegiate sport is to win its contests with Yale, and the schedules in football, baseball, track, and rowing are made up with that object always in view.

The undergraduate at our great universities is plainly never beset with the question eternal, "Why am I here?" Whether at Princeton, New Haven, or Cambridge, he knows the one divine, far-off event to which the whole creation moves.

The Washington authorities have thus far assumed a perfectly correct attitude towards the revolution in Mexico. They have sent warships to either Mexican coast, for the purpose of affording protection and relief, if needed, to American citizens; and are doubtless taking counsel as to what steps may be necessary if things go from bad to worse in Mexico. And the press, in general, displays a similar temper of patience and forbearance. One editor, indeed, who is supposed to have private reasons for desiring American intervention, seizes the opportunity to denounce President Taft as "laggard and chicken-hearted" for not at once declaring war on Mexico, and asks if, in case it were a question before the English Government, "English warships would not be already bombarding Vera Cruz."

If proof were needed that the literary spirit does not necessarily induce effeminacy, it would be supplied by Indiana. Vice-President Marshall's first act of importance relating to Washington is not, as might hastily have been assumed, the naming of a guard of honor consisting of the Hundred Hoosier Immortals, but the obtaining of a place in the inaugural procession for the Black Squadron of Indiana. Let the Rough Riders look to their laurels. But this is not the most convincing evidence of Indiana's martial ardor. The State, it appears, has already begun to mobilize for our second war with Mexico. "I expect," says Adjt.-Gen. McCoy, in tones that scarcely tremble, "the Indiana militia to be called to Mexico at any time after March 4." If they are, need we say that the glories of Resaca de la Palma and Chapultepec will be surpassed? With Gen. James Whitcomb Riley leading one wing, Gen. Booth Tarkington the other, and Gen. McCoy waving his sword menacingly in front of the advancing host, much blood and time will be saved by a prompt surrender of the Mexican armies *en masse*.

It is highly satisfactory, but not in the least surprising, to learn that the allegations of a corrupt relation between eminent members of the British Ministry and the Marconi Company have turned out to be pure guesswork. They

have been acknowledged by their disseminator to be wholly baseless. W. R. Lawson, the journalist, who is responsible for this wanton scandal, confessed before the Parliamentary committee of inquiry "that he had no knowledge to justify these allegations. He said he had heard stories in the city, but had not taken the trouble to investigate them." It would be pleasant to be able to look forward to a similar wind-up of the villanous charges made by yellow journalists in New York against upright public servants. Every decent citizen must share the feelings expressed by Controller Prendergast in regard to the poster-type headlines—"Subway Stealers in Court" and the like—in the *Journal* and the *American*. "The man who owns that newspaper," Mr. Prendergast declared, "is aware that those allegations are false." Does any man with a particle of sense doubt it? But nobody indulges the hope, in this country, that a Hearst or a Brisbane may ever be got to confess the baselessness of his unscrupulous accusations.

The British and German press agree in accepting the speech delivered by Admiral von Tirpitz before the Budget Committee of the Reichstag as a distinct expression of good will towards Great Britain and of Germany's readiness to enter into something like an agreement for the limitation of naval armaments. These two things, limitation of armaments and Anglo-German good will, are not necessarily synonymous. It is imaginable that the two nations, exhausted by a prolonged battleship competition, might agree upon a stated ratio of shipbuilding without making any approach towards greater friendliness. On the part of Germany, in fact, one might expect an increase of rancor arising out of the forced and formal acceptance of second place to Great Britain on the sea, as a substitute for the present haughty programme of a navy limited only by Germany's needs. But evidently to-day the desire for a limitation of naval expenditure does go hand in hand with a greater friendliness between the two nations. That such pleasant relations should have arisen out of the stress and fears of the Balkan crisis is yet another blow for the fearfully shattered reputations of the political prophets—who will continue to prophesy.

The Kaiser and the members of his General Staff may not be as mortified as one would suppose over the joke played on the Strassburg garrison by a lunatic with a fertile imagination. Now, as during the famous affair at Köpenick, the world may have its laugh at the rigidity of German military discipline, but after the fun subsides it must be a very solid satisfaction to the War Lord to know that his troops do stand ready to obey orders at a moment's notice and unquestioning. It is like the recent "regrettable" error in one of the frontier Departments of France, where a partial mobilization was set on foot because of a misinterpretation of orders. The alacrity with which the recruits rallied to their colors was commented upon with satisfaction throughout France, and the various officials implicated in the affair were duly—rewarded. Students of racial psychology may find in the Strassburg and Köpenick affairs what is supposed to be a characteristic manifestation of the German temperament. The Teutonic humor, to the outside world, is apt to have a massive tread. At least, the French are fond of saying that if a German wants to be gay he climbs up on the table. There certainly is something of Gothic dimensions about a practical joke like setting a whole garrison by the ears by means of a forged telegram under the Imperial signature; something almost *kolossal*.

The recent international congress of coöperative societies at Tours ratified the agreement effected some months before among the several groups of French coöperative societies. As this brings together producers or manufacturers as well as consumers, it may have some economic effect. The movement was of socialistic origin, though it was disavowed later by Socialist leaders. Robert Owen, who founded the coöperative movement in England, conceived of it as part of his communistic scheme, and it has grown until there are more than 1,500,000 members operating chains of shops, factories, and even means of transportation. Coöperative societies for production were established in France by 1848. In Germany the movement was vigorously opposed by Lasalle. He was willing to accept coöperation as a means of production, but could see no good in it as a method of distribution. Karl Marx and his followers spoke of the coöperative plans as "little bourgeois" methods of rose-water reformers. Subsequent development of coöperation on the Continent as well as in Great Britain wrought a change in the attitude of the Socialists of the second generation. In the first decade of this century coöperation in Germany had an enormous growth, the two principal groups acquiring a membership of 1,660,000. And in 1910, at Copenhagen, the Socialists declared in favor of a movement which had been condemned by the party's early leaders. An effort to keep the coöperative societies out of politics was made in Switzerland by Dr. Hans Müller, secretary of the Sociétés de Consommation, who declared: "The war of the classes constitutes for cooperation an element of decomposition, a kind of anti-coöperative dynamite."

An occasional outbreak of rioting in Tokio serves to modify the prevalent conception of superhuman Japanese loyalty. The last occasion on which popular discontent in Japan found expression in violence was in the early autumn of 1905. Oddly enough, the public demonstrations at that time were directed against the same man as to-day, Prince, or as he was then, Count Katsura, head of the Cabinet. But the animating cause to-day is different. In 1905 the people of Tokio protested against what they regarded as the betrayal of the national interests in the signing of the treaty of peace with Russia. The militarist spirit, swollen by a series of magnificent victories, ran high. A dazzling horizon of foreign conquest had been revealed, and the actual results of the war came as a disappointment. To-day the people of Tokio have forced the resignation of Prince Katsura because he stands forth as the representative of the militarist and oligarchic spirit in the government. He advocated an aggressive foreign policy, necessitating an increase in armaments, and was willing to override a majority of the elected representatives of the people. But he had overestimated his strength. In accepting the resignation of the Katsura Cabinet and sending for Marquis Saionji, who was forced out of office only a few weeks ago by militarist pressure and by the influence of the elder statesmen, the new Emperor has made a distinct concession to the principle of representative government.

BRYAN AS SECRETARY OF STATE.

Rumors about President Wilson's Cabinet are still only rumors, but in one point they all agree. Mr. Bryan is to be, or at least is to be asked to be, Secretary of State. The presumption that this is true is strong enough to warrant considering what would be involved in such an offer and its acceptance.

First of all, how would Bryan's appointment relate itself to Mr. Wilson himself? Obviously, it would at once lay him open to a charge of surface inconsistency, or else of having radically changed his mind about Mr. Bryan. It is less than six years ago that Woodrow Wilson wrote to Adrian Joline: "Would that we could do something, at once dignified and effective, to knock Mr. Bryan once for all into a cocked hat!" Memory of that saying could not fail to rise like a ghost at the Cabinet table, with Wilson at its head and Bryan at his right hand. There would doubtless be some to recall the saying of Hosea Biglow: "Formaly to knock a man into a cocked hat wus to use him up, but now it ony gives him a chance fur the cheef madgustracy."

But this, when all is said, is only matter for passing laughter. The newspaper wits would soon leave off their flings on this score. Mr. Wilson might frankly say that his opinion of Bryan is not what it was in 1907. He has, in fact, already said so. He might also point to the long precedent which lays the tacit obligation upon a President-elect to invite to his counsels men of great prominence in his party. The initial and personal awkwardness of President Wilson's placing Mr. Bryan in charge of the State Department could be got over quickly. Behind that, however, would lie questions much more nearly touching the new President's comfort. How would he and the former leader of the Democratic party work together in harness? Would Mr. Bryan pledge himself loyally to good team-play? Would he surrender his political ambitions? President Polk insisted that Buchanan, before becoming *his* Secretary of State, should agree to resign the office if at any time he should desire to be a Presidential candidate. No one supposes that Wilson would make such a demand of Bryan. But he would certainly be right in seeking assurances that Bryan would enter the Cabinet in a spirit of hearty coöperation and due subordination. It is probable that Bryan would volunteer such assurances. Blaine did to Garfield. In any case, Bryan must by now know Wilson well enough to be convinced that, all questions of official propriety aside, the new President will be master in his own house. So far as important matters of foreign policy are concerned, every President has to be his own Secretary of State. Wilson could never be called upon to edit Bryan's diplomatic papers any more severely than Lincoln did Seward's. For the rest, it is certain that no great question could come before the Cabinet on which the President would not insist upon having the deciding voice, and in regard to which the Secretary of State would not see the necessity of conceding that or else of giving up his portfolio.

There remains, however, the whole question of Bryan's fitness for the office, and of the impression which would be made, at home and abroad, by his taking it. On this point, the *Nation* has no intention to apply the "recall" to the judgment of Bryan which it has been many years forming and expressing. We still regard his as a flighty and unstable nature. He is more of an agitator than a statesman. There is serious doubt whether he has the ability or the persistence to buckle down to the wearisome routine and endless labors of a great executive department. The platform and the crowd would always be calling to him at his desk. But we have always perceived and admitted some excellent qualities in Mr. Bryan, and certain of them are of the kind which ought to be possessed by a Secretary of State.

Mr. Bryan knows something of the outside world. He has travelled extensively. He has met the statesmen and leading minds of foreign lands, and has come into some measure of contact with their people. The knowledge and sympathy thus gained would prevent him from attempting to apply the narrow and hectoring methods of a Pittsburgh lawyer to great international concerns. The world outlook is not a sealed book to Mr. Bryan. And he is a man of peace. There can be no question of his ardent desire to see the civilized world utilize every means to put an end to war. He might surely be counted upon to do all in his power to further the peace propaganda among the nations. And Jingoism would be repellent to him. He would not be found calling for the dispatch of battleships here and there, when reason and justice are alone needed. Indeed, some of Mr. Bryan's friends have intimated that he is fired by the great opportunity to make American diplomacy more peaceful and more Christian, and that in this lies the appeal to him of a possible offer of the State Department. He is said to desire to translate his lecture on the Prince of Peace into a reality of international policy.

No humane and truly patriotic American could deny that there is great force in these considerations. If such a programme were undertaken and carried out by Mr. Bryan, almost everything else could be forgiven him. In the regular business of the State Department, he could not be more remiss or unsuccessful than Secretary Knox has been; while he might be able to infuse into the conduct of foreign affairs a spirit of forbearance and conciliation and nobility, never more needed than to-day. We make no prophecies. We reverse no opinions. But if it proves to be true that Mr. Bryan is Secretary of State a month from now, we shall hope that his political past, which must always be a heavy burden for him to carry, and the instability and pettishness which he has shown as a party leader, may be partly atoned for by giving to America a new leadership in the high cause of universal peace.

JUSTICE FOR COXEY.

The day has come, it seems to us, to perform a simple act of justice to "General" Jacob S. Coxey, of Ohio, for the reason that, if some one does not recall at this time the facts of history, this great advocate of the people's welfare will be deprived of his proper laurels. It will be remembered that in 1894, while the effects of the panic of the previous year were still acutely felt, Gen. Coxey organized his army of the dissatisfied and unemployed to march on Washington and demand of Congress that this Government of and for the people should be restored to the people. He was hooted at, ridiculed, denounced, and troops were called out to regulate the progress of his forces. But when he reached Washington a respectful hear-

ing was accorded him by a Committee of Congress. His arguments were subsequently reprinted in pamphlet form, and it is upon this that we shall draw to prove that many of our modern reformers have deliberately plagiarized from Gen. Coxey in their efforts to set the people free.

There is the initiative and referendum, for instance. How few people know that Coxey was the first of our great statesmen publicly to demand them, not only for Ohio, but for the nation—or at least to *walk* for them? Others, college professors and students of Swiss history, may have privately advocated these innovations, but Coxey and his followers were the first to go to Washington and ask to be counted, on the grounds of the Capitol, in favor of these propositions. There are those who would claim the honor of being the pioneer public man to advocate this reform for William S. U'Ren, of Oregon, to whom is also credited the proselyting of Woodrow Wilson. The latter fact may be true, but for Coxey we claim first honors, just as we proclaim him the originator of the idea of walking to a place in order to get what you want. This point we stress particularly lest a fickle public credit the political device to "Gen." Rosalie Jones and her undaunted suffrage hosts that, having conquered Albany, are now preparing to move on Washington. But if time has thus set its stamp of approval upon Coxey's on-to-Washington policy, it has equally vindicated his appeal for the initiative and referendum in Ohio. By an overwhelming majority, just eighteen and one-half years after Coxey demanded them in Washington, they were written by his fellow-citizens into the organic law of his State. Who will venture to prophesy, in this swiftly changing time, that a statue of Jacob S. Coxey will not stand side by side with that of "Rise-up" William Allen in the rotunda of the Capitol from whose grounds rude policemen once ejected him? Yet in all the pæans of triumph after the Ohio election, we regret to say that Coxey's name was not mentioned.

So, too, we were distressed to find that certain phrases originated by him were freely adopted in the last campaign without regard for his copyright. Coxey first said: "In order that the people may be enabled to *regain control* of their State, county, and municipal affairs, we demand," etc. Yet no phrase has more frequently been used by candidates, from Bryan down to La Follette and Sulzer and all the Progressives, than this little gem—always without credit to Coxey, the first to see that our Government had slipped out of the hands of the plain people. As for Bryan—but here we reach a difficult subject. Who was the chairman of the Committee of Congress which heard Coxey on that ever-memorable Tuesday, January 8, 1895, but William Jennings Bryan, then Representative from Nebraska? Now, we are not going to join certain friends of Coxey in insisting that Bryan obtained all his radical ideas from Coxey at that day and hour. Mr. Bryan's heart, we know, was throbbing for the plain people before that time. So we would merely point out that, just as there are two claimants for the credit of every great invention, Mr. Bryan had arrived at the same conclusions simultaneously with Gen. Coxey. Thus, as chairman, Mr. Bryan must have thrilled to hear Gen. Coxey say: "The great issue, I believe, before the American people to-day is whether the railroads are going to own the Government or the Government is going to own the railroads. I can show you plainly how you can buy up the railroads of every State and Territory, and pay for them." True, Mr. Bryan did not speak out for Government ownership for some years thereafter; but each great man must take his own time for such public pronouncements. To-day, in 1913, do we not read of a Massachusetts legislative proposal to buy the railways? Is not the Federal Government now owning and operating a railway in Panama?

But we could fill pages with similar illustrations of the way in which time and fate have persistently caught up with and justified Gen. Coxey. One of the chief planks in his platform was, "a service pension to all soldiers of $8 per month, and in addition one cent per day per month for each day of actual service." We submit that the dollar-a-day pension demand was but an echo of this, and that the universal pensioning of every veteran, so recently achieved, must be attributed primarily to Gen. Coxey. Again, on Gen. Coxey's special campaign car stood the legend: "All railroad section men to receive no less than $1.50 per day of eight hours' work." Who has a better right to claim the credit of the high wages and short hours of section hands to-day? Of course, we must admit that Coxey's bill providing for non-interest bearing bonds has not yet been adopted by Congress. That need discourage no one, for we have come but a short distance from 1894, and, moreover, it is to be observed that this plan of paying no interest on other people's money has been, of late, not altogether unheard of in Wall Street. Finally, we confidently expect to see in the next Progressive platform these two Coxeyesque planks: "It is the crime of the nineteenth [twentieth] century that three millions of our fellow-citizens are in involuntary idleness, thus causing an irretrievable loss of millions of dollars daily" (this being coupled with a demand that every town, village, township, Territory, and State issue bonds to employ the unemployed); and "President, Vice-President, and United States Senators must be elected by direct vote of the people."

THE FRIENDSHIP OF POLITICIANS.

Among his other qualities, Mr. Lloyd George has a fair supply of humor and good nature. He kept the House of Commons in a gale of laughter the other day, during question time, by speaking for the Prime Minister, in Mr. Asquith's absence, and answering questions which had been put on the paper with the design of embarrassing himself. One persistent member desired to know whether the Prime Minister approved of a statement made by the Chancellor of the Exchequer. To this the Chancellor gravely replied, always speaking for the Prime Minister: "From what I know of the Chancellor of the Exchequer, I think he would be wholly incapable of making any statement of which the Prime Minister disapproved." There was more of this comedy, and it almost broke up the business of the House. It has often been said that Mr. Lloyd George is the best-hated public man in England. But he is very much liked in private, even by his political opponents. He does not cherish personal bitterness, and his bright ways make him an agreeable companion. Following an acrimonious debate in the House, he may often be seen in the lobby chatting gayly with those very Conservative landlords upon whose property he is supposed to have fell designs.

The question of such friendly relations between political enemies has lately been discussed by a London newspaper man who has long been in the Press Gallery at Westminster. He asks: "Do political opponents really hate one another?" Rarely, he thinks. Controversies in the House of Commons are often heated, and sometimes become personal. It is seldom, however, that in modern times differences on public matters lead to an open breach of private friendship, as in the famous case of Burke and Fox. Even when sharp debate betrays a member into something like a personal attack, the unpleasantness is usually dispelled by a witticism. On one occasion Sir Henry Campbell-Bannerman, irritated by something that Joseph Chamberlain had done, declared that conduct of that kind in private life would be enough to exclude a man from honorable society. Mr. Chamberlain instantly retorted: "I deeply regret that I am cut off from the society of the right honorable gentleman, *which I never really enjoyed.*"

The *entente cordiale* existing between politicians of "opposite political faith," to use the solemn phrase, is an old story in our country. It has different names, and is variously described. One favorite expression speaks of the practice as being "flowers growing over the party wall." This is intended to apply to the public recognition of one politician, or boss, by another. But there have been many things going on *under* the party wall, of which not so much is heard, and which do not deserve a poetic title. The subterranean relations frequent between Republican and Democratic bosses may have been friendly, but they put friendship on the firm basis of mutual profit. Platt and Croker were not intimates, but they had a perfectly good understanding with each other. There were certain "courtesies" which one could always confidently ask of the other; and all along, behind their assumed hostility, there was the feeling in either that the other was a reputable practitioner of the same arts as himself and presumably a good fellow. Any real hatred between the two, or between any other pair of bosses worthy to be mentioned with Richard Croker and Thomas C. Platt, was utterly out of the question.

With the traditional obligations of friendship among public men, in opposite parties, go many little conventions which have their amusing side. One of these is the duty of speaking highly of the political opponent who succeeds you in office. You may have fought him tooth and nail, and declared that his election would mean unspeakable calamity to the country; but when he is, in fact, elected, you send him hearty congratulations; and when he comes to take your office away from you, it is incumbent upon you not only to wish him success, but to express the sincere belief that his term will be marked by great benefits to the people.

It is not necessary to deal with the whole matter in a cynical spirit. Everybody knows that there is a great deal of humbug in the loves of politicians, along with much deceit and no little harm to the public interests; but no one can deny that there may exist honest respect and personal liking between public men who belong to different parties. Because they disagree, it does not follow that they must distrust each other. One may fight a political principle or a given legislative measure to the extent of his powers, and yet not feel compelled to believe that all who advocate it are scoundrels. And we may be sure that fewer high-minded gentlemen would go into politics if they felt it needful to carry party warfare into private relations, or if they did not believe that honorable men could differ in matters of national policy while remaining in private good friends.

A QUESTION OF EDUCATION.

In an interview which M. Bergson gave the other day, one could hardly fail to note a certain combination of keenness of thought with delicacy of touch, the mark of a peculiarly alert and intelligent observer. His comparisons between our universities and colleges on the one hand and the universities and *lycées* of France on the other were made rather in the spirit of a careful looker-on waiting to acquire fuller knowledge than in that of a critic or a judge. Nevertheless, his remarks touch upon some of the most interesting and most important of the questions affecting the character of our higher education.

It is with Germany, rather than with either France or England, that we are in the habit of instituting comparisons in university questions. But, widely different as the educational systems of France and of England are from that of Germany, and from each other, there is one point in which we constantly get the same story. Thoroughness is, by universal consent, regarded as the specific characteristic of Germany; yet when a report was made a year or two ago, at the instance of the Carnegie Foundation, upon the qualities of American, as compared with English, education as evidenced by the experience of our Rhodes scholars, the one unquestionable fact brought out was the very great superiority, in point of thoroughness, of English training for college and university as compared with ours. And when M. Bergson gives it as his impression that the French university student goes at his work with more earnestness than ours, and thinks it probable that this is due to the severe and definite discipline of the *lycée*, he merely confirms what we already knew.

To trace this persistent phenomenon to its cause, or causes, would be a considerable task. That it is not to be regarded as arising simply from any peculiarities of educational organization may be set down as certain. It is unquestionably connected intimately with the general circumstances of our national life, and with corresponding qualities in the national temperament. And yet it will not do, on the other hand, to dismiss the subject with this vague and easy-going declaration. Besides the general causes at work, there are special elements that clearly play their part, and with which it is possible to reckon. One of these is the fact that there is no such sharp line of division between university work and that which precedes university work as there is in France or Germany. That the end of the first two years of college corresponds roughly to the end of the *lycée* course in France may seem at first blush a mere matter of external classification; in reality it is a point of great significance. For the status of the American college student, from the start, is neither that of the student at the *lycée* or *gymnasium*, nor that of the student at the French or German university, but a cross between the two. It is neither that of a schoolboy subject to rigorous disciplinary training, nor that of the university student pursuing, in an independent way, his own clearly de-

fined purposes. The result of this is in many ways excellent; the American college graduate is a product peculiar to our country, and is, all things considered, a most valuable contribution to the body of American citizenship. But, viewed simply as a stage in the university process, the American college course is far less to the purpose than the *lycée* or the *gymnasium*.

A more deep-seated cause of difference is the superiority of the teaching material that goes into secondary education in France, as it does in Germany also; though some part of the reason even for this is to be found in the circumstance that our secondary schools break off with the entrance to the freshman class, while the *lycée* or the *gymnasium* carries the student to the gates of the university. But in the main, we believe, it is a matter of natural selection, supplemented by a difference of attitude towards the whole subject of university study. Men of real ability, in Germany and France, are ready, in far greater numbers than with us, to devote themselves to teaching in what we call high-school or lower college grades, largely because the opportunities open to them in other directions are so much less numerous and less alluring; and, in addition to this, the calling is there held in far greater honor. In France, moreover, as M. Bergson points out, "the *lycée* professor has not more than twelve or thirteen hours a week—the remainder of his time is generally given over to specialization and study"; the number of hours of the high-school professor in this country is twice as great, and this of itself makes a radical difference in his possibilities of achievement, as well as in the attractiveness of the post.

In discussion of university questions by European scholars, there is a singular absence of worry over matters of administrative management. These men seem to think that the quality of professors, the amount of time at their free disposal, the character of the training with which their students have been provided, the nature of the educational purposes pursued—that these and similar factors constitute the chief elements of the educational problem. There must, of course, be a certain amount of systematic organization, a certain amount of administrative work; but it seems to be taken for granted that this necessary amount will, in the nature of things, be fairly well provided, and that there is no occasion to cry for more. And yet they have extremely little of it in comparison with our country, where the creaking and groaning of the machinery is constantly in evidence. Perhaps we should do well if we were to fix our thoughts more on the need of getting the best possible men into the professorships and teacherships, and less on the problem of managing them after we have got them.

STUDENTS' WORK FROM THE ROMAN ACADEMY.

At the exhibition of the Architectural League, in the Fine Arts Building of New York, the students of the American Academy at Rome fill a gallery with their recent work. These young architects, sculptors, and painters have won their fellowships under conditions of severe competition. They are the best men that can be picked on an academic basis. The quality of their work will be severely scrutinized by those whose standards of art are anti-academic and wholly individualistic, while many of those who are in general sympathy with the idea of a residential academy in the Eternal City are still not free from misgivings as to the practicability of the plan. On the principle of judging an institution by its fruits we must approach the work of these favored young artists who hold the fellowships of the Academy.

The survey should be a reassuring one. Not merely is the technical standard quite as high as that prevailing in the Ecole de Rome, the prototype of all such schools, but it should be said that only an exceptionally good exhibition from the Ecole would show sculpture of the accomplishment of Paul H. Manship's, or archæological reconstructions so important as Edgar I. Williams's restoration of the House of the Vestals in the Forum. These are perhaps the most striking features of the show, though the competent mural painting of Frank T. Fairbanks and E. Tolles Chamberlain, with the really charming sketches of the latter, are entirely creditable evidences of the work and standards of the Academy in the field of painting.

Of Mr. Manship's work we print a special notice elsewhere in this issue. Mr. Williams's reconstruction of the House and Court of the Vestals under the Palatine Hill has the interest of being in part based on the researches of a distinguished member of the American School of Classical Studies at Rome, Miss Esther Van Dieman. Such a virtual collaboration seems to promise well for the consolidation of that School with the Academy. This union, which, as a matter of organization, has existed for upwards of a year, will soon be actually completed when the two bodies occupy their new quarters in the Villa Aurelia, on the Janiculum. The permanent alliance of practicing artists with philologers and archæologists is of so novel a sort that it has on both sides aroused misgivings. It has seemed to some an arbitrary and unnatural bond between those whose dependence must be native instinct and those whose forte is laborious and systematic investigation. And if this common and rather vulgar notion of the artist and the scholar be true, unquestionably the pending union is a hazardous one.

We feel, however, that the view of the artist as a mere temperament, and of the scholar as a sheer drudge, is both Philistine and false. Unless the artist guide his temperament by a somewhat austere and systematic training akin to that of the scholar, his temperament will come to very little. And surely the scholarship that satisfies itself with mere drudgery and simple accumulation is of little worth. Creative scholarship implies imagination, temperament, a distinct degree of genius. The actual success of the reorganized Academy will depend upon the type of young artist and young scholar it finds to hold its fellowships. To force a community of interest between temperamental charlatans on one side and unenlightened gradgrinds on the other can result only in academic bankruptcy. Fortunately, there is nothing in the record either of the Academy or the School of Classical Studies to make one dread such a disaster. Indeed, this artistic and archæological collaboration, represented in the reconstruction of the Atrium Vestæ, seems a kind of guarantee of the genuine community of interest that should ensue whenever real artists and real scholars in daily intercourse work together towards their diverse yet closely allied ideals. Its influence in this country will be wholesome.

RECENT GERMAN FICTION.

German fiction is at present in a peculiar state. The production is enormous, there are numerous works that interest though individually striking features, but not one that rises above the multitude, as did Gerhart Hauptmann's "Fool in Christ" two years ago and Grete Meisel-Hess's "Die Intellektuellen" last year. The admirers of Gerhart Hauptmann would have gladly acclaimed the novel published in his year of honor as a significant landmark in his development, but even his biographer, Schlenther, admits that "Atlantis" (reviewed in the *Nation* of January 2) does not bear comparison with his previous work. Gustav Frenssen, too, has disappointed by his latest story, "Der Untergang der Anna Hollmann" (Berlin: G. Grote). On a first reading the novel reminds of a play by the Dutch writer Heiermans, given some years ago by the American Academy of Dramatic Arts, "The Good Hope." Here as there a whole community owes its living to ship-owners loading human freight into rotten hulks, and pays a heavy toll in human lives. The vital power of the play lay in the social problem involved. Frenssen, however, is not concerned with employers' liability and other relations between capital and labor. To him the prosperity of the unscrupulous Hollmanns and the misfortunes of the Guldts present a moral and religious problem. Why should the righteous suffer through the unjust? Why should generation after generation of the Guldts be plunged into sorrow and misery through the criminal unconcern of the Hollmanns?

Among the writers who, like Frenssen, go to the folk-soul for inspiration and produce what the German aptly calls *Heimatskunst*, one of the foremost is Rudolf Hans Bartsch. His "Schwammerl" (Leipzig: L. Stackmann) conveys the spirit and the feeling of a whole section of Austrian society at the time when Vienna was the Mecca of musicians and music-lovers, when Beethoven reigned supreme, and Schubert was hailed as a rising new star. Even to the title, a sobriquet which Schubert applied to himself to suggest the short mushroom life that was to be his, the story is indigenous to the soil. In a series of delightful pictures the author traces the happy-go-lucky existence of Schubert and his artist friends, their devotion to each other, the gracious indulgence of their patrons, their triumphs, and their defections. A book which also admirably reproduces the atmosphere of a past period is Elisabeth Stewart's "Unvergessene Menschen" (Berlin: S. Fischer). The scene is a North-German country parish sixty years ago, with a population strictly native and strictly separated by conventions of birth, caste, and profession. The parson's children are the principal actors in this drama of innocent loves and flirtations, vanities and ambitions, interwoven with a strand of humor and pathos, and culminating in the tragedy of a youth who embodies the romantic sentimentalism of his time. Through the book moves a procession of figures such as we may see on faded old photographs, but the author has given them a spark of real life which brings them curiously close to us.

Lily Braun, who in an earlier work had written a charming memoir of Goethe's days, and in her autobiographical "Roman einer Sozialistin" furnished an intimate personal document on the history of social democracy, has gone back to the eighteenth century and written a fascinating book called "Die Liebesbriefe der Marquise" (Munich: Albert Langen). Out of letters and memoirs she has reconstructed the life of a representative woman of that period. This epistolary novel is one of the most enjoyable books of recent publication and one that has true literary distinction.

A virile personality is the Alsatian Hermann Stegemann, and something of this quality enters into the making of his heroes. "Thomas Ringwald" (Berlin: Egon Fleischel & Co.) is the story of a self-made man who in the stern pursuit of duty had overcome the romantic leanings of his youth and become a man of action, intolerant of the temperament and skeptical of the talent of his oldest son, who had left the parental roof to become a musician. At the zenith of his professional and civic career this conflict and the lure of a love which awakens desires he had not known in his joyless youth, cloud the serene atmosphere of Ringwald's home. But he is one of those who conquer their world by conquering themselves. The author's record of these struggles, pictured against the background of a city's growth, is as absorbing as it is convincing.

Franziska Mann's novel, "Frau Sophie und ihre Kinder" (Frankfort: Rütten & Loening) is the story of a woman who, though a child of the present and an artist, chose renunciation instead of "self-realization." The heroine has divorced the husband she had married when a mere child and devotes herself to her daughter, until the girl's marriage with an explorer places a continent between them and leaves her alone. She begins to write with fair success. Gradually, though she has become a grandmother, the youth she had missed returns to her, and she is willing to listen to the plea of a new love. At this moment she receives the news that an epidemic has orphaned her grandchildren. She renounces all thoughts of self, welcomes to her home the boy and the three girls who henceforth are to be hers, and remains deaf to the willingness of her friend to share her responsible task. Franziska Mann has in earlier works proved a subtle and sympathetic reader of the child-soul, and traces with delicate insight the relation between Frau Sophie and her children, until one by one they grow up and go out into the world. A childhood of quite another sort is pictured in Wilhelm Scharrelmann's "Piddl Hundertmark" (Egon Fleischel & Co.). The author has been a public school teacher who some years ago had difficulties with the school authorities on account of his liberal views and his deviations from the beaten track of pedagogy. The books which he has since published deal with the commonplace existence of the common people, without a note of pessimism, without the suggestion of any message except that of sympathy. Thus his story of childhood in a tenement is of a peculiarly wholesome realism, it has its thread of pathos, but also its touches of humor. His little hero is an individual rather than a type, and the author succeeds in interesting the reader so profoundly in the development of Piddl, that one is loath to part from him on the day when his strong young arm first strikes an anvil and his eye bravely and gladly looks out into the future before him.

Georg Hermann is the master analyst and chronicler of the Berliner past and present. His "Jettchen Gebert," which has recently been translated into French, and its sequel, "Henriette Jacoby," admirably reproduce the sentimental-romanticism of life in the educated middle-class of Old Berlin. His "Kubinke" is a novel of the lower strata of modern Berlin. In his latest work, "Die Nacht des Doktor Herzfeld" (Egon Fleischel & Co.), he presents two types of the Berlin intellectuals of to-day. The one lives in comfort among a collection of precious bibelots, but plays with the idea of suicide because he cannot get over the loss of wife and child. The other frets and fumes in literary drudgery, aggravated by marital troubles, imaginary or real, and plays with the idea of divorce. After a night of mutual confessions during endless walks about the streets and a prolonged session at a café, they return to their old life.

A delightfully quaint humor characterizes Ludwig Finkh's story, "Die Reise nach Tripstrill" (Albert Langen). It records the experiences of a naïve Suabian youth, who in his days of *Wanderlust* goes to the Caucasus, and later to Algiers. The book suggests the spell of old-time *Handwerksburschenleben* in a modern setting, and succeeds in interesting by the reaction of the travels upon the character of the hero. The other personages are his "pal" of the road and

the girl whose attachment to the prodigal brings the action to a dramatic climax. The book is a true product of the Teuton folk-soul. "Herrn Bredenfeld's Erde" (Egon Fleischel), by Theodor Malade, deals in the manner of Wilhelm von Polenz with the landowner of today who is deeply attached to his acres and to the traditional order of things, and stubbornly resists the trend of time which sets up foreign standards and settles the country with foreign labor. This is the social background of the domestic tragedy, the son dishonoring his name and his uniform by his passion for gambling. The strength of the book lies in the delincation of the numerous, finely individualized characters.

Alexander Castell has been hailed as a new Swiss writer of great promise. His novel, "Bernards Versuchung" (Albert Langen), offers some striking portraits from the world of cultured idlers haunting Paris and other European capitals, and in their peregrinations becoming estranged from their native soil and their kin. Castell's keenness of observation is amazing, and the dramatic suspense in the final chapter, where the hero accidentally meets the mother whom he had not seen in five years, is suggested with unusual force Lydia Danhöfen is another new name, and her story of a young physician who sets out upon his practice with an ideal conception of his profession, and who, under the pressure of poverty and the sting of social failure, adopts a code of phrases and of gestures that bring success, but earn for him the title, "Der Charlatan" (Albert Langen), has many features that raise it above the ordinary, not the least among them being the touch of irony. A. von Ende.

NEWS FOR BIBLIOPHILES.

The persecution of the Quakers by the Government of Massachusetts is recalled by the title-page of a quaint pamphlet:

A
DECLARATION
Of the sad and Great
PERSECUTION and *MARTYRDOM*
Of the People of God, called Quakers, *in New-England* for the Worshipping of God.

Whereof
- 22 *have been Banished upon pain of Death.*
- 03 *have been martyred.*
- 03 *have had their Right-Ears cut.*
- 01 *hath been burned in the Hand with the letter H.*
- 31 *Persons have received* 650 *stripes.*
- 01 *was beat while his Body was like a jelly.*

God hath no respect to *Cains Sacrifice*, that *killed* his Brother *about Religion.*

London, Printed for Robert Wilson, in Martins Le Grand.

The arrangement of the booklet reverses the order of the title, for the "Considerations" signed E. B. come first; the "Declaration" begins on page 17, and is signed by John Rous and John Copeland (whose ears had been mutilated), and by Samuel Shattock. Josiah Southwick, Nicholas Phelps, Joseph Nicholson, and Jane Nicholson (who had been banished from the colony under pain of death). On page 21 commences an account of the trial and execution of William Robinson, Marmaduke Stevenson, and Mary Dyer. A "Postscript," beginning on page 31, is signed "E. B. London the 15th of the 1st month, 1660."

The writer was Edward Burrough, whom his fellow Quakers styled "a son of Thunder and Consolation." Endecott, the Puritan Governor, who cut down a maypole as irreligious, had no thought of toleration for those whose creed differed from his own. In common with many other Pilgrim Fathers, he wished to hedge round their semi-theocracy and to exclude all those who in any direction deviated from the doctrines imported in the Mayflower. He was not the most extreme of the Puritans, but he had the misfortune to encounter men and women who were as unbending as himself. When the Quakers could not be convinced by arguments, by fine, by whipping, or by imprisonment, it was thought wise to get rid of them by banishment with a threat of death if they returned into the jurisdiction. If they returned, the Puritan Government held that they could logically be hanged, not only as heretics, but as disturbers of the commonwealth. The sword was held out, and if they rushed upon its point, they were not martyrs, but suicides. Such was the theory of John Endecott and those associated with him in the Government of Boston.

Marmaduke Stevenson, William Robinson, and Mary Dyar (so her name appears here) had been banished and had returned. The account of the "trial" given by Peter Pierson is vivid, and has every aspect of veracity. The two men were hanged, the woman was reprieved after she had ascended the ladder to the gallows, and when the halter was actually round her neck. She was sent out of the colony under guard, but returned and was brought before the General Court and Endecott again gave sentence. "This is no more," observed Mary Dyar, "than that thou saidst before." "Aye, aye," retorted the Governor; "therefore prepare yourself to-morrow at nine of the clock." None of the three was allowed to make any defence, and as usual in matters of conscience the ministers were the bitterest persecutors. Mary Dyar was executed on the first day of the fourth month, 1660. She died with undaunted courage. Her last recorded words were. "Yea, I have been in Paradise several days."

When the pamphlet now before us was issued to the public, William Leddra's fate was in the balance. "And we have a further account also," says Burrough, "that one of our Friends, named William Leddra, being banished upon pain of Death, he not departing the Colony, but being moved to Return again to Boston, was Apprehended and cast into Prison and there lyeth Chained to a Logg with a Horse-lock, Condemned to Die." He was executed fourteenth of first month, 1660-61. There were many in Boston who disapproved of these proceedings, and on the Restoration the Magistracy thought it necessary to send to Charles II a vindication of their action. This pamphlet contains the Quaker reply written to it by Edward Burrough, the man who stopped the further shedding of blood. He obtained an audience of the easy-going King, who had as little taste for persecution as for martyrdom. The King was so impressed by Burrough that, awakening from his habitual indifference, he at once had an order drawn up forbidding any further persecution, and directing that the Quakers, whether condemned or imprisoned, should be sent to England to be dealt with according to law. At Burrough's further suggestion, this document was entrusted to Samuel Shattock, one of the exiled Quakers. That must have been a bitter moment for John Endecott when the banished man returned, bearing in his hand the royal mandate that put an end to the tyranny of the Puritan magistracy over the liberties and lives of their Quaker brethren. Shattock showed the royal document to Endecott, who, after consultation with the deputy governor, said, "We shall obey his Majesty's command."

Edward Burrough was arrested for being present at a Quaker meeting for worship, and died in Newgate, December 14, 1662. The City of London authorities, who were keen enemies of the Quakers, managed to evade even the King's order for his release. *Alios salvos fecit, seipsum non potest salvum facere.*

William E. A. Axon.

Correspondence

ALLEGORY IN THE "VITA NUOVA."

To the Editor of The Nation:

Sir: Professor Fletcher's contention (*Nation*, January 30) that the "Vita Nuova" is an allegory of religious experience rests largely upon the assertions that Dante would have considered it extravagant or even blasphemous to liken service of an actual lady to service of Christ, that the idealization of womanly influence for good would have appeared to Dante preposterous, and that, "for his philosophy and that of his school, woman was simply inferior or unfinished man." These statements reveal a surprising disregard of the theory of the relation between lady and lover so prominent in the poetry of Dante's master, Guinizelli. According to that theory the lady is a human representative of divine goodness, which so emanates from her as to ennoble spiritually all those with whom she comes in contact, and in particular the man who devotes himself to her as her lover. In the greatest of his *canzoni* Guinizelli writes:

God the Creator shines among the an-

golic host with a brightness passing that of the Sun; the angels have immediate knowledge of their Maker, yield Him obedience in their turning of the spheres, and attain to the primal and perfect blessedness of the just God. Even so the fair lady of the shining eyes should bestow the essential truth of her noble nature upon him who never fails in serving her.

And in one of the sonnets:

She goes her way so lovely and so noble that she abases pride in whom she greets, and converts him to our faith if he believe it not; and no man who is base can approach her. Yet a greater power of hers will I tell you: no man can think evil while he beholds her.

Nor was this theory new with Guinizelli. It finds even clearer statement in the prose of his own master, Guittone d'Arezzo:

My noble lady, all-powerful God placed in you so marvellously the perfection of all that is good that you seem, in your words, your actions, and all your aspect, rather an angelic creature than one of earth, . . . and I believe that it pleased Him to set you here among us that you might arouse wonder, and be as a mirror whereon every worthy and lovely woman and every excellent man might gaze, becoming thereby more noble, avoiding vice, and following after virtue.

The young Dante, then, far from regarding woman as an inferior or unfinished man, was inevitably predisposed to regard her as a representative of divine goodness, and thus the comparison of lady-service to Christ-service was not blasphemy, but sincere reverence.

Mr. Fletcher says that the "avowed purpose of the 'Treatise on Vernacular Eloquence' is to pattern a fit garment of words and music for high themes of 'salvation, love, and virtue'—for the 'poetry of God,' as Boccaccio finely defines theology." The implied inference is that Dante regarded theology as alone worthy of poetic praise. But the love and virtue of the passage referred to, *Venus* and *virtus* in the Latin, have nothing to do with theology; they represent as normal subjects for song human love, as celebrated by Arnaut Daniel and Cino da Pistoia, and martial valor, as celebrated by Bertran de Born.

Mr. Fletcher's argument at other points seems to me to rest upon similar misinterpretations, to which I will not here refer. Let me remark, however, that his allegory fails of truth in its very essence; for the type of religion which alone the "Vita Nuova" can be conceived to represent is emphatically not the virile, intellectual type of religion that we find in the "Divine Comedy"—and the "Divine Comedy" is a better source for psychological study of Dante than the "Varieties of Religious Experience." Again, Mr. Fletcher interprets the peace attained just before the death of Beatrice as the fruition of the earthly blessedness; but the earthly blessedness is that of activity, of "the proper exercise of the human faculties," whereas the peace which Dante won was the result of passive resignation.

Mr. Fletcher says finally that the "Vita Nuova" is probably true to life only as an allegory. On the contrary, generations of readers have borne witness that it is true to life as a story of human love. And it is true to life in a particular and very interesting way. Many a youth endeavors, more or less consciously, to *realize in his own life* experiences of which he has read: books may foreordain reality. Just so the young Dante, finding in the verso of his master a lofty theory of the relationship of lady and lover, proceeded to enact that theory in his own life, transforming his behavior and his thought in conformity thereto, and investing Beatrice, in complete sincerity, with the radiant ennobling power of a divine representative on earth. And just so, I may add, he copied in life, to his own undoing, the literary tradition of the "lady of defence." ERNEST H. WILKINS.

University of Chicago, February 1.

THE CANAL TOLLS.

To the Editor of The Nation:

Sir: Your editorial and occasional comments on the question of Panama Canal Toll Remission to coastwise shipping companies have been followed by me with a good deal of interest, particularly the ethical scruples raised in connection with the Hay-Pauncefote treaty, and also your later subsidy objection. In view of Secretary Knox's recent masterful rejoinder to the British note the question whether your ethical scruples are well-founded is still manifestly a matter of debate.

As for the question of subsidy, it must be said that the American people have no objection to a subsidy *per se:* they only ask to be convinced that some real good is to be accomplished by it for the people generally. Now the chief argument for the remission of canal tolls to coastwise shipping I have not seen even mentioned in your references to this question. It might almost appear to be a studied silence. That argument lies in the fact that such a subsidy would encourage the formation of new coastwise shipping companies to compete with the companies now owned or controlled by railways, and would thus make the water traffic between our East and West coasts a genuine factor in the reduction of freight rates on the part of the railways with their great trunk lines. So long as the railways control the steamship traffic there can be no genuine competition, and our Pacific Coast States must endure their present bondage. Of course, the existing Money Trust might prevent the launching of such new shipping enterprises in any event—as has already seemed to be the case in at least one instance brought to public notice—but then, we are hoping for better things in that direction in the future. Clearly we ought to think twice before we retrace the step that has been taken. The canal is after all primarily our affair, and its bearings on the solution of our own national problems is a factor not to be ignored or overlooked in determining its proper administration.

FINER BREAD.

To the Editor of The Nation:

Sir: I do not know whether you care for mustard after dinner, but here is some of it. The expression "finer bread than is made of wheat" (*Nation,* January 9) can be found in John Lyly's "Euphues":

It is a world to see how English men desire to heare finer speach then the language will allow, to eate finer bread then is made of wheat, to weare finer cloth then is wrought of Woll (Works ed. Bond, I, p. 181).

JOSEPH DE PEROTT.

Worcester, Mass., February 5.

AREN'T I?

To the Editor of The Nation:

Sir: Professor Hart has been seriously disturbed to observe that the hero of Mr. Wells's "Marriage," though the "latest word in English science and culture," as Professor Hart puts it, uses "aren't I" in familiar conversation. Professor Haskell, in a subsequent letter to the *Nation* (January 30), after reviewing the situation in which the phrase is used by Trafford, welcomes it with sympathetic tolerance. But apart from the question of spelling and of its social standing, the phrase is no novelty. Its history, extending over nearly a century and a half, is given briefly in Jesperson's "Modern English Grammar" (I, p. 300). From *am not* arose *an't* or *a'n't,* as it is spelled in older authors. In its origin and in the subsequent lengthening of the vowel before *nt,* it is precisely parallel to *can't* from *cannot,* or still better, in view of the consonant assimilation, to *shan't* or *sha'n't* from *shall not.* Where is the barbarism or offence to grammar so far? I assume that Professor Hart in ordinary social intercourse says, for example, "Shan't I take it for you," and not "Shall I not take it for you." Why not, then, also *an't I* in place of the formal *am I not?* I am speaking now of the intrinsic merits of the case, and not asserting that in actual usage *shan't* and *an't* are on equal terms in point of respectability. For Professor Hart is not willing to let usage work itself out here and appeals to our sense of grammar.

"In nineteenth-century writers," to quote Jesperson, "this [*an't*] is generally represented in spelling as *I arn't* or *ar'nt,* as through the loss of *r* it has become identical with the plural *are+not* (thus G. Eliot, Anthony Hope, Pinero, Benson, Oscar Wilde, and others)." To go a step farther than Jesperson, we may note that the unconscious identification with the plural form is now complete, as is evident not merely from such a spelling as *aren't,* but also from the fact that those who pronounce *r* before a consonant, pronounce it in *aren't I* as clearly as in *aren't they.* Indeed, one may begin to doubt whether in all cases *aren't I* rests even indirectly on the older *an't I.* What happens in the case of our children seems to be this. They will not use the formal *am I not* in familiar conversation, and, feeling the illiterate flavor of *ain't,* they resort to *aren't,* which from its use in the plural has an entirely respectable sound. It is against this latest stage, the identity with the plural form, that the grammarian as such may file a protest, if he desires, though it might be urged that even this is in line with the identity in other verbs of all persons except the third singular.

It is well known that both the negative and the forms of the verb *to be* belong to that class of unemphatic words which are most subject to some sort of abbreviation in language. In English *am I not* is the only group of the kind for which there is not at least one accepted colloquial form. In the declarative we have *he isn't* or *he's not, you aren't* or *you're not, they aren't*

or *they're not*, and *I'm not*. So in the interrogative form *isn't he, aren't you, aren't they*. Professor Hart asks if there is anything which prevents us from saying *am I not*. Nothing; and most of us do so still, but in familiar conversation we always, I think, have an unpleasant consciousness that this sounds just as formal and stilted as *is he not*. Are we absolutely and forever debarred from such a colloquial substitute, which shall be as respectable as *isn't*? And if we find available a form as good as *an't*, parallel to *shan't*, or as bad, if you will, as *aren't* (though in my pronunciation *an't* and *aren't* are the same, I am prejudiced in favor of the former spelling), must we always protest and strive to thwart its advance? CARL D. BUCK.

Chicago, February 5.

A REPETITION.

TO THE EDITOR OF THE NATION:

SIR: In your issue of January 9, Mr. Daniel Ford points out the fact that Erasmus was the probable source of an error in regard to Aristotle which is found in both Bacon and Shakespeare. This information has already been given in the *Athenæum*, No. 3403, 1893, by Mr. George Neilson. Mr. Neilson's article is listed in Louis Betz's "La Littérature Comparée," chapter xiv, page 311. WILLIAM CHISLETT, JR.

Stanford University, January 19.

TO THE EDITOR OF THE NATION:

SIR: My discovery in Erasmus of the quotations cited in my letter of January 9 was made quite independently of Mr. George Neilson's article in the *Athenæum*. I am not acquainted with the article in question. I regret the unfortunate coincidence. DANIEL FORD.

University of Minnesota, February 5.

WRITINGS OF PROF. W. G. SUMNER.

TO THE EDITOR OF THE NATION:

SIR: A little above a year ago the Yale University Press published a collection of essays by the late Prof. William Graham Sumner. It is now proposed to publish another volume, in the autumn of 1913, to be called "Earth Hunger and Other Essays."

It is desired, in this proposed volume, to collect (aside from more extended essays) all of Professor Sumner's shorter publications. Many of his best and most characteristic utterances were brief articles, struck off on occasion, and widely scattered in newspapers and magazines. We have little trouble in finding his longer articles, but it is difficult to locate many a short and vivid fragment. Since the other volume was issued, not a few suggestions have come to our ears to the effect that another time we should not overlook this or that pregnant utterance—some striking thing which has riveted the attention of our courteous censor, and which he would like to have at hand. Sometimes such a constructive critic cannot remember just where or when he has seen such an article, and suggests vaguely that it was "in the papers," or "in one of the weeklies."

Now, we want all these scattered materials, and it has occurred to me that suggestions might be forthcoming as to their whereabouts, if our present effort to make a final and exhaustive collection of Sumneriana were announced to your readers. We should be glad to examine any materials that might come within the scope of the proposed volumes, and to receive any suggestions, however vague, as to utterances, brief or extended, from the pen of Professor Sumner. Materials sent me in the care of the Yale University Press will be acknowledged and promptly returned after examination.

As this volume will, in all probability, close the collection of Sumner's printed works in the way of essays and short pieces, those who can assist us in procuring available materials will confer a substantial favor. ALBERT G. KELLER.

Yale University, February 8.

PSYCHICAL RESEARCH.

TO THE EDITOR OF THE NATION:

SIR: Your editorial on "A Sisyphus among the Sciences" (January 30) begins with a happy title whose applicability to that part of Psychical Research which seeks scientific evidence for survival of bodily death would probably meet the approval of many who have earnestly devoted themselves to the search. But among those agreeing with you would be a considerable number who hold that, while there are unanswerable arguments *contra*, there are also unanswerable arguments *pro*, and that the weight inclines to the latter side. The subject is too complicated for exposition here.

But the survival of bodily death is by no means the only problem of what is called, not altogether fortunately, Psychical Research. There are subjects regarding which such men as Sir William Crookes, Sir William Barrett, Sir Oliver Lodge, and our own lamented Prof. William James would take issue with your statements that they bear no "mark of cumulative achievement"; that, "after thirty years of respectable and patient work by many highly intelligent persons, Psychical Research is, in a scientific sense, precisely where it was at the beginning"; and that, of the accumulated facts, "no part . . . stands out as a solid residuum, a starting-point for future work."

Among those who have really studied the subjects, Telepathy and Telekinesis are now regarded as established, and the researches of the Society have enormously extended our knowledge of Telopsis (clairvoyance), Somnambulism, Hypnotism, and Divided Personality.

You say that "even in the standard sciences it is essential to the firm establishment of anything new to the science that the experience on which it is based be capable of exact repetition by any competent observer or experimenter." If this is correct, are meteorology, law, economics, or even geology, seismology, and palæontology, not to speak of theology, "standard sciences"? And, if they are not, is it essential to the importance of a science that it should be "standard"?

But, whatever may be the answers to these questions, there remains the fact that, in their essential features, large portions of the phenomena of Psychical Research, even of its apparently spiritistic side, *can* be repeated by "competent observers and experimenters," and *are*. Even the phenomena of "mediumship" are frequently so repeated, and are already considerably generalized; and of them and the other orders of phenomena, properly repeated, there are big bookfuls of data now open to students.

If the task which, so far, there is much justification for your likening to that of Sisyphus had never been undertaken, what the Society has accomplished in the other departments amply justifies its efforts, the recognition given to them by Harvard, and the willingness of that University to continue them. A PSYCHICAL RESEARCHER.

New York, February 8.

Literature

CRITICISM APPLIED TO LIFE.

The Masters of Modern French Criticism. By Irving Babbitt. Boston: Houghton Mifflin Co. $2.50 net.

This volume is primarily a study of the French critics of the last century. Some half-dozen of the leading figures are very fully portrayed, and a number of minor ones are sketched into the background. The reader who is specifically interested in the historic development of French criticism will hardly find elsewhere any exposition comparable to this of the whole movement of that criticism during the last hundred years. Still less will he find elsewhere a presentation of the subject through the medium of so admirable a series of portraits. That of Sainte-Beuve, who has not been very fortunate in his critics, will probably impress many a reader as the completest and truest that has yet been done. But least of all will one find elsewhere such a penetrating analysis of the influence of modern criticism for good and evil on literature and on the intellectual welfare of the age.

The critics are made to serve as a starting-point for the discussion of criticism, while criticism itself is interesting to the author chiefly because it holds in solution the main problems of nineteenth-century thought; and these, again, do not so much interest him in themselves (for he sees the century in somewhat cold perspective) as in their relation to the thought of the ages. It is not simply the talent and the performance of the critic that occupy him. He has nothing in common with those who hold that we must, from necessity and perhaps in the interest of diversity as well, accept talent for what it is, and ask only how well it accomplishes what it aims at. He is especially concerned with the aim itself, and half his judgment is based, not on the talent displayed, but on the use to which the talent is put and on the atmosphere that invests it, not on its volume and momentum, but on the direction in which it moves and the plane it moves on. The

mainspring of this intensely intellectual criticism is not intellectual, but ethical.

As a thorough humanist, Mr. Babbitt is so respectful of tradition, so conscientiously careful not to neglect or undervalue anything that is good in the legacy of the past or in the often dubious riches of the present, that he might seem at a superficial first view to be only a clever eclectic who has ingeniously pieced together from every source a consistent body of critical maxims. But though they derive their sanction precisely from the repeated testing of experience, these pieces of his thought fit so coherently into the structure that they evidently find themselves there as organic growths, as the outcome of personal experience sanctioned by tradition. This makes it possible for him to point out so readily the disastrous results of the looser and less organic correlation of these same pieces in those critical structures which he has analyzed. Exaggerated homage to this or that current of contemporary thought, or exaggerated revolt from it, has helped to make nineteenth-century criticism as chaotic as it is rich and varied. The same causes have thus produced a confusion of standards in criticism corresponding to the confusion of *genres* in literature which Mr. Babbitt has already traced in "The New Laokoon." He seeks the remedy for this confusion in the reëstablishment of a rational hierarchy of standards.

According to Mr. Babbitt's analysis, the two main currents of nineteenth-century thought, the romantic and the scientific, have coöperated in producing this confusion. Romanticism, by its glorification of the spontaneous, of instinct, of temperament, has exalted above the intellect what lies really below the intellect. In its reaction from eighteenth-century rationalism, it drew away man's attention from his intellectual self, moving in those rather humdrum and utilitarian middle ranges where it expatiated under the sanction of Locke and Voltaire, to what it eloquently called his "soul." But it conceived this soul in a Rousseauistic, not in a Platonic, manner. It merely threw man back on his elemental ego made up of appetites and instincts which it glorified with a poetic halo. "Anatole France," Mr. Babbitt remarks, with caustic good sense, "is fond of talking of his 'soul' when he means only his nerves and sensibility." Science, in its turn, by emphasizing only the external fact, has tended to draw away man's attention from his soul in any sense whatever and to merge him wholly in the phenomena of nature.

The expository side of the book traces the various forms of these two streams of tendency, with their often bewildering cross and counter currents, as revealed in their advocates, their opponents—and their victims. The polemic side of the book analyzes, with no sparing of epigram, their mischievous inconsistencies and contradictions when tried by that final test of literature, confrontation with life. The constructive side is represented by a highly serious attempt to mediate between the old idealism and these modern elements, which it had too much ignored and which in their turn have too much ignored it.

One of the early chapters deals with Joubert, "the critics' critic, much as Spenser has been called the poets' poet." The specious glamour and sensuous heats of romanticism are contrasted with the *lumen siccum* of this serene spirit, in pages that for fine humanistic flavor will bear reading along with Arnold's essay, while they are far richer in constructive thought. Better than any other, the criticism of Joubert has foreshadowed and suggested the grounds of mediation "between an age that had been rational in a way to discredit the reason, and an age that was going to be imaginative in a way to discredit the imagination."

The central point attacked in romanticism is its pseudo-Platonism, its confounding of what is highest with what is lowest in human nature, its identification of goodness with passion, as expressed in its conception of virtue as an outflow of emotion instead of a discipline of restraint. This tendency is hunted down and exposed all along the line of modern thought, in Rousseau's dogma of the natural goodness of man, in Mme. de Staël's cult of purely expansive enthusiasm, in the æsthetic and emotional religiosity of Chateaubriand and Renan, in the insubstantial ardors of the Sainte-Beuve of the earlier period, the "epicurean with a Jansenist sensibility," in the benignant optimism of Emerson, and, in more modernized form, in the humanitarianism of to-day which invites the religious instinct to expand in all manner of external fraternities to the neglect of inner austerity. And it is traced finally in the downward trend of contemporary philosophy:

> In their dealings with the problem of the One and the Many, both M. Bergson and James have adopted, it would seem sufficiently plain, not the Socratic but the sophistical side of the argument. I have expressed my own conviction in the following pages that what is needed just now is not merely a reaction from scientific positivism (that we are getting already), but a reaction from naturalism itself. By this I mean that we should effect our escape from intellectualism, not by sinking below it, after the fashion of the Bergsonians and pragmatists, but by rising above it, and this would involve in turn a use of the Socratic and Platonic method of intuition. Instead of reducing the intellect to a purely utilitarian rôle, as M. Bergson does, we should employ it in multiplying sharp distinctions, and should then put these distinctions into the service of the character and will.
>
> James and M. Bergson do not, like Joubert, look on the One as a living intuition, but as an inert intellectual concept; and they would have us believe that we can escape from this intellectualism only by diving into the flux—in other words, only by cultivating our intuitions of the Many. It is to be feared that Joubert would have said of this modern philosophy what he said of the philosophy of change in the form it had assumed in his own time: I detest these horrible maxims as the ancient sages would have done.

In outlining the philosophical Manichæism which Mr. Babbitt opposes to the unilateral tendencies of modern thought, we have dwelt more on the negations which he sets against its complacent faith in progress and in human nature than on the affirmations which he sets against the disillusion and discouragement which science has produced in so many of its adepts. It would be essentially unjust, however, to Mr. Babbitt's thought to insist too much on its negative aspects. His philosophy is essentially affirmative. The balance and temperance of his judgments are as marked as the convictions on which his judgments rest. Even his most negative criticisms are everywhere mitigated by the consciousness that he is dealing with eminent personalities, with thinkers of great power and with artists of high rank. Though he has not spared the cunning sophist in Renan, few would find any inadequacy of appreciation in his final summary: "Though he is a great intelligence, he has few of the qualities of a great philosopher, but many of the qualities of a great historian, and nearly all the qualities of a great artist." Nor is there anything sourly restrictive in the recommendation of Renan and Sainte-Beuve, as the two nineteenth-century French writers likely to prove of most value to us because of their intellectual sensitiveness and critical finesse, delight in the free play of ideas, and large hospitality of mind.

One restriction, however, and that a fundamental one, Mr. Babbitt makes and reiterates: they have undermined critical standards. The chief problem of criticism is, in his opinion, to find new standards that may raise it above a bewildering impressionism and an all-dissolving sense of relativity. He has attempted to demonstrate that these standards must not be sought without, that science, history, biography, and all the forms of outer fact can serve only as auxiliaries and not as criteria, because the spirit refuses to be imprisoned in any circle of fact, however closely drawn. It is a *chose ailée*, which at the moment of contact rises above their clutches in scorn of such material profanation. Nor, on the other hand, if we are to find our standards within, must we fall into the fatalistic impressionism which accords to taste only a

subjective validity. When he deals with the irresponsible dilettante, the neurasthenic æsthete who has indolently settled down in his own temperament, Mr. Babbitt's logic kindles to a masterful intensity. One is reminded of Dr. Johnson, who, in expectation of a personal encounter with the perpetrator of Ossian, carried a stout bludgeon, with the intention of demonstrating to him that he was no less his superior in physical than in intellectual prowess. To the impressionist's favorite proverb, *De gustibus non disputandum*, Mr. Babbitt opposes the Spanish proverb: There are tastes that deserve the cudgel.

The relativists, who have been pushed so sharply from point to point, can hardly deny the cogency of the arguments brought to bear against them, or the definitiveness with which everything that was systematic in their methods of criticism has been reduced to ruins. To Scherer's cry: The absolute is dead, one is tempted to rejoin: The relative is mortally wounded. But the pure relativists will be as little ready as before to believe that the absolute can be revived. They will say that Mr. Babbitt has not only demonstrated that criticism is almost certain to go wrong with a system, but has incidentally demonstrated that it cannot exist at all without one. They will retort that Mr. Babbitt, after all, in the modest measure in which he attempts to be reconstructive, is in his turn opposing dogma to dogma and system to system, and that his critical practice also rests on a whole philosophy of life, and even a conception (and what is that but a theory?) of the universe—which they will challenge him to demonstrate as valid above all others. The intuition of the One, and the fundamental distinction of the three planes of existence, they will boldly question. That such questionings cannot be silenced by mere logic no one could admit more clearly than Mr. Babbitt. Brunetière, he says, thus silenced these questionings in his own nature, but the result hardly justifies him. "His idealism, resting as it does on ratiocination rather than on insight, remains essentially negative, and so failed to bring consolation." However, if Mr. Babbitt cannot, in the name of the absolute, expel the pure relativist of the type of M. France from his last theoretic stronghold, he can at any rate, by copious arguments drawn from the practical reason, render his sojourn there profoundly uncomfortable. "These higher truths," affirms Mr. Babbitt, "are matters of intuition." "But I," rejoins the pure relativist, "I have no such intuition!" "So much the worse for you!" retorts Mr. Babbitt. Just how much the worse it is, how hopelessly and intolerably the worse it is for M. France, for the pure relativist, and for the age which follows in their footsteps, this volume is an eloquent attempt to demonstrate. Commenting on the lack of central aim in Sainte-Beuve, Mr. Babbitt says:

> That so shrewd an observer as Sainte-Beuve could find no firm anchorage for the spirit in the movements peculiar to this century may in the long run turn out to be not to his discredit, but to the discredit of the century. It may become apparent that something was omitted in the whole nineteenth century view of life, and that this something is the keystone of the arch.

In all that he has published thus far, Mr. Babbitt has confined himself to philosophical criticism. In his discussion of literature he has abstracted the vital part, the ideas. He has done this with such adequacy that one is irresistibly led to ask whether he can do yet more, whether he can, refraining from this divorce between its soul and its body, treat the whole work as satisfactorily as he has treated its chief part. If applied to criticism involving this more strictly personal and literary attitude, will this talent, so strenuously intellectual, so free from the illusions of sense, and so unseduced by the specious appeal of a purely artistic sorcery—will this talent as successfully escape the danger that threatens criticism from the opposite direction, that of a too complete intellectual and spiritual detachment from the sensational side of human nature, from that individual temperament into which literary art after all so deeply plunges its roots, and whose charm and power the critic must imaginatively feel as well as intellectually apprehend in order to pluck out the heart of its mystery? In a critique of critics and of criticism this element could indeed hardly enter except, so to speak, by the back door. Occasional pages, however, have an unmistakable suggestion of its presence, implicate rather than materialized, and revealed rather by the pure glow of the thought than by anything superadded to it.

It should seem, however, that the practice of this more purely literary kind of criticism lies somewhat remote from the ambition of Mr. Babbitt. Despite the manifold correctives of culture, he appears to belong temperamentally, and by deliberation, to the family of critics who value the interpretative faculty chiefly as an instrument in the service of the judicial faculty. A distinctive mark of these critics is a certain scorn of mediocrity, however well-meaning. The vision of reprisals by self-conscious reviewers does not deter Mr. Babbitt from saying: "There are critics who have founded a considerable reputation on the relation that exists between their own mediocrity and the mediocrity of their readers." In these all-appreciative days when everybody, and especially the critics, is convinced that there is good in everything, Mr. Babbitt invokes the advent of the critic who will show us with how much evil this good is usually mingled, and how frequently it is only a specious disguise under which every kind of evil is paraded and patronized. This Jesuitic tolerance, which we prize as a peculiarly modern virtue, he traces quite as much to lack of moral seriousness as to loose thinking. He feels that the sort of critic needed at present is, not a Sainte-Beuve, even though perfect in his kind, but a critic of the sterner judicial type of Boileau and Johnson, one who can serve as a physician to the time, governing rather than humoring it, a critic who, in mediating between what is new and what is old, "between the spirit of the age and the spirit of the ages," can point out wherein we have erred, and who can also, by the light of his critical torch, show us the way that leads out of the wilderness. Every other function of criticism is indeed secondary to this, not in our day only but perhaps in every other age as well. That we actually have in Mr. Babbitt a critic who in a large measure fulfils these demands must be abundantly evident to the attentive reader of such contributions to philosophical criticism as the present volume and its predecessors.

CURRENT FICTION.

Mrs. Lancelot: A Comedy of Assumptions. By Maurice Hewlett. New York: The Century Co.

Mr. Hewlett refuses to be browbeaten into a definite return to the mediæval setting by the critics of his "Senhusian" trilogy. In his present romance, however, he has seen fit to withdraw to a sort of middle distance. Poetic dramas are known in stage lingo as "costume plays." The novel-reader's cant possesses no analogous phrase, or one might explain Mr. Hewlett as preëminently a writer of "costume" stories. His imagination is of the type which is most at home when it is abroad—when, at least, it is occupying itself with events and persons of some remoteness in point of time. Richard Yea-and-Nay is not only a more real person than Senhouse: he is a more modern person. So are the Duke of Devizes and the Gervase Poore of this story. The late Georgian period which provides the setting is now sufficiently past to have acquired its "costume" value—an atmosphere of quaintness and picturesqueness in which the artful conduct of this writer's style seems relatively simple and natural.

As always, Mr. Hewlett has focussed his lights upon a few characters—four, in this instance, with Tom Moore as a poor fifth—or, rather, as Chorus. Lancelot is a hard-working, dull young man, ambitious of political preferment depending on that virtual ruler of England, the Duke of Devizes. The Georgiana whom he marries begins with a wifely intention which his dry self-absorption frustrates and turns cold.

His affairs do not advance till the old Duke meets Georgiana, takes a fancy to her, and with insolent promptness gives the husband his billet. Then begin tortures for Lancelot, in whom the passion of love is roused too late. The Duke, he knows, is quite capable of making Georgiana his mistress; as, after a time, in the eyes of the husband and to the world, she appears to have become. She has not; the Duke, for once, has found his match. She will give him friendship and no more. It remains for Gervase Poore, "luscious and perfervid young poet," to comprehend her plight, to woo her strangely with verses and distant worship, and in the end to win her and carry her off in triumph from the finally magnanimous Duke and his ultimately resigned henchman. In the final scene, poor Lancelot presents the perfervid one with his wedding-ring, and a speech:

"When I was married," he said, "I gave myself this ring upon my wedding day. It was to remind myself of my duty—which, you tell me (and I acknowledge) I too soon forgot. Accept it from me. I don't ask you to wear it, but to keep it. You will not refuse."

"I will not refuse," said Gervase, "I take it as a sign that you trust me."

Discerning Gervase!

The Lost Million. By Winthrop Alden. New York: Dodd, Mead & Co.

Winthrop Alden, we are informed, is the disguise of a distinguished author, known on both sides of the Atlantic, who wishes to try the public by this entrance incognito. We have not guessed the distinguished lady's name, but are quite sure that she, or he, knows the roads of Long Island better than the ways of the English tongue. The story is a kind of detective yarn, which begins in Manhattan with the death of a strange man who leaves to a chance acquaintance a stranger commission; it passes to the country places over the East River, and then crosses to Europe, where it picks up a great Parisian detective. The mystery is well introduced, and the characters well chosen, but the unravelling of the plot misses the excitement of the direct chase and falls rather flat before the book ends.

PUBLIC OWNERSHIP.

Principles and Methods of Municipal Trading. By Douglas Knoop. New York: The Macmillan Co. $3.25 net.

Mr. Knoop has written the best book that has yet appeared in English on municipal trading, or, as we should say in this country, municipal ownership. He has not so many graces of style as Major Leonard Darwin and Lord Avebury, and he is certainly not so picturesque as Mr. Bernard Shaw. Yet he surpasses all these in freedom from preconceptions, minuteness of investigation, and shrewd common-sense in striking a balance between conflicting opinions. He raises the discussion of municipal trading to a distinctly high level; there is no speaking to the gallery and no slavish adherence to tradition. Just such a book as this has been sorely needed.

Mr. Knoop showed his fitness for this task as long ago as 1906, when, with an essay on "Municipal Trading," he won the Warburton Prize at the University of Manchester. The volume before us grew out of that treatise. His earlier studies have been supplemented by his investigations while holding the Langton Fellowship at the same University. The excellent bibliography which he has appended to this book contains multifarious and trustworthy sources of information.

The effect of municipal trading on municipal finance and on public and private morals has been strenuously debated, both in America and in Europe. It has been contended by many that the managers of enterprises of this class are often less regardful of strict business principles in creating and marketing their products and services than they would be if the plants were their private property; that government ownership has a demoralizing effect upon labor; that too much, in short, is done merely to propitiate the voter.

It may be said at the start that Mr. Knoop's facts seem to sustain these contentions. While not discussing directly and *in extenso* the effect of municipal trading upon the money market, he sets the reader's mind working along that line by his assertions with reference to the effect upon rates (taxes). Every loan imposes an annual interest charge upon the future revenues of the community that borrows; it amounts to mortgaging the future for the sake of the present. If the occasions for borrowing become frequent, the debt will ultimately become unbearable unless steps are taken to reduce it. It is impossible, declares Mr. Knoop, to contemplate the great rise which has occurred of late years in the rates of certain towns except with the greatest concern. Industries tend to migrate from those towns and new works will no longer be established there.

A local authority must fulfil certain obligatory functions, such as the maintenance, cleansing, and lighting of the public roads and streets, the upkeep of police, the administration of justice, the sewering of the streets, and the disposal of sewage, the providing of facilities for elementary and higher education, and in every area rate-payers will have to contribute to the relief of the destitute. It is only after the cost of fulfilling the various obligatory functions has been met that a municipality is able to judge what expenditure it is in a position to incur voluntarily without placing an unreasonable burden upon the ratepayers. The large increase in the expenditures of local authorities on education since the passing of the Education Act of 1902 has considerably restricted the resources available for other purposes, and this only emphasizes the need of caution.

It is impossible, we are told, to study the undertakings of municipal trading without feeling that the method of conducting their finances, in many cases, leaves much to be desired. There are various causes for this unsatisfactory state of affairs. In the first place, the wish of many local authorities to show favorable results with their trading enterprises frequently deters them from debiting various items to their trading accounts which ought properly to be so charged, and may lead them to credit too much to these accounts in respect of the products sold or services rendered to themselves by these enterprises. In the second place, the absolute ignorance of many town councillors of the most rudimentary principles of accountancy leads them to block proposals made on the advice of financial and technical experts. In the third place, the possibility of shifting, to a considerable extent, the burdens arising out of present operations on to the shoulders of future ratepayers is a temptation to which many persons give way very readily. In the fourth place, the anxiety of town councillors to gain popularity among the ratepayers and voters influences the finances of trading departments in two ways: in October, before election time, it leads to concessions being made to the customers, without proper consideration to the cost of the concessions, and in April, when the budget for the new year is being discussed, it leads to unreasonable claims being made on the trading departments for contributions in relief of the rates, in order to avoid the necessity of making heavier demands upon the ratepayers.

Another drawback to municipal trading is that it involves the employment by local authorities of large bodies of labor. It is perfectly right that municipalities should be good employers, and that they should give their work-people adequate wages and fair conditions. In skilled occupations, where trade-union rates of pay and hours of labor are adopted by private employers, a municipality can employ its labor on the same terms and probably no difficulties will arise. Unfortunately, most work-people in the employ of municipalities are of the unskilled or semi-skilled type, in connection with whom a recognized standard of wages or of hours of labor seldom exists. As a consequence, unduly favorable terms may be granted to these work-people at the ex-

pense of the general body of ratepayers, and in this way a small privileged class of wage-earners may be created.

Much can be said in opposition to the employment of a large body of unskilled labor by a local authority. It fosters a somewhat loose standard of honesty, according to which ratepayers' money is spent extravagantly. It increases the danger of corruption; and the temptation to councillors to act in a manner to please those ratepayers who are municipal employees, instead of in the best interests of the ratepayers in general. Again, the existence of a highly favored and privileged class of municipal employees affords most undesirable opportunities for nepotism and jobbery; whenever a local authority engages its work-people on the recommendation of the councillors, as is not uncommonly the case, the multiplication of jobs under a council offers dangerous facilities for abuse.

Taking all the attendant circumstances and conditions into consideration, municipal trading in itself cannot, declares Mr. Knoop, be regarded as a desirable institution; the management of industrial undertakings is not really a suitable sphere of activity for a local authority. This remark is qualified by the assertion that, in certain cases, it may serve the public better than private enterprise. The allusion here is to industries which have a strong tendency to become local monopolies. The difficulty of exercising satisfactory control over many monopolistic tramway, water, gas, and electricity undertakings affords the main warrant for their municipalization. Yet there can be no general rule on the subject, each individual case must be considered on its own merits.

The Last Leaf. By James K. Hosmer. New York: G. P. Putnam's Sons. $2 net.

"I attempt," says Dr. Hosmer, "no elaborate characterization of men, or history of events, or exposition of philosophies. My films are snap-shots, caught from the curbstone, from the gallery of an assembly, in a scholar's study, or by the light of a campfire." And these words admirably describe his book, much of which has already appeared as articles in the *Atlantic*, the Boston *Transcript*, and the New York *Evening Post*.

Yet his catalogue of celebrities is long and varied, ranging from Douglas and Webster, Grant and Meade, through Bancroft, Lowell, and Emerson, to Agassiz, Newcomb, and Francis Joseph. In many instances, his views of these men are snap-shots indeed, as when the King of Prussia, destined before the year was out to be crowned Emperor at Versailles, saluted him with a nod as he stood looking into a window of the royal palace in Unter den Linden; or, again, when in the gardens surrounding the palace at Potsdam he saw a ten-year-old boy run up to a low carriage and pat the pony's nose, the boy being now the redoubtable William II; or, still again, when he saw Francis Joseph on his way to the council-meeting which decided that Austria should be neutral in the Franco-Prussian conflict.

These are hardly more than post-card jottings. On the other hand, certain historians and scientists, American and German, are drawn at something like full-length, along with several members of the group of literary men and women that made Concord a national shrine. The culminating moment of Dr. Hosmer's life, if he could only have known, was when he sat upon the platform with Lowell at the Commemoration of the Harvard soldiers who had taken part in the Civil War, and listened to him read "from a manuscript with distinctness which could be heard everywhere" the Commemoration Ode. Unfortunately for his best appreciation of the poem, Dr. Hosmer was "uncomfortably nervous" over a speech that he was to deliver further on in the programme. The dropping out of one or two speakers, indeed, put him immediately after Lowell, and his "voice sounded out into the great space in which the echo of Lowell's was scarcely silent." In piquant contrast with this solemn scene is that of Phillips Brooks as he assisted at a Hasty Pudding initiation, "a tall fiend whose trouser legs were very apparent beneath the too scanty black drapery which enveloped him."

A sister-in-law of Hawthorne is the authority for a remarkable story which, as she told Dr. Hosmer, she had had directly from the romancer. During a sojourn in Boston, Hawthorne often went to the reading-room of the Athenæum, where he was particularly interested in seeing a certain newspaper. This paper, however, he frequently found in the hands of an old man, who annoyed him by retaining it interminably. One day Hawthorne entered the room, saw the old man, as usual, with the paper in his possession, and sat down to wait until his rival should finish with it:

> After a time the man rose, put on his hat and overcoat, and took his departure. As the door of the reading-room closed behind him Hawthorne took up the paper which lay in disorder as the man had left it, when, lo and behold, his eye fell in the first column on a notice of the old man's death. He was at the moment lying dead in his house in the suburbs, and yet Hawthorne had beheld him but a moment before in his usual guise reading the paper in the Athenæum! My friend said that Hawthorne told her the story quietly, without attempt at explanation, and she believed his thought was that he had actually seen a ghost.

Lowell once related in Dr. Hosmer's presence a tale of a different tone. In a certain Cape Cod village it had long been the custom to profit from the wrecks that occurred on the coast, so that at last the setting of false lights and the appropriation of the cargoes which were lost in consequence became a legitimate business. At the same time the villagers continued to be rigid Puritans, punctilious in attending public worship. One Sunday the congregation was startled by the news that a West India ship loaded with sugar was going to pieces on the rocks. Among the booty-seekers that immediately flocked to the shore was a deacon who was successful in piling up a large quantity of sugar, which he left unguarded while he went for his oxen to haul it home. In his absence the bad boys of the village emptied out the sugar and filled the bags with clean brown sand. The deacon came to a sense of his loss only when his wife attempted to sweeten his tea that evening. His rage he described subsequently in this language: "I declare, when I felt that 'ar sand agrittin' between my teeth, I don't know but it was wicked, but I e'n a'most wished that there wouldn't never be another wreck!"

Dr. Hosmer mars his recollections now and then with unnecessary comment, but it would be ungracious to take exception to the method of one who has done us the courtesy of bringing us face to face with the members of so unusual a company.

William Morris: A Critical Study. By John Drinkwater. New York: Mitchell Kennerley. $2.50 net.

Mr. Mackail has given us a documented biography of Morris, Alfred Noyes an acute piece of criticism written at an almost lyrical tension, and John Drinkwater, in spite of his sub-title, only a passionate tribute. As a poet's laurel wreath hung on the monument of his master, Mr. Drinkwater's book may be ungrudgingly received. It pulses with generous and elevated emotion seeking to extol the good and the beautiful. It is ardent knight errantry, though with a strain of the La Mancha school; we can admire the high spirit of the quest even when the knight is lost in the woods, and it must be said that Mr. Drinkwater is frequently lost in the woods. His book enters the field as a kind of protest against the criticism of Mr. Noyes, and it suffers by the comparison which it invites, whether it is dealing with the technical aspects of Morris's verse, or with his ideas, or with his total significance. The fact is that Mr. Drinkwater has a poet's impatience of the tedious investigation, comparison, and distinction upon which the critic's art depends.

Thus, in his overture, he protests sharply against the theory—in its general features accepted as a matter of course by Mr. Noyes and the rest of us—that the poet is the product of his age. "Experience," he says, returning to his thesis in the conclusion, "proves the advent of a great poet to be apparently capricious, the unconsidered whim of powers that make but little distinction of seasons." Yet in the next breath he admits that the greatest of English poets was "inevitable"—that he appeared "as the final and perfect articulation of a word passed freely from lip to lip" by his fellows. Wordsworth, to be sure, he finds much less explicable, "Collins and Gray notwithstanding" (why not Thomson, Cowper, Crabbe, and Burns notwithstanding?); but still there was nothing in Wordsworth's age absolutely to forbid his arrival. In the end the counter-theory seems to have been set up only to glorify Morris. When he comes to Morris he finds a poet not merely unheralded but positively excluded by the artistic attitude of his period: "He came not in due time, but by some large generosity of the gods."

The quarter-truth or half-truth which lies behind Mr. Drinkwater's protest can be brought out only by pursuing the methods by which one arrives at the other half of the truth; by developing in full all that can be said for the forces of "heredity" and "environment," and then indicating just where and how far your poet exceeded the limits of any calculable moulding and propulsive powers—in this case, by at least frankly admitting the antecedent powers of the romances of Scott and the poetry of Keats, the Oxford Movement and the revival of Gothic, the feudal reaction of Carlyle and the Arthurian excursions of Tennyson, the passionate and all-embracing æsthetic activities of Ruskin and the art and poetry of Rossetti. By admitting all this, and then demonstrating, if one is able, that the work of Morris is not the lovely withdrawing wave and ebbing foam of a quite definite and continuous tide of neo-mediævalism.

But Mr. Drinkwater attempts nothing of the sort. On the contrary, he deliberately chooses to present Morris as an isolated phenomenon: "to compare him with his contemporary-creators scarcely at all, believing such comparisons to be misguided in intention and negative in result." To this we may reply: "We do not wholly agree with you. Without such comparisons as you decline to make, one is obliged to refrain from defining and valuing the talent under consideration. Yet we find your desire to speak of your poet as a thing complete in timeless isolation perfectly comprehensible. If you are not interested in the genesis and formation of his talent or his relation to his predecessors and contemporaries, let us waive all such questions. Let us hear merely a report of your personal adventure. Let us speak neither of Morris's debt to other singers nor of his rank among them."

Well, Mr. Drinkwater seems to assent. He exclaims with fine impatience that whether Morris "was or was not the greatest poet of his age or century is a matter of complete unimportance upon which nothing depends." But this is only a protest apparently against the subtle running comparison of Tennyson with Morris in Mr. Noyes's book, at the end of which Morris appears somewhat diminished but still splendid, while Tennyson emerges at the last in the rich variety of his scrupulous art and the depth and range of his dealing with life head and shoulders above his brother. Mr. Drinkwater keeps his word in that he says almost nothing of Tennyson. But though he never comes out into the critical open, he insinuates the superiority of Morris at every turn; he violates our compromise right and left. He will avoid comparisons; yet he does not hesitate to say that "Morris's art came as near as any art can do to being unaffected by any external impulse at all." He will avoid comparisons; yet he asserts that in essentials "there is scarcely any evidence that he had ever read any of the poetry before him." He will avoid comparisons; yet fears not to prophesy that when the history of the nineteenth and twentieth centuries is written, "he will stand as a lonely titanic figure excelled by none in the depth and range of his art, but outside any categorical lines of development." He will avoid comparisons; yet on the basis of the prose romances ventures to say that "had he chosen, Morris might have . . . challenged comparison with the best of Fielding's successors." He will avoid comparisons; yet remarks that, among poets "comparable to him in achievement," Morris "stands alone in the creation of a body of work that moves consistently and surely on the plane of poetry—from first to last."

In the course of time this critical algebra becomes wildly exciting. The tantalized imagination hungers and thirsts after the Unknown Quantity. Who, in short, are the men "comparable to him in achievement"? They are Mr. Drinkwater's twelve peers of the world—for at last the secret is out. They are these: "Æschylus, Homer, Virgil, Dante, Michael Angelo, Shakespeare, Milton, Goethe, Beethoven, Wagner, Shelley, Wordsworth." We hope Shelley does not have to sit next to Shakespeare at this glorious round table, for, as Mr. Drinkwater says, this is a fellowship in which "there must be no disputation as to the headship." Then he adds explicitly enough: "Morris is, as I see him, clearly of that fellowship." This, we repeat, is not criticism; it is passionate tribute. It is claiming the victory after having refused to set lance in rest.

The Rhodes Scholarships. By George R. Parkin. Boston: Houghton Mifflin Co. $2 net.

Probably no benefaction of recent times has aroused such widespread interest as that which the late Cecil Rhodes made to the University of Oxford. It was a spectacular and at the same time a very practical gift, eminently characteristic of the adventurer, idealist, and shrewd financier, who thought in millions and dreamed of empires, who deemed it worth his while, amid the strenuous toil of building his own fortune and a new empire for Britain, to spend portions of eight years at Oxford, acquiring the ordinary pass degree which the University awards to its mediocre scholars.

The scholarships which Rhodes endowed made a radical departure from precedent. They were the first official recognition that Oxford has more to offer to a student than the academic advantages set forth in her statutes. Hitherto scholarships had been endowed and awarded, nominally at least, for learning only; Rhodes offered $1,500 a year to students from the ends of the earth that they might have the benefit of that indefinable abstraction commonly ascribed as "Oxford culture," which is acquired more in the social gatherings of the students than in lecture-rooms. It was no wonder that the gift, when the terms of the will first became known, aroused a certain amount of skepticism in academic common-rooms, or that the aristocratic college which at present numbers among her undergraduates the heir to the British throne at first refused to have anything to do with the scholarships. Now, after nine years, all doubts as to the practical nature of the scheme are set at rest, for already some 700 Rhodes scholars have passed through the Oxford course. The results of the experiment have been set forth by Dr. Parkin, the organizing secretary of the Rhodes Scholarship Trust.

On the whole, the careful analysis which he gives shows that the scheme has worked out well. He finds that in scholarship, pure and simple, students from America, as well as from the British colonies, are more often than not at some disadvantage when in competition with young Englishmen who have received their preliminary training in one or the other of the great public schools of the country; and he attributes this to lack of thoroughness in the groundwork of education. On the other hand, it is satisfactory to learn that Rhodes scholars, having become an established part of the university life, are accepted by the general student body solely on their individual merits; that there is no prejudice either for or against them as Rhodes scholars. The charge has frequently been made that they evince a tendency towards the formation of

cliques, and do not mingle sufficiently, as the founder of the trust intended that they should, in the social life of the university and the colleges. That charge, Dr. Parkin thinks, is not justified. It is natural that Americans, for instance, should draw together to a certain extent, and there exists in Oxford an American club, but the members use it for little except the reading of the national newspapers and occasional gatherings for the discussion of American topics. Normally, the unit of social existence for the Rhodes scholars, as for other students, is the college.

One could wish that Dr. Parkin had given fuller information as to the actual results attained in the "schools" by the Rhodes scholars, in order that comparison might be made of their attainments with those of open scholars from the English public schools. There seems little doubt that, as a class, they would suffer by such comparison. That, under the circumstances, should occasion no surprise in consideration of the difficultics which have to be met in making a selection from so wide an area. As a minimum test the standard of Responsions, the Oxford entrance examination, has been adopted, which consists of no more than "small Latin and less Greek," and an acquaintance with arithmetic and the elements of either algebra or geometry. This, however, represents only the minimum that is required by the university. Other tests are imposed that vary with different localities and are left in the hands of the local committees of selection. In this connection it is worth noting that Dr. Parkin comments on the difficulty of applying the athletic test, emphasized by Rhodes himself, in selecting the scholars from this country. In the universities and colleges of the United States, he says, quoting American authorities, athletics have become so specialized that they are "not favorable to the production of the all-round man whom Rhodes evidently had in his mind"—the athletics favored by Rhodes being, of course, those of the ordinary English public school.

Of particular interest to American readers are the pages in which the author discusses the vexed question as to whether it is profitable for students from the United States to spend three years at Oxford. He states frankly the objections that have been raised—the time involved, the possible loss of touch with home affairs, and the practical worth of an Oxford degree—and while he endeavors to meet them all, there is an honest hesitation in his manner that seems to admit the force of the argument on the other side.

Both for the general reader and for the prospective candidate for a Rhodes scholarship the present volume will be of value and interest. The long first chapter, dealing with the life of Cecil Rhodes, is an excellent bit of biography, and succeeding chapters (two of them, concerning the more intimate details of the Oxford system, contributed by F. J. Wylie) give a commendably clear and readable account of the purpose of the foundation, the methods of its administration, and the advantages offered by an Oxford course. As Dr. Parkin warns us, while the system is now definitely established, it is still only in an empiric stage, and neither the methods of administration so far adopted nor the conclusions that are here drawn can be regarded as final. In valuable appendices are given a list of the Oxford colleges; the statutes relating to students from foreign universities; and specifications of the required subjects for the entrance examination.

Notes

The Manchester University Press has in preparation "The Early Life of George Eliot," by Miss Mary H. Deakin, with an introductory note by Professor Herford, and "The Authorship of the Platonic Epistles," by R. Hackforth.

A timely book, in view of legislation now pending at Washington, is "The Immigrant Invasion," by Frank J. Warne, announced by Dodd, Mead & Co.

Forthcoming fiction in Scribner's list includes: "The Lore of Proserpine," by Maurice Hewlett; "The Land of the Spirit," by Thomas Nelson Page; "The Right of the Strongest," by Mrs. Frances Nimmo Greene, and "The Isle of Life," by Stephen French Whitman.

The same house will soon add two new volumes to the Studies of Theology series—"The Text and Canon of the New Testament," by Alexander Souter, and "The Theology of the Gospels," by the Rev. Dr. James Moffatt.

Geo. H. Doran Co. will publish on Saturday: "Simon Brandon," by B. Paul Neuman; "The Story of Stephen Compton," by J. E. Patterson; "Success," by Una Silberrad; "A Dream of Blue Roses," anonymous; "The Chequer-Board," by Lady Sybil Grant; "In the Shadow of the Bush," by P. Amaury Talbot; "My Sudan Year," by Ethel S. Stevens; "Modern Problems," by Sir Oliver Lodge, and "The Case of Oscar Slater," by Sir A. Conan Doyle.

Smith & Elder promise this spring a new Life of Jane Austen, based on the memoir by J. E. Austen-Leigh, the letters published by Lord Brabourne, and other family documents, some of them never before published. The book is written by two members of Jane Austen's family, W. Austen-Leigh and R. Austen-Leigh.

Capt. B. Granville Baker is bringing out, through Seeley & Service, "The Passing of the Turkish Empire in Europe," illustrated by sketches from his brush and pen.

Macmillan's spring list includes in fiction: "The Inside of the Cup," by Winston Churchill; "One Woman's Life," by Robert Herrick; "Comrade Yetta," by Albert Edwards; "Concert Pitch," by Frank Danby; "Patsy," by S. R. Crockett; "Poor, Dear Margaret Kirby," by Kathleen Norris; "The Impeachment of President Israels," by Frank B. Copley; "The Feet of the Furtive," by Charles G. D. Roberts; "Vanishing Points," by Alice Brown; "The Crock of Gold," by James Stephens; "The Idiot," by Fyodor Dostoievsky, translated by Constance Garnett, and "A Necessity of Life and Other Stories," by Betty van der Goes. Economics: "Essays in Taxation," by Edwin R. A. Seligman; "American Syndicalism, The I. W. W.," by John Graham Brooks; "The Soul of America," by Stanton Coit; "The Economic History of the United States, Vol. I, "The Economic Interpretation of the Constitution," by Charles A. Beard; "The Modern Trust Company, Its Functions and Organization," by Franklin B. Kirkbridge and J. E. Sterrett; "Industrial Combinations and Trusts," by W. S. Stevens, and "Economics of Business," by Norris A. Brisco. Biography and history: "The Writings of John Quincy Adams," Vol. I, edited by Worthington C. Ford; "The Letters of Richard Henry Lee," Vol. II, collected, collated, and edited by James Curtis Ballagh; "Lectures on the American Civil War," delivered at Oxford by James Ford Rhodes; "'Tis Sixty Years Since," by Charles Francis Adams; "The Cambridge Mediæval History," Vol. II, "The Rise of the Saracens and the Foundation of the Western Empire"; "Principles of Prussian Administration," by Herman G. James; "A History of the American Negro," by Benjamin Griffith Brawley; "The Old Colonial System, 1660-1754," by George Louis Beer; "The Dictionary of National Biography," second supplement in three volumes; "David Livingstone," by C. Silvester Horne, and "Sea Kings of Crete," by James Baikie. Religion and philosophy: "The Problem of Christianity," by Josiah Royce; "Social Religion," by Scott Nearing; "Social Idealism and the Changing Theology," by Gerald Birney Smith; "The Unconscious, the Fundamentals of Human Personality," by Morton Prince; "The Encyclopedia of the Philosophical Sciences," edited by Wilhelm Windelband and Arnold Ruge; "The Interpretation of Dreams," by Prof. Sigmund Freud, translated from the third edition by A. A. Brill, and "The Belief in Immortality and the Worship of the Dead," by J. C. Frazer. Miscellaneous books in Macmillan's list will be given next week.

"Germany's Future in the Orient" is the subject of an exceedingly significant article in *Die Erde* for January by Ewald Banse. Taking for granted the coming partition of the Turkish Empire among the great Powers, he asserts that Germany's share should be the region included in southeastern Anatolia, northern Syria, and northern Mesopotamia. No claim is made for Bagdad, the southern boundary running from Aleppo to Mosul. This would give to Germany what she does not now have, a colonial possession in a temperate zone and accordingly available for German colonists. It contains an immense extent of well-watered cultivable and pasture land upon which sufficient food could be raised to supply the Empire and lower the cost of living. Cotton-raising regions abound, which, when developed, will make Germany independent of America, Egypt, and India. Free access to the sea would be had through the ports of Mersina and Alexandretta. An outline map shows how probably Turkey in Asia will be divided among the Powers.

In two beautifully printed volumes the Oxford University Press has produced an edition of "The Complete Poetical Works of Samuel Taylor Coleridge" which, for fulness and authority, supplants all previous editions, and will probably hold the field for many years, if not forever. The text adopted by the editor, Ernest Hartley Coleridge, is that of 1834, in preference to that of 1829, which was selected by Campbell; this he does on the basis of "conclusive proof that, here and there, Coleridge altered and amended the text of 1829, with a view to the forthcoming edition of 1834." Details of this evidence Mr. E. H. Coleridge gives, and they will satisfy most students that his editorial judgment is right. In all cases, however, the complete development of the text from its earliest to its latest form is traced in the notes, and in some cases, notably "The Ancient Mariner," the first draft of a poem is also printed completely and independently in an appendix. The bibliographical information given by the editor is full and clear. In the second volume, after the plays, a succession of sections give the Epigrams, Jeux d'Esprit, Fragments from a Notebook, Fragments, Adaptations, etc. The absolutely new material is neither large in amount nor important in quality. It includes a number of brief hints and experiments, the star-dust of poetry, one might call it, in the later sections, and six poems in the body of the text. Of these six the only one of any poetical value is that entitled "Inscription for a Seat by the Road Side Half-way Up a Steep Hill Facing South." It was first printed in the *Morning Post* of October 21, 1800, and refers to the "Windy Brow seat" immediately above the River Greta, on the lower slope of the Latrigg, made by Coleridge and the Wordsworths, August 13, 1800. As it has never been included in any of the collected editions of Coleridge and is hence quite new to the modern reader, it may be quoted here at length:

Thou who in youthful vigour rich, and light
With youthful thoughts dost need no rest! O thou,
To whom alike the valley and the hill
Present a path of ease! Should e'er thine eye
Glance on this sod, and this rude tablet, stop!
'Tis a rude spot, yet here, with thankful hearts,
The foot-worn soldier and his family
Have rested, wife and babe, and boy, perchance
Some eight years old or less, and scantly fed,
Garbed like his father, and already bound
To his poor father's trade. Or think of him
Who, laden with his implements of toil,
Returns at night to some far distant home,
And having plodded on through rain and mire
With limbs o'erlabour'd, weak from feverish heat,
And chafed and fretted by December blasts,
Here pauses, thankful he hath reached so far,
And 'mid the sheltering warmth of these bleak trees
Finds restoration—or reflect on those
Who in the spring to meet the warmer sun
Crawl up this steep hillside, that needlessly
Bends double their weak frames, already bowed
By age or malady, and when, at last,
They gain this wished-for turf, this seat of sods,
Repose—and, well-admonished, ponder here
On final rest. And if a serious thought
Should come uncalled—how soon *thy* motions high,
Thy balmy spirits and thy fervid blood
Must change to feeble, withered, cold and dry,
Cherish the wholesome sadness! And where'er
The tide of Life impel thee, O be prompt
To make thy present strength the staff of all,
Their staff and resting-place—so shalt thou give
To Youth the sweetest joy that Youth can know;
And for thy future self thou shalt provide
Through every change of various life, a seat,
Not built by hands, on which thy inner part,
Imperishable, many a grievous hour,
Or bleak or sultry may repose—yea, sleep
The sleep of Death, and dream of blissful worlds,
Then wake in Heaven, and find the dream all true.

It would be easy to draw from these admirably edited volumes the material for a fresh study of the growth and decay of Coleridge's marvellous genius; and the very fact that this accumulation of materials, so largely fragmentary or tentative, suggests such a study, does in a way afford a sufficient reply to those who in general object to the publication of a poet's crude or trivial overflow. After all, barring three or four poems, Coleridge was *anima poetæ*, rather than finished poet, and in that form, as one dimly sounding his way in untried regions, he is peculiarly typical of the romantic movement. If we discarded his imperfect work, we should have no means of gauging his power as a pioneer, leading at once into gorgeous dreams and a bankruptcy of the imagination.

The Oxford University Press has also brought out, with certain omissions, the same edition of Coleridge in a single volume printed on India paper. The omissions touch only one or two of the sections of epigrams and fragments at the end. The notes are included without abbreviation.

Again, the same material, now entitled "The Poems of Samuel Taylor Coleridge," with the dramas omitted, is issued by Frowde in a cheaper one-volume edition at the price of 1s. 6d. For the ordinary reader of Coleridge this is perhaps the most valuable, as it is the least bewildering, form of the three.

"The New Journal of Marie Bashkirtseff" (Dodd, Mead) is of mild interest for such readers as recall that former record of youthful precocity and egotism which made its little stir some years ago. This volume contains extracts from the journals kept by Mlle. Bashkirtseff between the ages of twelve and fifteen. In the inborn sense of her own supreme importance she was not unlike many children; but she was unlike them in her frank glorification of that sense, and in the fact that she never outgrew it. Her beauty of face and form, her charm of manner, the wonderful voice with which she intends to astonish the world—these are the continual themes of her celebration. "Happy the man who will have me," she chants, not yet in her teens. "He will possess the earthly Paradise! Provided that he knows how to appreciate me!" The man is already selected: the Duc de H——, handsome, dissipated, noble; "he would suit me for a husband in every respect. I love him, and that is what makes me suffer. Take away this anguish, and I shall be a thousand times more miserable. My grief makes my happiness. I live solely for that." So, or less sanely, writes this pitiful spoiled child of a roving Russian family. For the most part, her self-regard exalts her to a sort of delirium. She goes to the opera, and fancies that the whole company of singers "salute her." Another time it is the audience: "Everybody admired me. Towards the middle of the entertainment I began to feel as lovely as possible. In going out I passed between two rows of gentlemen who stared at me till their eyes bulged, and they didn't think me bad looking, one could see that. My heart swelled with pride and joy." At fifteen she experiences hardly less ecstatic moods of self-pity. Nobody understands her, she is hopelessly alone in her elevation above the crowd. She discovers that men are villains, and determines never to marry—with reservations in favor of "some prince." Through it all, there are increasing premonitions that she is not to live long enough to become famous. The world holds small chance of happiness for such as she. Nominis umbra: the vague pity lingering about that shadow may find itself quickened by this new record, but hardly sharpened to regret.

Those who read the delightful "Rhymes of Pat McCarty," with the no less delightful prose, will know what to expect from Mr. John Stevenson's "Boy in the Country," just published by Longmans, Green & Co. His English is of the first water, and the Scotch-Irish of his characters is delicious. The story, if story it may be called that moves as freely as the wind on the heath, is simply that of a boy who is sent from the city to live for a while with an aunt on a farm in County Antrim, and there becomes acquainted with the people and manners of the road and the hillside. In the account of "Old Nellie" the scene is grim and almost tragic; in the chapter on Knight Errantry the way lies through as pretty a romance as one need ask for on a fair summer's day; elsewhere, and often, it is comedy or mere adventure or wayward musings on strange faculties. We could give samples of the book to any desired extent, but prefer the bare statement: Here is good reading. The illustrations, by W. Arthur Fry, are in keeping with the text.

A really charming little book, admirably illustrated, is "Things Seen in Palestine" (London: Seeley, Service & Co.), by Mrs. Hans Spoer (A. Goodrich-Freer). Mrs. Spoer has the gift of vision and the knack of style to render what she sees; she is also a trained folk-lorist and knows her Palestine intimately. Thus, an amazing amount of material is packed into these small pages without the picture becoming obscure or being thrown out of drawing. Yet there is no pseudo-picturesqueness, and the few slips are in technical details of Mohammedanism. There most travellers come grievous croppers.

A very different kind of picturesqueness—but not pseudo either—characterizes "By Desert Ways to Baghdad" (Scribner), by Louisa Jebb, now Mrs. Wilkins. Here, too, is the gift of style and the style tells of things seen, but they are strange things seen from the outside, yet seen and rendered with marvellous detail and reality. Mrs. Wilkins makes no profession of orientalism; she does not interpret; she only describes and narrates. And the describing and narrating are done very simply. There is perhaps only one chapter of purple patching, where she digresses into the land and times of Abraham and sees her own journey across the plain of Mesopotamia under the vision of his. Even then there is only a more careful picking and polishing of phrase conjoined with a Biblical gravity. For much elsewhere is far from grave, and the journey itself was surely of the maddest. Two young women start out alone—in the sense of having no conventional dragoman—from Constantinople and work their way, travelling on horseback, save for a stretch from Mekidje to Konia on the Anatolian railway, as light as might be, across Asia Minor to Tarsus; thence by Aintab and

Urfa to Diarbekr, by raft of inflated goat-skins down the Tigris to Baghdad, up along the Euphrates to Deir and across the desert to Damascus. Their Turkish was scanty to begin with, and for Mrs. Wilkins was scanty to the end. Her companion, Miss de Bunsen, although we find her throughout thumbing a pocket dictionary, evidently knew more, enough at least to gather on the journey materials for her "Soul of a Turk" —the Hassan of this book, though neither a Turk by race, being of Albanian Christian stock, nor by religion, being an advanced mystic. What he thinks of all this very interesting and illuminating "eopy" which his two charges have made of him must be a problem. They have revived the older times when the traveller, returning from the East, felt safe in giving to the public his views on all the queer things, beasts, and people he had met. Perhaps it is this revival which makes Mrs. Wilkins's book so racy and so different from the modern laborious trifling with travel-talk. There are seventy-four quite remarkable illustrations from photographs.

Roy Devereux, in his "Aspects of Algeria" (Dutton), is no such dishevelled wanderer, but a very normal tourist fleeing from the English winter. But being in Algiers and being a serious person interested in the problems of colonization, he used his opportunities and has produced a really useful book. His chapters on Islam, past and future, and on the Arabs in art and science, with whatever else he scatteredly says on those things, may be passed by silently. It is all singularly wide of the fact. Yet he had opportunities if he had only known how to use them. On pp. 10 ff. he describes what was evidently a Zar—a rare function for a man to see—and it would be of great interest if he would compare his recollections with Chapters xii and xiii of Madame Ruchdi Pasha's "Harems et Musulmanes d'Egypte." Similarly, his meditations on the Roman province of Mauritania are dominated by Gibbon. But nearly two-thirds of the book is given to modern economic questions—the status of the Moslem subjects of France, the French as colonists and as colonial administrators, the industrial development of the country, and the future for the different races in Algeria and for the Algerian race which is already beginning to appear. On it all Mr. Devereux is not sanguine, and his views need balance, but his book is most informing and suggestive.

It is nearly thirty years since Professor Paul Deussen's "System des Vedânta" appeared in Germany, and it is remarkable that a work so important has not been translated into English before this. Those who do not read German will welcome the volume just published by the Open Court Publishing Co., in which this standard treatise of Hindu philosophy has been ably done into English by Mr. Charles Johnston, who is himself a Sanskrit scholar of proved ability. The translation is literal and has the notes of the original, which might have been made a little clearer in respect to the somewhat blind references to Sanskrit works, but which the translator has here and there amended by adding later literature. For the body of the work, dealing as it does, not with modern literature, but with Sanskrit texts, no changes have been necessary. The system presents by all odds the best account of the foremost (as it is the earliest) Hindu philosophy, that of monism, divided into the various parts demanded by modern rather than by ancient thought. Thus the doctrine of Brahman, as cosmic principle and as psychic principle, leads to a discussion of the cosmology of the Vedânta; after which the nature of the soul and its relation to the body bring the system to the point where metempsychosis can be discussed in detail. The final discussion concerns the doctrine of emancipation. It is a pity that the translator did not think it worth while to give in his own preface a brief account of the diverging school of interpretation. The system expounded by Deussen is that of Çankara, and to understand the Vedânta one should also have some idea of the doctrine of Râmânuja, well set forth by Thibaut in his Vedânta-Sûtras. But Deussen's work is the best exposition of what is virtually the dominant school of interpretation.

Although not distinguished by any novelty of interpretation, the first two volumes, recently appearing in English translation, of Mgr. Louis Duchesne's three-volume "Histoire ancienne de l'Église," have much to recommend them on other grounds. Briefly, they constitute for the period covered, from the beginnings through the fourth century approximately, the best account accessible to the general reader. And this for two reasons: their scholarship and their style. Among students of this subject and this period Duchesne has but one peer and that peer is his German contemporary, Harnack. The volumes are, then, the work of a great scholar with all in the way of breadth of view, accuracy, embodiment of recent investigations, etc., that that implies. But scholarship is no guarantee of readability, yet it is exactly in this respect that Duchesne's work scores brilliantly. The volumes are written with a rare narrative gift which assures the author a worthy place in that great succession of French writers of church history illuminated by the names of Tillemont, Baronius, and Renan. With regard to the translation of the third volume, a thing very much to be desired, the publishers of the English work, Longmans, Green & Co., are not in a position to affirm anything except that it cannot appear for some time to come.

In "Fifty Years of Prison Service" (New York: Charities Publication Committee), Mr. Zebulon Reed Brockway has made a conscientious effort to be autobiographical, but either he is not given to self-study or the habit of writing year-books has been too much for him. His book is mainly a record of his official career with the Elmira Reformatory in the fore and himself in the background. The record is often dry, always informing, and sometimes almost dramatic, particularly in those chapters in which the types of criminals are illustrated by individual histories; over and above the human interest, these narratives are immensely instructive for what they suggest regarding the possibilities of reformation. Not the least interesting, however, are the chapters describing the educational programme at Elmira, in particular the unique ethics class, in which a few hundred thieves discussed, evidently with interest, doubtless with profit, the moral philosophy of Plato and Socrates. Mr. Brockway was fifty years old, and had seen twenty-five years of prison service, when, at the opening of the Elmira Reformatory in 1876, he began the experiment in penology which has made him known throughout the world. By this time his earlier interest in church and religion had given place to a comfortable sort of mysticism, at once optimistic and hard-headed, which enabled him to believe, while working ever for the better, that all is determined for the best. No other theory of life would have served him so well. Even those who doubt whether his experiment amounted to a final demonstration will hardly deny that his work was a success. The difficulty is to find a proper way of determining the results. An investigation conducted in 1888 showed that 78.5 per cent. of the "graduates" were leading self-supporting and orderly lives. An earlier inquiry showed 81 per cent. Mr. Brockway tells us, however, that to those who had reformed the inquiry worked injustice, and it should not be repeated.

In 1894, evidently at the instigation of certain "sinister" interests, charges of cruelty were brought against the Reformatory. After two investigations the management was exonerated. It was admitted, however, that recalcitrant prisoners were sometimes "paddled," and this practice was discontinued. But although the detail seemed unimportant, the backbone of the system was broken; and in 1900, after struggling with a new and hostile management, Mr. Brockway resigned, evidently not without some bitterness of soul, though his account of the matter is manly and serene. He makes it quite clear that, while solitary confinement may work in an ordinary prison, a reformatory system is demoralized if any prisoner can choose to remain merely inactive; and he spends some pages in explaining that the paddling was not for purposes of punishment, but only to give the prisoner the "physical shock" necessary to awaken his attention. In a sense he is right, and he is also wrong. A cut of the whip administered to a horse is not necessarily retributive in motive, but a horse who knows that he will be whipped if he fails to move must logically regard it as punishment.

In "Ecce Deus" (Open Court Publishing Co.) William Benjamin Smith offers an English edition, somewhat revised and enlarged, of a German work published in 1911. This remarkable book, it may be remembered (see the *Nation*, November 23, 1911), seeks to prove positively by means of what is called the symbolic method of interpretation that the Jesus of the Gospels is not an historical man but a mythical god of a cult like Mithra. Of the fresh matter contained in the English version, the most interesting are the postscript in which Dr. Smith pays his respects to some of the reviewers of the German original, and the section headed The Gospel Portrait, in which it is argued that "it seems quite impossible that the Synoptics were aiming to depict any character at all either real or ideal." Indeed, indications of a noble character, such as words and deeds of kindness, and especially of self-sacrifice, are conspicuous by their absence. "We never hear of a single instance of the least self-sacrifice on the part of Jesus. The Passion is not in point, for its contents are purely

dogmatic" (p. 165). Striking also, both for the use of the argument from silence and for the finality of the conclusions, is the following (p. 172):

The fact that Galilee cuts no figure at all in the actual tradition of the first preaching of the Gospel negatives finally and forever the notion that Galilee was the scene of a life in which that Gospel was grounded, from which it sprung, and to which it returned as to its one and only source of authority and inspiration.

The new material, the insertion of headings to sections, the addition of indexes, and the excellence of the book-making as a whole make the English edition more valuable than the German original.

The death is reported of Elrikr Magnússon, in his eightieth year. Born and educated in Iceland, where he issued his well-known edition of the new Icelandic Bible, he was from 1871 to 1910 under-librarian of the University Library, at Cambridge, England, and a lecturer on Icelandic. With William Morris he translated many of the Icelandic stories, among them the "Grettis Saga" and the "Völsunga Saga." Later he published "Three Northern Love Stories," and "The Saga Library."

Science

The following are science books in Macmillan's spring list: "Trees in Winter," by Albert F. Blakeslee and Chester D. Jarvis; "The Fitness of the Environment," by Lawrence J. Henderson; "Mind and Health," by E. E. Weaver; "Malaria, Cause and Control," by William B. Herms; "The Farmer of To-morrow," by F. I. Anderson; "Sheep Farming," by John A. Craig and F. R. Marshall; "Principles of Fruit Growing," by Prof. L. H. Bailey, new edition; "Co-operation in Agriculture," by G. Harold Powell; "Farm Forestry," by E. G. Cheyney; "Forage Crops for the South," by S. M. Tracy; "Fruit Insects," by M. V. Slingerland and C. R. Crosby; "Milk and Its Products," by Henry H. Wing; "General Chemistry, Theoretical and Applied," by J. C. Blake; "Elementary Household Chemistry," by J. F. Snell; "Industrial Chemistry for Engineering Students," by H. K. Benson; "Gas Analysis," by L. M. Dennis; "Definitions in Physics," by K. E. Guthe; "Elementary Principles of Electricity and Magnetism," by R. H. Hough and W. M. Boehm; "Alternating Currents and Alternating Current Machinery," by Dugald C. Jackson and John Price Jackson, new edition; "Genetics, An introduction to the Study of Heredity," by Herbert Eugene Walter; "Household Bacteriology," by Robert E. Buchanan and Estelle D. Buchanan; "Manual of Bacteriology," by Robert Muir and James Ritchie, new edition; "The Fungi which Cause Plant Disease," by F. L. Stevens; "A Laboratory Guide to the Study of Parisitology," by W. B. Herms, and "Plane and Spherical Trigonometry," by A. M. Kenyon and Lewis Ingold.

The "Practical Medical Dictionary" (William Wood & Co.), of Dr. Thomas L. Stedman, evidently satisfies a demand for that sort of aid, for a second edition is on our table only a little above a year after our notice of the first. The book has grown by thirty pages and the editor prides himself upon the thoroughness of the revision which he has been able to make, besides adding a couple of thousand titles. The careful reader will not go far without recognizing that a still further revision is much to be desired, and he may say this in no captious spirit, but rather because he regrets that a book in many ways so good is not better. We must again insist that the pronunciation of Virchow here given is incorrect, and we base this criticism on personal intercourse with the family. Saemisch, now called an "Austrian" (instead of "Australian") ophthalmologist, was in fact as distinctly German as any medical man of any eminence ever known; he was born in Prussia and never lived outside of Prussia for any length of time. His death several years ago is not noted, and we may add that the biographical data in general are far from being as full and exact as the reader will wish and the preface asserts. These are trifles, but indicative of numerous snags that ought to be, and could easily be, removed.

We are, however, more concerned with Dr. Stedman's neglect of words which have a growing interest for medical men besides being long enough in use to demand recognition. Such, for example, are the terms used in physical chemistry, the application of which to biology and medicine has been much studied. The student will find *anion* and *kation* (with misleading pronunciations, although not as bad as that of the eminent biologist of foreign extraction who once publicly spoke of "kashuns") and *cryoscopy*, but when he looks for *osmosis, osmotic pressure, semipermeable membranes,* and other common terms of the subject, he will find nothing or only most incomplete and antiquated definitions. The chemistry of colloids has also been coming to the front for some time and just now looms up very conspicuously, but the reader will learn little about its special words and will look for *sol* and *gel* in vain. If the student seek exact information about modern sphygmomanometry (a subject with a literary past of fully fifteen years), he will have a hard time, unless he knows enough about it to think of Riva-Rocci and Rogers, under which names he will find pictures. He will then find also the astonishing statement that the instrument of Riva-Rocci measures the blood pressure by arresting the circulation in the finger, the fact being that our noted Italian contemporary enjoys the distinction of having devised an arm band for the compression of the brachial artery. Something similar may be said concerning the technical terms of electrocardiography, which already bulk large in medical literature. *Oscillometer* is perhaps too new a word, but a student may well wish to find out what a string- or thread-galvanometer is. The definition is in the book, but hidden under another word. Many other queries suggest themselves. What, we wonder, would the first users of the word (Portier and Richet, in 1902) think of the statement that anaphylaxis is formed from "*ana*, privative, + *phylaxis*." Is it not Homburg-*vor*-der-Höhe, and doesn't *fuchsin* come from fuchsia and only indirectly from the old botanist Fuchs? Agar-agar is commonly believed to come chiefly from Japan, and such seems to be the statement of the most recent investigator of that material. And, finally, let us add a hearty regret that Dr. Stedman, who has a reputation as a purist on both sides of the Atlantic, has chosen to give the weight of his authority to *aluminum* rather than *aluminium*.

Under the somewhat misleading title, "Wild Life and the Camera" (Lippincott), A. Radclyffe Dugmore has published an entertaining farrago composed of advice for the out-of-doors photographer and the camper, narratives of fishing advonturos, and descriptive accounts of mountain tramps, ranging geographically from Newfoundland south to Florida and west to Catalina Island. If this medley contained reproductions of only three or four photographs—those of the mallard duck rising, of the Newfoundland caribou in migration, and of the worm-eating warbler with her family—it would still be far better illustrated than the ordinary "nature book." It contains, however, ten or twelve additional photographs almost as remarkable, and another score or more every one of which is quite worth publishing. Only a very hostile reader will emphasize the undeniable fact that the text is, relatively, of no consoquonce. Relatively, wo say; for all of the twenty-two chapters (somo of which have already appeared in magazines) are at least readable, and cortain of thom are thoroughly interesting. Mr. Dugmore does not write with skill; loose constructions, an amateurish fondness for epithets, and an occasional grammatical slip indicate that ho communicates with us more eloquently by means of his camera than by means of his pen. But what he lacks in skill is in a measure compensated by his evident pleasure in talking about his hobby—photography and tho study of wild life. He sometimes manifests, too, a senso of humor that makes one wondor whether he is not aware of the incongruity between his preaching against the killing of wild creatures and his shooting "a nice fat yearling" deer to furnish food for his agreeable climb up Mt. Katahdin. Throughout the book instruction is pleasantly—often accidentally—interwoven with the author's account of his excursions. Only a few pages, we must confess, are devoted to a direct discussion of out-of-doors photography, and these pages are far from thorough.

Drama and Music

The Evolution of the English Drama up to Shakespeare, with a History of the First Blackfriars Theatre: A Survey Based upon Original Records now for the First Time Collected and Published. By Charles William Wallace. Berlin: Georg Reimer.

When, four years ago, Dr. Wallace published his "Children of the Chapel at Blackfriars, 1597-1603," students of the Elizabethan stage generally were unaware of the existence of an earlier theatre at Blackfriars, although, as it now turns out, documentary evidence to that effect had been accessible in print for nearly thirty years—in the Report of the Historical Manuscripts Commission for 1879. Moreover, Dr. Wallace's

treatise just named contained no allusion to the matter. The first intimation of the existence of such a theatre to the world of scholarship at large came in the form of a letter in the *Daily Chronicle* for December 22, 1911, from Prof. Albert Feuillerat, describing certain documents relating to this subject which he had found among the Loseley MSS. These documents Professor Feuillerat published in full last year in the Jahrbuch der deutschen Shakespeare-Gesellschaft, so that, as far as the Blackfriars is concerned, the phrase "based upon original records now for the first time collected and published" in the title of the present work is not quite accurate. Furthermore, Dr. Wallace here asserts that he had come upon the essential documents proving the existence of the earlier Blackfriars before the publication of his first volume. We do not wish to enter into the unpleasant controversy between these scholars over the question of priority of discovery which, having run its course in the *Athenæum*, may be taken up elsewhere. It would be manifestly unfair to pass judgment in the case until the arguments on both sides have been heard in full. It is carrying the spirit of controversy pretty far, however, when, but for one brief mention, Dr. Wallace excludes from his volume the name of Professor Feuillerat, who, of course, stands in the front rank of living investigators in this field.

The thesis of Dr. Wallace's work is that the real origin of the Elizabethan drama is to be sought in the dramatic entertainments at court, not in the school-drama or other forms. These court performances influenced the popular drama throughout the Tudor period, when the personality of the sovereign loomed so large, but the decisive event in bringing the influence of the court directly to bear on the popular stage was the founding of the first Blackfriars under the management of Richard Farrant, in the latter part of 1576. Here the Children of the Chapel Royal, who were accustomed to act before the Queen, gave what were virtually public performances, and thus came into direct rivalry with the popular stages. The playwrights who purveyed dramatic entertainment for the court were, of course, superior in literary quality to their rivals, and their competition tended to raise the whole level of dramatic production. Moreover, when in 1584 the first Blackfriars theatre came to an end, the court-dramatists found themselves compelled to write for the popular stages, in order to gain a livelihood —hence the transformation of the drama, in a literary sense, which we observe about that year.

From this simple statement of Dr. Wallace's theory it is evident that, whether eventually accepted or not, it is at any rate an ingenious and, at first blush, very plausible solution of the questions at issue. Apart from the influence here ascribed to the Blackfriars theatre, however, the theory is not so absolutely novel as one might imagine from its author's claims. In his "John Lyly" Professor Feuillerat laid stress on the importance of court influence in the development of the Elizabethan drama, and in his treatise, "Le Bureau des menus-plaisirs et la mise en scène à la Cour d'Elizabeth" (1910), he says explicitly: "Il n'est pas exagéré de prétendre qu'à l'office des Revels est dû en partie le magnifique essor que prit le théâtre pendant le règne d'Elizabeth." If we omit here the words, "en partie," we have a succinct statement of the thesis of Dr. Wallace's book, and it still remains to be proved that the qualification which they imply is unnecessary. The whole tendency of Professor Feuillerat's work, indeed, has been to bring into prominence this neglected factor in the evolution of the Elizabethan drama. He has never advanced, however, to the extreme position which Dr. Wallace has now assumed, and in that sense the theory elaborated in the present treatise is unquestionably novel.

From the nature of Professor Wallace's investigations which have centred upon the Blackfriars theatre, we should not, perhaps, be surprised that his book takes the form of an *ex parte* argument. But, on his own showing, before the reign of Elizabeth the number of plays acted at court which were neither moralities nor mere pageants or masques was not very large, and it seems very unlikely that such scattered performances should have had the decisive influence which he ascribes to them. The *Zeitgeist* affected the people as well as their sovereign, and the itinerant companies, so numerous even in Henry VIII's reign, who had to devise almost daily entertainment for a livelihood, were much more likely to develop a dramatic expression of it independently than to take their cue from rare court performances. In any event, the other side of the question requires a presentation which is not given here.

Dr. Wallace's idea that the English drama was liberated from religious and didactic tendencies exclusively through court influences might be erroneous without diminishing the value of his theory as to the part which the first Blackfriars played in transforming the quality of dramatic production about the year 1584. The discovery that this theatre, with its court dramatists, was competing for popular favor during the years 1576-1584 introduces undeniably a new element into the problem, but in this case, too, the evidence hardly justifies, we believe, so sweeping an assumption. The elevation of the Elizabethan drama depended on Marlowe and Greene, who wrote altogether for the popular stage, at least as much as on Lyly, who wrote for the court; but can any one affirm that these writers would not have taken to play-writing, if they had not had the example of Lyly before them? Incidentally, Dr. Wallace endeavors to depress the dates of Lyly's "Campaspe" and "Sapho and Phao" and of Peele's "Arraignment of Paris," so as to fit in with his theory as to the radical change which took place in the drama about 1584. But Professor Feuillerat has given satisfactory reasons for dating even the later of Lyly's two plays early in 1582, and we know nothing positively concerning the date of "The Arraignment of Paris," except that it was produced after the publication of Spenser's "Shepherd's Calendar" (end of 1579) and at least as early as 1584 (since it was published in that year), so that the current dating, 1581, is as likely to be correct as Dr. Wallace's.

Even the earlier part of this work contains much debatable matter, apart from its main thesis—as, for instance, in the transference to William Cornish of certain plays hitherto attributed to John Heywood, Edwards's authorship of "Misogonus," etc., but whatever may be the ultimate fate of Dr. Wallace's theories as to the general evolution of the English drama, or as to questions of detail, there can be no doubt that his treatise is one of the first importance, and that it is likely to determine the direction of investigation in this particular subject for some time to come. We have here a careful history of the dramatic activity at court, especially from the beginning of Henry VIII's reign down, supported at every point by a liberal citation of the original records. Even in regard to the first Blackfriars theatre the author has added considerable documentary material to that published by Professor Feuillerat, and his account of this theatre is a contribution of high value to the history of the Elizabethan stage. The same thing may be said of the Table of Plays and Masks given before Queen Elizabeth, 1558-1585, and the list of Payments for Plays at Court during the same period. The list is compiled from the Declared Accounts of the Treasurer of the Chamber, the duplicate accounts of the Pipe Office and the registers of the Privy Council. In the *Modern Language Review* for October, 1906, E. K. Chambers was the first to point out in an article on the subject that these records constituted the only proper basis for such a list. We are surprised that Dr. Wallace does not mention this fact.

We conclude this review with a correction of detail: "The Buggbears" is not accessible only in Grabau's edition. The play is included in R. W. Bond's "Early Plays from the Italian" (1911).

Edward Sheldon's latest play, "Romance," produced in Maxine Elliott's Theatre, differs

from his earlier works in form rather than in character. Although it asserts itself to be romantic, it is, in its principal scenes, ultra-melodramatic. The story in itself might be romantic if it were not for the ugliness of some of its details. An old bishop, wishing to prevent his grandson from hastily marrying an actress, sets out to tell him in a prologue how in his youth he had a bitter but salutary experience in an entanglement with a prima donna. Then the scene changes and the bishop's story is acted out as the play proper. In it the young clergyman, model of all the virtues, and the singer, possessed of all the graces, conceive a mutual passion at first sight. The extravagance of the introduction—which involves some scandalous reflections upon the morals of early New York society—is maintained throughout. When the simple parson would marry the singer, the latter, loving him too well to deceive him, confesses that her life has always been wayward and that she is even now the mistress of the banker at whose house he had met her. Greatly shocked, he abandons the idea of marriage, but, in his capacity of priest, strives to convert her from the error of her ways. She promises to live purely hereafter, but in a farewell scene, in which he suspects her wrongfully, his passion overcomes his spirituality, and it is the woman who has to recall him to a sense of his responsibilities, his conscience being quickened by the sound of his choir singing hymns in a midnight procession. Here Mr. Sheldon has brought into successful combination such effective melodramatic elements as an erring parson, a repentant Magdalen, musical charm, and religious sentiment, with no regard for anything but theatrical necessities. In the end the parson retires in chastened spirit, to marry the girl to whom he had long been engaged. In an epilogue the grandson, having heard this story, announces his decision of marrying his actress without delay. The play has a certain freshness and inventiveness, with several scenes which will please the crowd, but like its predecessors is weakened by the extravagance of its details.

A catalogue of the Dramatic Museum of Columbia University has been printed, with an introductory chapter by Brander Matthews. Although the Museum is only in its infancy, the list of models (completed or in preparation) of the ancient Greek and Roman theatres, of the mediæval French, English, Italian, and Spanish stages and of contemporary theatrical mechanism, makes an imposing appearance. Professor Matthews, in his preface, indicates the lines along which he hopes the institution will be developed. He writes:

> Besides a collection of models of the more significant theatres, a dramatic museum ought to possess also a large collection of views of theatres, floor-plans, elevations, and cross-sections, with drawings of the interior during an actual performance, in so far as these exist. It would have full sets of the illustrations prepared by artists of all nations for the works of the great dramatic poets, especially Shakespeare and Molière. It should seek out assiduously all the engravings of court-processions, royal entrances, allegorical tourneys, and the like, which are often useful in throwing light on the evolution of the masque in England and of the comédie-ballet in France. It again should collect every possible portrait of actors in costume, for the history of stage-costume (although not so completely neglected as the history of scene-painting) has an importance of its own. It should be the duty of such an institution to collect, to set in order, and to display to advantage the iconography of the drama. It should place at the disposal of the student all the graphic material likely to be of use to him—material which the historians of the drama have not yet utilized to the full. To accompany the accumulated illustrations, showing how certain plays were performed in the theatre at certain periods, there also should be a collection, not only of such "acting editions" of these plays as may have been published, but also of the prompt-books prepared for the use of the stage-manager, and existing only in manuscript.

The announcement that Charles Frohman is to present a revival of "Much Ado About Nothing" next season, with an all-American company, headed by John Drew as Benedick, is interesting on more accounts than one. Old playgoers will be glad to welcome Mr. Drew's return to the brilliant Shakespearean comedy in which he once shared honors with Ada Rehan, and some of them, perhaps, will speculate on the height he might now have occupied as an actor had he continued along that line of development upon which Augustin Daly started him, during the past twenty years—the prime of his professional existence. In the formation of his all-American company, Mr. Frohman will be able to realize the extent to which the syndicate system has exterminated competent Shakespearean performers. His selection will be watched with curiosity. When perfected, it ought, in any case, to give assurance against those varieties of intonations and dialects which have offended fastidious ears in some modern revivals. There is cause for reflection, too, in the sudden ardor for the Shakespearean drama manifested in theatrical circles. It is to be found even among the promoters of the moving-pictures, who are relieved of the responsibility of teaching their actors how to deliver the text, and how to suit the word to the action. What with the spectacular condensations of Sir Herbert Tree, the verbatim representations of Granville Barker's "The Winter's Tale" and "Twelfth Night," and the regular performances of Robert Mantell, Julia Marlowe, and E. H. Sothern, New York will, for once, feast full on poetic drama.

An experiment will soon be made in London with a Welsh play, enacted by Welsh actors. It is called "The Joneses."

Sir Herbert Tree is paying a flying visit to Russia, his object being an inspection of the New Theatre, in Moscow, which has the reputation of being one of the most perfectly equipped playhouses—for artistic purposes—in the world.

The Archbishop of Munich has condemned Wolf-Ferrari's opera, "The Jewels of the Madonna," on the ground that its libretto is an affront to religion.

The London *Times* refers to "the indefatigable Mr. Grainger," as one who "seems ready to provide a continuous stream of British folk-music settings."

Charles Manners is organizing two companies to sing Wagner's four Nibelung operas in English throughout the United Kingdom next season. He is convinced that the "Ring" "will be played by nearly every opera company in England, and if English conductors do not look out there will be the usual rush of foreigners to do the work."

The number of concerts heard in Germany last year is given as 2,440. The works performed reached a total of 15,512, about one-half of which (7,533) were by German composers, who numbered 374. France was represented by 98 composers, Italy by 94. Of the other composers, 136 were Austrian, 51 Belgian, 41 British, 36 Russian, 28 Swedish, 26 Dutch, 25 Danish, 17 Swiss, 17 American, 10 Polish, 10 Norwegian, 8 Spanish.

Monte Carlo will again precede Paris in producing what promises to be an interesting operatic novelty—Charpentier's "Julien." Julien is the name of the hero of the same composer's "Louise," to which the new opera is a sequel. Charpentier has been elected to the Académie des Beaux Arts to fill the place left vacant by the death of Massenet.

Art

A NEW SCULPTOR.

There is no rarer or more delightful sensation than the recognition of a new and genuine talent. This sensation I have experienced at the present exhibition of the Architectural League. What is known as the Academy's Room at the galleries of the American Fine Arts Society is, for this exhibition, given over to work from the American Academy in Rome, and among the things there exhibited is a group of some ten pieces of sculpture by Paul H. Manship, a young man who has just returned to this country after the close of his three years' study at the Roman school. The group consists of a high relief in plaster, a plaster statue of heroic size, a bronze fountain figure a little smaller than life, five or six little groups or statuettes, and a commemorative medallion—enough to give one some clear notion of a personality still in the making but already full of originality and charm.

The high relief, entitled The Woodland Dance, is, I should judge, the earliest of the pieces exhibited. It represents a capering centaur and a dancing nymph, and is competent naturalistic work; the figures, almost in the round and semi-detached from the ground, like those in a classic metope, are well modelled, the composition is successful, and the characterization of the heads is pleasant and slightly humorous. But the manner shows no particular individuality, and the only thing that distinguishes this production from that of almost any other clever young sculptor is the entire absence of the influence of Rodin—an influence found nearly everywhere to-day.

The heroic statue, or group, The Mask of Silenus, pleases me less than Mr. Manship's other works. The idea of the masked figure is ingenious, and the half-frightened child is well done, but the modelling seems less solid and thorough than in other things, and the

archaistic treatment of certain details has an ambiguous effect. One is left wondering if the face under the mask is not like the mask itself, as, apparently, it should be to agree with these details. I do not know if this statue is, in reality, earlier in date than the little groups, but it looks like the first fruits of Mr. Manship's interest in archaic Greek sculpture and a tentative effort to appropriate its piquancy.

The little groups and statuettes, Centaur and Maid, Lyric Muse, Motherhood, Playfulness, etc., seem to me almost uniformly successful and charming. Here there is no confusion and uncertainty; these satyrs and centaurs are not wearing archaic masks; it is their own faces that are archaistically treated, and the figures themselves are simplified in a manner which reminds one of the sculptures of Ægina, and which harmonizes admirably with the elaborately plaited draperies and the conventional treatment of the hair. Yet these groups are full of the direct observation of life and of an essential modernity. The archaism is, after all, only the acceptance of a method and a limit, as if one should choose to write a *ballade* or a *chant royal*, but to express one's own mind in it. And to see this archaistic manner applied to figures with a quite unarchaic freedom of movement, doing things that no archaic sculptor would have thought of making them do, is oddly exhilarating. Perhaps the best of them all is the Playfulness; the slim young mother with the wide-open archaic eye, slightly uptilted at the corners, gayly playing at ride-a-cock-horse with the baby.

These are minor works, with a distinctly sub-humorous intention, and the peculiarity of method seems to me a quite legitimate way of attaining the desired effect. They do not seem to me to be, as one of the newspaper critics has called them, "extremely mannered." Rather they seem the experiments of a young man in search of his manner—a young man who has, fortunately, an eye for the art of the past as well as for the nature of all times, and who is not willing to submit himself to the dominating influence of his own time. And if the mixed style he has employed in them should harden into a premature mannerism, as I do not believe it will, it would, at least, have the merit of being his own mannerism, not that weak reflection of the mannerism of Rodin which seems to be the stock in trade of most of our younger sculptors.

Yet if these statuettes were all that Mr. Manship had to offer, I should, much as I like them, be less confident of his future than I am inclined to be. It is in his fountain figure, The Duck Girl, that he shows what he can really do. If this be not the latest of his works, it is certainly the best, the most thoroughly considered and completed; and the fact that he has put it into bronze would lead one to think that he so regards it. Here there is very little archaism; only that degree of restraint which marks the best sculptural tradition. The hair is elaborated into little rings, and the ivy crown lies flat to the head; the drapery is slightly formalized and stiffened; the modelling of the whole figure is simplified, and the accents are everywhere kept slight. In these things it reminds one of the best Pompeian bronzes, and, as in these bronzes, everything is there under the simplified contours. This is living flesh and tissue, the movement profoundly studied, each bone and muscle and tendon in its place and functioning under the smooth skin. The figure, with its large hip and slender yet well developed bust, is probably that of some precocious Italian girl of to-day; the lovely head, which reminds us vaguely of many things seen before, is apparently a refined portrait. We are as far from the mechanically constructed pseudo-classic ideal as from vulgar realism. Finally, the composition of line and mass is admirable, especially in the way the wing of the duck falls upon the girl's thigh, and the ornament, with its conventionalized fishes' heads for spouts, is delightful. It seems to me an original work of true classic inspiration, which the ancients themselves would have cared for as I do.

Will this new sculptor fulfil his promise? Can he go on, clarifying and defining his style, his talent becoming stronger and more supple, until he stands forth indubitably a master? It is dangerous to prophesy, and we have all been often disappointed. The ugly duckling who develops into a swan is less common than the cygnet who turns out, after all, to be a goose. But, to me at least, Mr. Manship presents so swan-like an aspect that I shall watch his future with the deepest interest, and shall hope that he will prove to have the enduring patience, the indefatigable industry, the high seriousness of purpose, which are, no less than the talent which he assuredly possesses, necessary to the making of a great artist.

KENYON COX.

The Works of Ruskin. Library Edition. 39 volumes in large 8vo, illustrated. Edited by E. T. Cook and Alexander Wedderburn. London: George Allen & Co. Edition limited to two thousand copies.

When Mr. Cook and Mr. Wedderburn began printing the Library Edition of Ruskin ten years ago, the fullest edition lacked thirty titles of being complete. Meanwhile considerable publications of Ruskin's works, especially letters, have added to the responsibilities of the editors as their work progressed. To realize the enormous difficulties of editing Ruskin critically one need only recall that his literary activities began at six, and that he was publishing at eleven. Mr. Cook reckons the titles of books, pamphlets, and articles which are bibliographically desirable for a Ruskin collector at two thousand seven hundred and fifty. This was the raw material for the editors. To such inherent difficulties of a copious and widely scattered production Ruskin added the especial embarrassment of radically revised texts. The first and second volumes of "Modern Painters" were thoroughly overhauled, the changes involving considerable transpositions and excisions. "Sesame and Lilies" has appeared with three different prefaces, and in certain editions lacks a chapter. In this Library Edition one may read for the first time all the material that Ruskin prepared for this famous work. An additional care for the editors, and naturally also a great resource, was the enormous accumulation of manuscript materials. Ruskin's father kept every scrap of the writing of the gifted son, and a complete Ruskin, in the sense in which the Weimar Edition is a complete Goethe, would probably run to sixty such volumes as we are reviewing. Finally, Ruskin's extreme fastidiousness about the illustration and format of his books laid an especial class of duties upon a publisher and editors who were his disciples and friends. Upon the successful discharge of duties so variously delicate and onerous, these gentlemen are most heartily to be congratulated.

As to the text, the editors have systematically preferred the author's last revision; but they have entered all various readings, and in appendices have restored suppressed passages. At first blush one is tempted to doubt if this enormous task were really necessary, and yet Ruskin's retouching of his text is invariably instructive, and few of the passages which for one reason or another he withdrew are negligible. On the whole, we feel that students will approve the thoroughness of the editors. In fact, there is much to be said for dispatching such textual matters, once for all, and by the most competent hands. If literary executors would generally take this ambitious view of their functions, it would save the world much piecemeal and ineffectual pedantry. The tendency of certain critics to upbraid the editors for their exhaustive presentation of variants seems to us ungrateful. After all, nobody has to read the variants, and in due time popular editions will succeed what will remain for students and libraries the definitive edition.

If the editors have been absolutists in the treatment of the text, in the handling of unpublished material they have been wisely opportunistic. Their canon is the published work of Ruskin, but

they have freely drawn upon unpublished material in notes, and especially in the biographical introductions provided for each work. These introductions are a most valuable feature of the Library Edition. Whoever knows Mr. Cook's and Mr. Wedderburn's memoirs of Ruskin does not need to be told that these running introductions are not merely diligently compiled, but also written with taste and insight.

Besides the letters and other unpublished material thus used there are two thick volumes containing the most essential letters, with a calendar containing extracts of minor letters which seemed worthy of preservation. There is another volume of bibliography with a complete list of Ruskin's drawings. The last volume, of nearly seven hundred pages, is given up to a general index. Upon this, one is tempted to expatiate. It enables one to find the way topically through the maze of Ruskin's writings. For example, the index article on Turner runs to twenty-seven pages, fifty-four columns, arranged under twenty-four well-chosen heads. For his neglect of Velasquez, Ruskin has never ceased to be ridiculed. But the index shows more than sixty entries under that name. Such articles as Painting (three columns) and Political Economy (four and a half) are treasure trove for the investigator. And the index reveals quite as clearly the limitations of the man. You will seek in vain for such names as Corot, Théodore Rousseau, Millet, Manet. In compensation, Kate Greenaway, to be sure, a friend and correspondent, requires a column. Such analytical articles are in addition to the usual registration of names and things, while the more important separate works retain their especial indices.

Concerning illustrations the editors have adopted the policy of reproducing all the original cuts, and they have added as well one hundred and seventy-six drawings by Ruskin, previously unpublished. Other new illustrations have been added with wise economy. To have included well-known pictures and buildings would have swelled the bulk of the volumes inordinately. Color illustrations have usually been freshly reproduced by the chromo-lithographic process. These facsimiles are generally more satisfactory than the famous illustrations in the original editions, but in some cases the plates suggest that the drawings themselves must have faded. The editors have even availed themselves of a few unused coppers by Ruskin's hand. Thus the Library Edition must be registered bibliographically among first editions. Every volume contains a facsimile page of the original manuscript. Even Ruskin's few musical compositions have been duly collected. In the make of the books Ruskin's own preferences and the tradition of the house of Allen have been faithfully followed. The stately octavos are on fine paper with a type-face clear, distinguished, and without affectation. The whole enterprise is a noble monument to a noble personality. It becomes immediately indispensable to libraries and students, and it is hard to imagine a day when this Library Edition will be superseded.

In two recent letters to the London *Times*, Mr. Thomas Ashby, director of the British School in Rome, gives a full account of the archæological research carried on in Italy during the year 1912. Many of the discoveries he enumerates have been noted in the *Nation* from time to time; but some have not been generally known and deserve special mention here. The work done in Rome itself is for the most part familiar; the only fresh item of interest concerns the researches of Dr. Fritz Weege in the ruins of the Golden House of Nero. An important part of this palace was, as is well known, covered in Roman times by the substructions of a very large set of public baths, which until the last twenty years bore the name of Baths of Titus, but are now known to have been erected my Trajan. The rooms of Nero's palace, with their beautiful paintings, were closed in and rendered inaccessible by the massive foundation walls of the later structure, which was superimposed on them; but they became known early in the Renaissance, and were studied by artists, such as Raphael and Giovanni da Udine. Some of the rooms have always been accessible to the ordinary visitor; but in these the frescoes are much faded and blackened by the smoke of torches; while others have remained unseen since the eighteenth century, though, as in the case of the frescoes on the Palatine, drawings and engravings existed, which gave some idea of their general character. Dr. Weege has fortunately been able to explore these rooms, and found the paintings in a very good state of preservation. The Italian authorities accepted his proposal that they should completely clear the most easily accessible of the rooms containing a painting identified as Hector and Andromache. The work is now nearly completed, and the results are of such importance that it may be hoped that the other rooms will in time be laid bare; for we shall then have a unique example of the decoration of the palaces of imperial Rome in the first century A. D.

Mr. Ashby also records discoveries at Cumæ and Calabria. The work at Cumæ was begun by Professor Gabrici, who found on the lower terrace of the Acropolis traces of a pre-Hellenic settlement, which seems to have lasted until the eighth century B. C., and also the platform of a large temple, approached by a winding road; below it are massive walls which apparently served the double purpose of support to the terrace and defence of the citadel. The temple belongs to the first century A. D., and was hexastyle, with ten columns on each side. It is not yet certain whether the temple was dedicated to Jupiter or to Apollo.

The official accounts are now available of excavations carried on by Professor Orsi in Calabria in 1910. At Locri Epizephyrii a necropolis was explored, in which, owing to the absence of suitable stone for sarcophagi, large tiles were used for the burial of the bodies. Above 250 tombs were found, placed extremely close together and extending over three centuries, from about 550 B. C. to about 250 B. C. It was not rich, and no vases of special note were discovered; but a number of fine bronze mirror-handles were found. A large Doric temple was also brought to light, with numerous fragments of its terra-cotta decorations, belonging apparently to the second quarter of the fifth century B. C., and a small sanctuary of Athena was excavated. The famous Temple of Hera, on the Lacinian promontory, near Croton, was explored. The wall of enclosure of the *peribolos* was found, with a fortified entrance to it from the great road which led to the temple from Croton, belonging apparently to the period of the Roman Republic. Of the temple itself very little is left, except the one column which still stands close to the shore and is in danger of being destroyed by the waves. Architectural and decorative fragments of marble and terra-cotta were dug up. Remains of a bathing establishment of the Roman period, with a fine mosaic pavement, were found near by.

The exploration of prehistoric cemeteries in various parts of Italy still continues, and the wealth of material of this nature is continually on the increase. A large cremation cemetery, of the Bronze Age apparently, has recently been found in the Central Apennines, within the ancient Picanum. Excavations have also been carried on at various cemeteries in Etruria, notably near Leprignano, close to the site of the ancient Capena, where important discoveries had already been made in past years; while Professor Taramelli has prepared a long report on the discovery of an important Phœnician necropolis at Cagliari, in Sardinia.

John George Brown, artist, painter of The Passing Show and other pictures in which bootblacks and newsboys figured, died Saturday at his home in New York. He was born in 1831, in the County of Durham, north of England, and his boyhood was passed in Newcastle-on-Tyne, where he served seven years' apprenticeship in learning the glass trade. Some years later, while working in a glass factory in Edinburgh, he carried on art studies at the Royal Academy, under Robert Scott Lauder. In 1853 he went to London, where he supported himself by drawing and painting portraits. Shortly afterward, on hearing Henry Russell singing an immigrant song, he determined to come to America. Soon after his arrival here, he began to specialize in painting street boys. The first work to attract wide attention was His First Cigar. In 1860 he had pictures on exhibition for the first time at the National Academy of Design. The following year he was made an Academician for his picture, Curling in Central Park, which was painted for Robert Gordon. In 1869 he was elected president of the Academy. He also served as president of the American Water Color Society and the Artist Fund Society.

Among the best-known of Brown's pictures are The Passing Show, The Dress Pa-

rade, The Three (Scape) Graces, The 'Longshoreman's Noon, A Merry Air and a Sad Heart, The Thrilling Moment, The Old Folks at Home, A Jolly Lot, What Say?, Silent Supplication, When We Were Girls, Training the Dog, The Gang, At the Cottage Door, The Stump Speech, and Grand Menan Fishermen Pulling for the Shore. His output of work was large, between twenty and thirty paintings a year. Many of these have never been seen except by a few who happened to drop in on the painter while he was at work on them.

Finance

REFORMING THE STOCK EXCHANGE.

After prolonged discussion, in and out of the press, the expected bills to reform Stock Exchange procedure were introduced in the Albany Legislature last week. A little while ago, it was expected that measures prohibiting "short sales" and requiring incorporation of the Stock Exchange would be included. In the event, those subjects were not touched. The bill on which attention really focussed was a measure to prohibit and punish "manipulation." It provided that any one who raises or lowers prices of stocks "by means of pretended purchases and sales thereof, or by any other fictitious transactions or devices," whereby "no simultaneous change of ownership or interest therein is effected," shall be punished by $5,000 fine or two years' imprisonment, or both. The same afternoon, the Stock Exchange governing committee adopted a rule that any member of the Exchange or of any firm with such membership, who "shall give, or with knowledge execute, orders for the purchase or sale of securities which would involve no change of ownership," may be suspended from the Exchange for a period of twelve months.

Supposing the Albany bill against manipulation enacted into law—an entirely plausible supposition—and supposing the law to act as a positive deterrent on the offences at which it is aimed, what would the reformed Stock Exchange be like? The truth is, that the New York stock market has drifted so far from what it used to be, and from what any other great stock exchange in the world now is, that it is not entirely easy to draw the picture. In their moments of frankness, most observant members of the New York Stock Exchange would probably confess that the patronage of the institution has been narrowing down more and more, in recent years, first to a group of immensely wealthy outside capitalists who mark prices up or down through a mixture of brute force, gambling machinery, and Peter Funk auction methods, and secondly, to a not particularly wealthy mob of individual speculators, who try to follow such operations and usually leave their money behind them.

It is an old tradition of Wall Street that a market will never grow really active unless it has "great leaders." There have been in the past long stretches of inactivity when it was common complaint that the leaders were all gone. Yet somehow it always happened, after such intervals, that new and fundamental reasons for sweeping changes in values suddenly appeared, and then a new generation of Leaders came into the limelight. Thus it was never quite certain whether the leaders created the market or the market the leaders.

It must be admitted that, even in the days of the Jim Fisks and Jay Goulds, the general public was indulgent to the exploits of those celebrities. There was at least a spice of excitement about it. The financial pages of the afternoon papers were absorbing reading, and not infrequently the achievements of these high financiers of the Stock Exchange appropriated a "three-decker head" and a "column story" on the outside page. Only ten years ago, John W. Gates and his associates occupied, in the mind of the simple reader of the news, a place not unlike that which the lanzknechts and border chieftains filled in the minds of honest civilians of an older century. Probably, also, much of the interest with which the public followed such careers arose from its knowledge that the adventurers in question were throwing their private fortunes into the wild game of chance, and stood to win or lose everything themselves on the turn of a day's market.

Whether because of the latter-day "coordination" of this industry, along with others, or because of the mere "concentration of capital," or because fiduciary institutions began, here and there, to put stock speculation in the front of banking science—whatever the cause, a change undoubtedly came over this pleasing avocation. Something of the sense of monotony and dulness which pervades a manufacturing trade, when a ten-million-dollar company, equipped with scientific management, supersedes the old-fashioned hand-worker and individual employer, began to surround this new and calculated manipulation. Evils and vices of the old régime of professional speculation were retained, but none of the element of picturesque personal achievement. The groups with one foot in a bank directors' office and the other in the stock market seemed (at least in Wall Street's suspicious eyes) to perpetuate most of what was obnoxious in the old-time freebooters of the market, while discarding all their dramatic interest. Robin Hood and his merry men were absorbed and replaced by the Interurban Highway Operators' Corporation, a holding company.

But all this transformation leaves the question open whether, from the point of view of any one save the participants in this new order of Stock Exchange manipulation, anything will be lost by obstructing the process altogether. Wall Street itself is well aware that even brokers' commissions are charily distributed under the up-to-date plan of doing things, while, as for the general outside public, that has long since been convinced that the dice on the table are nowadays loaded, not only by secret inside knowledge of company affairs, but by connections with powerful financial groups and institutions, in case the individual part of the experiment goes wrong. In consequence, not only have people at large lost faith in the Stock Exchange as a fair and open market, but a dead hand has even been laid on popular interest in the course of prices as an expression of the business community's sober judgment of the future. Perhaps, therefore, the mere fact of rehabilitation of the Stock Exchange, in the eyes of the thrifty and respectable outside public, might make the present crusade against manipulation worth the while.

Stanley Washburn's
NOGI
A Man Against the Background of a Great War

With 16 Illustrations from photographs by the author. $1.00 *net.*

A short sketch of General Nogi's life and character. The author was with Nogi both at Port Arthur and later in the field in Mongolia. During the last four months he came to know him very well. General Nogi represents a curious blending of the old Samurai with all the primitive feudal traditions in his blood and at the same time the highest science in modern war.

George Middleton's
TRADITION
and Other One-Act Plays of Modern American Life

$1.35 *net.*

Plays which it is thought will peculiarly appeal to women. The title play shows the dominant man of the family in his effort to crush the artistic ambitions both of wife and daughter. "On Bail" deals with "tainted money." In "Their Wife" both husbands condole with each other. "Waiting" is one of the many cases of a long-delayed marriage. "The Cheat of Pity," a dramatic "triangle," and in "Mothers" the protecting woman is shown.

The Nation said of the author's "Embers" and other plays: "'Embers' is a tender, human, and inspiring piece, somewhat akin to Gilbert's 'Sweethearts' and Howard's 'Old Love Letters.' In 'Madonna,' a difficult subject is treated with exceeding delicacy and touches of simple pathos . . . 'The Gargoyle' is a curious conceit, very ingeniously and somewhat plausibly treated. . . . But in every play there is much good literary workmanship, with many evidences of keen observation and ready invention."

CONSTRUCTIVE RURAL SOCIOLOGY

By JOHN M. GILLETTE

Professor of Sociology, Univ. of North Dakota

This work surveys carefully rural conditions, notes tendencies and deficiencies, seeks to present clearly problems calling for prompt solution, and to point out ways of betterment in accordance with the best ideals of country life. The practical aim of the book is to organize information with a view to improving the present situation. The subject is considered as a whole and in its larger aspects.

Auction Bridge

With Revised Laws and the New Count

Containing a chapter on Coon-Can

By J. B. Elwell

Mr. Elwell has retained the title, "Auction Bridge," because this new volume comprises the substance of that former classic; but this is so completely a new work that hardly a single paragraph in it is the same as in the other. The introduction written to the game of "Royal Spades," etc., compelled an entirely new treatment; and this is virtually a new work, printed from new plates, and revised from cover to cover.

With Illustrative Hands. $1.25 net.

Auction Bridge IN TEN LESSONS

As Played Since the Adoption of the New Count

By Grace G. Montgomery

By the device of "Question and Answer" she has compressed her great experience as teacher and student into this little volume.

"The chief value of the present volume is in its compression and convenient size, and in its clear arrangement."—*Evening Post.*

"The information is so complete and well arranged that the little book fulfils the promise which its title implies."—*Boston Globe.*

Illustrated. $1.25 net; by mail $1.33.

Art in Egypt

By G. Maspero

Director-General of Antiquities in Egypt.

Nearly 700 illustrations.

"It is profusely and delightfully illustrated with pictures of all ages of Egyptian art."—*Boston Transcript.*

"Sir Gaston Maspero treats it here for the first time as a whole. This fact and the admirable selection of illustrations (many very rare) give his book far greater value than most hand-books can claim."—*London Times.*

$1.50 net; postpaid $1.65.

Latin America: Its Rise and Progress

New Volume in the South American Series

By F. Garcia Calderon

With a Preface by RAYMOND POINCARE, of the French Academy; President of the French Republic. *Translated by* BERNARD MIALL. *With map and 32 illustrations.*

A far-sighted study by a distinguished Peruvian diplomat who writes from a viewpoint that comprehends all international relations and influences—intellectual, social, and political—that have a bearing on "Latin America." The author reveals the contending racial characteristics of the people as illustrated in their history and their present political situation; shows the common salient characteristics of the various sections and attempts to foresee the way these peoples are likely to react under pressure from various foreign countries:—a significant work for Americans, describing with force and candor what our present policies toward these republics should let us hope for, or make us fear.

8vo, $3.00 net.

Veiled Mysteries of Egypt

By S. H. Leeder

Author of "The Secret Gateway."

With numerous full-page illustrations.

This curiously interesting and intimate view of the Egyptian people as they live in city, village, and desert resulted from the unique opportunity that came to the author:—the head of the Islamic religion allowed it to be known that he gave approval to his living on familiar terms for a considerable time among them.

8vo, $3.75 net.

Development of Religion and Thought in Ancient Egypt

By James H. Breasted, Ph.D.

Professor of Egyptology and Semitic Languages, University of Chicago.

"This is the most notable contribution to the history of religions recently made, and it is the most valuable ever made to the history of the religion of Egypt. It embodies the most exact scholarship of the type commonly regarded as German; and it is characterized by the brilliancy which is usually ascribed to the French."—*N. Y. Evening Post.*

Essentials in Journalism
By HARRY FRANKLIN HARRINGTON, Director of Courses in Journalism, Ohio State University, and THEODORE T. FRANKENBERG, *Ohio State Journal.*
8vo, cloth, 300 pages, illus., $1.75
This textbook, designed for all young people wishing to prepare for practical newspaper work, has been tested, with gratifying success, through three years of classroom work.
The book aims to combine the practice and the philosophy of all routine newspaper work and takes up each phase of editorial activity. For the benefit of the teacher in English who may not have had actual newspaper experience there are appended a series of assignments, stories to be written out, articles to be put in approved newspaper form, and various exercises calculated to differentiate newspaper writing from other literary activities.

TREES IN WINTER

By A. P. Blakeslee (Connecticut Agric. Coll.) and C. P. Jarvis (Storrs Agri. Exper. Station)

An authoritative manual on the selection, location and planting of trees for different purposes and their care at different seasons. Illustrated. $2.00 *net.*

THE FITNESS OF THE ENVIRONMENT

By Lawrence J. Henderson, A.B., M.D.

The physical and chemical characteristics of life and cosmogony, and of the properties of matter in their biological relations.
$1.50 *net.*

NEW MACMILLAN FICTION

ONE WOMAN'S LIFE

By Robert Herrick, Author of "Together," "The Healer," etc.

The life story of Milly Ridge. The drama of a human soul. A fine modern study of human motive. $1.35 *net.*

PATSY

By S. R. Crockett, Author of "Love's Young Dream"

A stirring romance of Galloway in the years of smuggling and adventure, told in Mr. Crockett's best vein. $1.25 *net.*

CONCERT PITCH

By Frank Danby, Author of "Joseph in Jeopardy," "The Heart of a Child," etc.

A love story of unusual trend and method, typical "Danby" in material and spirit. $1.35 *net.*

THE CROCK OF GOLD

By James Stephens, Author of "The Hill of Vision"

A fantasy of indescribable charm. "Not another book like this in English literature."—*London Standard.* $1.25 *net.*

Published at 64-66 5th Ave., N.Y. **THE MACMILLAN COMPANY** On Sale at All Bookstores

The Nation

NEW YORK, THURSDAY, FEBRUARY 20, 1913.

The Week

Any settlement whatever in Mexico, even if but temporary, would have been welcome, and the one arrived at on Tuesday is perhaps as satisfactory as could have, at the moment, been found. Madero was depending solely upon his generals, and when they failed him, the game was up. What they did was not of the nature of a *golpe de estado*—that had come before—but was to force a cessation of the war raging in the very capital. By so much, it may be said that Generals Huerta and Blanquet acted patriotically. Something had speedily to be done to prevent, not alone a bloody and fruitless civil war, but foreign complications threatening the very independence of Mexico. The last have now seemingly been averted, and that is a great gain, even if the ultimate solution of the real Mexican problem remains yet in the unknown. There is no great promise in a military interregnum. One does not like the idea of the Pretorian Guard making Presidents. But the acute crisis is passed, and the Mexican people may yet find a way to struggle back to stable civil government. Meanwhile, what has already happened is a fine justification of the cool and sound policy of President Taft in keeping hands off. A precipitate intervention would have created ten thousand evils for every one that it cured. Mr. Taft stood resolutely by the position which he first took, that the Mexicans must be left to fight their own quarrels through—so long as Americans were not exposed in any numbers to slaughter—and the result must be a great source of gratification as well as relief to him. It certainly is to the whole country.

Last Monday was still Tuesday of last week in the Senate of the United States. An agreement to take a vote on the Connecticut Dam bill had been made for the "legislative day" of Tuesday, and as the speech-making could not be cut short, the day was cut long. The debate was long and earnest and really important; for there was involved the whole question of controlling water-power by the Government, and of compelling the users of water from a navigable stream, or the developers of electric power from it, to pay a reasonable tax. But the final vote of the Senate was against this new view of the Government's rights and duties, and the bill was passed without the provisions which champions of the conservation doctrine, like Senator Burton, had ardently advocated. It is not expected that the Connecticut Dam bill, in its present form, can pass the House at this session. Should it do so, it is understood that President Taft would veto it. Thus it would appear that the Senate had simply wasted its time. But if it has given the conservationists a juster idea of the opposing forces, and has the effect of inciting to new effort to get all these matters settled in the right way, the time spent has really been well spent.

Republican Senators in caucus at Washington on Saturday took action that looks decidedly interesting from the standpoint of political prognosis. In selecting as objects upon which effort is to be concentrated for the remainder of the session five bills of the kind that a few years ago would have been called progressive, and which now are more generally spoken of as Progressive, the Republican caucus has given perhaps the most substantial indication that has yet been furnished of the existence of a "get-together" process as between the two segments into which the Roosevelt revolt divided the party following. Of four of these five bills—or at least bills essentially identical with them—Mr. La Follette can claim the authorship; and all the five are advocated both by him and by the Progressive Senators. The Wisconsin Senator must be taking a grim satisfaction in such a verification of the claim that he kept insisting on throughout the tempestuous period when the Roosevelt whirlwind was sweeping through the country last year, after so unceremoniously blowing him off the field. Mr. La Follette always maintained that the progressive movement within the Republican party had been making enormous headway, and that everything looked hopeful for it until the Colonel rushed in and upset all that had been done. Whatever may be the fact on this head, certain it is that Mr. La Follette had been working strenuously and successfully for years in the promotion of a progressive programme, before Mr. Roosevelt discovered that there was anything in it; and it is easy to understand the Senator's feelings when the Colonel pushed him aside and made himself "the whole show." Mr. La Follette must feel now as though he were making a fresh start at the point where he left off a year ago.

It would be almost revolutionary if Mr. Wilson were to carry out his alleged purpose of confining his inaugural address to two thousand words. This would release the attention of the audience within fifteen minutes. An open-air speech to the multitude at an inclement season is like Macbeth's bloody errand—"'twere well it were done quickly." After all, most of those who face Mr. Wilson at the east front of the Capitol will have assembled, not to listen to a long disquisition, but to witness an impressive ceremony and to look into the face of the citizen whom a nation has raised to its highest office. Except at some critical juncture in public affairs, an inaugural address should seek terse expression which will interest by its spirit rather than by its argument, by its mirror of the man rather than by its promises of future accomplishment. To press into a few words what most of his predecessors have spread over many would put Mr. Wilson's rhetorical ability to a severe test, but his success would assure his remarks a reading not accorded to such an utterance since Lincoln's day.

The imposition of jail sentences on the president and twenty-eight officers or employees of the National Cash Register Company, as a result of their conviction under the Anti-Trust law, attracts wide attention for two reasons. It is only the second case in which such sentence has been imposed, and the company concerned is a well-known and important enterprise. The president of the company receives the extreme penalty prescribed by the Anti-Trust law—$5,000 fine and a year in prison. The defendants had been tried before a Federal jury in Cincinnati, under a grand jury

indictment found on February 22 of last year. This was a criminal indictment, of which the counts alleged the driving of competitors from the trade by bribing their employees, injuring their credit, influencing transportation companies against them, cutting prices by illegitimate means, threatening suits for the purpose of harassing the business of rivals, organizing dummy competing corporations, and instigating suits against the patents of competitors for purposes of annoyance. The evidence has been detailed and voluminous; on Thursday of last week the jury found the defendants guilty on all counts of the indictment.

The judge, in imposing sentence, referred with special emphasis to the evidence that the concern had maintained a "competition department whose sole duties were, not to sell goods, but to prevent the sale of goods by competitors." As our readers know, the *Nation* has opposed, throughout the Anti-Trust suits, the newspaper clamor for general recourse to the imprisonment penalty of the law of 1890. We have held that, in the great majority of cases brought before the court there had been no clear agreement in the courts, prior to the Supreme Court's two great decisions in May of 1911, as to just what did or did not constitute restraint of trade. This being so, and defendants being able to show opinions of lower courts which were at least ambiguous, it appeared to us in the highest degree unreasonable to impose a penalty such as the law reserves habitually for offenders who violate it knowingly and defiantly. The weakness of the defence in the present case lay in the fact that nearly a year had elapsed since the Supreme Court's plain ruling on the nature of illegal restraint of trade, and in the character of the business methods alleged in the indictment. The motion made by the defendants' counsel for arrest of judgment bases itself, not on the ground of a verdict contrary to the evidence, but on grounds of legal technicality, including the contention that the Anti-Trust law is unconstitutional.

Gen. Woodford's death removes a Civil War veteran who, in addition to his services at the crisis of the nation's life, gave full devotion to his country in many forms of useful activity. His greatest opportunity came when, as Minister to Spain in 1898, he labored with might and main to prevent war. And he publicly maintained at Boston, in October of that year, that our Government could have obtained the withdrawal of Spanish rule from Cuba "without the firing of a shot or the loss of a life." This may have seemed an extreme statement at the time, but not when, three years later, the full story of his diplomatic negotiations and dispatches was for the first time published by the Washington authorities. Then it became clear that if President McKinley had not been so terrorized by Congress that he had not the courage to second Minister Woodford's efforts, hostilities could have been averted. It was on April 5, 1898, that Gen. Woodford sent a moving dispatch to the President —which he did not lay before Congress —giving the positive assurance that the Spanish Government was willing to grant two out of our three demands, with the other one virtually certain soon also to be granted, and adding: "I believe that this means peace, which the sober judgment of our people will approve long before next November [election month!], and which must be approved at the bar of final history." But McKinley already had his war message written, and sent it to Congress with only the barest mention of Minister Woodford's earnest appeal.

A State that gave the Roosevelt electors a plurality of 60,000 last November would seem to be one that was particularly without excuse for harboring any dickering or deals between the saints and the sinners, yet Michigan actually leads the way in a reuniting of the Republicans and the Progressives. The latter get the platform, which is so mediæval as to except judges from its proposal for the adoption of the recall, and the former have the satisfaction of marching under the same old banner which, up to June 18 of last year, even the Colonel held sacred. This unholy alliance proves that, however it may be in New York, former Chairman Hotchkiss's recent statement at Albany is not of universal application. The Progressive leader remarked: "I am safe in saying that the Progressives would not enter the same room with Republican leaders." He, or at least his chief, will be constrained to revise this assertion, however, when they give due consideration to the battle-cry of the Michigan Republicans. "Get together and fight the Democrats" was the heaven-sent word that dispelled all anger and threw brother once more into brother's arms.

Upon the statement of two negro women that they had seen him throw the body of a murdered white woman into a cellar, a negro was lynched at Houston, Miss. The next day a ring, said to have been the property of the murdered woman, was found in the possession of another negro, who confessed the crime. He was burned to death in the court house yard. And a dispatch solemnly records the report that "No further trouble is feared from the negroes, most of them taking the matter calmly, seeming to think that the guilty one received just punishment." What the innocent one received they are evidently too well schooled in the ways of justice to talk about. If anything could add to the ghastliness of this two days' exhibition in a single town, it would be supplied by the twenty-three-year-old son of an Evansville, Ind., factory owner, who deliberately shot and killed three negro employees of his father's, giving as his excuse that his victims were trying to run the plant, that they had threatened his life, and that they were carrying revolvers and knives. The police, it is explained, believe that the youth was temporarily insane. One is tempted to ask whether the same characterization will not be made of whol sections of the country one day.

"Few of us realize," says the Memphis *Commercial-Appeal*, "how the death-rate among infants has been steadily growing." The editorial is entitled "Startling Statistics," and it opens thus:

> One baby dies every ten seconds. Six babies die every minute. Three hundred and sixty babies die every hour, and eight thousand, six hundred and forty babies die every day.

There is, of course, nothing in these statistics to show that "the death-rate among infants is steadily growing"; but the impression made on the mind of the average reader by magazine articles, reform addresses, and the like, which seek to startle rather than to inform, is just such as has been made on the mind of this editor. It may be thought that this can do no harm; that,

for instance, though the truth is that the death-rate among infants has been steadily and enormously diminishing, instead of "steadily growing," yet there is room for much more improvement, need for much more effort, and so the error can do no mischief. But in point of fact, this *class* of errors can do a great deal of mischief; for there is nothing that contributes so much to the growth of thoughtless revolutionism as the spread of false and reckless assertions concerning the actual tendencies of the existing order of society.

That Joaquin Miller's vogue should have been greater in London than it ever has been in this country is quite in accordance with Europe's traditional attitude towards American literature. The Old World has never forgiven us for failing to live up to its ideal of our primitive civilization. It is the volcanic or eccentric elements in our literature that Europe prefers to accept as typically American—Poe and Whitman in the spirit of their works, Bret Harte in his picturesque material, and Joaquin Miller in his own picturesque personality of flowing mane, flannel shirt, and boots. Miller's theatrical flair suited London's preconceived notions of our Far West, notions based partly on inductive reasoning, and partly on Bret Harte's romantic evocation of a California that never existed. The foreigner never ceases wondering why the tamers of a continent and the upbuilders of the greatest industrial society in history should fail to be inspired by the work of their own hands. Mr. Arnold Bennett is quoted as saying that, if Balzac had seen Pittsburgh, he would have cried out, "Give me a pen!" It is not at all unlikely that if Balzac had seen Pittsburgh he would have made a better go of those numerous commercial schemes for making money that he was always engaged upon. Instead of devoting himself to Père Goriot, he might have gone into partnership with Mr Carnegie.

Judge Ward's decision that ex-President Castro was illegally excluded from this country by the immigration authorities, may be appealed from by the Government, but it has already had its due and wholesome effect. It has released Castro, but that is of minor consequence. He may come or go as he pleases, and hereafter will receive only the attention which his personality, such as it is, deserves. But the principle has been established that incoming aliens have rights under our laws, which the administrative officials cannot override. Above all, Judge Ward's decision makes an end of the absurd pretence of the Government that, because Castro refused, on examination, to incriminate himself, therefore he was a criminal. If such a doctrine had been set up in Venezuela, we know what would have been said of it here. To have it brushed aside by our own courts is a great clearing of the air. For the State Department it is a mortifying and even humiliating ending of what from the first had every appearance of being a personal and vengeful persecution of Castro.

The plight of Ambassador Leishman must be another mortification to the State Department. Why he should have been promoted to Berlin has never been satisfactorily explained, particularly as the Americans in Turkey were never enthusiastic about his service there. Now that the present open scandal has developed, it does not seem proper that he should remain a day longer at his post. Mr. Taft, we all know, is inclined, in a case like this, to take the easiest way out, which would be to allow Mr. Leishman to serve the remaining two weeks before Mr. Wilson becomes President, when his resignation goes in. But if it is true that he is in arrears for his rent, as well as in the payment of other bills, to say nothing of the suit against him in this city because of his stock-gambling losses, the situation would seem to be too serious to admit of delay. Our diplomatic service has none too good a repute on the Continent, and under the Knox régime its prestige has steadily waned. But its standing will be injured and not heightened by glossing over this scandal. An immediate recall is what the situation requires, even if the stories from Berlin are without foundation. Mr. Leishman's usefulness has plainly come to an end.

An incidental remark in an article in the London *Economist* on "The Advance of Argentina" throws an interesting sidelight on the vast sweep of the interests that would be affected if England were to abandon her free-trade policy. The astonishing scale on which Argentina has been developing is one of the most remarkable phenomena of our time, and the *Economist* points out that one of the main factors in this development has been the steady stream of British capital flowing into the country, the present amount of such investment being estimated at £500,000,000—two and a half billion dollars. "It is worth while," says the *Economist*, "to remember that any artificial measures aimed at restricting the entrance [into the United Kingdom] of foreign grain and meat will, so far as they are successful, strike a blow at some of our most meritorious countrymen across the sea." The truth is that, whichever way the British protectionists turn their eyes, they encounter difficulties and drawbacks, while the advantages they offer are of a decidedly shadowy nature. The only thing that gave their cause anything of a real "boost" was the calamity cry—the story of decline of British trade and industry which, for a time, gained the public ear; but subsequent developments emphatically disposed of all this, and the whole movement has ever since been limping badly.

The amalgamation of the three principal English railway unions would, in one respect, seem to bring nearer the possibility of a general strike of transport workers such as has been threatened by the irreconcilable element in the British unions ever since the partial failure, or partial success, as one chooses to regard it, of the great strike movement in Great Britain during the last two years. The extremists are even looking forward to the great Union of Unions which shall put labor in a position to dictate terms to its masters and the state. At the same time there is a distinct concession to the conservative element in the provision which vests in the executive officers of the new union the authority to order and terminate strikes without a vote by the members of the union. It was shown during the recent strikes that the leadership of the unions is much more moderate than the rank and file. One of the main tenets of the syndicalist creed which aims at the amalgamation of all labor unions into a single fighting body is that all important decisions shall be made by a referendum vote. Hence the new railway organization embodies a compromise between two tendencies.

IN THE COILS OF EXTRAVAGANCE.

There is something almost laughable in the pained astonishment now prevailing at Washington in the matter of swollen appropriation bills. Everybody is alarmed at the rising tide of extravagance, yet everybody is helpless. President Taft is still busy on his plans for something like a national budget, but he has no power to cut down Government spending, except by vetoing entire appropriation bills—and that is no real remedy. The Chairman of the Appropriations Committee in the House raises his voice in emphatic warning against the rate of expenditure which Congress is authorizing, but all that he can do is to protest. He cannot stop the waste. The centralized control of appropriation bills with which the Appropriations Committee was vested years ago, has gradually been taken away from it. There are now some ten or twelve committees each authorized to frame and report its own appropriation bill. And this scattered authority has meant squandered public money. The leader of the majority in the House, Mr. Underwood, has been appealed to, and his attitude in the matter is what it ought to be, but he can do little except to pass on the appeal to his party followers. Neither he nor anybody else has the power to come down with a blunt: "You shall not have this money."

How much good it does merely to beg a popular assembly, with the unrestricted power of the purse, to be economical, may be seen in the Public Buildings bill, which was introduced in the House on Saturday. Bear in mind the circumstances. The session is drawing to a close with the Democratic leaders in a state of great apprehension over the mounting appropriations. Pledged to economy, they see the bills piling higher and higher. The solemn warning has been issued that, unless there is the sharpest possible cutting down of the remaining bills, the appropriations of this session will exceed those of the last by $100,000,000, and equal if not surpass the high-water mark of Republican extravagance. Now, this is the time—the critical time—chosen for bringing forward a bill which would appropriate in one lump more than $25,000,000 for public buildings in various parts of the country.

Who is responsible for this? Nobody and everybody. It is just the result of a huge scramble, favors being widely and unblushingly distributed for the purpose of getting votes for the measure. No Representative with a piece of "pork" safely in the barrel will object to its being shoved along. The bill was drawn not only without the authority of the most influential Democrats of the House, but against their wishes and, indeed, their protests. Congressman Fitzgerald, of the Appropriations Committee, who is opposed to the whole plan, spurned the offer of an item of $300,000 for Brooklyn, which was made as an inducement to him to acquiesce, or at least keep silence. But others in both parties were caught wholesale by sprinkling through the bill almost innumerable appropriations of from $100,000 down to $5,000, each one being intended as the justification of the Congressman to his constituents for voting for a measure which, as a whole, is indefensible. The entire bill, considered in itself and in the circumstances of its being pressed upon the House, is one of the most glaring illustrations ever given the country of the evils of our happy-go-lucky methods of public finance.

The mischief, in the proportions to which it has grown, is not one to be cured by a budget system, pure and simple. That would be a great help, no doubt, and ought to be urged and tried. But it could not go to the root of the evil. After you had framed your budget as carefully as expert knowledge could make it, how could you be sure that Congress would be bound by it? What guarantee could you have that log-rolling measures, like the Public Buildings bill, would not at any moment gain sufficient headway to burst through all your labored plans of economy? It is one thing to lead Congressmen up to a budget, but another to make them drink it. It is not only a more painstaking and quasi-scientific apportioning of Government expenditures that is needed, but a power of control, lodged somewhere, that shall see to it that the thing proposed is carried out, and that the official plans are not trampled upon by Congressional raiders.

We know how the difficulty has been met in British finance. All money bills are reserved for the Government. A private member cannot even introduce a bill to spend public funds. Thus a rigid control is kept in the hands of a responsible Ministry. The Chancellor of the Exchequer can make his estimates without fear of having them knocked sky-high by a log-rolling combination in the House of Commons. In addition to a national budget, we must acquire somehow the authority to compel living up to the budget, if we are effectively to make head against extravagance at Washington. At present, as we can all see, there is only the feeblest control. Control would involve, of course, sound judgment. In the Public Buildings bill there are, for example, some appropriations that are not only justified but needed. What intelligent control would do would be to allow these items, but remorselessly to excise all those thrown in simply as makeweights, or tacit bribes, in order to get the bill passed. Till we get something of that sort, or until the President be empowered, as the Governor of New York is, to veto separate items in an appropriation bill, we need not expect to free ourselves successfully from the coils of extravagance, which are now crushing Congress as the serpents did Laocoön and his sons.

THE BULL MOOSE AND THE COURTS

Mr. Roosevelt has spoken and written on the judiciary, times without number; but never, we believe, has he made an utterance so illuminative as to the condition of his own mind, or so instructive as to the true significance of his agitation, as was contained in his Lincoln Day speech. His main text was the Idaho decision excluding the Roosevelt electors from the official ballot. That this decision, however unfortunate, was simply the inevitable interpretation of the law of the State, seems to us clear. We have recently set forth the actual facts of the case, which seem to us plainly to show that Mr. Roosevelt's charges were based on ignorance. But let us waive that. Let us grant that Mr. Roosevelt has reason to believe otherwise. Let it be supposed, for the sake of the argument, that the Idaho Supreme Court rendered a decision that was not in accord with a true interpretation of the law. And then let us ask ourselves what is to be thought of the state of mind of a man who, at the celebration of the birthday of Lincoln, can speak in this way:

At this moment there has occurred in Idaho a decision by the highest State court which, within its own limits, is an even graver offence against justice and decency and an even greater blot on the American judiciary than the Dred Scott decision itself. . . . This decision I hold to have been an outrage upon the people of Idaho, and not merely upon them but upon the people of all the United States, for any interference with the right of an American in any State to cast his vote and to have it counted for the President of his choice is an offence against the Americans of all the States.

The Dred Scott decision was one of the memorable events of our national history—it may even be said, of the world's history. Whatever may have been its legal merits, whether it was right or wrong from the standpoint of professional interpretation of the Constitution, it embodied the clash of mighty political elements, it brought to a focus the light and heat that had been beating upon the tremendous question of slavery and of States' rights for a generation. When Lincoln denounced it —even denounced it as a conspiracy— he was grappling with great forces that everybody knew were at work, forces that soon after came into collision in a stupendous trial by blood and fire. To mention in the same breath with it the act of a court on a technical point of election procedure, a point not bound up with any general principle, a point not paralleled anywhere else except in California, where a similar decision was made by the courts, but made in Mr. Roosevelt's favor—to place this isolated judgment in juxtaposition with the Dred Scott decision and base upon it an appeal to national indignation and popular passion, is the act of a man either filled with an egotism hardly to be distinguished from insanity, or so reckless as to be willing, in the pursuit of his ambition, deliberately to play the part of a contemptible demagogue.

And what is Mr. Roosevelt's remedy for this appalling outrage that he sees in the Idaho decision—this audacity of the judges in reading the law otherwise than as he would have them read it?

A case like that in Idaho shows the need of the power of popular recall of the judiciary, a need which I believe could probably be best met by having the judges appointed or elected for life, but subject on petition to recall by popular vote every two years.

Upon this we do not propose to comment; with those who like that kind of judiciary it is unprofitable to argue, and for those who do not there is no need of argument. We merely remark that when Mr. Roosevelt first came out with his own particular nostrum of the recall of decisions, he laid great stress on the difference between that and the recall of judges, and warned his hearers that the wicked press would be accusing him of having advocated the recall of judges, when all that he proposed was the reversal, by popular vote, of judicial decisions in a strictly limited class of Constitutional cases.

On the recall of decisions, Mr. Roosevelt offers nothing specially new, unless it be when he says: "I care not whether you call this action of theirs [the people's] construing the Constitution or making the Constitution." His critics have always known that he did not care, and they have always asserted that making—or unmaking—the Constitution is precisely what this recall of decisions would amount to. But Mr. Roosevelt absolutely ignores the fact that, so far as State Constitutions are concerned—and that is what he professes to be talking about—there is an easy way to do this already in existence. He may or may not be aware that there is pending in his own State at the present moment a Constitutional amendment which would give the Legislature full and unrestricted power to act as it thought best in the whole class of questions to which his recall of decisions is intended to apply. The amendment has been adopted by one Legislature; if the present Legislature takes like action, it can be made part of the State Constitution this coming November. To do so may be more radical as to the immediate matter in hand than it would be to "recall" the Ives decision of the Court of Appeals, or any similar decision or decisions; but it would be doing the thing as it should be done, decently and in order.

The very thing that attracts the Rooseveltian mind about recall of judges and recall of decisions is that they do things not decently and in order, but by noise and tumult. They do not go about the task of curbing the courts through the setting of narrower bounds to their powers; they strike at the very heart of the idea of the judicial function. And no enemy of these proposals has ever given so convincing a presentation of the dangers to which these proposals would open the door as Mr. Roosevelt himself has just made. Does he try to show that the Idaho judges misinterpreted the law? Does he try to show that they were personally corrupt? Does he try to show that they acted under the pressure of outside political influences? None of all this. He simply denounces their act as having had consequences that were evil. Whether that was the fault of the law or the fault of the judges he makes no pretence of examining. If an ex-President, the head of a great party, can make such an appeal at a time of tranquillity, what is to be expected of the common demagogue, and what is to be expected of the general mass of the people, in a time of extraordinary excitement?

FRENCH PROSPECTS.

The news from France, in this first week of M. Poincaré's Presidency, continues to emphasize the tone of optimism and universal good will which was struck after the election of a month ago. The republic is looking forward to an era of good feeling. The new President and his Prime Minister, M. Briand, are regarded as the two men best fitted to raise the business of government from the slough of factional politics to the level of true nationalism. It was M. Briand who some three years ago announced that the time had come for a policy of "appeasement." The feuds and rancors that had sprung from the Dreyfus affair were to be swept away. The hatreds engendered by the conflict between the state and the church were no longer to be inflamed artificially for political purposes. In other words, parties and persons standing outside the dominant alliance of Radicals and Socialists were no longer to be regarded as under suspicion. A "formula"—and formulas are still dear to the Gallic mind—could be found broad enough to include all Frenchmen. That is very much the burden of the news to-day, but it plainly must be taken with a certain amount of reserve. The journals of weight and standing in France whose views are apt to shape the reports sent out by foreign correspondents have as a rule been in opposition to the parties in power. They would naturally be inclined to welcome any new régime as a better régime. But even allowing for such bias, there is no denying the fact that

M. Poincaré has assumed office at a moment when an exceptionally healthy and confident tone animates the French nation.

The internal condition of France shows a notable advance towards pacification. The labor unrest which found its most vigorous expression in the activities of the General Confederation of Labor, with its blend of socialistic and anarchistic policies, seems to have attained its climax in the great railway strike of the autumn of 1910. It was M. Briand's masterful handling of that crisis that made him the logical expounder of a policy of appeasement. His past affiliations were with Socialism and Anarchism, but responsibility found him prepared to defend the existing order with as much vigor as the most moderate of citizens could demand. The activity of the revolutionary Confederation of Labor has waned since that date. The firm policy adopted by the Cabinet towards the revolutionary unions of schoolmasters last year was another instance of a growing determination on the part of the Government not to submit to intimidation. The strikes and demonstrations which were an annual feature of life in Paris have of late fallen into abeyance. It is true that revolutionary Syndicalism is still a live question of the day, but it is the theories of Syndicalism that are being most hotly discussed. France has had no labor disturbance during the last two years that can compare with the crises which Great Britain has passed through, or even with the strikes carried on in this country under the picturesque auspices of the I. W. W.

It is a significant fact that even Gustave Hervé, the exponent of anti-militarism and anti-patriotism, who once upon a time called upon the army recruits to throw the flag of the republic upon the dunghill, has seen fit to moderate his views. Hervé has been compelled to take into account the change that has come over the spirit of the French nation during the half-dozen years that followed the appearance of the Moroccan question. That has, of course, been more or less a formal issue over which France and Germany engaged in a bitter duel that only recently came to an end with the establishment of a French protectorate over Morocco. It was a struggle which, from the French point of view, had for its object the reduction of France to a mere dependency upon Germany. It was marked by more than one severe crisis; more than once the question of war or peace hung in the balance. The contest began with a humiliation of France, back in 1905, when the German Emperor forced the retirement of M. Delcassé from the Ministry of Foreign Affairs. But in the course of the struggle the French people found themselves. The unofficial alliance with Great Britain was one of the factors which enabled France to stand up to German pressure. But simultaneously there has been a strengthening of the popular morale. Ten years ago those who believed in the republic were afraid of the army, and the army itself was rent apart by the animosities springing out of the Dreyfus affair. To-day the spirit of "appeasement" pervades the army, and the country is no longer afraid of its troops. Gustave Hervé has had to take that fact somewhat into account.

This same spirit of healthy confidence is manifested in the literature of the day. Paris will never be without her anarchists in letters and art, but the sickly decadentisms and epicureanisms of a dozen years ago have lost much of their vogue. Maurice Barrès is the most notable example of those who are turning from dilettantisms of various kinds to the gospel of duty. The simple ideals of the provincial literature of France, as expounded by René Bazin and Henry Bordeaux, are making their impress on the literature of the *blasé* metropolis. The "cult of the land and of the dead," which is but a literary name for patriotism, has grown in literature, undoubtedly under the influence of the long struggle against Germany. Altogether, it is not surprising that there are those who speak of present conditions in France as almost a national renaissance.

"JUST BILLS."

Thirty-eight of the forty-eight State Legislatures are in session, and two more will meet before the year is half gone. Out of two score deliberative bodies what wisdom may not come! Yet there are indications now and then that all that is legislative is not wise. A Wisconsin State Senator, for instance, has introduced a bill to abolish the junior "prom" and other class dances of the University of Wisconsin. If any member of the Connecticut Legislature were so bold as to introduce a bill of this sort, it is not hard to imagine what winged words would beat upon his ears from New Haven. But the Wisconsin Senator has his reasons. A hearing on a bill to abolish fraternities brought forth testimony of lavish expenditures by students for social diversion. "When university students tend to impoverish their parents by supporting an eighteen-hundred-dollar dance," exclaimed the Senator, subsequently, "it is high time the people of a democratic State should be informed of what is going on at their State-endowed university." Arizona, on the other hand, does not seem concerned over what may be going on in this line at Tucson, but is greatly disturbed over a proposal to put the union label on all legislative stationery. The House, after a heated debate, defeated the motion, but in the Senate all stationery must bear the label of the union.

One of the oddest bills that have confronted the Legislature of North Carolina this year would make illegal the keeping of honey-bees within one hundred yards of the public roads in Pender County. There was much applause, it is reported, when this bill was read for final passage. One inquisitive Senator wanted to know how bees could be kept from the road. A colleague explained that rural mail-carriers in Pender were greatly troubled by certain bee-stands located near the mail-boxes. Another moved to amend the bill by extending its provisions to wasps, bumble-bees, and "yellow-jackets." A third declared that he would not vote for the bill until he was sure that it would not work injury to some humble citizen of Pender County with a small tract of land who might not be able to locate his bee-stands as far as one hundred yards from the road. Finally it was discovered that the introducer of the measure was absent, and so it went over. More serious is freakish tampering with the fundamental law of a State. The Constitution of South Dakota is hardly a quarter of a century old, and it has been materially amended, yet a constitutional convention is about to be called to revise it. Will that convention repeat the mistake, common to so many of our State Constitutions, of putting into that instrument matters of detail that belong to statutes and not to Constitutions, and

thus perpetuate the necessity of frequent changes?

The flood of freak bills is confined to no section of the country. In Pennsylvania, "bills by the score have been introduced in both Senate and House at Harrisburg. Some of them are important. Most of them are not—are just bills." The same complaint comes from California, a trifle more bitingly expressed, the headlines being: "Clean Gone Crazy. The State Capitol at Sacramento Has Become a Lunatic Asylum." The text is in the same tone:

> The character of our Legislature as an organized body will not be known until its final adjournment, but that it contains a large number of members whose mental balance is so completely lost that their proper place is a sanatorium is evident from the great number of freak bills introduced. . . . Some anarchist wishes to abolish the militia. A near-anarchist would abolish the Legislature and substitute a single house. It is said that more than forty constitutional amendments have been introduced, and that the prospect is that so many of them will pass that it will be necessary to call a special election to vote on them.

One newspaper attempts to set forth the philosophy of such proceedings. "The tendency of all legislative bodies," it remarks, "is to turn out a mass of new laws." The consolation is that very few freak proposals reach the Governor.

What gives one pause in any consideration of this situation is that bills reflect the mentality of their sponsors. Like bill, like legislator—and, what is of more consequence, like legislator, like constituent. Yet it must be conceded that the latter has fought valiantly to free himself of the stigma implied in this comparison by trying one device after another to improve the quality of his legislator. He has prohibited the Legislature from meeting annually, and limited it to biennial, and, in one case, that of Alabama, to quadrennial, sessions. He has imposed the further limitation of 40, 45, 50, 60, 70, 75, or 90 days in two-thirds of the States upon the duration of the session. He has begun to establish legislative reference bureaus to tell the legislators how to say what they mean, and in some States he is dividing the session into two parts, the recess being supposed to furnish opportunity for reflecting upon what to do with the legislation that has been proposed. All of these devices, however, have not stopped the deluge of bills, or centred debate upon the more important measures. Here is the real objection to freak or unnecessary proposals. They divert the attention of the lawmakers from the essential to the unessential, and thus bring about a misconception of what legislators are for. We need a training-school for lawmakers in order to enable them to see the difference between a well-considered programme of laws and "just bills."

TAKING POETRY TOO SERIOUSLY.

In view of all that is being done to encourage the poetic art in America, it can scarcely be said that we fail to take poetry seriously. Is it not possible, on the contrary, that we take it too seriously, and that this attitude, having its effect upon the poets themselves, is responsible for a certain sense of strain, a certain absence of simplicity and naturalness, in their expression? What is demanded of them, at present, is not merely poetry, but great poetry—as a nation we will not be satisfied with less—and in their efforts to supply it, our poets run the risk of confusing artistic greatness with moral seriousness and spiritual elevation. It makes no difference what the subject may be. Anything from a love lyric to an elegy on the death of an airman must be treated in the same manner, must be subjected to the same sublimation of style and sentiment, so as to lose every trace of the common or familiar and to become "ideal." An excellent case in point is afforded by a poem which appeared in a popular magazine on the death of the aviator Moisant. "They say that magazines do not publish great poetry nowadays," remarked the editor. "Why, Shelley himself would have been proud to have written that poem if he were alive to-day!" And it was indeed in the Shelleyan manner, this poem; so much so, indeed, that the effect was really ludicrous; as if what the poet had striven after had been a parody rather than the sincere expression of the pathos involved in the untoward event commemorated.

Now, ideality is admittedly the highest attribute of great art. But the constant effort to idealize life by spiritualizing emotion and sentiment, as part of a deliberate poetic and rhetorical process, produces a sense of effort and unreality. Much of our contemporary American verse shows this sort of forced ideal, and attains elevation only at the expense of real emotional warmth and imagination. The drift is, indeed, towards a purely intellectual exercise of the fancy, based rather upon concepts than upon intuitive perceptions. It was Miss Ellen Terry who said she had never heard so much talk about beauty, or seen so little evidence of its sensuous appreciation, as among American college women. The same might be said of American verse, which impresses the reader no less by its coldness than by its intricate subtleties of form. Nor has subject-matter much to do with this. The young poets who to-day rebel most against what they call "Puritanism" in American art, and seek to introduce a note of "passion," assume precisely the same attitude in essaying to celebrate its glowing mysteries; and in attempting to exalt these, they import into them outworn conceptions of allurement and of sin in the manner of Swinburne and Baudelaire or Oscar Wilde. It is, after all, merely an exchange of models. The mood is the same, and we are just as far as before from real poetry—that is, poetry that is an intimate personal record of thought and emotion.

It is not new themes that we need, but the knowledge that the province of poetry marches upon that of prose, that the material for the one as for the other lies close at hand, ready for use, and that the surest way to attain heights in either is to pay strict attention to truth and naturalness of expression. The taste for sublimities tends to dry up the sources of the simple, tender, purely human sentiment that finds utterance, for example, in the verse of some of the younger French poets of to-day who at once in their ease and their elegance afford a distinct relief from our own lyrists. The latter, like our athletes, seem often "over-trained." These French versifiers have also that "sense of humor" which we so irritably arrogate to ourselves as a national excellence, though it does not safeguard us against taking ourselves very seriously indeed in nearly everything we attempt. We strive so to "appear," while they feel absolutely at home in their medium of expression, daring to say so much in verse that we should shrink from for fear that it might be "bad manners" or beneath our dignity. No incident which pleases or amuses them, no fancy which excites or grati-

fies them, is unworthy to be turned into easy, flexible, and dexterous verse—yet verse admirable in warmth and tenderness of sentiment—to which they bring a closeness of observation, a realistic coloring of description, a cleverness of witty invention, productive of charming surprises, from stanza to stanza, that we seldom encounter in our own versifiers.

It seems plain that the great poetry for which we are so desirous to-day, and which must first of all be natural and sincere, might be more surely attained in the course of time if we were to relax somewhat from our strained and tense attitude in courting the Muse. We should make of poetry one of the graces rather than one of the severe duties of the intellectual life. And we should, in the meantime, be accumulating an admirable body of well-turned minor verse, without due appreciation of which, according to the degree of its merits, we may fail to recognize the great manifestation when it does finally arrive.

THE INTERNATIONAL ART EXHIBITION.

The Association of American Painters and Sculptors has deserved well of the city in exhibiting, along with a somewhat limited selection of recent American work, a comprehensive series of the earlier revolutionary painters with an adequate representation of the very latest anti-realistic schools. Thus materials for a public verdict on Post-Impressionism, Cubism, and Futurism are generously offered. The exhibition will run long enough for readjustment to these novel types of invention; the battle of the critics may be fought within eye-shot of the hostile lines, and the discriminating minority of the public, the ultimate judge in these matters, may take its position for or against the new movements. Obviously, if sculpture and painting are to be utterly revolutionized along anti-naturalistic lines, as certain critics confidently predict, why, the sooner the turn-over is made the better. If, on the contrary, as we believe, these new tendencies are mainly the insignificant seething of crude and undisciplined personalities, the sooner this fact is perceived the better. In either event, good must result from bringing the new art out of the incense of clique and special pleading into the light of every day.

Aside from this special aspect of the show, President Davies and his associates have provided pleasure of a non-contentious sort by assembling works of highly individual flavor which escape the categories of movements and schools. Few New Yorkers have had the chance of enjoying the rich fantasy of Redon, of estimating the morbid power of Van Gogh, the barbaric intensity of Gauguin, the stalwart constructions of Cézanne. It is interesting also to have the chance to view the painting of that pride of otherwise despairing British art, Augustus John. In the foreign exhibits the Association has handsomely lived up to its programme of Internationalism, Internationalism being, of course, defined as a technical and revolutionary word.

Not the least valuable feature of the exhibition is the close juxtaposition with the newest work of paintings of the so-called Impressionistic schools—Manet, Monet, Renoir. All those revolutionists of thirty years ago now assume the sedate aspects of classics. Ingres, his rival Delacroix, and their successor Degas harmonize on the wall, with an old-masterly assurance. The fact that these leaders of a couple of generations ago now plainly fall into the general tradition of great painting, emphasizes the reality of the revolution on foot. The romantic Delacroix belongs with the classic Ingres; it is safe to say that Picabia and Matisse never will belong with either. Art is at the brink either of genuine revolution, or, as we believe, of a monstrous aberration. Either way, something like a new thing has been found under the sun, even if the newness turn out to derive from such venerable sources as excessive boredom, ignorant self-assertiveness, or over-ingenious pursuit of novelty and notoriety. If the newest art is really to be the art of the future, plainly *homo sapiens* must become a new creature—

> 'Ban, 'Ban, Cacaliban
> Has a new master: get a new man.

Waiving these ulterior issues, the exhibition sets an excellent example of efficient organization and accomplishment. For years the National Academy has been grieving for want of a building in which large and stately shows may be given. But this new Association proves that the way to give shows is to want to give them badly enough to take the necessary trouble. Nothing could be more satisfactory from every point of view than the installation of the present exhibition. If the Academy can give a large and fine exhibition under its competitive system, to give it is merely a question of rearranging, on a plan that could be repeated year by year, any large, well-lighted hall. The financial support implied in such a step should readily be forthcoming. The Academy should take up what is virtually a challenge of the revolutionaries. The way to combat the extravagances of the innovators is not club-corner ridicule, but to show pictures and statues that make out a convincing case for sane traditional ideals. The way to get a splendid building for Academy exhibitions is to give shows that plainly call for fine housing.

If the shade of Dr. Johnson could step into the present exhibition, one can imagine it emitting a spectral guffaw that would blow at least half the exhibits irrevocably through the skylight. And if this robust sprite were suddenly told that the official art of the nation was being shown in cupboards and crannies because nobody would build an art palace, it would be not the Post-Impressionists, but the conservators of our national artistic tradition who would hear the impressive utterance—Fiddlestick!

SIDNEY'S "ARCADIA."

The death of Sir Philip Sidney in his thirty-second year, a few weeks after the wound received at Zutphen, was only the culminating tragedy of several which it is difficult not to read into his life. The highest type of English gentleman though he was, with a quickening influence upon many sides of activity, mourned by a whole nation when he died, he leaves those who have studied the bright promise of his youth grievously disappointed that some of his best talents were somehow almost smothered. This is bound to be the feeling with reference especially to his literary career. He was fitted by native ability and by education to be much more than a patron of letters. And it is true that his name is usually included among the great writers of his remarkable day. Yet after due allowance is made for a few sonnets, which have an independent beauty, his reputation in literature is too much entangled with passing fashions of the age not to suf-

fer greatly when it is measured by more permanent standards.

Sidney's most extensive work, the "Arcadia,"* is very little read these days, and it is small wonder. If Scott and Dickens cause present-day readers impatience by their method of leaving one thread while they turn back to pick up another, what shall one say of Sidney's convoluted progress? Yet to the sympathetic student of Sidney the "Arcadia" is an absorbing document. While recognizing it, from a modern point of view, a failure, one may find profit in searching it for signs of literary ability which might have achieved enormously, if properly directed.

I.

The "Arcadia" leaves the modern reader more uncertain as to its author's intention than almost any other important work of that time. It appears to have no critical purpose. Even the enigmatic Ariosto is not so baffling as Sidney. For above the entertainment which the author of "Orlando Furioso" palpably got from the vast body of fiction then opened up to Europe, his mind is felt to be reacting critically. He at least surveys his material with a cynical smile, and his elevation above it bestows upon it a sort of unity and artistic purpose. And Spenser, whatever else he may have intended to do, revealed, as no other writer of his day had done, the poetic adaptability of many elements of life. He it was who gave to the cant expression "pure poetry" its one drop of sense. He had, at the very least, a poetic outlook on life, and through it maintains his individuality.

To me it must always seem strange that Sidney should not have made something more than he did of the prose romance. Let it be granted that he beautifully domesticated a late Alexandrian product, and that his work is better than any of its kind written by contemporaries. Yet the impression of the piece as a whole is of a "Faerie Queene" (not including the stretches of allegory in that poem) put into prose; that is, with the very "salt" of the poem's existence gone. The regret over Sidney's failure is made still greater by the thought that when he first undertook the work he was feeling his way towards a form close to the modern novel. If we may trust the statements of Mr. Bertram Dobell, who has discovered in manuscript the first draft of the "Arcadia," the hopelessly episodic complexion of the current version replaced, in the original version, a pretty sustained development of character, with the incidental stories falling into a nicely proportioned framework and serving merely as illustrations of important traits in the central personages.

However this may be, Sidney soon yielded to the full plan of Heliodorus and other Alexandrians who had made the prose romance popular, and glutted his work with episode. The surprises of situation and the delight in corruscated ornament were allowed to impair the main narrative and character-study. Having vitiated these as a means of holding his story together, upon what did he rely for unity of action? This is an important point. The Greek romancers had a pretty definite conception of Fortune to serve as backbone, the romances of the Middle Ages were built around the institution of chivalry. And Sidney, too, if he took his work seriously, as I believe he did, must have felt the need of a big propelling motive. Yet where to look for it? Old landmarks had been uprooted in almost every branch of knowledge, as well as in religion, and settled lines of belief had not been restored. Not until years later did any such "justification" as Milton found for his epic release itself. That Sidney was conscious of the problem is attested by his half-hearted attempt to transform the old idea of Fortune into the Renaissance conception of *virtù*, or human efficacy. Other writers also appear to have missed the underlying motives which literature once had. Painter and Golding, we know, pretended to read Christian allegory into the tales of ancient Greece or Rome which they translated; and it may be that Stephen Gosson, for all his distortions, expressed a widespread yearning for a sound vindication of literature.

The confusion of ideas was broader than literature; it touched all else. For the moment it was difficult to understand how life, in any large way, was controlled by fixed human motives. Such being the case, the epic, or epic-romance, of all the types of literature, suffered the most. By its nature it requires some broad generalization to rest on. In the absence of one, Spenser, as I have suggested, trusted not a little to the sheer lift and sweep of poetry. Sidney, with less chance of success, not improbably put a similar reliance upon his own poetic prose, which, indeed, he regarded theoretically as poetry, following Aristotle's principle. For the rest, his story gets on as best it can by "creative evolution," one chapter begetting another. Perhaps, indeed, M. Bergson's phrase is an exacter description of an artistic method, then common, than it is of the modern universe. The fact is striking that literature, though lacking an articulate *raison d'être*, possessed enormous vitality. Ancient or modern, it swept along irresistibly. The sixteenth century was the last age, and perhaps the first, in which a serious writer would have begun an epic work with virtually nothing to hold it together. Yet, true to the time from which it sprang, the "Arcadia" possesses extraordinary energy—each of the very numerous episodes being told with steady enthusiasm—but no direction; it goes round and round. If to Sidney his work seemed to have some relation to actuality, this must have been because in a vague way it does reflect the sheer rush of life of which the age was conscious.

Herein lies the futility of the "Arcadia," so far as we moderns are concerned, that if, as a whole, it is to have any significance, this must be an irradiation of energy which each is forced to interpret for himself. Whatever there may be in excess of its literal meaning is not communicable from one to another, but has to be vaguely felt, after the manner of the indefinite symbolism to which poets sometimes resort. Did Sidney, for instance, employ in the "Arcadia" some of the Platonism which he learned at Oxford? He gazes so directly and withal with such wonder at certain moments of life that one is tempted to read into that look a transcendental understanding, such as crops out in the "Astrophel and Stella." Or it may be that it is only the Pygmalion in him. For, like Spenser, he is palpably fascinated by some of his creations, and thereby seems to give them a life not their own. Love of beauty was strong in him, and with such a one beauty was apt to transfigure. Yet if the "Arcadia" was more than the "frolic of invention," the author kept the secret to himself.

II.

This central weakness, a fatal weakness to be sure, being admitted, the "Arcadia" offers many compensations. It has the stuff of good comedy; novelists might have drawn upon it much more than they have done, especially for the hints it gives of woman's mental processes; it is full of lyric feeling not badly expressed, and its style is rich and spacious. In a word, it shows much of the excellence and versatility of the age. Briefly, it is the story of two Greek princes, cousins, Pyrocles and

*The Complete Works of Sir Philip Sidney. (Cambridge English Classics). In three volumes. Edited by Albert Feuillerat, professor of English literature in the University of Rennes. Volume I, "The Countesse of Pembroke's Arcadia." Cambridge University Press. New York: G. P. Putnam's Sons. $1.50 net. The bibliography of the "Arcadia" is complicated. Written as early as 1580, it underwent revision at Sidney's hands, and was first published, incomplete as he left it, in 1590. Of the earliest form, which was circulated but never printed, three manuscript copies were discovered in 1907 by Mr. Bertram Dobell, two of these having since come, as we have been informed, to this country. In 1593 the original "Arcadia" was combined by an unknown person, though reported to be the Countess of Pembroke, with the first printed quarto, and was issued. This is the version which is usually reprinted. But Professor Feuillerat has adopted for his text the version of 1590, reproducing the archaic spelling, and in Vol. II of the Works will furnish that part of the original "Arcadia" which was later added to complete the story. The Works will also include the Poems, "The Defence of Poesie," the Correspondence and Political Pamphlets, as well as the translations of the Psalms and of Mornay's "Vérité de la Religion chrestienne."

Musidorus by name, who, after numerous adventures, among them a shipwreck, win their way to Arcadia, to which an elderly king, to outwit an oracle, has retired with his young wife and two beautiful daughters. As the king, for oracular reasons, does not wish his daughters to marry, one prince has disguised himself as an Amazon, the other as a shepherd. The devices by which the princes make themselves known to the girls, gain their love, and in the end marry them, are bound up with an almost infinite series of surprises, shared by eighty-eight named personages and by many who are not named. Quite two dozen of the characters have histories of their own which are recounted at length, and which are brought into connection with the main adventure. Obviously, there is nothing meagre about the background of this story. Almost all of the chivalric apparatus found in the "Faerie Queene" is present here: fair love-sick ladies float aimlessly across the horizon; the jousting is as plentiful and as various; excellent, ill-apparelled knights "carry it away"; if there is no dragon, at least a lion and bear give scope to men's courage; pastoral interludes abound, as well as choice rural vignettes, among them as charming a picture as ever Spenser painted of maidens bathing in a stream; there is a stubborn captivity presided over by a wicked woman, morally akin to Tasso's Armida.

All this background enters into one's appreciation of the "Arcadia," producing a cumulative effect, but Sidney's literary talent can be brought out sufficiently by reference to the main traits which I have enumerated. First, the comedy. Though the situations are largely borrowed from ancient writers, he has manipulated them with a rare instinct for their possibilities. It is a question whether even Shakespeare, except for one detail, has greatly improved upon a bit of farce to which Sidney showed him the way. The duel between Viola in disguise and Sir Andrew in "Twelfth Night" is anticipated by the encounter of two cowards in the third book of the "Arcadia." Shakespeare, by having one of the combatants a girl, touches the situation with prettiness and a certain refinement. Here is the challenge of Damætas to Clinias, which should be read in connection with Sir Andrew's well-known bravado:

> O Clinias, thou Clinias, the wickedest worm that ever went upon two legs; the very fritter of frauds, and seething pot of iniquity: I, Damætas, chief governour of all the royal cattle, and also of Pamela (whom thy Master most perniciously hath suggested out of my dominion), do defy thee, in a mortal affray from the bodkin to the pike upward. Which if thou dost presume to take in hand, I will out of that superfluous body of thine make thy soul to be evacuated.

The words being delivered, Clinias bade the messenger to "tell the lout that sent him, that he disdained to have anything to do with him." But men were present to prick both parties on, and the duel had to take place, though Damætas, for one, was eager for it—when he fancied that his challenge would not be accepted. "Then lo, Damætas began to speak his loud voice, to look big, to march up and down, and in his march to lift his legs higher than he was wont, swearing by no mean devotions that the walls should not keep the coward from him; but he would fetch him out of his conniebcrrie." His shield was to bear the following device: a plough with the oxen loosed from it, a sword with the many arms and legs it had cut off, and a great army of pens and inkhorns and books. All these were to mean that he had left the plough to do such bloody deeds that a host of writers would be kept busy to "historify" them. Asked why he wrote no motto on the shield, he replied that "that was indeed like the painter that sayeth in his picture, 'Here is the dog, and here is the hare.'" The comedy, which is developed at considerable length, never flags, and the manner in which Sidney delays the climax by some fresh surprise and sharpens the action by precise "gesture lines" makes the scene one of the notable farces in English literature. If it is not quite the equal of Shakespeare's, it may be compared without disadvantage with the similar scene in "The Rivals."

Sidney also keeps well sustained the fun of Pyrocles's disguise as the Amazon Zelmane. The doting of the old king, who takes him for a maiden, and the competition of mother and daughter, who know him to be a man, lead up to a roaring climax when Pyrocles makes an appointment separately with king and queen to meet him in a cave, but leaves them shamefacedly to confront each other. Of elaborate comic scenes there are few in the "Arcadia," but innumerable funny situations are roughly sketched. Musidorus in shepherd's dress trying to reveal his identity to Pamela by making love in her presence to the wench Mopsa, while Pamela, seeing his game, holds him for a time to his ostensible avowal; his leaving the deluded Mopsa later to wait in a tree for his return when, unknown to her, he has eloped with Pamela; a proposal by deputy having the same result as Miles Standish's; and a score of other such devices witness to a rollicking humor which, if it had had the outlet of drama, might have been long acclaimed.* This statement may sound extreme to those who judge Sidney by the bits of extravagant grotesque found particularly in his battle scenes. But these are manifestly supposed to embody that grim epic humor to which even Homer was not averse, or to furnish a contrast to more refined scenes—the sort of foil beloved of Spenser.

III.

I have said that Sidney's chance of inventing what might have been the first of modern novels was gone when he sacrificed character-study to the surprises of situation, yet a novel might still be easily made out of the "Arcadia" by a deal of pruning and by slightly developing the lines of character which are clearly marked out. The contrast furnished by the two girls, the somewhat independent yet feminine Pamela and the yielding, winsome Philoclea, is well recognized. The former has often been compared with Richardson's maiden of the same name. A truer comparison would link Pamela and her sister with Shakespearean heroines. Sidney's women have, in fact, much in common with Shakespeare's, especially lightheartedness, archness, humor, and love of banter. Pamela, in love with Musidorus, is listening as he tells the tale of his cousin Pyrocles, and interrupts so far as to say, "And therein you may (if you list) say something of that same Musidorus, his cousin, because, they going together, the story of Pyrocles (which I only desire) may be better understood." Philoclea is less patient: "But go forward, dear Pyrocles, I long to hear out till your meeting me: for there to me-ward is the best part of your story." The repartee of Philoclea and Pyrocles, whose Amazonian disguise is not yet suspected, is strikingly like the exchanges of Orlando and Rosalind while the latter is playing the man. Later, Philoclea, anxious and yet loath to reveal her love, catches precisely Juliet's manner: "Shall I seek far-fetched inventions? True it is, alas, too true it is, O Zelmane (for so I love to call thee, since in that name my love first began, and in the shade of that name my love shall best lie hidden) that even while so thou wert (what eye bewitched me I know not), my passions were fitter to desire than to be desired. Shall I say, then, I am sorry, or that my love must be turned to hate, since thou art turned to Pyrocles? . . . Thy virtue won me; with virtue preserve me. Dost thou love me? Keep me then still worthy to be beloved." Nor will any one fail to see a resemblance to the embryonic Juliet, namely, to Julia of "The Two Gentlemen of Verona," in Pamela's toying with a missive received from Musidorus after he, for his too great ardor, has had to be disciplined:

*"The May Lady," a dramatic interlude composed by Sidney to entertain the Queen at Wanstead, the Earl of Leicester's castle, in 1578, is too slight a thing to afford a measure of his ability. Therion, a forester, and Espilus, a shepherd, contend in argument and amœbæan song for the possession of the Lady of May. This is much the sort of thing occasionally met with in the "Arcadia." Some fairly good fun is supplied by Rombus, a pedant, who utters a deal of bad Latin and Latinate English.

But when she saw the letter, her heart gave her from whence it came. And therefore, clapping it to again, she went away from it, as if it had been a contagious garment of an infected person; and yet was not long away, but that she wished she had read it, though she were loath to read it. Shall I (said she) second his boldness so far as to read his presumptuous letters? And yet (said she) he sees me not to grow the bolder thereby. And how can I tell whether they be presumptuous? The paper came from him, and therefore not worthy to be received; and yet the paper (she thought) was not guilty. At last, she concluded, it were not much amiss to look it over, that she might out of his words pick some further quarrel against him. Then she opened it, and threw it away, and took it up again, till (ere she were aware) her eyes would needs read it.

The debt of Shakespeare's women to John Lyly has been stated many times; what they may owe to Sidney has never been sufficiently studied.

Characterization in the "Arcadia," as might be suspected, comes out incidentally, one might say inevitably, rather than from design. The occasional penetrating sentiment which has made the passion of "Astrophel and Stella" appear to be something more than pretence, is met with in almost as poignant form in the longer work. Musidorus, in momentary difficulties with Pamela, began "to bewail not for himself (whom he hated) but that so notable a love should perish." At one point Philoclea was embarrassed by her own boldness, "whereat she blushed, and yet kissed him again to hide her blushing." On another occasion the same lady for a while "did nothing but turn up and down, as if she had hoped to turn away the fancy that mastered her, and hid her face, as if she could have hidden herself from her own fancies." With but a few strokes Mopsa is made into a veritable Audrey. "In faith, you jest with me: you are a merry man indeed," is her sufficient way of discrediting a nobleman's advances, and nothing could be more in character than her voluble, inconsequential manner when she receives permission to tell a tale. One of the shepherds, being asked to give an opinion of the pretending shepherd, Musidorus, says tartly: "The lad may prove well enough, if he oversoon think not too well of himself, and will bear away that he heareth of his elders." So much has been made of Lyly's innovation, evident in his plays, of distinguishing the speech of the low-born from that of the nobility that Sidney's similar, earlier achievement might properly be dwelt on. How far he was in advance of Robert Greene in this respect is brought home by the instance of Margaret, daughter of a gamekeeper, in "Friar Bacon and Friar Bungay," who glibly quotes Virgil.

Richardson's indebtedness to certain of Sidney's characters has often been felt, but has never been precisely stated. It is difficult to illustrate; yet every one must recognize the hints which were at the disposal of the later writer. The introspection and powers of self-analysis which some of the personages in the "Arcadia" possessed, especially when examining the sentiment of love, were just the kind of thing to appeal strongly to Richardson; his kinship here to Sidney is much more marked than to the author of "Euphues," in which work the similar examinations partake less of the modern spirit than of the conventions of courtly love. Usually, as I have previously said, Sidney lacks the dead-level seriousness of Richardson, but in one scene, where Pamela, urged by the wicked woman Cecropia to yield up her virtue, upholds the cause of chastity and of God's right purposes, it might be Richardson's heroine talking; though at this point she is equally to be compared to the Lady in "Comus," where the very situation is substantially repeated.

IV.

The language of the "Arcadia" has caused greater annoyance to those who have merely dipped into it than to the few who know it well. It is so easy to make a great to-do over scattered sentences like the following: "And so, as they sate devising how to give more feathers to the wings of Time," etc.; or "her handkerchief, which had lately drunk up the tears of her eyes," etc. The chances are that if the prose style of the day had not been discredited by Euphuism, Sidney's work, which has next to nothing in common with Lyly's, would receive fairer treatment. Pathetic fallacy it is guilty of, though not so enormously as is generally supposed; but Shakespeare sinned in that way, too. And it is noteworthy that when Sidney reads into inanimate objects human sentiments, his analogies are at least precise on the surface. When the girls have finished bathing in the Ladon, which has grown amorous after such an experience, and are drying themselves, "the water (with some drops) seemed to weep, that it should part from such bodies." Owing to the tricks of the Petrarchists, the whole universe was easily conceived of as being thrilled by a lady's beauty, and Sidney, while falling in with the habit, strove more than most for accurate likenesses. Not infrequently one runs across such a choice bit as this: "Her lips, although they were kept close with modest silence, yet with a pretty kind of natural swelling, they seemed to invite the guests that looked on them; her cheeks blushing, and withal when she was spoken unto, a little smiling, were like roses when their leaves are with a little breath stirred." If it is said that prose is tortured by the general run of Sidney's analogies, then the same charge, in less degree, must be brought against Bacon in the Essays. He himself might have written Sidney's comment on a dog coming out of the river, "shaking off the water (as great men do their friends) now he had no further cause to use it."

Naturally, the language of the "Arcadia" will never again come into use; though it is perhaps worth noting that for Sidney's "goodly cypress, who bowing her fair head over the water, it seemed she looked into it, and dressed her green locks by that running river," the purist Hawthorne has an overhanging tree beside the river at Concord which with its outstretched arms appears ready to dive in. But I would not dismiss Sidney's style with an apology; it was too much a part of himself to deserve anything of the sort. If Spenser could catch the poetry of a mere fleck of light, the sunshine in a grove or the glint of a stream, Sidney's language seldom fails to bring out the tender beauty of the humblest surroundings:

It [the picture] was of a young maid which sate pulling out a thorn out of a lamb's foot, with her look so attentive upon it, as if that little foot could have been the circle of her thoughts.

H. DEW. F.

NEWS FOR BIBLIOPHILES.

The late Edward N. Crane, of Newark (who died suddenly in June, 1911), had been for the last eight or ten years an enthusiastic collector of Americana, especially of New Jersey books. His library, it is announced, will be sold at auction this coming spring by the George H. Richmond Literature Company, of this city.

Few books are rarer than the first publications relating to New Jersey. Of the six thin tracts published by the Scottish Proprietors, 1676-1685, Mr. Crane was able to procure two:

(1.) "An Abstract, or Abbreviation of some Few of the Many (Later and Former) Testimonys from the Inhabitants of New-Jersey, and other Eminent Persons," London, 1681. Of this, the second book on New Jersey, four other copies are known, in the John Carter Brown Library, British Museum, and Huntington and Halsey collections. (2.) "An Advertisement Concerning the Province of East-New-Jersey in America. Published for the Information of such as are desirous to be concerned therein, or to transport themselves thereto." Edinburgh, 1685. Of this piece only two other copies are known, one in the New York Public Library, the other in the Huntington collection.

Other New Jersey books, slightly less rare than the two named above, which Mr. Crane procured are:

(3.) George Scott's "Model of the Government of the Province of East-New-Jersey in America: And Encouragement for such as Design to be concerned there." Edinburgh, 1685. Of this book, some fifteen or sixteen copies are recorded. The Crane copy was formerly Mr. Lefferts's, and is of the variety intended, it is supposed, for circulation in England, pp. 37, 38 having been reprinted. The variety intended for circulation in Scotland, with the passage recommending religious freedom as an inducement for emigration, is the rarer.

(4.) Thomas Budd's "Good Order established in Pennsylvania & New Jersey in America," 1685. Although the book bears no place of printing, the imprint reading simply "Printed in the year 1685," there is little doubt that it was printed in Philadelphia by William Bradford, and was, except for an almanac, the first book printed by him. Some eight or ten copies have been traced.

(5.) Thomas's "Historical and Geographical Account of the Province and Country of Pennsylvania and of West-New-Jersey," London, 1698. The Crane copy is fine and crisp in the original binding. It was formerly in Newbold Edgar's library, dispersed privately.

The rarest book in Mr. Crane's library is probably "A Discourse and View of Virginia," by Gov. William Berkeley, a thin pamphlet of twelve pages, printed, probably, in 1662. The only other copy known is in the British Museum. Neither of these two copies has a title-page, and it is possible that none was ever printed, though, as the text begins on A2, it is certain that a leaf of some kind, possibly only a blank, is lacking.

Among other early books on Virginia are Robert Johnson's "Nova Britannia" (1609) and "New Life of Virginia" (1612); Smith's "General Historie" (1624), with first issue of title-page and with the rare slip of errata; Bullock's "Virginia Impartially Examined and left to Public View" (1649); Beverly's "History of Virginia" (1722); and Jones's "Present State of Virginia" (1724).

Mr. Crane was always much interested in collections of Voyages. He acquired the Eugene Paillet copy of the first French collection of voyages, "Extrait ou Recueil des Isles Nouvellement Trouvés" (1532), in an elaborate binding. His set of voyages published by Hulsius, which is complete (with minor imperfections), formerly belonged to the late E. D. Church, who disposed of it when he purchased the great Henry Stevens set, for which he paid $6,500. The first collection of voyages in English, Peter Martyr's "Decades of the New World," translated by Richard Eden (1555), is in the library, though the copy is an inferior one. Hakluyt's first collection, "Divers Voyages touching the discoverie of America" (1582), is one of the rarest and most interesting of books, though, as usual, both maps are in facsimile. Hakluyt's enlarged "Voyages" (1589) and the final collection in three volumes (1598-1600), as well as Samuel Purchas's "Pilgrimes," five volumes (1625-26), made up partly from manuscripts left by Hakluyt, are in the library, besides Ramusio, Linschoten, Montanus, Pinkerton, and other later collections.

The series of editions of Las Casas is remarkable. Besides the nine original Spanish tracts, there are numerous translations, including the one in English, "The Spanish Colonie" (1583), the most valuable of all.

Among books on Canada and the Northern Frontier are Champlain's "Voyages" of 1613, 1619, 1620, 1632, and 1640, all perfect, except the last, which has the large map in facsimile. The editions of 1620 and 1640 are merely title editions, the text being identical with the books of 1619 and 1632. The series of editions of Lescarbot's "Nouvelle France" is equally good. There are French editions of 1609, 1611, 1612, and 1618, the first and last being fine copies from the Charles H. Kalbfleisch collection, afterwards Newbold Edgar's. There is also the English edition (1609), translated at Hakluyt's suggestion by P. Erondelle, a French schoolmaster in London.

Alsop's "Character of the Province of Maryland" (1665); Denton's "Brief Description of New York, formerly called New Netherland" (1670), the date, as usual, cut off by the binder; Wood's "New Englands Prospect" (1634), first edition with the correct map, and Hubbard's "Present State of New England" (1677) are other books in English of first-class importance.

We mention last, because of most importance, the Latin Columbus letter. This is Plannck's second edition (Rome, 1493), four leaves, a fine and perfect copy. It was formerly the Astor Library copy, sold a few years ago as a duplicate by the New York Public Library.

Correspondence

MR. HENRY C. LEA'S "HISTORY OF THE INQUISITION."

To the Editor of The Nation:

Sir: In your issue of January 16 occurs the following passage in the Paris correspondence of S. D.:

M. Bratli says of Henry C. Lea [author of the "History of the Inquisition"]: "He cites papers and documents from nearly all the archives of Europe, without its being known that he anywhere undertook personal researches"—an insinuation which may have point where persons like Philip II are concerned, but is to no purpose in matters concerning the Inquisition.

Your learned and esteemed correspondent doubtless did not perceive the unfortunate impression which this passage might give to those readers who were not already aware of the unimpeachable standards of accurate and original scholarship adhered to during a lifetime by the late Mr. Henry C. Lea. The facts have been elsewhere placed on record, by Prof. Edward Potts Cheyney, of the University of Pennsylvania, in an obituary notice of Mr. Lea, published in the Proceedings of the American Philosophical Society, Vol. I, 1911, No. 198. Believing that they ought to be publicly noted also in the same columns where the French author's unjust insinuation was printed, I wrote to Philadelphia, and with permission now make the quotation below from a letter of Professor Cheyney, dated January 28, 1913. The quotation specifically meets the insinuation:

Mr. Lea had a large body of manuscript material copied from various European archives by thoroughly competent copyists; and these copies are still in existence, and accessible to any one, in his library. I have gone over many of them, both with him during his lifetime, and in the process of classification with one of my colleagues, Mr. Howland, since his death. They are not only systematically and carefully made transcripts, but are annotated all through by his own hand, indicating the use he made of them. Work done by official, semi-official, or other capable copyists is universally considered to be just as authoritative material as if the author went himself directly to the actual original. In fact, the use of printed sources is obviously dependent on the work of such copyists. . . . Any question of the originality of the materials used by Mr. Lea, or of his patient care in their use, seems absurd to any one who was familiar with his habits of work.

Apropos of histories of the Inquisition, it is proper to mention here a book, not named by your learned correspondent, which, until the appearance of De Cauzons's work, reviewed by him, gave the most authoritative account of the ecclesiastical courts and procedure of the Middle Ages—I mean Fournier's "Les Officialités au moyen âge" (1880). Unfortunately, it is now out of print; I have not seen it offered in the book-lists once during the past ten years; and Professor Fournier apparently is not to give us a second edition. Any one who knows of a copy that can be consulted in this country will do a favor by letting me know.

JOHN H. WIGMORE.

Northwestern University, February 15.

EXPLOITING THE PHILIPPINES.

To the Editor of The Nation:

Sir: It is a hopeful sign that the President-elect has publicly expressed sentiments in close accord with your editorial (November 14, 1912), on the "Philippines Question."

Mr. Wilson is popularly reputed to be of conservative tendencies, and, in all likelihood, will make haste slowly in forcing any radical recommendations upon the Congress. It is a foregone conclusion that the Jones bill or any measure affecting the present *status quo* will develop active opposition. In such cases the usual procedure is a compromise pending the investigation of a Congressional committee or a Presidential commission. The personnel of such bodies is usually composed of distinguished public men of high standing.

During a residence of more than eleven years in the Philippines, and in pursuits that have taken me many times throughout the archipelago from the Batanes to the Sulu Sea, I have observed that distinguished visitors see these islands and meet their people under conditions not of a sort to give them a close insight into actual conditions. We have here a well-organized defensive league whose explicit duties are to "steer" visitors of prominence so that they may not come into contact with any disturbing or inharmonious elements. The agents are paid for this purpose, and the "Filipino pays the freight."

When the late Secretary of War, Dickinson, was here, his itinerary was not only prearranged, but he was carefully policed night and day, in order that no American or Filipino known to have dissenting views from the policy of the Administration should have access to him.

To cement our grip upon these possessions we have effected a masterpiece of diplomatic tact. In ten years, notwithstanding a stationary population, and without any reduction whatsoever of the high-salaried American staff, we have nearly doubled (see Blue Book) the civil-service roster of low-salaried native employees. Now all the past records of the Filipino Assembly show a desire and effort to administer affairs with the closest economy consistent with efficiency. As some thousands of these appointments were made for no other reason than to justify our boast that we are inducting the native into the art of government, one-half or more of them would, under a Filipino régime, be summarily dismissed as supernumeraries. But the burning question is, which half?

Our brilliant *coup* has worked out to make both halves united and solid supporters of America. Our every energy is now concentrated upon goading this patient people into some overt or treasonable act which shall call for the intervention of the mailed fist, in order that we may shout aloud in triumph, "We told you so." A trivial petty larceny we magnify into "Threatened Insurrection," writ large. At a recent banquet, poor little Quezon used these words: "The United States had better give us our freedom. It will be better for them to do so, and better for the Filipinos." The next day the American newspapers had, under fearsome scarcheads: "Quezon makes veiled threats against the authority of the United States." And even Bishop Brent used his pulpit to denounce this act of "black ingratitude." This, however, is not the first time in the history of our country that the pulpit has thundered in behalf of the sacred institution of slavery.

Manila, January 6.

HEADLINE ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: Whether the headlines of one's morning paper are matter for laughter or tears is largely a question of the reader's temperament. As in the case of Atticus, there is often ground enough for both—especially on the part of those who are interested in the potent influences at work upon our speech. For in its striving for certain praiseworthy ends—brevity, conciseness, tellingness of phrase—the newspaper headline occasionally plays fantastic tricks before high heaven. I subjoin a few samples, clipped from the representative newspapers of one of our largest cities. And I hasten to add, in order to forestall an amply warranted skepticism, that the originals are all in my possession.

The first batch offers exercises in ingenuity. "Woman Fires Self Lighting Pipe" leaves one in some suspense as to what was really fired, but the statement is lucid in comparison with another from the same paper: "To Pen for Killing Over One Cent." The paragraph thus headed contains an account of a sentence to the penitentiary imposed upon one Stanley Wesnewski for the killing of Frank Mantowski in a dispute over the possession of one cent. Through the labyrinth of the following (there *is* a clue!) one may wander at will: "Judge Orders Man Suing Wife Said She Saw in Hall Brought In." "Men Nearly Blind Suitor Girl Favors" does blunder round about a meaning; but the purport of the next remains greatly dark: "Sees No House Row Harm; Mayor Says Body Has No Important Legislation Control Split Delays." "Light Clerks Macbeth Supes" is the terse summary of a paragraph recounting how the clerks of a certain light and power company were employed as supernumeraries in a performance of "Macbeth." And a momentary shock of surprise has its compensating pleasure as the following grows upon one: "Large Plymouth Rock Hen Lays Toy Egg on Drop in Market Price"—a triumph probably of the same artist who had previously written: "Ex-Bankers' Head is Dead." The mysterious caption, "Raps Tear-Making Rites," heads an account of a clergyman's statement that "the old idea of having the funeral an intentionally tear-producing affair was out of date"; while "Grips Convict Toil Poser" is headline English for "tackles the problem of convict labor."

Moreover, to the headline is due a rapid enrichment of our vocabulary. It has long been a matter of course that all legislators should be "Solons," all aldermen "city fathers," all detectives "sleuths," and all aviators "bird men." But it is with a wild surmise that one greets "Crop Sage Who Advises Buy Direct from Farm," until one sees below the line the features of Secretary Wilson, and learns that the Crop Sage is the "Agricultural Secretary" (*sic*). A few days later the same paper offers the following: "Biscuit Baron Finds South Outstrips North in Progress." The Biscuit Baron turns out to be "the millionaire President of the National Biscuit Company." "Defends Alien-Getters" calls attention to the defence of a certain State Board of Immigration. But it is in a rival paper that the following gem appears: "Angry at Being Shot Shootee Beats Shooter." It may be added that the headline (observed last week), "Gun Thought Empty Discharges, Striking Gamebearer in Van," is not designed to convey anatomical information, but merely to state the fact that the "shootee" was walking ahead of the "shooter"!

The headlines, too, are magnificently Elizabethan in the freedom with which any part of speech is made to do duty for any other. "Held, Due to River Death"; "Puts Baron Canteen Father"; "Eyesore Fate in Doubt"; "Cites Jap Christ Hatred"; "Two Die of Stair Falls"; "Woman Steals as Sleuth Step"; "Mr. —— to Travel-Talk"; "To Honeymoon in South Africa"; "Crawls Snow to School"; "Races Continent with Death."

Nor is chaste elegance of style without its votaries. "Tolstoi Memorial Frost; Fire-eaters, Slamming American Conduct, Spoil Cincinnati Tribute"; "Pop Concert Audience Dents Lid in Encores"; "St. Louisan, Broke Abroad, Peels Liner Spuds to Get Home"; "Bible Revisionists Combing Europe" (glossed for the uninitiated in the sub-head: "Papal Commission Has Envoys Searching Libraries of Many Nations"); "Titled Touts to Get Frosty Glare." Occasionally the headliner even shows that he has drunk of Aganippe's well: "Jug of Wine, Can of Paint and Thou Leads to Jail."

And newspaper headlines are more widely read than anything else in print.

JOHN LIVINGSTON LOWES.

Washington University, January 29.

"TRIPE-VISAGED."

TO THE EDITOR OF THE NATION:

SIR: In the second part of "Henry IV," act 5, scene 4, line 9, Doll Tearsheet applies to the beadle, who has come to arrest her, the epithet of "tripe-visaged rascal." It had never occurred to me that there was any obscurity in the term until recently I saw it defined in the Century Dictionary as: "Having a face resembling tripe, either in paleness or sallowness, or in being flabby, baggy, and expressionless." This at once impressed me because it varied so widely from the sense that I had attributed to the term, and I investigated further. I was surprised to find it given in Schmidt's Shakespeare Lexicon as: "An epithet applied by Doll Tearsheet to the beadle, in a sense probably not quite clear to herself (pale? sallow?)."

Now it appears quite evident to me that the sweet-tempered Doll knew just what she meant and meant just what she and the beadle both understood the term to mean. The surface of a piece of tripe has a pitted appearance dreadfully suggestive of pock-marks, and doubtless Doll used the most offensive term she could think of for an equivalent of "pock-faced." The frequency with which the allusion to pock-marks occurred in that age is shown by such expressions as "pocke eaten," 1550; "pock-fretten," 1640; "poke frekyns," 1530; "poik-braik," 1568, etc. F. STURGES ALLEN.

Springfield, Mass., February 14.

Literature

YOUNG CHINA.

Recent Events and Present Policies in China. By J. O. P. Bland, joint author, with E. Backhouse, of "China Under the Empress Dowager." Illustrated. Philadelphia: J. B. Lippincott Co. $4 net.

Mr. Bland's long experience in China entitles him to respect as an authority. To the question, "What are the prospects of Young China's evolving an effective and acceptable administration under the Republic before the dangerous elements of the community shall have thrown off the last remnants of control?" he replies that "salvation from this quarter is impossible: not only because Young China itself is unregenerate and undisciplined, but because its ideals and projects of government involve the creation of a new social and political structure utterly unsuited to the character and traditions of the race; because it is contrary to all experience that a people cut off from its deep-rooted beliefs and habits of life should develop and retain a vigorous national consciousness." But there are other authorities who are as optimistic about the future of China as Mr. Bland is pessimistic: Dr. Morrison and "Putnam Weale," for example. What is the layman to think when experts such as these disagree?

The natural answer to such a question is the affirmation that all opinions are probably equally worthless. But the opinion of a recognized publicist in a critical affair like that of China at the moment goes far to mould public opinion in the Western world, and the voice of the people ultimately shapes the policies of such countries as enjoy free government. What observers like Mr. Bland believe or say should be considered with some attention. He prophesies ill for a rule as unsteady as that of Peking during the past year. The Peking corre-

spondent of the London *Times* describes the Government of China as still "dangerously invertebrate"; nevertheless, that Government holds on without any serious menace to its authority. While the southern provinces incline to lawless obstruction and the fringes of the empire are menaced by foreign nations, trade and the revenue continue to increase and the central administration receives substantial if not sufficient funds. The truth seems to be that no estimate of Chinese affairs is adequate which is based upon the principles of political philosophy as accepted in the West. China has retained the instinct for self-preservation inherent in communities of the mediæval type where the people, if allowed to work, can live off the ground they cultivate without much concern for the interruption of either imports or exports. They constitute a political entity that is virtually indestructible. We have forgotten that this has long ceased to be the case with European states, the richest of which would be strangled by any serious derangement in the machinery of its administration or of its relations with the outside world. Mr. Bland has overlooked this essential difference between a state of the antique type and the scientifically organized commercial powers. The repetitious discussion carried through the five hundred pages of his book presents a travesty on Mr. Cleveland's famous dictum, for here it is a theory, not a situation, that confronts us. Were we to accept his theory of inevitable collapse in China, the effect upon her immediate future might well be disastrous in removing from her the sympathetic attention of neutral Powers upon whose moral support in the throes of transition she has some right to rely.

It is not easy to controvert the author's main contention that the programme of the revolution is impossible of achievement. It is, of course, a tremendous experiment: who can say that it will succeed? The premises of his argument rest mainly upon the principles enunciated by John Stuart Mill and Herbert Spencer—principles so generally accepted in the Caucasian world where they were propounded that any logical deduction from them obtains assent from Western readers. The trouble with this proceeding seems to lie in the fallacy, quite unsuspected by these readers, of applying to the Oriental a philosophy the fundamentals of which are very imperfectly supported by political experience in the East. On the other hand, the range and complexity of the subject are so great that, after we have thrown away our old text-books, no Western student is as yet competent to declare a new system upon which the course of events can be reasonably interpreted. We may in a vague way discern in China more definite influence derived from kinship and from belief in the prevalence of departed spirits than in Europe; a less definite conviction than we have in logical processes of reasoning and in such institutions as jurisprudence and the Church. These generalities do not go very far, nor can they be assumed as postulates, but in view of our inadequate grasp of the problem we should be extremely wary in committing ourselves to deduction.

As Mr. Bland does commit himself freely to deductions, an examination of some of his statements ought to be permitted, whatever may be said for the bases of his disquisition. Perhaps it is due to temperament that he fails to discover religious inspiration of any sort in China. "The effects of Western education," he says, "reflect the callous agnosticism of the masses; hardly a whisper, in all this valley of dry bones, of any vivifying breath. The glory that once was China has departed, like that of Greece and Rome, because of the decay of religious faith and worship." Others who have lived there and who know as much of China as he report the matter differently. From them we learn that the Chinese are susceptible to inspiration of a purely spiritual kind and actually show better than most Asiatics their appreciation of a living faith. The fact that, being a practical people, their reverence does not assume the ecstatic or sensual forms familiar in India and Burma should not blind us to its existence and reality in China, or make us forget that in the Superior Man of Confucius or in the older conception of *Tao* the Chinese have long been animated by ideas of the highest spiritual significance. In such an issue we must prefer the testimony of many observers to that of one. A similar tendency to discredit the spiritual side of Chinese character seems to inspire the author's assertion that "loyalty to a leader is the rarest of Chinese virtues." Chinese patriotism has been sadly bedraggled during the last century of Manchu truculence and corruption, but it is not likely in so brief a time to have disappeared from a race which can display numerous brilliant examples of that virtue in thirty centuries of recorded history. Loyalty is a spirit that may take protean forms and even mask under disguises. In China, where alone until recently the educated Chinese could conceive of life as worth living, it has ever been a spirit of fealty to one's class or interests within the empire. Until they learned of the existence of other states equal in culture and strength to their own, whose ambitions were capable of antagonizing China's superior claims, they had no more idea of applying the term to their country than have we to the inhabited globe. Now, in their newly-born consciousness of foreign rivalry, they are clearly moved by the devotion and even chivalry inspired by a true love of country, however confused by the "shouting of unstable and interested politicians, blind leaders of the blind, without permanent inspiration or consistent purpose."

While in these and some other respects Mr. Bland does not appear to have made his contention good against those who read the Chinese spirit differently, he is justified in ridiculing the idea that old habits and traditions will be transformed through the magic of the word "Republic." There is nothing divine, nothing compelling, in the name. The causes of the uprising against the Manchus were chiefly economic, and the proclaiming of the Republic by the Cantonese was, if you please, an act of inspired selfishness. The South has never raised a man who could control China, and it is unlikely that it ever will. But in acumen and dexterity the men of Kwangtung and Fuhkien are superior as a whole to those of the other provinces. They perceived a better chance for their future participation in the general government in a copartnership under representative institutions than in the hopeless attempt to force a southern dynasty upon the nation. There are seeds of trouble in the antagonism between South and North, as there were for Japan at the beginning of the Meiji era in the jealousy and ambitions of Satsuma, but the prospect for some sort of cohesion is certainly greater under a republic, however imperfect, than under a dynastic leader from one or the other of the rival factions. English writers not infrequently exhibit the prejudice against republican forms that is generally to be found in English "society." It is possible that Mr. Bland is influenced by a feeling common to his class, and that he overlooks the fact that a monarchy conducted "constitutionally" in a country which has only known an autocratic control involves as radical a change as a republic. He thinks rightly that a political *volte-face* like this may leave the people of China ignorant of its purport, but his deduction from this does not necessarily follow. The utter absence of political consciousness among the masses is not so much a menace as a safeguard against indefinite continuance of the turmoil. This proved to be the case in Japan. These are peoples who have always left the conduct of politics to their betters. If the literati could agree among themselves as to problems of statecraft, they would obey orders. To them the proof of the pudding always lay in the eating; if a mismanaged state induced economic distress, they troubled very little about the recipe, but went out with staves to look for the cook. The intellectuals are, therefore, fairly justified by age-old pre-

cedents in assuming entire control and in establishing, with the ballot, qualifications for a "silk-gowned franchise"; it is a sensible precaution of the brain of the body politic against the lust and passion of its still unregulated members. The people of China must be "managed" for a long time to come, and it is fitting that they should be controlled and educated by the class which they have always respected—a class recruited, however, from the best of the common folk. That this class is feeling its way towards new and strange forms of government to free the nation from insufferable evils of the past, amid appalling risks from a civilized world beyond their own, is an aspect of the case which calls for friendly consideration rather than a too particular criticism of motives and methods.

It is this phase of the problem of changing China which inspires our strictures upon Mr. Bland's discussion. His creditable career entitles his views to respectful examination. They are advanced with ability, but they are supported almost entirely by his personal observation and remain, after all, personal opinions the value of which can only be tested by time. If they are accepted in this country as a reason for condemning a valiant if quixotic effort of China's young enthusiasts to rescue their nation from the fate of ancient Babylonia, they may do some harm.

Mrs. Falchion. The same.

The other day, in reviewing "The Long Portage," by Harold Bindloss (November 21, 1912), we noted that the fiction of the Canadian Northwest is now the product of a well-understood convention. Such is the fate of all frontier fiction. Those bold types of humanity in untrammelled action which thrill a law-abiding and sedentary public run quickly into grooves, and are seen to act according to established rule. The miner, the cowboy, the bad Indian, the gambler, the tenderfoot, the woodsman, the female camp-follower, the sheriff, the dive-keeper, the athletic "sky-pilot," the Yankee school-marm, the half-breed, the beautiful and virtuous daughter of the ranch—these pretty well exhaust the types to be encountered in our far-Western fiction. And the very clearness of their outlines sets a limit to their usefulness in the hands of a serious story-teller. Bret Harte, in later years, could only imitate himself, his Californians became pale shadows of the figures which he had once made vivid and famous. The miner, the desperado, the cowboy, are already, as it were, set pieces. A great artist may yet conceivably give them new meaning, but they seem destined to live chiefly in the hands of the melodramatist, the "short-story" expert, and the "photoplay-wright."

The fiction of the Canadian Northwest is of somewhat younger growth, and the process of hardening has not gone so far as with our ranch and trail literature. But it is well under way. Many of its human types are virtually the same as ours—with a French or British accent. Two of them, and the dominant two, are radically different. His red coat and imperial authority give the mounted policeman an immense advantage over the county sheriff in civilian clothes who stands casually for the law on our side of the line. The very title of sheriff is a bit dingy and dubious, almost as likely to belong to the dupe or the villain of American romance as to its hero. There is no doubt about the mounted policeman. He is, so far as we are able to learn, always right and always picturesque.

The second distinct type is the Younger Son, corrupted or flung off by civilization and destined to become a man in the Bush before the death of the heir makes him a nobleman at home. This is evidently a different person from our tenderfoot, a person of consequence, to be regarded with solicitude, not ridicule. Our tenderfoot is reformed sufficiently for our purposes when he has learned to bust a broncho, pull a gun, and "irrigate" freely without showing it. The Younger Son is reformed when he has purged his system of alcohol and "side" and learned to pick up a living with his hands. He is then fitted to return to civilization and prove that a lord's a man for a' that.

Of this type is the "man at Lone Lake." He has turned hermit in the Bush, to fight the morphia habit. His only neighbor is an old trapper, whose daughter has run away from him because she cannot bear his trade. She takes refuge in a convent, and sends him word that she will never come back till he gives up his trapping. Finally he is struck down by paralysis, and sends the man at Lone Lake to bring the girl back—his trapping days are over. Of course, the man and the girl fall in love, the man conquers his appetite for morphia, succeeds to a baronetcy, and returns to England with his bride—not, however, without difficulties in connection with a villanous half-breed, who abducts the girl. She is rescued by the god of novelists, and the villain dies at the hands of an officer of the Mounted Police.

Corporal Cameron is not heir to a baronetcy but to a Highland chieftainship. At his Scottish university he is a wonderful football player, and not incapable of scholarship, but drink brings about his disgrace on field and in classroom. He proves unfit for business, and goes to Canada as a failure. There he achieves success as a farm-hand, as a member of a surveyor's gang, and finally as a mounted policeman.

At the beginning of the third book, when one has a little wearied of descriptions of farm life, local merry-makings, and the like, the action accommodatingly bursts into melodrama, and thereafter matters are lively enough. Cameron is kidnapped by a whiskey-runner, miraculously escapes death a half-dozen times, joins the Mounted Police, and quickly becomes "the best man on the force." Most remarkable of all is the development of "heart-interest" in the later pages of the story. A shapeless, grammarless, unclean farm-wench, whom the earlier chapters have displayed hopelessly enamoured of Cameron, is in two years transformed by the power of love into a golden-haired, graceful, manicured, and radiant damsel, fit and destined to be the mate of Corporal Cameron.

What Bret Harte was to the American frontier, Gilbert Parker is to the Canadian Northwest. The fact is brought home by the first three volumes of the new Imperial Edition of his works, which contain his earlier short stories in this popular field. Sir Gilbert's introduction to the first of these volumes, "Pierre and His People," gives an account of their origin. He was born and educated in Canada, but at twenty became editor of a newspaper in Sydney, and spent the following years writing or roving in Australia and the South Seas. But the life of the Canadian frontier held his imagination, and when in 1889 he came to London, he brought with him a collection of tales of the Northwest. Aspiring to publish them, he got Archibald Forbes to read them. Forbes's sole comment was that the young writer had "the best collection of titles he had ever known." Parker took the hint, and burned them all that night. The next day, pausing aimlessly before the window of a second-hand shop, he saw the leather coat and fur cap of a Hudson Bay Company trapper. "At that window," he says, "I began to build upon the ashes of last night's fire." Pretty Pierre, the original of whom he had known as a child, seemed to look out of the shop-window at him. He went home and began the Pierre series, which first won him a public, and which, as he

justly avers, "was the pioneer of the Far North in fiction."

The story he wrote that night was "The Patrol of the Cypress Hills." Its chief figures are Pretty Pierre and an officer of the Mounted Police; and they or their analogues keep the lead throughout the three volumes of tales here reprinted, and throughout Sir Gilbert's Canadian fiction as a whole. Pierre, the half-breed—gambler, outlaw, and slayer of men—is pictured as, in effect, a Beaucaire of the North. He lives his desperate life with a bloom upon his cheeks, a song upon his lips. His manners are fastidious in their way, and he has a code of honor. He wrongs no woman, and is generous towards many a man. He is, it will be perceived, Bret Harte's Oakhurst, with a different costume and accent. Not that there is question of deliberate imitation: Pretty Pierre is Beaucaire, Oakhurst, Robin Hood—a romantic type of inexhaustible charm and effectiveness. It exists, however imperfectly, in any scantily policed society, from that of the Northwestern frontier to that of certain well-known districts in New York City.

The mounted policeman belongs to another universal type: the chivalrous "cop" is as dear to the popular heart—or almost as dear—as the chivalrous "crook." But the officer of the Northwest has, we have hinted, a special glamour due to his imperial authority. We are now acquiring a true analogue in the United States in the person of the forest ranger, who has already made his appearance in fiction. His authority is more than local, he represents something more to the imagination than even the Government at Washington. But he lacks the glamour of the imperial Rider of the Plains. At the very end of the long and hectic tale called "Mrs. Falchion," a member of the Mounted Police appears just in time to prevent a bloody fracas between a gang of river-drivers and a gang of fishermen. "I am a sergeant of the Mounted Police of Canada!" he cries; "my jurisdiction extends from Winnipeg to Vancouver. You cannot have this man except over my body: and for my body every one of you will pay with your lives; for every blow struck this night there will be a hundred blows. . . ." A little declamatory, a trifle theatrical, these people of Sir Gilbert Parker's—an incorrigible romancer, to whom coincidence is a pillar of cloud, and poetic justice a pillar of fire.

This new edition, which will run to eighteen volumes, is quite as handsome as the editions of Kipling, Stevenson, and Meredith, previously issued by the same publishers. It is to be had only in sets.

GEORGE MOORE AGAIN.

Hail and Farewell. Salve. By George Moore. New York: D. Appleton & Co. $1.75 net.

The first volume of this trilogy, which was entitled "Ave," set forth in full the considerations and reconsiderations which led Mr. Moore in the days of the Boer War to make a reconnoitring expedition into Ireland and to take counsel with the literary chiefs in Dublin concerning the future of art. This second volume treats of the transference from London to Dublin of his bag and baggage, his Manets and his Monets, of his long and earnest endeavor to become a concordant note in the Irish Renaissance, and of his final tragic conviction that Roman Catholicism was hostile to art, and that "Dogma and Literature were incompatible." The anti-Roman thesis gives to the book a certain tenuous continuity, but it appears to be only incidental to the main purpose of the work.

What this purpose is may best be explained by reference to the nearest French equivalent. In the preface to the great "Journal des Goncourt," brother Edmond says: "We have tried to make our contemporaries live again among posterity in life-like guise, to make them live again by the spirited stenography of a conversation, by the physiological surprise of a gesture, by those flashes of passion in which a personality is revealed, by that *je ne sais quoi* which renders the intensity of life—by noting, in short, a little of that fever which is peculiar to the heady life of Paris." On the 28th of May, 1857, the Goncourt firm entered this thought in their journal: *Un joli titre pour des souvenirs publiés de son vivant: SOUVENIRS DE MA VIE MORTE.* In 1906 Mr. Moore carried out the hint with his "Memoirs of My Dead Life." Add to this his earlier "Confessions of a Young Man" and the trilogy now before us, and the scope of his design becomes apparent: he aspires to be the Goncourt of the English decadence—the Boswell of a literary generation.

It is hardly necessary to remark that the matter of his epos is distinctly inferior. In the French work we are confronted with the real leaders of the generation, the peers of France who received their inheritance from Hugo and Balzac: Flaubert with his life poisoned by remorse for once having coupled two genitives, Gautier exploding in reckless paradox, Sainte-Beuve adorned with earrings of cherries and overflowing in fine malicious chat, Taine disputatious, Scherer coldly circumspect, Renan silent but curious like a respectable woman at a supper of courtesans, Zola comparing notes with Edmond on the pain in his intestines—and much more of less and greater import. This gossip at the lowest is still, so to speak, gossip from the tents of the heroes encamped before Troy. When we turn to Mr. Moore's journals, we are not turning to the Goncourt of a corresponding literary generation in England. We are no longer at the centre of the engagement. We are rather regaled with gossip from the camp-followers of the French movement. It is Symons, and Yeats, and Moore against Sainte-Beuve, and Flaubert, and Zola. On the whole, it is an English "Epigoniad" against a French "Iliad."

Yet as the Goncourt of English "side-issues" Mr. Moore has no rival. He deserves the credit for introducing into English a vivid personal narrative of literary contemporaries, which is almost a new literary form; what though all his heresies were long since anticipated by the guests at the Magny dinners. His work, furthermore, so far as the manner is concerned, possesses both the merits and defects of his French predecessors. He says apparently everything that he pleases without regard to the pleasure of living sensibilities. He mingles delightful bits of reverie with passages of studied grossness, pages of piquant dialogue, epigrams, criticisms of music, art, poetry, characters of the living and the dead. Most of his Irish fellow-workers he sketches with the detachment of a whimsical contempt. Of "dear old" Edward Martyn, one of the lesser dramatists, he writes, with his usual felicity of suggestion:

> A great psychologist might have predicted his solitary life in two musty rooms above a tobacconist's shop, and his last habits, such as pouring his tea into a saucer, balancing the saucer on three fingers like an old woman in the country. Edward is all right if he gets his mass in the morning and his pipe in the evening. A great bulk of peasantry with a delicious strain of Palestrina running through it.

He never lets slip an opportunity to add a comic stroke to his delineation of the character of Mr. Yeats:

> When the hooker that was taking Yeats over to Aran, or taking him back to Galway, was caught in a storm, Yeats fell upon his knees and tried to say a prayer; but the nearest thing to one he could think of was "Of man's first disobedience and the fruit," and he spoke as much of "Paradise Lost" as he could remember.

As usual, Mr. Moore writes with most particularity and interest of himself. He makes it perfectly clear that Ireland could never be anything to him but an exquisite place to dream in: "Oh, how beautiful is the world of vagrancy lost to us forever, Æ.!" There is nothing finer in all Moore's works than some of these occasional passages of vague and drifting reverie:

> A numbness stole upon my eyelids, and I began to see the strange folk plainer, coming in procession to the altar, headed by the Druids. Ireland was wonderful then, . . . and, opening my eyes, Ireland

seemed wonderful in the blue morning that hung above her, unfolding like a flower—a great blue convolvulus hanging above the green land, swelling like the sea. My eyes closed again. It seemed to me that I could dream for ever of the gods, and the mysteries of Time, and the changes in the life of Man, of the listless beauty of the sky above, fading imperceptibly as the hours went by.

After a succession of these fine swan flights, it is amusing to find Mr. Moore comparing himself with Catholic Martyn, and wondering whether it would be wise for him to exchange, "were it possible, a wine-glass of intelligence for a rummer of temperament." More to the point is the passage in which he seems to reveal an awareness that his quarrel is not with Catholic Ireland nor with Protestant England, but with the whole spirit of Western civilization. His final words of self-justification will remind the reader of Dowden's defence of Shelley:

The right of property holds good in all society; but in the West ethics invade the personal life in a manner unknown to the East, so much so that the Oriental stands agape at our folly, knowing well that every man brings different instincts and ideas into the world with him. The East says to the West, "You prate incessantly about monogamy——" A sudden thought darting across my mind left my sentence unfinished, and I asked myself what manner of man I was. . . . An extraordinarily clear and inflexible moral sense rose up and confronted me, and, looking down my past life, I was astonished to see how dependent my deeds had always been upon my ideas. *I had never been able to do anything that I thought wrong, and my conscience had inspired my books.*

However ill Mr. Moore has prospered in his endeavor to domesticate in England this Franco-Turkish latitude of conscience, it must be very satisfactory to him for his own part to look back over a perfectly impeccable past. We Occidentals know little of this inflexible rectitude of conduct. It is at odds with the genius of our morals and of our literature. Even our priests and holy men have not professed it; they have acknowledged their bad days of backsliding and shameful defeat. For we of English race know ourselves to be men of blood and sin, emerging from the welter and conflict with blotted 'scutcheons to partial triumphs; and, at our final retrospect, the best of us are of Henry the Fifth's mood:

More will I do;
Though all that I can do is nothing worth,
Since that my penitence comes after all,
Imploring pardon.

To put the whole matter on merely literary grounds, we resist Moore—though he is a pretty writer—to save Shakespeare, whom, on the whole, year in and year out, we prefer. East is East, and West is West; and when Mr. Moore has drained that wine-glass of intelligence, he may have another flash of insight, in which he may perceive that it is not dogma and literature that are incompatible, but George Moore and an English tradition of a thousand years.

The Catholic Encyclopedia. Edited by Charles G. Herbermann and Others. In fifteen volumes. Vol. XV. New York: Robert Appleton.

With the publication of the fifteenth volume the Catholic Encyclopedia is brought to a close, and its editors and publishers are to be congratulated upon the completion of a really notable undertaking. The successive volumes have appeared with unfailing regularity; but five years having elapsed since the first came from the press, an unusual feat in a work of this magnitude. The present volume concludes with useful lists of errata covering the entire work. These are so much longer for the later than for the earlier volumes as to suggest that the difficulties of keeping up to schedule time increased as the work progressed. This was, of course, to have been expected, and argues no lack of care and fidelity on the part of the editors. The general quality of the whole has been well sustained, both in text and in illustrations, and the final volume seems fully on a level with its predecessors. Among its many important articles special mention may be made of those on the Council of Trent, the Vatican Council, the United States, Universities, Vows, Vestments, and Virgin Mary, the last two profusely illustrated, and also of the one on Westminster, containing a fine picture of the new London cathedral.

The elaborate article on the Trinity, "the central doctrine of the Christian religion," as it is called, is an excellent example of the historical and dogmatic method of approved Roman Catholic theology. The doctrine is found by the authors in the New Testament, and in the primitive church fathers, but the claim frequently made by orthodox Protestant divines, that it is taught also in the Old Testament, is not insisted upon.

The long and careful article on Tradition expounds and defends the Catholic principle in an admirably clear and unequivocal fashion. The following passages sufficiently indicate the author's point of view:

The living magisterium, therefore, makes extensive use of documents of the past, but it does so while judging and interpreting, gladly finding in them its present thought, but likewise, when needful, distinguishing its present thought from what is traditional only in appearance. It is revealed truth always living in the mind of the Church, or, if it is preferred, the present thought of the Church in continuity with her traditional thought, which is for it the final criterion, according to which the living magisterium adopts as true or rejects as false the often obscure and confused formulas which occur in the monuments of the past. Thus are explained both her respect for the writings of the Fathers of the Church and her supreme independence towards those writings; she judges them more than she is judged by them. . . . Doctrinal infallibility has been guaranteed to the episcopal body and to the head of that body as it was guaranteed to the Apostles, with this difference, however, between the Apostles and the bishops, that each Apostle was personally infallible, . . . whereas only the body of bishops is infallible and each bishop is not so, save in proportion as he teaches in communion and concert with the entire episcopal body. At the head of this episcopal body is the supreme authority of the Roman Pontiff, the successor of St. Peter in his primacy, as he is his successor in his see. As supreme authority in the teaching body, which is infallible, he himself is infallible.

The Union of Christendom is discussed in an interesting and instructive article of more than twenty pages, dealing both with the divisions of past and present and with the many efforts at reunion. The author is not sanguine of an early healing of the existing schisms between the Greek and Roman Churches, and between Catholics and Protestants, and he insists, as an orthodox Romanist must, that reunion can come, if at all, only through the return of all Christians to the bosom of the Mother Church, the Roman Catholic communion.

The two articles on Woman and Woman in English-speaking Countries, the one by an Austrian and the other by an American, represent somewhat different points of view. The former refers approvingly to the woman movement as "a gratifying sign of the times," but adds, "It is difficult to unite the direct participation of woman in the political and parliamentary life of the present time with her predominant duty as a mother. . . . On the other hand, the indirect influence of women, which in a well ordered state makes for the stability of the moral order, would suffer severe injury by political equality." The latter, while recognizing that "the opinions of the majority of Catholics seem to hold the political activity of women in disfavor," points out that "the Catholic Church has made no doctrinal pronouncement on the question of women's rights in the present meaning of that term," and that many prominent bishops have openly favored woman's suffrage.

The longest article in the volume is on the Vatican, containing an elaborate description of the palace and of its various museums, librarics, chapels, and residential apartments, and an account of its architectural history, its government, and administrative boards. The article is full of interesting and instructive information, some of it not easily accessible elsewhere, and is in every

way a model of what an encyclopædia article should be.

My Friends at Brook Farm. By John Van Der Zee Sears. New York: Desmond FitzGerald. $1.25 net.

Mr. Sears we take to be a man of affairs, not of books, though he refers to a little book on the life of ants as written by him, growing out of observations at Brook Farm. His father, born on Cape Cod, found a home in Albany, N. Y., among the descendants of the Dutch, and, marrying in that environment, numbered among his children our author, whom at a tender age he sent with a sister somewhat older to school at Brook Farm. The book records in interesting and simple fashion a boy's observations and impressions while in that famous community, giving glimpses of noted personages and a picturesque experience well worth remembering. Mr. Sears's references to Transcendentalism and the deeper life at Brook Farm are informal and brief, but clear and probably accurate as far as they go. He says:

> Their philosophy may be formulated as the philosophy of Here and Now, on the spot with the goods at the moment. This instant is the appointed time to live for all you are worth. Put your heart into your work right here. Respect for the past is all right, but never look back so intently as not to see what is before you Here and Now. Hope for the future is all right, but let not dreams of the good time coming becloud clear comprehension of the realities at hand Here and Now. This was their ideal, and they lived up to it every day and all day long. The unstated purpose was the carrying out of a social experiment, a practical attempt to form a community living the simple life. I can truly say I have never known a community anywhere who enjoyed this earthly existence more thoroughly than did these Brook Farmers. . . . To wake up every morning eager to begin an eager, active, joyful day, without a thought of anxiety—that was their ideal; and like their other ideals was fairly realized.

During our author's stay the community was reorganized formally on the Fourier basis, under the influence of Albert Brisbane, then a noted social reformer, but soon after succumbed under misfortunes, the most noteworthy being an invasion of smallpox and disastrous incendiary fires, due to neighborhood ill-will.

As an account of interesting personages and happenings seen from the point of view of a clever boy, the book is well worth while. Mr. Sears's Dutch friends suffered him with much reluctance to go into such associations. The boy himself was recalcitrant against New England institutions, having in particular an aversion to brown bread, an inevitable form of provender. But the kindly life soon won him over, and he describes it with admiring zest. The school, which had for its head George Ripley, was wisely managed, permitting an intermingling of work and play that developed the faculties well. As much was learned in the woods and fields as in the classrooms, for the teachers were the constant companions of their charges. No wholesome game was looked upon askance, nor was it allowed to interfere with hard work, the elders always leading the way. Mr. Ripley had especial charge of the cow-stable, in which were a score or so of cows that supplied the milk, choosing this task because the most repulsive. Mr. Sears became his first assistant, succeeding, he tells us, in this function Nathaniel Hawthorne, who had retired from the community, but came back sometimes as a friendly visitor. Mrs. Ripley, a refined lady, chose for the same reason to scrub the floors. The temper in which these labors were undertaken made them light and pleasant. Nothing was more enjoyed and elaborately carried out than the plays and pageants, in the winter in-doors, but when possible in the open, in the woods, or the amphitheatre by the brook. Here Abby Morton Diaz, authoress of the "William Henry Letters," was a moving spirit, while all pertaining to music was in charge of John S. Dwight. The most famous men and women of the time came to see, to lecture formally, and better still, to talk at their ease, in the free and pleasant atmosphere.

It is a fault of the book that it gives almost no dates or statistics. We do not know just when Mr. Sears went to Brook Farm, nor how long he stayed. The numbers of the community are not given, and of the noted people associated with it, we have often only vague mention, sometimes none at all. George William Curtis, for instance, is not noticed. The name of Orestes A. Brownson is barely given. Of Hawthorne we have only the briefest record, as a handsome fellow, then little known to fame, who came and went. Margaret Fuller is a very transient figure in the narrative, a visitor who oppresses the boyish auditor by talk not well adapted, while, on the other hand, Elizabeth Peabody is charming. In contrast with this neglect, Mr. Emerson, never a member, but often a sympathetic sojourner, is reverently remembered. George Ripley and his wife are brightly in the foreground, delightful personalities, he destined to great usefulness as perhaps the best critic of his day. Of John S. Dwight and Charles A. Dana, each on his way to a career of eminence, we have vivid pictures. So, too, of Father Hecker, who was then the Brook Farm baker, but who later swung back from Transcendentalism to old Rome, and founded the order of the Paulist Fathers. The book illuminates, but leaves in shadow much that one would like to see more clearly.

The Charles Dickens Originals. By Edwin Pugh. New York: Charles Scribner's Sons. $2.50 net.

Of making many books on Dickens there is no end. Mr. Pugh confesses to two, but he does not intend his last to be a weariness to the flesh. On the contrary, he writes to satisfy a widespread interest in gossip about a popular novelist. He does, indeed, speak of his purpose to establish the deep influence that Dickens's acquaintances and friends had on his characterization and outlook on life. But he does not take this declared purpose too seriously. It would be inconvenient. The abandon of his method may be seen in his treatment of the suggestion "that Sidney Carton was founded on another purely imaginary character, Richard Wardour, the hero in Wilkie Collins's play, 'The Frozen Deep.'" With a fine scorn of logical procedure, he declares: "I have never read 'The Frozen Deep.' Nevertheless, I scout the suggestion that Dickens could ever have been indebted to any other writer—or, indeed, anybody—for any least part of his material."

He has justification for this attitude. A desire for scientific proof would have robbed him of the pleasure of writing the book at all. Dickens left so little evidence about his methods of composition and his sources of inspiration that a discussion of orginals is bound to deal in unfounded conjecture. Besides, such questions as whether Kate Nickleby was copied from Dickens's sister-in-law, Mary Hogarth, or whether Sam Vale was the original of Sam Weller, have little real significance for the novelist's achievement. It is a psychological platitude that the creative imagination does not copy. It may gather details from a myriad different sources and must fuse them into a new whole that is independent and unique. Dickens himself affirms as much concerning one of his characters that was not created but made—Harold Skimpole in "Bleak House." Writing to Leigh Hunt of a fancied resemblance, he said:

> Every one in writing must speak from points in his experience, and so I of mine with you; but when I have felt it was going too close I stopped myself, and the most blotted parts of my manuscripts are those in which I have been striving hard to make the impression I was writing from *unlike* you. The diary writing I took from Haydon, not from you. I now first learn from yourself that you ever set anything to music, and I could not have copied *that* from you. The character is not you, for there are traits in it common to 50,000 people besides.

If Mr. Pugh posed merely as an entertainer, his book might be dismissed

in a few lines. But he is constantly assuming the robes of the critic. He likes to scatter scintillating paradoxes in the manner of Mr. Gilbert K. Chesterton. The point to which he returns time and again is Dickens's caricature. He asseverates that "it is precisely because of this stark rawness in depiction that Dickens's people, by virtue of their very eccentricity, live." Indeed, he avers with deep solemnity: "This is the miracle of art that only Dickens, after Shakespeare, was able to perform with consistent success."

The amused but catholic reader inquires what justifies such praise. He thinks of the creatures evoked by Dickens's imagination. He sees their red noses and cringing gestures. He hears the nasal twang of their voices or the deprecating cough that punctuates their conversation. Surely there is here an intensity of visualization and realization that is rare. Dickens did, indeed, live through the experiences in his books. Turn now to other great characters in fiction. Think of Marta in the "Marta y Maria" of Palacio Valdés. She stands for mystical devotion as much as Pecksniff stands for oily hypocrisy. Everything she does reveals the growing dominance of this religious ideal. Her acts are a consistent and convincing expression of her state of soul. Think of Anna Karenina in Tolstoy's novel. She, too, is visualized with rare vividness, but more salient is the unity of impression given by her conduct throughout the long book. Her passion is witnessed by innumerable acts that bring conviction and sympathy to the reader's heart. Set Falstaff against Mr. Micawber, as Mr. Pugh suggests. Falstaff talks an infinite deal, but, from the moment when he falls from praying to purse-taking because 'tis his vocation, to the moment when he babbles of green fields, his acts are the acts of the one and inimitable Falstaff.

It is just here that Dickens's characters fail to maintain in us, despite our lively realization of their appearance and speech, that willing suspension of disbelief which constitutes the illusion art diffuses over its objects. Who can believe in the improvident Mr. Micawber as a prosperous citizen in Australia? Who can believe in the literary career of David Copperfield while thinking of the doll-like Dora holding the pens for him? A further illustration of how little we consider Dickens's world as the same world we live in may be seen in Sairey Gamp. That unsurpassable embodiment of vulgarity, so highly amusing in bizarrely fantastic Dickensland, would be unbearably disgusting if conceived of in our world. When tested by their conduct, Dickens's creations lose their miraculous quality. His characters live, not because of the exaggeration in the caricature—that is the very feature that makes them unreal—but because, having their being only in the atmosphere of humorous grotesquerie where their creator's imagination placed them, we willingly forget this unreality.

Of this truth Mr. Pugh catches fleeting glimpses. But he scorns to entertain a suggestion that would derogate from the greatness of Dickens's achievement or the universal truth of his art. With a dogmatism that reminds one of the "bludgeon school" of criticism, he indulges in the following delicate urbanity:

> The fact is that when any man says of literature or art that it presents a false picture of life he is talking like a fool, not a nice silly fool, but a conceited fool.

Notes

Doubleday, Page & Co. are bringing out Mrs. Humphry Ward's new book, "The Mating of Lydia," which is described as a modern love story laid in rural England.

Among the books which Sturgis & Walton have in press are: "The Price of Inefficiency," by Frank Koester, and a new novel by John Fleming Wilson, entitled "The Princess of Sorry Valley."

Mr. Updike, of the Merrymount Press, Boston, announces the publication of a second group of books in the Humanist's Library, under the general editorship of Lewis Einstein. They are "Pico della Mirandola: A Platonick Discourse upon Love," translated by Thomas Stanley and edited by Edmund G. Gardner; "Giovanni della Casa: The Galateo—of Manners and Behaviour," edited by J. E. Spingarn, and "Albrecht Dürer: Journeys to Venice and to the Low Countries," edited by Roger Fry.

McBride, Nast & Co. will publish Alexander Black's romantic story, "Thorney," and "The Children in the Shadow," a work by Ernest K. Coulter which opposes the bill to abolish the Children's Court in New York.

"A Turkish Woman's European Impressions," soon to be issued by Seeley, Service & Co., has been written by a lady of culture and position. The book is edited by Miss Grace Ellison.

Putnams will soon have ready: "Patchword Comedy," a story by Humfrey Jordan; "Synonyms, Antonyms, and Associated Words," by Louis A. Flemming; "Things Learned by Living," by John Bascom; Vol. III in "The Story of the Civil War"—"The Campaigns of 1863 to July 10," by William Roscoe Livermore, and the following Cambridge books: "The Icelandic Sagas," by W. A. Craigie; "The Vikings," by Prof. Allen Mawer; "English Patriotic Poetry," selected by L. Godwin Salt, and "The Early History of the House of Savoy (1000-1233)," by C. W. Previté Orton.

The following are miscellaneous titles in Macmillan's list of spring publications: "Training the Boy," by William A. McKeever; "Labrador: the Country and the People," by Wilfred T. Grenfell, new and enlarged edition; "Trans-Himalaya: Discoveries and Adventures in Tibet," by Dr. Sven Hedin, Vol. III; "Guide to the Best Fiction in English," by Ernest A. Baker; "Historical Fiction," the same; "Ancient Ideals," by Henry Osborn Taylor, new and revised edition; "Myself and I," poems by Fannie Stearns Davis; "The Governments of Europe," by Frederic Austin Ogg; "The Science of Human Behavior," by Maurice Parmelee; "Educational Administration: Quantitative Studies," by E. L. Thorndike; "History of Education in Modern Times," by F. P. Graves; "Handbook of Exposition," by R. A. Jelliffe, and "Everyday English," by Franklin T. Baker.

Applications for the Kahn Foundation for the Foreign Travel of American Teachers should be sent to the Secretary of the Foundation, Sub-station 84, New York city, not later than March 1. The fellowships carry with them stipends of $3,000 and no obligation other than that of making a year's journey around the world and rendering a report to the trustees. Fellows will be selected early in May and will begin their travels on July 1.

It is not hard to see why in England the great Dictionary of National Biography (Macmillan) should be regarded as a national institution. A mere glance through its pages must be like a visit to Westminster Abbey. Take the last two volumes of the second supplement to the Dictionary, containing the biographies of distinguished persons who died between January, 1901, and December, 1911. A nation that has so many great names to lose in the short space of ten years is entitled to look back at the past with pride and to envisage the future with courage. Francis Galton, S. R. Gardiner, W. S. Gilbert, Joseph D. Hooker, William Huggins, Holman Hunt, Henry Irving, Jebb, Lecky, Meredith, Cecil Rhodes, Herbert Spencer, H. M. Stanley, Swinburne, George Frederick Watts, and James McNeill Whistler are the outstanding figures in a numerous and distinguished company.

Like the original volumes of the Dictionary, these two supplementary volumes—the first volume of the supplement containing the much discussed memoir of Edward VII has already been noticed in the *Nation*—make fascinating reading. The plan of the Dictionary calls for the sober and highly condensed presentation of the truth, but it is far from neglecting the anecdotal or the picturesque. One can always count upon unearthing a piquant phrase or fact. Thus we consider it a real contribution to knowledge when we are informed that the author of "Pinafore" and "The Pirates of Penzance," when he was two years old, was kidnapped by Neapolitan brigands and ransomed for £25. Sir Francis Galton not only established the science of eugenics and invented finger-prints and the composite photographs; he also constructed a map to show the geographical distribution of beauty in Great Britain. In his sketch of Phil May, E. V. Lucas tells how May was once asked for a loan of £50 and turned over all he had, which was only half the sum. Thereafter May used to avoid meeting the borrower because he felt that he still owed him £25. We may quote a few lines from Thomas Seccombe's estimate of George Meredith: "Meredith's novels are more like Platonic dialogues than works of

fictiou. His characters have as a rule singularly little volition or speech of their own. . . . He was articulate enough when he desired to be so. But the uovel was more or less occidental to him. His descriptive power and insight into the secret chambers of the brain were indeed superb."

The University of Cambridge played an important part iu the early history of the English Separatists. It was the alma mater of Robert Browne, the founder of the movement; of John Robinson, who was so closely connected with the Pilgrim Fathers; and of Francis Johnson, the leader of the first group of English Anabaptists. But hitherto no special study has been given to the contribution made by the University to this phase of religious life in England. As regards the Baptists, at least, this gap has now been filled by Mr. Bernard Nutter's little book on "The Story of the Cambridge Baptists and the Struggle for Religious Liberty" (Heffer; Cambridge, Eng.). It naturally gives special prominence to the influence exercised at Cambridge by Robert Robinson and by his eminent successor in the Baptist pastorate, Robert Hall, whose eloquence was regarded by his contemporaries as equal to that of Pitt or Fox. Incidentally, Mr. Nutter traces the course of the agitation for Nonconformist emancipatiou at the University, from the time of the Act of Uniformity to the abolition of religious tests at graduation.

Mr. Wilfred M. Short, for many years private secretary to Mr. Balfour, has brought out a volume of some 550 pages, entitled "Arthur James Balfour as Philosopher and Thinker" (Longmans). The book is, as the preface informs us, "an attempt to present in a convenient form the more important and interesting non-political views to which Mr. Balfour has given expression in his public writings, speeches, and addresses from the year 1879 to the present year." Just why the public should need an anthology of Mr. Balfour is not told us. The value of a philosophical anthology is always questionable, as logical continuity of thought is generally supposed to be one of the prerequisites of any real philosophy. However, there doubtless are many loyal followers of Mr. Balfour who will be interested in learning their leader's opinions on every possible subject; and all such readers will find in this book just what they want, and all arranged (most appropriately) in alphabetical order, from Authority, Bacon, and Beauty, to Stevenson and Tributes. The only wonder is that Mr. Short found nothing from his master's pen on Xenophon and Zeno.

Sergeant Maynard, the eminent lawyer and judge of the period of the later Stuarts, preferred the Year Books to comedy as the companions of his travels, and many others since that time have felt the fascination of these very human descriptions of the law trials in mediæval English courts. The Year Books have long been recognized as throwing light not only on the history of law and judicial procedure, but on many conditions of every-day life and the relations of every-day people, and on the manners and wit of the bench and the bar. Yet until the middle of the last century, these reports were either in manuscript or in untrustworthy texts, printed with eminent disregard for accuracy. In 1863, the first modern edition appeared in the Rolls Series, and from that time to the recent retirement of Mr. Pike as editor and the probable discontinuation of the British Government's share in the work, some twenty volumes have been issued for the reigns of Edward I and Edward III. Later, in 1903, the Selden Society, inspired by its founder and brilliant literary director, the late Professor Maitland, began the publication of a supplementary series for the reign of Edward II, which is now in its seventh volume, with two more in active preparation. Recently, the Law School of Harvard University has announced its intention to issue the Year Books of the reign of Richard II as a memorial to the late dean, Prof. James Barr Ames. In the seventh volume of the Selden Society series (Year Books of Edward II, Vol. VII. The Eyre of Kent, 6 and 7 Edward II, A. D. 1313-1314, Vol. II, London, 1912), W. C. Bolland, the surviving editor, both Professor Maitland and L. W. Vernon-Harcourt having died during the progress of the work, has discussed anew the difficult problem of the authorship of the Year Books. He rejects the old tradition that they were unofficial reports made by officials of the court in their private time, and believes that they were written up from notes taken by juniors of the court in the interest possibly of a syndicate of sergeants, who above other men needed information of this kind. Mr. Bolland's view, which it may be noted is essentially that held by Professor Maitland and presented by Holdsworth in his "History of English Law," seems to be the only solution capable of meeting the many difficult and intricate questions which are raised.

It is the study of a people and a temperament rather than a narrative of war that G. F. Abbott has written in "The Holy War in Tripoli" (Longmans). Partly this is due to the desultory nature of the Italian campaign in North Africa, but in part also to the writer's self-imposed limitations. In return for the Turkish Government's permission to join the forces in Tripolitania, which permission was granted in spite of the fact that Mr. Abbott has been a sharp critic of the Ottoman rule in Europe, the author, writing when the war was still in progress, has omitted such information of a specific nature as might have proved useful to the enemy. The pages are full enough of alarums and excursions, but our interest, and the author's evidently, is almost entirely in his background. Vigorously and in considerable detail, but without the flamboyancies that are usually considered esential to a description of the sun-baked deserts of the brooding East, Mr. Abbott has drawn an arresting picture of arid North Africa and the psychology of its people as it manifests itself in a moment of crisis. The one-sided nature of the war, if we compare the Italians and their Turco-Arab opponents in numbers and equipment, is pitiful. It was the desert alone that held back the European invaders so long. If the Turkish armies now engaged in the Balkans have been sent to the firing line under anything like the same circumstances that obtained in Tripoli, the victories of the allies are altogether explained.

For its romantic interest, the Guadalquivir, described by Paul Gwynne in "Along Spain's River of Romance" (McBride, Nast), should be classed with the Nile and the Euphrates rather than with European streams like the Rhine and the Loire, for its history dates back to the dawn of civilization. The Tarshish of the Scriptures was probably situated near its mouth. Along its banks fought and traded Phœnicians, Carthaginians, Hebrews, Romans, Vandals, Goths, Moslems, and Christians. And at the present day it traverses Spain's sunniest, gayest, and most fertile province. Mr. Gwynne, an Englishman with a fondness for adventure, exploration, archæology, folk-lore, history, aud literature, has had the happy thought to follow the Guadalquivir from its obscure source in the hills of Cazorla down to its Mediterranean outlet. This journey was accomplished afoot, on donkey, and in boat. His book reflects his manifold interests. He is always less concerned with the actual river than with what it symbolizes. He presents a good deal of information, but his style is light and readable, though the humor is at times a trifle strained. He is least happy when he makes imaginary peasants recount folk-tales which he obtained from Trueba, Fernán Caballero, and others, a debt acknowledged in the introductory chapter. Mr. Gwynne does not possess the art of making his Andalusians speak naturally. The book is illustrated with numerous wash drawings and colored lithographs.

The "Cligés" of Chrétien de Troyes, the best, in mediæval opinion, of all his romances, has been translated in prose by L. J. Gardiner for Duffield's New Medieval Library. The work has been well done; the rendering is very faithful, and the English is simple, pleasant, and free from affected archaism. The love-psychology which charmed the ladies of Champagne is no longer novel, but "Cligés" is still interesting in many ways—as a deliberate offset to the Tristan story, for instance, and as the first Western version of the feigned-death motive that led eventually to "Romeo and Juliet." The enthusiasm of Mr. Gardiner's introduction, however, is certainly excessive. To say that Soredamors, Guinevere, Fenice, and Thessala "form a gallery of portraits unprecedented in literature" is to bring their slight mediæval pallor into pitiful contrast with the living heroines of classic verse.

Edmund Curtis's biography of Roger of Sicily is a welcome addition to the Heroes of the Nations series (Putnam). The cosmopolitan brilliancy of the court of Frederick II is a matter of common knowledge; it is not so generally known that Palermo was equally cosmopolitan and almost equally brilliant a century before his time, and that the career of Roger as count and king was no less rich in varied activity thau that of his more famous grandson. Mr. Curtis does full justice to Roger's personal achievements in diplomacy and in campaign, but it is easy to see that he is chiefly interested in the innovations that marked the political and financial organization of the *Regno*. Introductory and concluding chapters treat the coming of the Hautevilles and the decline of the kingdom under Roger's immediate successors, so that the book is in reality an adequate, though brief, account of the whole Norman dynasty. Mr. Curtis has done his work with admirable completeness and accuracy. One

or two of the chapters are perhaps rather thick with technical details, but in the biography proper the style is clear and interesting and at times extremely good. The illustrations are excellent. Several are from photographs of places, several from Siragusa's edition of Peter of Eboli. These latter are always printed (doubtless through no fault of the author) "with acknowledgments to Instituto Storico Italiano Fonti, per la *Storia d' Italia*."

Prof. Henry Wood, head of the German department in the Johns Hopkins University, has published through Georg Reimer, of Berlin, his maiden volume, "Faust-Studien, Ein Beitrag zum Verständnis Goethes in seiner Dichtung." It is remarkable that the German of an American Quaker, a man originally trained under Wülcker, of Leipzig, for work in English, should exhibit only occasional slips. "Und ahmte seinem Stile nach" (p. 10, l. 35) may be a misprint, as there are certainly two in the immediate neighborhood; "Addressat" (p. 23, l. 3) has the sound of commercial correspondence; "So wird man einer noch grösseren Einheit gawahr" (p. 24, ll. 11-12) is quaint, at the very least; "Der soeben zitierte Uebersetzer ins Englische" (p. 41, l. 18) seems clumsy, especially after the suspended construction. Some other peculiar expressions could be cited. But the author's lack of clearness arises rather from an apparent indifference as to whether the reader follows him or not. One gets the impression now and then that Professor Wood is talking rather to himself than to others. The argument in favor of the strong influence of Hans Sachs upon some portions of "Das Vorspiel im Theater" is worked out in detail, but hardly holds, since the theme of the decadent powers of old age is so common that it may be easily assumed in "Faust" without the least suggestion from the old Nuremberg mastersinger. Professor Wood is one of the many commentators who do not feel quite satisfied until Goethe's every idea has been safely traced home to some external source. Of the five essays the cycle of papers treating the witch's kitchen scene is the most extensive. The arguments to prove the Hexe is Johann Caspar Lavater are by no means convincing. Professor Wood contends that, because the Hexe draws her magic circle "mit seltsamen Gebärden" and because she "fängt an mit grosser Emphase aus dem Buche zu declamieren," therefore she must represent Lavater, for he often spoke with great vigor and used vehement gesticulations. Nor is the argument convincing that, as Goethe uses the word "exorzisieren" in a paragraph of "Dichtung und Wahrheit" (Book XIV) concerning Merck and Lavater, it logically follows that he had the Hexenküche and Lavater in mind when he wrote it, and that the witch represents Lavater. The concluding paper on Friedrich Maximilian Klinger's "Faust-Romane" and Goethe's "Faust" is the best of the book. Professor Wood has collected rich material and has handled it well. Rieger's "Briefbuch zu Friedrich Maximilian Klinger" (Darmstadt, 1896) helped to clear up the relations of Goethe and Klinger, especially after the latter removed to Russia, though Rieger, as a relative of Klinger, may have laid too much of the blame for the estrangement upon Goethe. On the other hand, Professor Wood favors Goethe unduly, by reading into the correspondence what is not clearly there. For instance, it is difficult to find in Goethe's letter of May 8, 1814, to Klinger any cunning plan to sound the latter as to the sources of his "Faust-Romane," or in Klinger's lengthy reply of May 26, 1814, any evasion of Goethe's supposed ulterior purpose. But it is an interesting theory.

Under the simple title "Virgil" the Macmillan Company brings out a second edition of T. R. Glover's "Studies in Virgil," noticed in these columns eight years ago. There is little addition or alteration in the text, but the supply of foot-note material is perceptibly increased. The handling of the character of Æncas remains, as before, the least satisfactory portion of a generally excellent book. The difficulty with Æneas is simply the difficulty inevitable to any modern mind of achieving a sympathetic understanding of Virgil's fundamental plan. We can judge Dido according to ordinary standards of human action and passion, but if we attempt to apply the same standards to Æneas we are at once out of harmony with the poet's purpose and our criticisms can end only in confusion. If Æneas had been actuated simply by human motives, his band would never have seen the banks of the Tiber, while, if the gods themselves had adjusted their own differences and led him straight to the destined goal, the poem would have been just as hopelessly disarranged in other respects. Taking the whole history of the Æneid into consideration, it is fairly safe to assume that auy one who to-day can find in the protagonist only a miserable failure has not yet found out exactly what Virgil was aiming at. We must take issue with a foot-note on page 160 concerning Horace: "The odes in which he takes the high imperial line of virtue and reformation are very curious. It is hard to imagine any one taking them very seriously who knew Horace at all well, and it is impossible to suppose them to be banter. Perhaps Augustus thought they would do for his public." The serious odes of Horace are hardly as "curious" as the attitude of mind which can read his work as a whole and then seek to exclude any serious moral feeling and purpose from the maturer years in which most of the odes were written.

Cincinnatus Heine ("Joaquin") Miller died on Monday in the one-room cabin which he had built years ago on the Piedmont Hills of California. He was born in Indiana, in 1841, but removed when a small boy to Oregon. He sought gold in California, practiced law, and edited a newspaper. After vainly trying to publish his first poems, "Songs of the Sierras," in this country, he brought them out in London, where they were much esteemed. When he returned to this land, his hermitage in the West became an American institution. He continued to write—hating the labor of it, he said—because it was his best means of support, and published: "Pacific Palms," "Songs of the Sunland," "The Ship of the Desert," "Life Among the Modocs," "First Families of the Sierras," "The One Fair Woman," "The Danites in the Sierras," "Shadows of Shasta," "Memoric and Rime," "Baroness of New York," "Songs of Far-Away Lands," "The Building of the City Beautiful, a Poetic Romance," "Chants for the Boer," "True Bear Stories," and several plays, among them "The Danites."

Charles Major, the author, died on Thursday of last week at his home in Shelbyville, Ind., aged fifty-six. After practicing law for a number of years, he turned to literature, publishing his first book, "When Knighthood Was in Flower," in 1898. Other books followed, among them "Bears of Blue River," "Dorothy Vernon of Haddon Hall," "A Forest Hearth," "Yolanda, Maid of Burguudy," "Uncle Tom Andy Bill," and "A Gentle Knight of Old Brandenburg."

The death, in his fifty-eighth year, is announced from Rochester, N. Y., of William De Lancey Ellwanger, the author of "A Summer Snowflake and Drift of Other Verse and Song" and "The Oriental Rug."

Science

Instinct and Experience. By C. Lloyd Morgan. New York: The Macmillan Co. $1.50 net.

Bergson's works have attracted so much attention of late that we are not surprised to find the philosophers of the day turning seriously to the old problem of the relation of instinct to intelligence to which the Frenchman gives such prominence, in his most popular book, "L'Evolution créatrice." Accordingly, in July, 1910, at Cambridge, England, a notable array of English psychologists met together with no other object than to compare their own views on this subject, and to listen to an exposition of Bergson's doctrines from his most loyal English disciple, H. Wildon Carr. Upon that occasion, Prof. Lloyd Morgan appeared as one of the principal speakers; and the book before us is virtually a continuation of the debate which then took place. It is a fuller exposition of the writer's views where he feels they have been misunderstood, a reply to criticisms of his positions made by the other debaters, and an attempt to show the relation of his conceptions to those of Bergson, Driesch the neo-vitalist, and others.

The earlier publications of the author have been so attractive to lay readers that we are tempted at first to treat the work before us from their standpoint. It is evident, however, from what has just been said as to the contents of the book, that these lay readers will find themselves in the position of belated persons who do not reach an audience hall until all the principal addresses have been made; and who, finding one of the original speakers rising again, naturally expect to hear from him a résumé and discussion of the most significant points in the debate. But in this they are destined to disappointment, for they discover (p. 2) that he intends to undertake no such task. He acknowledges at the very start that he appears as an advocate of special views from which his fellow-debaters dissent; and his hearers listen in the main to labored efforts to maintain positions which were gained by the debat-

er in his younger days and which his opponents feel ought to be abandoned or substantially changed. Such general readers are therefore likely to close the book, as they might leave the lecture-hall, with a sense of disappointment.

From the point of view of the technically trained student, we note that the earlier works of Professor Morgan had their special value as records of careful experiment in animal behavior. He dealt with certain distinctions which appear on the surface between instinct and habit, and between instinct and intelligence, and which he found available for his uses and satisfactory enough for descriptive purposes; but it has never been clear that he was giving sufficient thought to the fundamental import of the distinctions he made, which was, of course, the real subject of the Cambridge symposium. One might have expected then to find in this book indications that the criticisms made by his opponents in the course of the debate had led to some changes of view where his positions seemed particularly weak; but this expectation is not met. Our author prefers to stick to his antique guns, not, we fear, without some loss of prestige.

An important part of his argument is based upon a theory of his own in relation to the functioning in special parts of the nervous system. One would think he might himself perceive upon how dangerous a foundation he is thus building, inasmuch as he acknowledges, towards the end of the book (p. 283), "that we are still novices in the interpretation of the integrative processes within the cortex, and . . . ought not to found too much on our present ignorance." How can one who is convinced of this ignorance in relation to the cortex fail to go further, and acknowledge that we really know quite too little of the nature of the functioning within the nervous system to warrant his view that the distinction between reflex action, instinctive action, and the intelligent control due to experience, is based upon differences of functioning within the spinal cord, the sub-cortical brain centres, and the cerebral cortex, respectively (p. 58 ff)?

As a matter of fact, if anything was brought out clearly in the course of the Cambridge debate it was that we have little real warrant for making the sharp distinctions in this field which we find practically serviceable in every-day life; and in the attempt to justify this usage on theoretical grounds, our author becomes involved in not a few troublesome inconsistencies. For instance, we find him (p. 56) defending his old view that instincts are "complex reflexes"; and this notwithstanding his contention, above referred to, that a sharp distinction may be made between reflexes and instinctive reactions because these two types of action involve functioning within diverse nerve tracts. Furthermore, if we agree that he is warranted in holding this view that instinctive reactions are complex reflexes, we can see no reason why he should reject altogether the notion that intelligent control due to experience may be as closely correlated with instinctive reactions as these latter are with the reflexes.

But we may pass over these defects to note one signal advantage in our author's method of approach. It is not without significance that the title given to his book is different from that given to the debate to which it refers; for the author thus shifts our attention from the relation between instinct and intelligence to the relation between instinct and experience, and thus tacitly suggests that instinct and intelligence cannot be properly related if one takes the position of a scientific observer, as he assumes to do. He evidently appreciates that, whereas instinct, on the one hand, is an objective concept appropriately considered by one approaching the subject from the biologist's standpoint; on the other hand, intelligence is a subjective concept, *i. e.*, one relating to our conscious life. The two are indeed on different planes, if we may so speak; and the fact that we overlook this in our attempts to correlate them leads to endless confusion in our thought. So he asks us to attempt the correlation of instinct, not with intelligence, but with experience regarded as an objective fact; and in this is clearly justified. It is true that, notwithstanding his emphasis of the difference between "experienceds" and "experiencings" (*e. g.*, chap. v), he does not always keep this distinction clear before his readers, who are accustomed to use the word experience to refer to mental states. Nor does he himself always avoid the confusions above referred to; as, for instance, when (p. 81) he says that the objective facts which we describe as "acquired modes of behavior . . . fall under the heading intelligence"; or when he endeavors (p. 90 ff) to bolster up the conception of the appearance in the course of evolutionary process of an "effective consciousness," of which conception he made much in his earlier writings. On the whole, however, his determination to cling to objective considerations in attempting to correlate experience with instinct is no small advance in method.

In the comparisons he makes between his own views and those of other writers whose works have attracted attention, he displays his usual skill, and introspective keenness, and, withal, commendable fairness. This is especially evidenced in chapter vii, which is given to an attempt to discover the real meaning of Bergson's "Philosophy of Instinct." Here we find him persistently endeavoring to take a sympathetic attitude, and to comprehend the standpoint and conceptions of this popular philosopher, while presenting a serious arraignment of his views.

Mr. Timothy Lewis, of Aberystwyth College, is preparing for the press a sixteenth-century Welsh medical compendium, containing about 600 recipes, charms, etc., which were probably brought together by Thomas Williams, of Trefriw.

The aged Dr. Alfred Russel Wallace is bringing out through Cassell "Social Environment and Moral Progress."

"A Reader of Scientific and Technological Spanish," edited with vocabulary and notes by Lieut.-Col. C. DeW. Willcox, of the United States Military Academy, is announced by Sturgis & Walton.

Forthcoming science books in Putnam's list include: a new and enlarged edition of "Volcanoes, their Structure and Significance," by Prof. T. G. Bonney, and the following Cambridge publications: "The Modern War Ship," by Edward L. Attwood; "Mendel's Principles of Heredity," by W. Bateson; "The Story of a Loaf of Bread," by Prof. T. B. Wood, and "Collected Papers," by J. Y. Buchanan.

Music and Drama

Practical Reflections on the Figurative Art of Singing. By Giambattista Mancini. Boston: Richard G. Badger. $2 net.

Giambattista Mancini was one of the most famous teachers of the old Italian *bel canto*. He was born in 1716, and died in 1800. In 1760 he was invited to Vienna to teach the imperial princesses. Seventeen years later he gave to the world a treatise on the art of singing, the value of which was appreciated at once, especially in France, where two different translations of it were published. The English version, though late, is by no means untimely. Mancini lived at the time when florid song was in its full glory in Italy, and many of the hints he gives are as valuable to teachers and students at present as they were in his day. Although the dramatic style of singing is more in vogue than ever, the public has by no means lost its liking for the ornamental style, as witness the extraordinary furor created a few years ago by Tetrazzini. Richard Strauss introduced in his latest opera, "Der Rosenkavalier," an aria which vies in the brilliancy of its embellishments with the most difficult of the *fioriture* written by Rossini for Patti and other specialists in ornamental song; and Frieda Hempel, who sang this aria, has expressed the opinion that the florid style is destined to prevail once more over the dramatic.

The translator, Pietro Buzzi, of Los Angeles, has turned the quaint Italian of Mancini into lucid English. His dedi-

cation of the book to Alessandro Bonci, "the only living exponent of the art that made Italy famous during the sixteenth and seventeenth centuries," may surprise the devotees of Caruso; but Caruso owes his position as the leading tenor of the time more to the beauty of his voice and to the art of dramatic expression than to the practice of the *canto figurato* on which the vocalists of the old Italian school chiefly relied, as does Bonci. The blending of registers, the portamento and appoggiatura, the *messa di voce*, the trill and the mordent, the brilliant cadenza, are all at the command of Caruso, but he does not specialize in them; one forgets his accomplishments in the superior dramatic and emotional qualities of his singing and acting, whereas in the case of Bonci they are his chief stock in trade. Parisian critics were on one occasion very indignant with Caruso for introducing a flourish at the end of "La donna è mobile" in "Rigoletto." They were right to condemn this, for that tune ought to be sung in a simple, straightforward manner; but it was Caruso's sole offence against Verdi's style.

When Bonci sings that same air he makes it the occasion to show how beautifully he can swell and decrease the volume of his tones and do other things the singing teacher has taught him. In the good old times, it was thought the proper thing to apply such tricks on every occasion. Witness what Mancini says in regard to Cuzzoni (the spoiled idol of the public whom Handel once called "a veritable she-devil," and threatened to throw out of the window unless she sang a certain aria as he had written it):

> When singing a melodic song, she knew how to adorn and embellish it with such varied "gouppettos" and passages without marring the melody; now blending, then vibrated with trills and mordents; now "staccato," then sustained, and then loose runs in a redoubled style, soaring with a portamento from a chest tone to a high head tone, and, finally, all these were done with that fine perfection that caused admiration and wonder.

Many interesting details of this nature are given by the author concerning other favorites of the golden age of florid song—Stradella, Faustina, Ferri, etc. The last-named could sing a chromatic chain of trills up and down two octaves in one breath—a feat that seems impossible. Nor can we realize what that meant to the operatic audiences of his day. Melba is famous for her beautiful and even trill, which, however, is regarded as a mere detail of no special importance. To Mancini the trill is "the perfection and beauty" of the art of singing. He is indignant because Signor Manfredini criticised his attitude in this matter, and points out that the public shares his predilection:

> Take a singer who has a good voice, easy execution, good taste, and refined style, perfect cadences, genuine passages, and "Fermate," but no trill, and on the other hand, take a singer with only a few of the above-mentioned qualities, but possessing the trill, and ask the audience who is the better. How can you doubt? The second, of course, is the preferred, liked, and honored.

Mancini gives practical directions in regard to the attainment of a good trill, of agility, and the other things so much admired in his period. He tells about the conservatories in Venice and Naples where these things were best taught, and discourses on the superiority of Florentine speech over other Italian idioms as a model for singers. Recitative and even acting receive some share of his attention, though in a somewhat apologetic fashion, because these arts were so neglected in his day. He also explains why so few succeed in music, one reason being that "women, owing to their sex, abandon study when young and deem it worthless, because they receive praise for their talent." It is amusing to find in these pages, written 130 years ago, the same complaints one hears to-day regarding the decadence of the vocal art and the absence of gifted younger singers to take the place of the veterans. The reasons for the decline are the same, too: "What hope can remain when we see a pupil literally sold by the teacher to the manager, the teacher's only interest being the enormous percentage to be paid him for an incomplete and unfinished course of instruction?"

Putnams announce "Voice Training for Choirs and Schools," a Cambridge book by Cyril Bradley Rootham.

"Chamber Music: A Treatise for Students," by Thomas F. Dunhill, is in Macmillan's spring list.

The Quinlan Opera Company, which is to give the Wagner operas in English in the British Isles next season, and also in the colonies, has returned from an eighteen months' tour, embracing Great Britain, South Africa, and Australia. Over 400 performances were given, and the company travelled 43,000 miles; yet it is stated by the management that "in this period never once has the public been disappointed by the non-appearance of any particular artist, or the changing of the opera."

Munich will have its usual Wagner and Mozart festivals the coming summer. Four of Mozart's operas will be sung in August, while Wagner's "Tristan," "Meistersinger," and the four Nibelung operas will be sung in August and September. Strauss's "Ariadne auf Naxos" will also be staged, and performed four times during those two months.

Teresa Carreño, who is a great favorite in Europe as in America, is doing good work for the cause of American music by including in the programmes of her present concert tour, which takes her to all the larger and many of the smaller European towns, a set of MacDowell piano pieces, which she plays in a manner to spread his renown.

In the London *Times's* remarks on the first performance in England of Strauss's "Rosenkavalier," under Mr. Beecham's direction, two statements are of particular interest: "Even with considerable cuts, which were made last night, the opera is too long." "Every one of Wagner's works might be, and probably has been, cited as supplying something to Strauss in 'Der Rosenkavalier.'"

The first operatic novelty of the season was produced last week at the Metropolitan, not by the Metropolitan Opera Company, which has so far contented itself with revivals, but by the Philadelphia-Chicago Company, which is continuing Oscar Hammerstein's policy of friendliness to new operas. The work in question was "Conchita," by Riccardo Zandonai, a young Italian composer, who has studied with Mascagni. The opera was first produced in Milan in October, 1911, and in the following year it was heard in London—where one of the most prominent critics declared that its score was the most perfect of its kind that had yet come from modern Italy—an opinion which is not shared by the professional judges in this country; nor was any enthusiasm over it manifested by the audiences in any of the three cities (Chicago, Philadelphia and New York) in which Mr. Dippel has so far produced it. The story of the opera is based on "La Femme de la Pantin," by Pierre Louys, considerably modified by the librettists to make it less objectionable on moral grounds. It is concerned with the efforts of a rich man named Mateo to win the love of Conchita, a cigarette girl in a Seville factory, and his failure till after he has given her a good thrashing. It is said that Puccini refused this libretto, and he was certainly wise in so doing. Yet it has redeeming features, chief of which is the fact that it presents scenes of local color that recall the masterworks of Bizet and Charpentier—"Carmen" and "Louise." For these scenes of dancing and the movement of crowds, Zandonai has written some appropriately animated music; and he has learned the trick of orchestrating with brilliant colors. As a whole, however, his score is dull, because of a lack of real melody in either the vocal or the orchestral parts.

Death has carried off, at a ripe age, one of the few members of the extremely numerous Austrian Imperial family, who had a genuine and life-long interest in music. Former rulers and princes of the Hapsburg house are intimately associated with the history of the tone world, but during the past half-century it was principally Archduke Rainer, whose death recently occurred in Vienna, that was associated with the furtherance and cultivation of music. His place is now likely to be filled by Archduke Eugene.

Macmillan's spring list includes: "In the Vanguard," a three-act play by Mrs. Spencer Trask; "English Drama of the Restoration and Eighteenth Century," by George Henry Nettleton, and "Representative English Comedies, Vol. II, The Later Contemporaries of Shakespeare," by Charles Mills Gayley.

The American Stage Society will give a

presentation on Monday afternoon, February 24, for the first time in America, of Arnold Bennett's three-act comedy, "The Honeymoon." The cast will include Laura Hope Crews, Mrs. Sara Cowell Le Moyne, G. W. Anson, Howard Estabrook, William Fagan, Ernest Lawford, Frank Reicher, Albert Reid, and Richard Sterling.

The Oxford University Dramatic Society have just produced Thomas Dekker's "The Shoemaker's Holiday," and seem to have acquitted themselves fairly well in the circumstances.

The poetic drama "Nimrod" (Lothrop, Lee & Shepard), by Francis Rolt-Wheeler, is the fruit of long and frequent revision. It was first completed as a dramatic poem in 1903, was remodelled and copyrighted as a play in 1906, and has now been entirely rewritten. In its present shape it is not only a notable addition to the modern literary drama, but possesses qualities which, with slight modification, ought to make it valuable for theatrical representation, especially of a spectacular kind. It has an abundance of striking and picturesque incident, contains much vigorous characterization, and is written in fluent and virile blank verse, which, if it seldom soars into the higher regions of fancy, is often eloquent and imaginative and—what is much to the purpose—uncommonly well adapted to stage declamation. Perhaps it may be described most accurately as romantic melodrama of a very superior order. The hero, of course, is that son of Cush briefly immortalized in the Scriptures as "a mighty hunter before the Lord." But it is not in that capacity, except incidentally, that he figures in the play, nor is any attempt made to connect him with historical fact or legendary lore. He is purely a creature of fiction. Serving as the commander-in-chief of Astrael, the King and high priest of the Chaldean city of Eridhu, he aspires to the hand of the King's daughter, Astupheli, who loves him, and has confided to him the secret of his own royal and priestly birth, which her father had zealously concealed. Astrael, threatened by revolution, sends him on an expedition against the cities of the plain, promising Astupheli's hand as the reward of victory, but planning to marry her, by the aid of the priests, during his absence. Learning of this treachery, when it is too late for him to defeat it, Nimrod appeals to the Jewish patriarch, Enochael, who, by prayer, invokes a tempest which obscures the sun and so prevents the marriage rites until Nimrod can return, rescue his love, and avenge himself upon his foes. The story is told with great spirit and with more illuminative action than is generally found in works of this description. Nimrod, Astrael, the intriguing high priest, Cal-Erech, the patriarch Enochael, Astupheli, and several minor personages are vividly drawn and full of histrionic opportunity. And the author has contrived to preserve an appropriate atmosphere of far antiquity, while taking the utmost advantage of poetic license. His Enochael, recalling both Abraham and Elijah, does not belong to the same era as his revolutionary hermit, and Nimrod's political opinions are of a distinctly modern cast, but he, too, for all we know, may have been among the prophets. The learning, the influence, and the unscrupulosity ascribed to the Chaldean priesthood are fully justified, at all events in poetic drama, and the final scene, if somewhat ultra-melodramatic, would afford a rare chance to a powerful emotional actress.

In "Le Théâtre d'Ibsen" (Paris: Perrin & Cie.), W. Berteval, following Ibsen's advice to his critics, has studied the plays chronologically. M. Berteval is always conscientious and sometimes very keen, especially in analysis. By remaining deaf to fanciful interpretations of previous critics, he has cleared up a number of obscurities. Three chapters are particularly good, those on "Emperor and Galilean," "Peer Gynt," and "Brand." The author's avowed purpose is to explode the symbolistic interpretation of Ibsen. In this his chief opponent is Count Prozor, who, indeed, is permitted to present his views in the preface of the present volume. But if the ideas of the symbolists concerning Ibsen are too divergent and conflicting to bring conviction, M. Berteval's brief for accepting the plays purely on their face value is somewhat impaired by Ibsen's willingness that critics should often guess what he meant. Nor is M. Berteval himself quite consistent. On page 3 he says that Ibsen wrote merely for his own satisfaction—"il a écrit pour soi, il a obéi à sa seule inspiration"—and on page 5, "il a un but moral." Another defect of the book is the lack of any broad generalization. While following the chronological order of the plays, the author gives scarcely any indication of the evolution thus suggested.

Art.

THE MORGAN PICTURES AT THE METROPOLITAN.

Mr. Morgan has never collected pictures in the systematic spirit in which he has assembled his incomparable collection of prints, books, autographs, and manuscripts. Quite naturally, therefore, the twenty-nine pictures now generously lent to the Metropolitan Museum represent somewhat divergent principles of selection. In the main, it is a choice of the more important canvases which served to decorate his London house. A few, like the famous Colonna Raphael, the exquisite altar piece of the Alessandri family by Fra Filippo Lippi, the Velasquez, and the Rubenses, were presumably bought for their art historical importance. Some especial unconventional inspiration must account for the purchase of a most winning portrait of a child by an unknown Spanish artist, in whom I should like to recognize Francisco Zurburan. Evidently, the graciousness of the portraiture of the early English school, with the contemporary work of the French portraitists, has made the deepest appeal to Mr. Morgan's taste. Indeed, this has been a characteristic enthusiasm of the collecting of the last thirty years. It is no wonder that, before the restlessness and vulgarity of most modern portraiture amateurs, have willingly taken refuge with the gentle distinction of Sir Joshua, the poetic glamour of Gainsborough, the vital simplicity and rightness of Raeburn. Such French limners as Van Loo, Drouais, and Quentin Latour, while they generally bring a less engaging point of view, offer an even more impressive knowledge and a more satisfying perfection of workmanship.

The drawback to this delightful art is its tendency to push prettiness to the point of sentimentality. One may note it in the portrait group by Mme. Vigée Lebrun, in the reiterated coquettishness of the little girl by Greuze, who winds away her yarn from a mischievous kitten, in Hoppner's Godsal children prettily posing before a setting sun, even in Sir Joshua's head of that languishing fair widow Lady Waldegrave. It would be an interesting lesson in pictorial quality to pass from the English and most of the French pictures to the anonymous portrait of a Spanish child, to Raeburn's Lady Maitland and Miss Rose, and Latour's Mme. de Mondonville. What constitutes the superiority of these latter portraits is their honesty. About most of the others, even including the Van Dyck full-length of a patrician lady and her child, there is some element of clever masquerade.

Yet how lovely some of these calculated effects are! Lady Delmé, with her children and their spaniel, under an oak—could any one play more fetchingly at motherhood? Sir Joshua's cool intelligence, his amazing skill as *régisseur* of the aristocratic spectacle, is here at its height. How fastidiously he declines all expected and commonplace features, retaining the charming slight dissonance between a saffron robe and the mellow browns and greens, where most painters would have been frightened into some obvious harmony. Romney and Gainsborough one does not see at their best here. In the notorious "Stolen Duchess" in her present state I can see little interesting but the mystery of her abduction. Had I won into the Agnews' gallery, I should have stolen preferably almost anything else. Yet the full-length Lady Gideon has much of Gainsborough's chivalric note, and perhaps Lawrence's sensationally effective Miss Farren (more obscurely known as the Countess of Derby) may atone for a certain disappointment in her gallery neighbors. Lawrence was only twenty years old when he painted it, and happily not yet the lazy man of talent, much-fêted knight, and admired P.R.A. Of course, the picture is theatrical, but then Elizabeth Farren was an actress. And you get from the canvas the thrill that her fine eyes suddenly directed upon you would produce.

The great Raphael, which was painted in 1504 for the Poor Clares of Perugia, does not thrill me, when I recall the

Marriage of the Virgin of the same year. Indeed, I suppose there now is only a few square inches of Raphael's handiwork visible in the entire picture. Yet the design of Raphael is so noble that it seems indestructible either by repainting or copying. We are in the realm of a divine geometry, of an abstract beauty that persists even when its particular forms have deteriorated. Note how the swaying form of the Virgin is steadied and balanced by the little St. John, how the canopy opens like a lily above the pyramidal group, while the angels above suavely carry the diverging lines back into the picture. Even the projecting hood repeats the easy ovals of the pattern in the third dimension. For the best Raphaels we must cross the water; yet we are profoundly fortunate in having so representative a masterpiece in America. In contrast with the garbled surfaces of the Raphael is the authentic, delicate shimmer of downy tempera and gold in Fra Filippo Lippi's St. Lawrence. One can imagine the lusty friar smiling with a certain condescension over the anæmic grace with which he endows the saint, and taking a whimsical pleasure in the ironical worldliness which he imputes to the older saints. The color is as exquisite as that of an apple tree in spring.

Rubens is here in his vitality and measured gorgeousness, but Fromentin is right: Rubens is not a great portraitist. Hobbema, in the famous Water Mill, presents a fine example of his solid uninspired prose. He thought nothing interesting about landscape, but saw it with rare integrity. Turner, in a Venetian scene, brings the contrast of a hectic and not quite normal poetry. Constable, in a scene on his beloved Stour, offers an embarrassment of riches in several charming landscapes not very happily compressed within a single frame. Velasquez's Infanta is admirable in its probity, but the element of charm is not there, nor is the workmanship at all of his most magical.

Raeburn's two Scotch gentlewomen, as I have already hinted, are so simply right and appealing that any words in their regard seem quite superfluous. For me the keen and novel sensation of the show comes from these two portraits, and the nameless Spanish Child; from the Fra Filippo, and the unassuming head by Quentin Latour. But there is much else that is pleasurable, instructive, and in its degree important. In exhibiting this choice group of pictures Mr. Morgan has put all American art lovers deeply in his debt.

F. J. M., JR.

"Ancient Stained and Painted Glass," by F. Sydney Eden, is a Cambridge manual in Putnam's list.

Macmillan's spring list includes "Pictures and Their Painters," by E. V. Lucas.

Finance

NEW AND OLD INFLUENCES ON THE MARKETS.

On Monday of last week, the rate for call money on the New York Stock Exchange—usually a fairly accurate barometer of American money market conditions generally—rose to 4 per cent., as against the 3 per cent. maximum prevalent since the beginning of the year. Last week closed with the rate at 4½. Meantime, the rate for three months' loans in Wall Street has advanced from 4¼ to 5 per cent.

Neither the rate for call money nor the rate for time loans is abnormally high; the one touched 20 per cent. and the other 6, barely two months ago. But that comparison is not the test. The significance of the past week's money rates is better measured by the statement that neither market has reached as high a rate, thus early in the season, in any year since 1907. Taking call money, for example, the present high rate was not touched in 1912, after the first-of-January settlements were completed, until the first week of April; nor in 1911, until the late weeks of December; nor in 1910, a year of much disturbance, until the end of April; nor in 1909, until October.

This unusually early tightening of the money market has not been wholly unexpected. It followed some weekly New York bank statements which made quite as impressive a comparison for themselves. Surplus reserves of the banks in the Clearing House last Saturday were not only barely one-fifth of what they were at that date in 1912 or 1911, but were lower than any February figure during the dozen past years, except for the quite abnormal tight-money periods of 1906 and 1907. The surplus had, in fact, been declining steadily since the statement of January 25, whereas last year the maximum of this season was not reached before February, and the year before, not until March.

But this early turn of the bank position to comparative weakness was no mystery. Currency sent from New York bank reserves to the harvest States, during the autumn season, rushed back in the usual quantity after January 1; but its effect on bank reserves has been offset by export of no less than $25,000,000 gold from New York to Europe and South America, since the beginning of 1913. There has, in fact, been only one occasion, since the outpour of gold which followed the "Venezuela panic" and the breakdown of our Treasury's reserve at the end of 1894, when so large a total sum of gold as this has left New York on export during the first seven weeks of the calendar year. Since the opening of January, also, the loan account of the New York banks, which in that period of 1910 increased $37,000,000, in 1911 $88,000,000, and in 1912 $123,000,000, has this year increased $136,000,000.

That unusually large increase did not reflect unusual activity, either in the season's general business or in its financial operations. But it undoubtedly did signify that New York had this season borrowed less from other great money markets and had lent more to them than is customary at this season. The particular cause for such a condition has been the state of affairs in Europe. Continuance of the Balkan War has prolonged the strain on the great European markets, where the natural effect of the resulting political and financial disturbance has been high money. This condition has been very greatly aggravated through the hoarding of money by the people of Continental Europe, which has drawn huge sums from bank reserves.

Until last week's sudden and sharp advance in Wall Street rates, every European market has this year been bidding more for money than New York, and most of them still pay more than we. Unusual as such a situation undoubtedly is, it is not in all respects a new position; at this time in 1900, European bank reserves were even more upset through the war blockade of the $8,000,000 monthly shipments of gold from the Transvaal mines, and the New York money rate was below that of London, Paris, or Berlin. But the Boer War was very promptly followed by widespread and emphatic reaction in European trade activity, and business demand for credit had very soon sunk to a minimum. The sequel to the Balkan War has been that the general trade activity of the great European States has hardly halted. Last month's export and import trade of England, for example—a fair measure of European conditions—broke all January records.

But all this shows that the abnormal conditions, in the American money market at the opening of the year, are due primarily and perhaps exclusively to the unusual state of things in Europe. It is necessary, therefore, in studying the significance to our own situation of the present week's rise in the New York money market, to make full allowance for these circumstances quite outside of the United States. So long as Europe needs money urgently, and bids more for it than borrowers in New York will pay, the natural flow of capital from the cheapest to the dearest market will necessitate continuance of the conditions under which our own markets have begun the year.

There are three possible turns in the situation which may alter these existing relations between our own and the for-

eign markets. Termination of the Eastern war might bring to an end the exceptional stringency on Europe's money markets. Our own rate for money might advance so high as to force the European borrowers to go elsewhere. Or a decided slackening in the pace of Europe's trade activity, such as followed 1899, might reduce the foreign need for capital and release our markets from the strain.

Representative Essays in Modern Thought—A Basis for Composition

Edited by **Harrison Ross Steeves**, A.M., Instructor in English, Columbia University, and **Frank Humphrey Ristine**, Ph.D., Acting Professor of English Literature, Hamilton College, sometime Instructor in Columbia University.

$1.50

This volume includes nineteen well-written, intelligible, and authoritative essays by leading authors upon subjects which grip the intelligent interest of the average college freshman. Each essay is preceded by a brief introduction dealing with the author and his point of view. In most cases where there are two sides to the problem that has been presented, two typical essays, showing both points of view, are offered. One selection is to be assigned for reading each week, followed by the writing of impromptu themes in the classroom upon topics which suggest the salient points of the work under consideration. Every effort is made to encourage the student to think for himself, to form his own opinions upon proper evidence, and state his own position on the questions involved.

Social Forces in Modern Literature

By PHILO M. BUCK, Jr.,
Professor of Rhetoric in the University of Nebraska.

12mo, cloth, 254 pages, $1.00.

This history of European literature of the past century offers a study of the attitude of the leading writers toward problems arising from our modern complex social life. The author traces the gradual rise of the interest of pure literature in the mutual relation of man and society; and suggests the various answers essayed by thinkers and writers who may be regarded as pre-eminent in their several fields. He emphasizes two leading ideas: the gradual breaking down of purely national ideals in literature, and consequent close interdependence of the literatures of Europe, and the conception that many of the present-day problems are not new. The book will be found invaluable for classes in comparative literature, as well as for the general reader.

THE BOOKMAN

For MARCH, 1913

contains an article on

The High Cost of Living (familiar topic) and Shakespeare

The problem of the cost of living is not a matter of to-day or yesterday. Just about the time Shakespeare was born all England was in a turmoil over the same problem, for the prices of the necessities of life had been doubled, probably on account of the flooding of the country with gold brought back from Mexico. This condition was naturally serious to the poor scribe of Elizabethan London, who, receiving from four to six pounds for a play, was confronted by the exactions of the landlord of his humble lodging, the keeper of the tavern at which he dined—when he did dine—and the questions of expense for the occasional journey. To the March BOOKMAN Algernon Tassin contributes the first paper in the series, The Grub Street Problem, the Daily Life of a Man of Letters in Many Periods, which will deal with Shakespeare's England.

My Little Sister

By ELIZABETH ROBINS

The Story You Can't Forget

"Nowadays books are like dinners; once devoured they are forgotten. This, however, will not be forgotten, and, I think, after you have read it, you will agree with me that it should not be forgotten."—*Cleveland Leader.*

"It absorbs every grain of feeling in him. It takes possession of him to the exclusion of all else. If he be reading another novel, if he be engaged in other work, if his mind be filled with other matters, they will be crowded out and usurped by the events of this story the instant they recur to him. He cannot get away from them, and he would not get away from them if he could. And in every thought he is giving to it he is unconsciously paying the award of genius to Miss Robins. All that need be added is that 'My Little Sister' is a story to be read, rather than a story to read about."—*Boston Transcript.*

Until the Day Break

By W. L. GEORGE

Author of "A Bed of Roses," etc.

What manner of men are these who come to our shores looking for a freedom they have never found in their own country; and not finding it at once become discontented, and preachers of agitation and violence? For a remarkable story about a remarkable individual of this kind, read "Until the Day Break."

$1.30 *net. Postage* 13 *cents extra.*

The Weaker Vessel

By E. F. BENSON

Author of "Dodo," "The Climber," etc.

Although E. F. Benson is widely known as a clever member of a remarkable family, and the author of a dozen extremely clever novels, he has never yet done better work than that which has gone into the writing of "The Weaker Vessel." A young girl possessing the latent seeds of genius and of a noble character comes, through a marriage which begins unhappily, to the development of her best nature.

The Immigrant Invasion

By FRANK JULIAN WARNE, Ph.D.

Formerly Secretary of the Immigration Department of the National Civic Federation, Secretary of the New York State Immigration Commission, and special expert of the United States Census Bureau on our foreign-born population. Author of "The Slav Invasion and the Mine Workers," "The Coal Mine Workers," etc. With illustrations from photographs, numerous diagrams, maps, charts, etc.

One out of every seven of the 91,000,000 population of the United States was born in some foreign country. This book tells where this great foreign population of more than 13,000,000 came from, the conditions under which it has moved to the United States, its racial composition, and how it has distributed itself in this country. It points out some of the innumerable national problems which its presence here has given rise to. Immigration of the present, which continues to make large additions to our foreign-born population, is contrasted with that of the past, and the differences in economic conditions pointed out. The newer immigration and its characteristics are also distinguished as to races from the older immigration. The conclusions of the author are not superficial opinions, but have been reached after fourteen years of study and investigation and are supported by an array of convincing facts.

$2.50 *net. Postage* 24 *cents extra.*

The Nation

NEW YORK, THURSDAY, FEBRUARY 27, 1913.

The Week

The movement for a revision of the rules governing the make-up of Republican National Conventions is gaining head. Senator Root's approval of the proposal to hold a special Convention next autumn will give it impetus. The purposes are the changing of the basis of representation, and of the rules so as to permit the choice of delegates in each State to be made according to the laws of that State. The latter is a point that never assumed prominence until it came up in a disastrous form in connection with the California delegation at the Convention of last year. The former, on the other hand, has been a source of notorious scandal for two-score years. The reluctance of the party to change the rule that representation for each State shall be on the same basis in the Convention as in the electoral college is easy to understand. To abandon it is to acknowledge explicitly the abnormal condition that exists in the Southern States. This reluctance was perfectly honest on the part of the rank and file; the machine managers, for their part, were glad enough, for interested reasons, to let things stay as they were. But the practical effect of the situation was to destroy the representative character of the Convention; and, when it came to a death-grapple like that of last summer, everybody perceived that the continuance of a system under which a large part of the Convention represented virtually nothing was intolerable. The only trouble about Mr. Roosevelt's uproar on the subject was that he had no right to expect that a system which had been in existence for half a century, and which he had fully exploited when it suited him, would be instantly abandoned the moment it got in his way.

Cardinal Gibbons is evidently very serious in his opposition to self-government for the Philippines, but he has chosen to cast his objections into humorous form. It is, of course, humor of a subtle and delicate kind, in keeping with the character and dignity of the distinguished prelate, but humor nevertheless. The Cardinal is quoted as saying:

> In the first place, I maintain that the Filipinos—the vast majority of them, at any rate—have never been consulted regarding their independence. The islands composing the archipelago number over three thousand and are widely scattered. The people of one island have little or no relation with the inhabitants of another. . . . There has been no plébiscite, and it would require days and weeks for them to gather and register their opinions on the subject.

Compare with the summary manner in which it is proposed to turn the Filipinos adrift, our careful procedure when we took over the islands. A rigorous plébiscite was carried out. To every one of the three thousand islands in the Philippine archipelago went a revenue cutter carrying a force of United States marines, a ballot-box, and four official tellers. The utmost freedom was extended to every Filipino, man, woman, or child, to register his or her vote. Only after the vote from the three thousand islands had been carefully counted and compiled and checked and re-checked, and the unanimous desire of the Filipinos to be annexed was made manifest, did we step in and take possession.

The decision of the Supreme Court upholding the constitutionality of the "white slave" law is highly important in itself, and not less so in its bearing on other questions involving the limits of the power of the Federal Government over interstate traffic. The Court was unanimous in its finding, and the result is thought to be almost conclusive as to the position the Court will take upon a law forbidding the transportation of liquor for sale in States in which such sale is prohibited by State law. Another subject which, according to a Washington dispatch, is regarded by lawyers there as likewise virtually settled by the decision is that of laws prohibiting the transportation in interstate commerce of goods produced under labor conditions that are not regarded as coming up to modern standards. But, whatever the Supreme Court may, in point of fact, decide when such legislation comes before it for action, there is a very sharp distinction between a law of this kind and such a law as that whose validity has just been declared. It was a chief contention that the Federal power asserted in this law was an invasion of the rights reserved to the State; but, says the Court, in the course of its opinion, "if such power be exerted to control what the States cannot, it is an argument for—not against—its legality." The case of an interstate regulation in the interest of uniform labor legislation in all the States stands on a very different footing.

London dispatches confirm last week's story of a steamship company with a capital of $15,000,000, to build a fleet of new ships to ply between our Atlantic and Pacific ports via the Panama Canal. One peculiarity of the scheme is that the Hamburg-American Steamship Company is to be half-owner of the new company, contributing $7,500,000. This is borne out by a letter from Herr Ballin, of the Hamburg-American Company. The ships would be built in American shipyards, and would be exempt from canal tolls, under existing law. They would therefore (as Secretary Knox said to Sir Edward Grey) receive a subsidy from the United States equal to the amount paid by other ships not so exempt. Thus it would turn out that the Hamburg-American Company, which has never had a subsidy from its own Government, would receive one from ours. This shows that the new enterprise is not without its comic features.

From Mr. Bryce's remark, in his address to the New York County Lawyers' Association, that the outcry against the judiciary is not without provocation, few will be found to dissent. Criticism of judges has long been familiar in this country, and has been confined to no party and no school of opinion. What is novel in late years, and characteristic of that restless segment of the population which has in large measure taken up the Roosevelt banner, is on the one hand a certain looseness and wildness of criticism, and on the other a childish readiness to seize upon the first thing that offers itself by way of remedy. Mr. Bryce, having in mind the proprietics of his position, expresses no opinion as to the controversial question of the recall of judges; but he does not feel debarred from discussing the gen-

eral problem. And, as a mere matter of course, he refers to it as the problem of insuring "that the State's judges be men who possess eminent capacity and independence of character." Well, does any advocate of the recall venture to maintain that that device will tend to the obtaining of such judges? The most that can be claimed for it is that it will get a bad judge *off* the bench; and probably not one in a hundred of those who jump at the nostrum has taken the trouble to think of the difference between occasionally getting rid of a bad judge and constantly obtaining judges of "eminent capacity and independence of character." The tendency of the recall will be to make such judges much more scarce than they are now—to increase, instead of diminishing, the difference between the standards of the American judiciary and those of the English or Canadian. The difference between Mr. Bryce's talk and that of the recall people is precisely the difference between a grown man's thinking and a child's.

By admitting Edward F. Mylius, the Englishman who was convicted of criminally libelling King George, a United States court has again warned the Secretary of Commerce and his subordinates that there are other views of the immigration laws than their own narrow ones. Judge Noyes holds that Mylius's offence involved no moral turpitude, and he is now at liberty to reside in this country. Secretary Nagel says he will appeal, as he has threatened to in the case of Castro, which was a more flagrant bit of blundering by the Department than that of Mylius. This appeal will, we believe, not avail the Department. These two judicial decisions have been among the most salutary of recent political happenings. Primarily, they demonstrate the necessity of having these guardians of the law to review the acts of administrative officers. Otherwise abuses of all kinds would arise out of the whims of temporary officials. The very stability of these courts means stability of policy. In such cases as these the courts demonstrate something the public is now inclined to overlook: that they form one of the greatest bulwarks of our liberties.

All the old saws about the way to economize have been left far behind by the present Congress. Its rule for saving is to double the expenditures. The Public Buildings bill, which left the House carrying $25,000,000, was promptly reported to the Senate with $20,000,000 more clapped on. Yet all this must have been done in the spirit of the severest retrenchment, for everybody in the Capitol is loud in praises of economy, and ready at any moment to make a vigorous speech in favor of cutting to the quick all appropriations in which he is not directly interested. Economy never had so many votaries, apparently, yet so few practitioners. Every Congressman would be a Poor Richard if he could, if we were to take his own word for it, yet circumstances seem to compel him to be a lavish squanderer of the public funds. He furnishes, at any rate, one argument more for the need of a system of rigid and responsible control in our national finance.

Thirty-six years ago, when the pension appropriation was about $35,000,000, Garfield spoke of the figure then reached as being, almost as a matter of course, the highest that our expenditure for war pensions would attain. The next year, however, it went up to about $57,000,000; nine years later, in 1887, it struck the $80,000,000 mark; three more years carried it up to nearly $125,000,000; it stood pretty stationary in the neighborhood of $140,000,000 for some twelve or fifteen years ending with 1906; then the figure hovered around $160,000,000 for several years, ending with $165,000,000 a year ago; and now we have the high-water mark of more than $180,000,000. Half a century after the close of the Civil War, and with no war in the interval except the short and almost bloodless affair with Spain, the pension charge on the country is more than five times what Garfield, himself an old soldier of the great war, considered as evidently the highest mark it would reach. The experience is an index of what kind of business we shall have on our hands if we ever take up the scheme of old-age and similar pensions for the people in general.

It's an ill wind that blows good to no one, and so Delaware is pricking up her ears in hopes of a transfer of the business of chartering corporations from New Jersey, their unnatural mother, to one who would fain be the right kind of step-mother to them. It has been fourteen years since the Blue Hen legislators began this endeavor to attract the affections of Big Business, but their efforts have not had much success. Yet the initiation fee for a Trust in Delaware is only about three-fourths of what it is in New Jersey; the annual tax imposed upon it is but half of that inflicted at Trenton; stockholders and directors may hold their meetings wherever they please, thus escaping the necessity of taking the ferry or the tube to Jersey City now and then; "intermeddlers" have less chance of getting at the corporation's books under the Delaware law; also, stock may be issued as compensation for service rendered, while in suspicious New Jersey it may be put out for property only. In fine, there are no fewer than eighteen points in which Delaware has the advantage of her neighbor. With Gov. Wilson's Seven Sisters looking daggers at the Trusts, is she not justified in expecting more revenue from Big and possibly Bad Business than she has yet enjoyed?

In an address, a few days ago, to the Oklahoma Legislature, Lieut.-Gov. Harding, of Iowa, warned Oklahomans not to dispose of their school lands. He pointed to the experience of Iowa, which sold hers for twelve and fifteen dollars an acre, and now sees them selling for $150 and $250. The chief difficulty in all the States, said Mr. Harding, is that there are too many laws, especially laws that are not backed up by public opinion. On the other hand, communities are inclined to try to wrest law to suit their wishes, as in the case of an Illinois town which demanded that the Governor should send militia to protect the citizens during a labor difficulty, and was surprised to find itself under martial law in consequence. "Always," remarked the speaker, "there is some fellow who wants to amend the Constitution." Also there is now an annual besieging of Legislatures by women asking for the ballot. In Iowa, according to the Lieutenant-Governor, "one session the House kills the bill, and the next the Senate does it. That's a mighty good system sometimes." But not nearly so good as it was once.

Senator Gallinger's bill to rid Washington of unworthy and, in some instances, fraudulent institutions of

"learning" should have an effect upon the tone of education throughout the country. Owing to such things as the investigation and appraisal of medical schools by the Carnegie Foundation, people are more inclined to pay heed to adverse criticisms of our educational systems, public and private, than ever before. In the same direction would be the effect of a similar examination of law schools throughout the country, which the Foundation is reported to be making. As a people, we have never discriminated sharply between a so-called high school or college and a real one, still less between a pretended university and one deserving of the name. This has been in a measure due to the ideal we have had of education as a privilege for everybody. But we are waking up to the fact that nothing is gained by a misleading name, and that a first-class secondary school is preferable to a fourth-rate "college."

Among the interesting items offered in the Borden sale in New York last week were two volumes of original dispatches and letters of Gen. U. S. Grant, "chiefly in his own handwriting." The first volume, running from July 9, 1864, to April 7, 1865, contains 285 letters of Gen. Grant; also letters from him to President Johnson and to Congress, and a roster of the officers in the Confederate army under Lee when he surrendered. The second volume is described as containing manuscript correspondence between President Johnson and Gen. Grant "which was not permitted to be preserved in the Government archives." We do not know who purchased these volumes, but it seems clear that whatever may have been the feeling about them once, every one of these documents ought to be in the national archives. We hope that the Library of Congress has been able to get hold of them. If not, the incident merely reinforces our frequently expressed contention for an archives building and a commissioner of archives, one of whose duties should be the obtaining of just such valuable papers as these for preservation among the historic records of the Government, where they obviously belong.

It is a satisfaction to note that United States District Judge Hand has imposed on one of the two "white-slavers" convicted in his court three weeks ago the maximum sentence permitted by the law, a penitentiary term of five years. Why the other received only two years we do not know; presumably there were circumstances that justified so marked a difference. But the penalty allowed under the Federal law is not high enough. Twenty years would be none too great. In England, where the idea of flogging a convict is certainly not one that appeals to the habits of thought of the community, that punishment was recently specially provided by act of Parliament for this loathsome class of criminals, and it has actually been inflicted. The feeling there, when the subject was discussed in Parliament, was that only by providing a punishment that would really strike terror into these wretches could this peculiarly abominable crime be checked. The New York State law has, within the past few years, been amended so as to make twenty years the maximum term, and the same thing ought to be done with the Federal law.

Europe, for some time to come, will probably hear a little less of Dreadnought competitions and more of army corps and artillery reorganization. The change of interest from sea to land is undoubtedly one of the results of the Balkan War. The recent intimations from Berlin of a readiness to come to terms with Great Britain in the matter of naval construction may be explained in part as arising from a real improvement in the state of Anglo-German feeling, but in part, too, as due to the new responsibilities which the changed aspect of things in the near East has imposed on the armies of the Triple Alliance. The partners in that bond must now arm against the Balkan allies as well as against France and Russia, since there can be little doubt, in view of the intense feeling against Austria among the victorious little nationalities of the peninsula, on which side they will be found in case of a European Armageddon. Hence the steps taken in Germany for an increase in the strength of the standing army with a corresponding agitation in France. The German militarists are in a position to argue that in proportion to its population the Fatherland is by no means making the sacrifices it is capable of. With sixty-five million people to France's less than forty millions, Germany maintains a peace strength hardly superior to that of France, if at all. The German standing army is supposed to consist of just about an even 650,000 officers and men, as opposed to 565,000 for France. But the latter country has an additional 150,000 men in its colonial army, of which half is quartered in Algeria and Tunis and is readily available for service at home. Counting in the first line of reserves the French have, on paper, the advantage with an estimated total strength of 1,300,000 men to Germany's 1,160,000. But the German Landwehr would throw in an additional 600,000 men, and behind these it is estimated that there are one and a half million of partly trained recruits available.

Extracts from the diary of Abdul Hamid II, late Sultan of Turkey, are being published in a German periodical. They reveal the former Padishah as a man of wide interests, in touch with many modern movements upon which he has strong convictions of his own. His dislike for the present world-wide feminist agitation is something more than the view of a conservative Mussulman. He probably discerns in woman's uprising a social force of which he has been himself a victim. The modern man, as the ex-Sultan sees it, is so terribly browbeaten by his women folks at home that his natural impulse is to take it out of somebody else. So he takes it out of his kings. Hence the absurd Western habit of going in for constitutions, revolutions, dethronements, and the like. It was otherwise when every man was a little Sultan in his own household. He knew both the sweetness and utility of despotic power, and could sympathize with his Caliph's natural desire to hold on to what was his. And yet Abdul Hamid's present position refutes the despotic idea. The deposed monarch is happier than when he was Commander of the Faithful and lived in constant fear of assassination. His principal concern then was to keep his Ministers so busy plotting against one another that they might have no time to plot against him. His favorite literature was the daily reports from his extensive spy bureau. To-day he lives care free, his mind accessible to philosophic speculation, and with an apparently unlimited supply of the Sunday newspapers from Western Europe and the United States.

OUR DUTY TO MEXICO.

It is needless to pile up words about the deep damnation of Madero's taking off. The official explanations of that murder, as the whole civilized world regards it, are so muddled and self-inculpatory that they only heighten the barbarity, while intensifying the shock. There may have been no direct order to kill Madero. It may be impossible to show that there was a tangible plot to take him out at night where he would be shot. But all the surroundings of the affair are suspicious and bloody. In the savage frenzy prevailing, a hint would have been equivalent to a command. From the moment it was known that the deposed President was not to be allowed to leave the country, the worst was to be feared for him. He was felt to be a doomed man.

Yet the monstrous crime, considered not in its personal but its international aspects, calls for no change of policy on the part of our Government. It does not essentially alter the nature of the relations between Mexico and the United States, though it undoubtedly calls for even more careful study of what our course ought to be in the future. On Saturday night, almost at the very time when Madero was being done to death, President Taft reaffirmed his determination not to intervene in Mexico unless absolutely compelled to do so. The shocking events in Mexico City should not affect that decision. We have only one crime more to contemplate; simply added proof that brute passions have been let loose in Mexico, and that our dealings with that country must be marked by the extreme of caution and vigilance, yet with the unremitting purpose to do what is wise and just for the people of both lands, never forgetting that the Mexican nation as a whole must not be confounded with the military adventurers who may temporarily get their clutch upon its throat.

It is a wholesome sign that the American press is so largely sober and restrained on the subject of intervention. The run of newspaper comment is that no specifically new duty is laid upon our Government by the killing of Madero. It is true that our Ambassador had been instructed to urge that Madero's life should be spared; but this was only a suggestion in the interest of humanity, and of the standing of the new Mexican régime in the eyes of the world; and if Huerta and the others made up their minds to disregard this, that is their own affair. The penalty they are already incurring in the alarm and disgust of their own countrymen and in the reprobation of all civilized people.

Now, to assert, as some English newspapers, and one or two reckless American sheets, are doing, that we "commanded" the Provisional Government not to take Madero's life, and that it has "defied" this nation in a way to demand intervention with a strong hand, is the pitch of unreason. President Taft promptly disclaimed any such inference, grieved and depressed as he was by the news of the murder of Madero, and the country continues to respond to his judicious and peaceful lead in all this business. He spoke with some vehemence and with real moral elevation on Saturday night, when he alluded to the charge that his policy towards Mexico had been "cowardly." Such a taunt, he justly said, was one that a President, charged with the great issues of peace or war, should put beneath his feet. It takes far more courage to resist an insensate clamor for warlike measures than to bluster at the head of the crowd. The truly cowardly part is to yield when your heart and conscience tell you that it is wrong to do so. There has been much loose talk about its being necessary for the United States so to deal with Mexico as to maintain our "prestige." But prestige is as slippery a word as "honor." It was Lord Salisbury who once said that he wished the word "prestige" could be excluded from the diplomatic vocabulary, because it had so unpleasant a connection, etymologically, with deceit! One of its definitions is "a flattering illusion"; and that is surely what those are laboring under who think that our army could make a holiday march into Mexico and settle all her difficulties at one stroke of the sword.

Putting all such wild dreams aside, what is the prudent, the statesmanlike, the patriotic course for our Government to pursue towards Mexico? Surely there is no great mystery about it. If the Mexicans can, even along bloody paths, proceed to set up a reasonably stable Government of their own, we must aid them in every way open to us to do it —aid them by forbearance, but also by friendly counsels. Our Government and our Ambassador in Mexico City can, as it were, make themselves the mouthpiece of civilization. They can apply a quiet moral pressure to the rulers of Mexico. Those men must be made to understand that there is such a thing as the public opinion of the world, and that they are answerable to it; that Mexico cannot be permitted to lurch back into the barbarous governmental methods of seventy years ago, as if nothing had happened since. All this, of course, lends immense importance to the selection of the next Ambassador to Mexico. Mr. Wilson should seek the best man attainable—known for his love of peace, for his tact, for his ability to see the right thing to do and the just thing to say. Only by such a choice and by the most patient and sagacious course in determining the attitude of his Administration in this vexed and highly complicated matter, can the new President surmount what might easily be a crisis or even a calamity confronting him from the first hour of his taking office.

TWO TRADITIONS.

The birthday of Washington has been honored by general observance for more than a century; it is only within the last two decades that Lincoln's birthday has assumed anything like a coordinate place in the national thought. The nearness of the two anniversaries in time makes a comparison between the place held in the hearts of their countrymen by these two foremost Americans inevitable; and it is undeniable that, whether Washington has or has not held his own majestic eminence in the present generation, Lincoln's rank as an embodiment of popular ideals and as an object of national homage is today vastly higher than it was when a quarter-century, instead of a half-century, separated us from the time of his labors and his martyrdom. One circumstance, however, is common to the two. Neither in the case of the Father of his Country, nor in that of the man who steered it through the time of its supreme danger and guided it in the extirpation of the blot of slavery, is the haze of legend or the partiality of patriotism necessary to account for the tribute of reverence which we pay to their names. The greatness of Washington and the greatness of Lincoln are

established, with equal security, in the facts of their lives and character as weighed by historians and publicists who are free from our national bias and judge them by the standards of world history.

But around the figure of a national hero there is sure to arise a cloud of legend and myth. Perhaps this is a necessary part of the process by which he becomes permanently set apart from the lesser personages of the country's history, and through which his name acquires the force of a symbol of patriotic aspiration and noble endeavor. However this may be, together with the good in it there is undeniable harm; and especially there is injury ultimately to the reality of the very fame which it is the first effect of this idealizing process to enhance. For along with the idealizing there is sure to come, sooner or later, a devitalizing of the hero. Few if any persons are now living who can remember the time when the name of Washington was going through the stages which, in the past decade or two, we have been witnessing in the case of Lincoln; but very many of us can remember the time when it came to be realized that Washington had become, in the minds of the multitude, little more than a "plaster saint." Shrewd-minded schoolboys were given to suspecting that there wasn't very much to Washington after all, and that we simply had to stand together as good Americans and call him a very great man because he was the head of the Continental army and the first President of the country, and was highly respectable in his personal qualities. After a generation or two of conventional idolization of Washington, there came a time during which the paradox was presented that those who had really studied the history of his time recognized his title to the highest eminence, while many who knew little or nothing about it suspected that the Washington tradition was almost wholly a myth.

The myth-building in the case of Lincoln takes, to be sure, quite a different form. The Lincoln myth that is now making concerns not so much his personality as his intellect and his purposes. He is represented as a prophet from whose inspiration we may derive the solution of all our present-day problems. "The democracy of Abraham Lincoln's Gettysburg speech applied in municipal affairs" is prescribed as the magic solvent of the problem of city government; and on an adjoining page of the same prominent periodical in which this occurs we find that "the industrial evolutionist" merely "agrees with Abraham Lincoln that, 'as the Author of man makes every individual with one head and one pair of hands, it was probably intended that heads and hands should coöperate as friends, and that each particular head should direct and control that pair of hands.'" That Lincoln in his Gettysburg speech was thinking solely of the preservation of the great republic which for three-quarters of a century had represented to the world the cause of democracy, that in speaking of the control of one man's hands by another man's head he was (as we assume in the absence of context) protesting against chattel slavery, makes no difference to these myth-makers. They are bent on finding in him a vision and a purpose of which no trace is to be found in his words or acts; a process which bids fair to transform the most genuine and most human of men into a shimmering vision of unearthly wisdom in whose reality nobody will believe.

"We are doing just what Lincoln would do if he were living" has become a familiar catchword in these latter days. But nobody says "we are doing just what Washington would do." For this many reasons may be assigned. Lincoln lived nearer to our own time. Lincoln was a man of the people, while Washington was a landed gentleman. Lincoln was of a genial and sympathetic nature, while Washington was cold and reserved. There is something in all this. But perhaps most important of all is the fact that Lincoln's connection with the emancipation of the slaves lends itself to an indefinite amount of emotional exploitation, and this is a time of emotional exploitation. If we look facts squarely in the face, however—if, instead of setting up a fictitious Lincoln or wrenching his words into fantastic meanings, we examine his acts and his words as in very truth they were—we shall find that the name of Lincoln lends no more countenance to emotional agitation in the name of a vague humanitarianism than does the name of Washington himself. Different as were the two men, in native disposition as well as in education and environment, they were alike in their sense of solemn responsibility as custodians of the cause of a nation of sober and law-abiding freemen. Not even Washington,

That mind serene, impenetrably just,

ever showed more firmness than did Lincoln in pursuing, amid all the tumult and clamor of the great war, that steady course dictated by his conception of his duty under the Constitution. Of our two foremost men, neither was a soaring genius, and neither was the prophet of a new morality or a new sociology; both did supreme service to their country and to the world by performing with consummate sagacity and with unstinted devotion the plain duties of leadership and government.

THE FAILURE OF THE LEVEES.

When the Mississippi, bursting its banks, extends in a flood seventy miles wide, deluging thousands of square miles, destroying crops, drowning cattle, and leaving behind it mud, pestilence, and starvation, people in other parts of the country express their sympathy by raising subscriptions and organizing relief expeditions. It requires, however, a calamity to keep the attention of the ordinary man centred for any length of time upon any such problem. A minor misfortune like the Beulah crevasse, in which no lives were lost, arouses scant interest. "Something wrong, probably, with the levee system," is the general feeling. And, in fact, the engineers of the Mississippi are still trying to explain how a disaster which caused much suffering last year in the Beulah district could be repeated.

There is, indeed, something wrong with the levee system. The New Orleans newspapers declare that another $8,000,000 appropriation by Congress, supplemented by aid from Louisiana, Mississippi, and Arkansas, will suffice to perfect the embankments. But the Memphis *Commercial-Appeal* puts the Congressional appropriation needed at $60,000,000! The Federal Government has already expended $70,000,000 in its attempts to subdue "the Father of Waters," and the States, counting convict labor with other items of expense, may have contributed as much again; but the mighty stream has continued to break away as easily as Gulliver broke the ropes of the Lilliputians. As far back as 1717, M. Le Blond de la Tour built a mile of levee to protect the infant city

of Nouvelle-Orléans. By 1828 embankments were virtually continuous as far north as the mouth of the Red River. Just at the outbreak of the Civil War, the policies of the State and Federal Governments with regard to riparian protection were crystallized, or fossilized, by the report of Capt. Andrew D. Humphreys, who, after ten years of investigation, endorsed the levee system as the only means of effectually protecting some 29,000 square miles of land below the river's high-water mark. Unfortunately, a crawfish boring into an earthwork may render futile the efforts of the best engineers of the Humphreys school. As the flood water rises higher and higher against the levee, its pressure increases, and the track of an earthworm will complete the damage the crawfish has begun. The water trickles through to the lowlands, ever enlarging its vent, until suddenly the road atop the levee crumbles into a swirling yellow stream, the embankment melts away, and a torrent pours through the opening.

On January 26 the crevasse in Beulah levee was 125 feet wide, and pouring out a sheet of water six feet deep. On February 3 gradual erosion had reached the loam section of the embankment and 200 feet of earthwork suddenly washed out, making the total width of the crevasse more than 600 feet. Truly, there is something wrong with the levee system. But there must be some means of protection. If the people of the States chiefly concerned, and the people of the United States, have been willing to put $140,000,000 into earthworks, it has been only because the damage by flood has been ten times as great. And if real protection can be had, the expense need frighten no one.

Perhaps some men have "known the river" better than Mark Twain, but surely none has so fully possessed the gift of imparting this knowledge to others. He outlined in a book the various schemes for relief discussed on his journey down the river, after the great flood of 1882, without, however, arriving at any conclusion as to their merits. Those opposed to further levee-building, he said, pointed out that the higher you built the levee, the higher the river bottom would rise. This has been proved. Some believed that the surplus water could be diverted into Lake Borgne, etc. Engineers have unanimously opposed all plans for diversion of current. Some believed in averting floods by the use of reservoirs in the upper river from which the flood waters could be released in low-water seasons. This is the remedy which has been found specific in Egypt, and which is appealing to thoughtful people here.

The *Florida Times-Union* remarks that to build the walls to restrain the flood is to raise the channel, then to raise the walls, until we have a river flowing through a pipe to the sea. It concedes that the inundated districts should be made safe, but reasons that, "if we would reclaim the lower lands and make the river our servant as it is now our master, we must prepare reservoirs in which the surplus waters may be kept until they are needed." The Louisville *Courier-Journal* refers to the Assuan dam, by which "the tears of Isis have been not only arrested, but made to water potatoes, onions, and cotton."

The problem, whatever solution may be evolved, will require vast expenditures; but it must be remembered that the reward is certain. The Mississippi Valley is second in extent only to that of the Amazon. It contains 1,250,000 square miles, and, as a writer in *Harper's* said, "as a dwelling place for man it is by far the first upon our globe." For the great tributaries of the Mississippi the surest preventive of flood is forestation, but this would be the work of many years. Meantime, the opinion of the experts who have curbed the Nile should be had before any more money is expended in levees. The right of the inhabitants of the alluvial lands below Cape Girardeau to be safeguarded against floods will not be questioned when adequate means of protection have been agreed upon.

SLANDER MADE EASY.

By the London telegrams we have learned in general of the complete breakdown of the charges of corruption made against members of the Cabinet, in connection with the Marconi contract. But it takes a detailed reading of the evidence brought out at the official inquiry, and of the cross-examination of the man, Mr. W. R. Lawson, who was chiefly responsible for spreading the slanders through the press, to give one an adequate idea of the monstrous nature of this attack on the integrity of Ministers of the Crown. The reputation for personal honesty on the part of members of the Government in England has long stood so high and has so rarely been impeached, that these scandalous insinuations caused a great sensation. Happily, they have been shown to be utterly without foundation. England has not suddenly lurched back to the days of Marlborough, and got a lot of jobbers in office. But the circumstances in which the damaging accusations were made, and the subsequent entire blowing away of the whole mass of rumor and surmise, are such as to justify more than a passing reference to the matter. If the result was to clear the Ministers, it was also to incriminate a certain type of journalism.

The charges grew out of the contract made by the Government with the Marconi Company, and the wild gamble in Marconi shares on the Stock Exchange. In a series of articles in the *Outlook* and the *National Review*, the assertion was explicitly made that Ministers had taken advantage of their official knowledge to speculate in these shares. The thing had been gossiped about in brokers' offices and clubs, but first got into print in the *Outlook*. It declared that "a sinister use had been made of the names of Cabinet Ministers in the City and elsewhere in association with Marconi shares." At another time Mr. Lawson spoke definitely of "four names," one of them being "a Kaffir magnate," and the others Cabinet Ministers. One of the latter was so plainly indicated that everybody knew the Attorney-General to be meant. At the inquiry, Mr. Lawson testified that the other two were the Chancellor of the Exchequer and the Postmaster-General. On cross-examination, he admitted that he really knew nothing about any Kaffir magnate. Now, note the questions and answers in the case of the members of the Cabinet:

> The Chairman—Had you the slightest grounds for implicating those names in connection with the rumors?—Simply the rumors themselves.
>
> Mr. W. Redmond—Had you a single shred of evidence that the rumors were true?—I had nothing beyond the rumors. I had no positive evidence.
>
> Do you think that a charge so dreadfully serious as this against three Ministers of the Crown should have been made without evidence of any kind?—No.

There was a great deal more equally fatal for Mr. Lawson, who finally, in a kind of desperation over the plight

in which he found himself, cried out: "If Ministers of the Crown will allow lying rumors to go about for months, how can you expect any one to take more interest in their reputation than they do themselves?" This is the frankest admission of a code of newspaper ethics, practiced in some quarters, which we remember ever to have come across. The theory appears to be that you may catch up a lot of malicious inventions about public men, first circulated in pot-houses and back-alleys, then help them along with additions of your own, and at last put the whole mass in print, excusing yourself on the plea that if the stories were not true the slandered persons ought to have branded them as false long before. According to this, you are at liberty to start up out of the gutter and throw mud at a man, and then if he does not instantly brush his coat in public, to declare that he made the mud-throwing seem fully justified!

It is not worth while to follow Mr. Lawson as he was driven from hole to hole by a merciless cross-examiner. His alleged facts were shown to be the merest moonshine, his boasted documentary evidence was burned to nothing by the acid of a few questions, and he was forced again and again to say, abjectly, "That was a mistake," "I should not have said it," "I withdraw that." But his impudence did not wholly desert him. "I maintain," he said at one point, "that, so far from doing the Ministers harm, I gave them an opportunity of clearing themselves." That is, to charge a Government official with villanous conduct is really a favor to him, since it enables him to affirm that he is an honest man! Was there ever such an attempt to make a victim appear a beneficiary?

It is needless to say that all journalists who are above picking pockets would repudiate with scorn the justification of his course which Mr. Lawson advanced, as if with the question, "What is a poor newspaper man to do if he does not give credence to and put into type every lying rumor that comes his way?" This is to make slander easy. It is to erect back-wounding calumny into an honorable calling. The libel laws offer a partial remedy. There appears to be no doubt that Mr. Lawson and his associate will have to answer in court for what they have said in their papers. It is to be hoped, after the pitiful exhibition they have made, that they will be cast in swingeing damages. But the moral of the whole will be lost unless the decent members of the press everywhere are prompted, by this exposure of reckless mendacity, to take anew an oath against all such hasty defiling of their columns—and poisoning the public mind—with back-stairs gossip and wicked efforts, by insinuation, to rob men of their good name.

CRITICS WITH A CONSCIENCE.

In an article in the *Contemporary Review*, Mr. Edward Garnett adds his voice to the chorus of dissatisfaction, heard these days, with the state of literary criticism. Mr. Poel's recent production of Shakespeare's "Troilus and Cressida" brought the critics face to face with a little-known play, and, according to Mr. Garnett, showed the best of them to be oddly deficient. Their comments "are typical of the process by which drama of great, rare, or particular interest is regularly strangled in London." If a piece is unusual, he says, the critics at once conclude that it is all wrong. Yet this is hardly in accord with the facts. There was widespread approval for "The Miracle," which came as close to being a circus as anything put on the London stage these many years. We should incline to reverse Mr. Garnett's statement and say that critics have too much reflected the popular absorption in the spectacular and, in general, in the strange and remote Oriental plays that have had so great a run. Further, so much has recently been heard of talent unrecognized that critics have been put on their guard. According to present-day ethics, it is a more venial sin to praise what may turn out to be poor work than to belittle a coming light.

But the greatest fault in contemporary criticism, not only of drama but of literature in general, the writer has failed to touch, even indirectly. Apparently, two kinds of literary criticism are going along side by side, each yielding somewhat to the other, though at heart incompatible. There are the modernists, who, having figured it out that it is about time for another important era of literary activity, think to hasten its coming by acclaiming as significant anything that deals with up-to-date problems or catches the surface glow of the age. With clean-cut literary standards they do not bother, for the supposed reason that each generation must create its own rules and requirements. Loosely they make comparison with great writers of the past, but merely to give weight to their own judgments. One work has the variety of a Thackeray, another has Tolstoy's epic sweep, etc. On the other hand, there are critics with a truer understanding of what constitutes greatness who endeavor to judge for the most part in the traditional way. Yet their policy also lacks sharpness, because, along with the modernists, though to a less degree, they make vague concessions to the changed conditions of the present day. Their conservatism is in no respect aggressive. By a compromise with methods in which they do not actually believe, their work becomes more or less futile, and they lay themselves open to the charge of being timid old fogies. Until literary criticism wins back definite standards and dares to apply them it cannot hope to vindicate itself from just the sort of attacks that are now made.

It is possible that the standards which were in use nearly a century ago would still serve. A play, after all, is a play, and a novel is always a novel, and each, to be successful, requires much the same art now as formerly. As for poetry, if we exclude the sonnet, which, to be sure, grew out of the ancient ode, there is scarcely a poetic type that the Greeks did not practice. Nor are the newest themes so new as we often suppose. Mr. Moody's "Great Divide" professedly only read into present conditions the situation of the rape of the Sabine women, and M. Bernstein's "Samson" has an ancient earmark. "Ghosts" and "King Lear" bear a resemblance to "Œdipus." Changes in superficial conditions will never destroy the oneness of great art. It would be wholesome for the popular appreciation of literature if contemporary works were carefully compared with recognized classics. When a publisher or dabbler in criticism glibly likens a best-seller to Dickens, the scrupulous critic might do worse than to take him at his word and pursue the comparison to the end. Some may say that, in these days of newspaper headlines and ingenious advertising, this is just the way to give a worthless production a factitious value. But since it has been proved that even curt condemnation can

thus be turned into eulogy, we should not be worse off for the experiment.

There are, besides, unmistakable indications that solid, conscientious criticism is much desired. The demand has grown out of a ridiculous situation. Certain established writers have shown impatience with the lavish praise bestowed upon what should properly be classed as apprentice work. A mere youth, by juggling cant, economic or sociological terms of the day, and by running much to the theatrical, produces a play which all but a few critics pronounce a sensation. Of genuine knowledge of the deeper side of human nature there is no trace. It is not strange that men of experience whose plays contain the fruits of mature reflection should rebel at virtually finding themselves put in the same class with whippersnappers. To them all who take this situation to heart might well look for relief. It is a delicate matter, for writers will hesitate to exalt themselves by lowering a brother in the craft. But when the main body of literary criticism is in danger of defeating its own end, delicacy may properly give way to conscience. What should be demanded is not more "sympathetic" criticism, but more rigid comparison of present-day works with those which have gained the suffrage of time. The public would soon see the point.

A NEW AUSTRALIAN ANTHOLOGY.

SYDNEY, Australia, January 15.

A fourth Australian anthology in twenty years witnesses to a "boom" in Australian verse, doubtless running parallel on a higher plane to the industrial and political boom that has made Australia the paradise of the artisan. The bane of all these collections is the, perhaps unavoidable, lowness of their standard, which admits mere rhyme where rhythm and a lilt and the note of song are demanded. Even the best of them, that otherwise admirably edited by Mr. Bertram Stevens, and reviewed in these columns six years ago, yields too often to the desire to propitiate persons in authority, whose prose is better than their verse. For a different reason—apparently from the absence of any standard at all—the present selection falls short of high excellence.*

The first generation of Australian poets was a disastrous race. Adam Lindsay Gordon, the strongest of them all, after leading a somewhat erratic existence, died by his own hand; Kendall, the purest and most spontaneous, died of utter exhaustion after spending a year in a madhouse; and Lionel Michael, to make sure of no longer escaping his doom, perished by drowning and the bullet simultaneously. Their successors have not been free from misfortune: Francis Lauderdale Adams, an aspiring soul of large capacity, left Australia for England, as so many ill-encouraged Australian writers have done, only to find a suicide's grave on the coast of Kent; B. H. Boake, another suicide, fell a victim to melancholia so recently as 1892; and Victor Daley died of the poet's disease, consumption, though not at an early age. That the life-stories of contemporary Australian poets are brightening is doubtless due to a more settled and prosperous society, more assured means of subsistence, and greater encouragement on the part of the conductors of public prints and periodicals.

One of the best, the Victor Daley just mentioned, like many of Apollo's sons in Australia, was of Irish birth and paternity; he was born in Navan, County Armagh, in the very centre of old romance. Therefore, some would say, he was a bohemian. But he was also, on the mother's side, of Scottish extraction, and therefore, others would say, he was a respectable bohemian. The Irishman in him, say his friends, was frank, warm-hearted, and careless; the Scot in him was cold, calculating, and cynical. Cold-blooded, he lacked the poet's passion; warm-brained, he produced verses that rank high for their music, their rich coloring, and their charm. Like many Australian poets—like Gordon and Kendall themselves—Daley was at first strongly imitative. Moore, Rogers, and Swinburne, T. B. Aldrich, and Joaquin Miller, successively set the tune of his verse. Line after line has been traced back by Mr. A. G. Stephens to these masters. Yet in his earlier volume, "At Dawn and Dusk," he was obviously gaining mastery over his material and fusing it in an internal fire. In the later collection, "Wine and Roses," his originality is patent. The editors of the new anthology reprint only from the earlier volume, as Mr. Stevens had necessarily done, when it was in their power to reprint from the later, but "A Sunset Fantasy" shows Daley at his best:

> Spellbound by a sweet fantasy
> At evenglow I stand
> Beside an opaline strange sea
> That rings a sunset land.
>
> The rich lights fade out one by one,
> And, like a peony
> Drowning in wine, the crimson sun
> Sinks down in that strange sea.

The rhythm is everywhere perfect. The verses are those of a true poet; indeed, as the admiring editors of this anthology assert, of one of the greatest Australian poets. They composed themselves, as poems should. Once the idea occurred to him, it could be developed under any circumstances or in any surroundings. Is not that inspiration?

But the feature that will attract most readers in other countries is the poetic representation of the primitive, the changing, and the enduring aspects of Australian life and its environment. We had not thought of the ex-High Commissioner of New Zealand in London, now director of the School of Economics in London University, W. P. Reeves, as a writer of stately and sonorous verse (his squibs were known), but his chant-like poem, "The Passing of the Forest," reminds one of Coleridge. Does a chief author of the Socialist legislation in New Zealand ever apply his own lines to the Factory Act and the system of industrial arbitration that he founded? Does he ever call upon himself to scan—

> The ruined beauty wasted in a night,
> The blackened wonder God alone could plan,
> And builds not twice! A bitter price to pay
> Is this for Progress—beauty swept away.

It was not beauty that was then destroyed, but freedom and a natural self-adjusting mechanism, evolved from within, not imposed from without.

A picture of a cattle stampede by Will Ogilvie is worthy of Gordon. Like the chief Australian poet's "Sick Stockrider," it is drawn from life by the hero of an incident that is of frequent occurrence in the bush, but has never been more vividly painted. Mr. Ogilvie, who (like Gordon) "fought grim battle in the West, to live a lost love down," was born and reared in Scotland, but came out to Australia, where, as we see, he took an active part in distinctive Australian pursuits. Ever restless, he migrated to the United States, but though he again returned to Scotland, his heart is evidently still in Australia, which lays a strange spell—the spell of the bush—on all who have really lived its life.

The same theme is more calmly treated by Col. Kenneth Mackenzie in a poem, "The Australian Bush," that covers almost the whole of the pastoralist's existence. After long years of political and military activity (he commanded the first Bushman's Contingent that served in South Africa), he still recalls—

> Sweet scent of myall, belts of deep green yarran,
> The crimson splendor of thy solemn dawns,
> The stillness of thy deserts vast and barren,
> Where Death and Life play chess with men for pawns.

He, too, recalls the stampede and the "thousand hoofs' deep thunder," "the fierce moments," the "wild gallops," "the glad hours of kingly strife," and all the

**An Austral Garden: an Anthology of Australian Verse.* Selected and edited by M. P. Hansen and D. McLachlan. Melbourne: Geo. Robertson & Co.

other incidents of "the lost station of my dreams"—the "station" being the equivalent of "ranch."

If these poems appear grave and are long-lined, the flexibility of the Australian mind is seen in Ethel Turner's "Gum Leaves," which is a harmony (*à la* Whistler) in red, white, blue, and gray. It is no less seen in the quick movement of Bernard O'Dowd's "Resurgent"—a glad song to Spring, with the romantic touch at the close which the earlier poets hardly knew and the younger seldom forget.

An Australian anthology without a companion picture of the often disastrous summer would be incomplete, and two such adorn this representative volume. Charles Kingsley, in his days of strength, bravely sang of the north wind, of which he was to die; here is a poet, E. S. Emerson, as true an optimist as his American namesake, and he exultingly chants "A Rain Song." Every drop of rain that falls in droughty Australia is telegraphed everywhere; the message that "it's raining" is "an anthem of elation," and each rainy day is a "canto sweet of God's great song."

J. C.

NEWS FOR BIBLIOPHILES.

One regrets to find a familiar but scarcely correct statement repeated by Prof. George B. Churchill in his introduction to "Richard the Third" (The Tudor Shakespeare). He says: "In America . . . the presentation of this play by a native company on March 5, 1750, at the theatre in Nassau Street, New York, practically begins the history of our stage." The ultimate, if not the direct, authority for this assertion seems to be Seilhamer's "History of the American Theatre," which opens with an account of Murray and Kean's company of Philadelphia comedians, and lays stress on their performance of "Richard the Third" in New York, mentioned by Professor Churchill.

Seilhamer's history, excellent as it is, contains other errors. The author writes one chapter on The American Theatrical Towns, 1750-58, naming only Williamsburg, Annapolis, New York, and Philadelphia (I, 81); he alludes to the Southwark Theatre, Philadelphia, which dates from 1766, as "the first permanent playhouse in America" (I, 151); he terms the Charleston Theatre, built in 1773, "the first theatre in South Carolina" (I, 329). That each one of these statements is erroneous, can, I think, be shown. Present interest in stage history may justify a brief discussion.

Seilhamer's work ignores the existence of a permanent theatre in Charleston fifteen years before the opening of the Nassau Street Theatre in New York, thirty-odd years before the erection of the Southwark in Philadelphia, and almost forty years previous to the building of what Seilhamer thought to be the first one in South Carolina. Contemporary newspaper notices of the earlier institution are reprinted in McCrady's "South Carolina Under the Royal Government," but they appear to have escaped the observation of Seilhamer and other Philadelphians and New Yorkers writing about the American stage. The first notice appears in the *South Carolina Gazette* for February 21, 1735: "At the New Theatre, Queen Street, will be acted on Monday next a tragedy called 'The Orpban, or The Unhappy Marriage' (McCrady, p. 526). One week later is found this advertisement: "By the Desire of the Troop and Foot Companies, At the New Theatre in Queen St., will be acted on Tuesday next a Comedy called the 'Recruiting Officer,' with several entertainments, as will be expressed in the foot bills" (*ibid.*, p. 527). For March 12 we find advertised "The London Merchant, or The History of George Barnwell." These three plays McCrady does not attempt to identify, but "The Orphan" is easily recognized as Otway's tragedy; "The Recruiting Officer" is the equally well-known comedy of George Farquhar, while "George Barnwell" was written by Lillo and presented in London just four years previous to its Charleston performance. All these plays became exceedingly popular in America later on. Another advertisement, dated January, 1737, gives particulars as to the price of seats. The play to be performed is "The Tragedy called 'Cato,' written by the late Mr. Addison, with a Prologue by Mr. Pope. Tickets to be had at Mr. Charles Sheppeard's; Stage and Balcony Boxes 30s., Pitt 25s., Gallery 5s. To begin exactly at six o'clock" (McCrady, p. 527). On November 22, 1737, a concert is advertised to take place "at the Queen Street Theatre," the tickets on sale at Mr. Charles Sheppeard's.

The scale of admission prices just given is remarkable when one compares the charges then prevailing elsewhere in America. Seilhamer quotes various advertisements, in which the seats run from 5 to 10 shillings in boxes, 4 to 7½ shillings in the pit, and 2 to 3 shillings in the gallery. Making all due allowance for local differences in money values at that day, one must discern a sharp contrast between these figures and the Charleston rate of 30 shillings for boxes and 25 shillings for the pit. Seilhamer also gives an advertisement from a later Charleston paper in the season of 1774, announcing the sale of box seats at 35 shillings, pit at 25 shillings, and gallery at 20 shillings. Evidently in Charleston the theatre did not appeal for patronage to the common people. But the rates charged for admission, the standard of plays given, and the fact that the theatre was so called even when a concert was given there, all go to prove that the structure was permanent and was worthy of its name.

With reference to the later history of this theatre, some information may be gleaned from items in an unpublished diary known to McCrady, but not quoted by him. This journal was kept by a Charleston lady, Mrs. A. M., the wife of a wealthy merchant, and large excerpts in manuscript are preserved by the South Carolina Historical Society. From this document we learn that the good lady "went to the play of George Barnwell" in Charleston on November 25, 1754, and to unnamed plays on December 27, 1754, and on January 27, 1755. In 1764 she saw these plays: February 3, "George Barnwell"; February 13, "The Conscious Lovers"; February 24, "Jane Shore"; February 27, "Love for Love"; March 19, "The Jealous Wife"; March 29, "Theodosius"; April 9, "The Mourning Bride"; April 12, "Romeo and Juliet"; May 10, "King Lear." Again in 1766 Mrs. M. mentions seeing these dramas: January 17, "The Distressed Mother"; February 10, "Love in a Village," the first American production of which play Seilhamer claims for Philadelphia on March 19, 1767; March 13, "The Provoked Husband"; April 13, "School for Love."

Exactly who acted in these earliest plays remains a question. That it was the so-called American Company that played in Charleston in 1764, and presumably in 1766, is shown by a newspaper notice just sent to me by Miss Webber, secretary of the South Carolina Historical Society. This is copied from the *South Carolina Gazette* for November 5, 1763, and runs: "A company of comedians arrived here last Monday from Virginia, who are called the American Company, and were formerly under the direction of Mr. Lewis Hallam, till his death. Amongst the principal performers, we hear, are Mr. David Douglas (the present manager, married to Mrs. Hallam), Mr. Lewis Hallam, jr., Mr. Quelch, Mrs. Douglas, Mrs. Harman, etc. They come warmly recommended from the Northern colonies, where they have performed several years with great applause, and in their private capacities acquired the best of characters. A theatre is already contracted for, 75 feet by 35, to be erected near where that of Messrs. Holliday and Company formerly stood, and intended to be opened the 5th of December next." Evidently this was the first visit to Charleston of the company playing in 1773-4, and their theatre was a temporary structure. The whole subject forms a neglected, but, in my opinion, an important, chapter in the annals of the American stage.

ROBERT ADGER LAW.

Correspondence

THE WHITE HOUSE UNDER CLEVELAND.

TO THE EDITOR OF THE NATION:

SIR: May I point out one error in the otherwise admirable article on "Simplicity at Washington" in your issue of January 30? I refer to the evident implication that the official receptions given during President Cleveland's Administrations were well managed and constituted a model to be followed by President-elect Wilson. As a Cleveland Democrat, I yield to no man in my admiration for that great President's sound judgment in matters of state, his consistent devotion to high ideals, and his sterling patriotism; but I must admit that the evening receptions were not well managed, though this was presumably due to bad judgment on the part of subordinates rather than to any act or neglect on the part of the President himself.

The chief troubles were that no one was ever required to show his card of invitation (so that many persons came who had not been invited at all), and that, to adopt the words of your article, "servants in livery" (or without livery, but livery would have been better, to prevent confusion) "were lacking, and guards were few." The

natural result was not merely that the number of visitors exceeded the accommodations, but that there was no adequate means of preventing the visitors from being crowded together for a considerable time so closely that the pressure was not only uncomfortable, but dangerous, and, in a sense, indecent. I attended most of these receptions during the years 1894-97, and the trouble was always the same. From the moment one reached the White House steps until one came to the ante-room adjoining the reception-room proper, one was always in a closely packed mass of human beings, moving gradually forward if movement was possible, but often immovable for lack of space. At the coatroom one had a minute's relief, and when one reached the ante-room one could cool down a little and arrange one's disordered dress; but for a long period of time (the movement being naturally very slow) every one was subjected to the discomfort of this crowding. Certainly, the "distinguished German" to whom you refer never attended an evening reception, as otherwise he would have said, "If this be 'great and true democracy,' give *me* 'the glitter of the Viennese court,' where at least I am treated like a human being."

I do not know whether the system has been improved in these respects since 1897; but if it has, Gov. Wilson's fellow-citizens have a right to demand that there shall be no return to the old method of receiving them, even if more servants and guards be required.

And may I touch on another matter? Gov. Wilson's quiet disapproval of the silly inauguration ball is refreshing. Is it too much to hope that his common sense will also protest against the even sillier custom of expecting the President to shake the hand of every one of the thousands who attend his official receptions? When the country was small and the guests proportionately few, the matter was not very serious, though I believe Washington never adopted the custom. Now that the country is so large, and the President is called upon to receive such throngs of people, this handshaking is a very serious tax on his strength—a tax as bad for his health as the 100 per cent. wool duty is bad for all our healths. Washington probably thought that the hand which wielded the sword should not be treated like a common pump-handle. Should not the hand which so ably guides the pen be equally respected?

CHARLES C. BINNEY.

Philadelphia, February 18.

WOMAN'S MIND.

TO THE EDITOR OF THE NATION:

SIR: There is one little casual remark in Mr. Fite's article on "The Feminist Mind" (in your issue of February 6) which many readers, indignant at the contemptuous tone of the article as a whole, will probably overlook. After giving as his "formulation" for the feminine mind that "it corresponds most closely to the masculine mind *just before* the presumptive stage of maturity"—that while "the masculine mind goes on to maturity, the feminine mind seems hardly to get beyond the stage of adolescence"—Mr. Fite remembers a few rather glaring exceptions to his rule, and says: "I am not raising the odious question, whether women are 'so' by nature, but whether they are so *de facto*. *De facto* I should say that the formulation fits the feminine average or type." Now to set aside this little "odious question" is actually to set aside the main factor in the case. If women are mostly in the adolescent stage, there are two things that may be done about it. One is to keep them in their place, to snub them when they are "fresh," to drive them off when they try to meddle with the affairs of "grown-ups." The other is to help them to grow up. Which course one advocates depends, one would suppose, upon whether or not one thinks that women are by nature capable of growing up. But though all the rest of Mr. Fite's article appears grounded in the assumption that women are immature and unintelligent *by nature*, in the passage quoted above he expressly disclaims making any such assumption.

Now I freely admit that for most practical purposes the average woman of to-day is less intelligent than the average man. She is more apt to be influenced in her judgments by personal considerations, more apt to rely upon intuition, more apt to condone a breach of trust. But not one of these differences holds between men and women who have had approximately the same training and approximately the same stimulus. I have read and heard (alas, who has not?) an enormous number of sweeping statements about women, but I have never come across the statement that business or professional women were less alive to standards of scrupulous honesty than business or professional men. I thought for a moment that Mr. Fite was about to make such a statement. "Those," he says, "who deal with women in business are not impressed by their self-sacrifice, but rather by their failure to comprehend the elementary principles of justice." But the example given shortly afterwards (of the feminine customer who hardly pauses to reflect that the privilege of unlimited exchange of goods has an effect upon the prices charged) shows that what he has in mind is not at all the business woman, but the average woman—who is, of course, utterly unaccustomed to the business point of view and unacquainted with the simplest economic principles.

The kind of decisions and judgments that the ordinary woman is usually called upon to make do not, in point of fact, demand abstract reasoning. Personal considerations are as a rule the only ones that she need take into account. The "naïve freedom from the restraining considerations that would be presented by a broader view of the case," which Mr. Fite regards as characteristic of women's minds, is the result, not of a mental organization different from that of men, but merely of the fact that "a broader view of the case" is not demanded of them, and their interest in "broader views" is consequently only an academic one. This is why intuition has so large a share in the mental processes of women. The nature of the common fallacy about feminine intuition is indicated in a single sentence which I quote from a very lucid examination of the general subject. "It is not true that men's minds and women's minds have different ways of working; but it is true that upon certain occasions . . . we all act from intuition, and that the circumstances of women's lives have hitherto been such as to make their interests lie somewhat more exclusively in those regions in which conduct is intuitive than in those in which it is long thought out" ("Intuition and Reason," by C. L. Franklin, *Monist*, Jan., 1893). And just as the ordinary business woman is no less honest than the average business man, so the average woman who has had training and practice in abstract thinking is no less logical than the average man with the same training and practice. Women do not work out mathematical problems by intuition—nor do men read the expressions of people's faces by any conscious logical process.

There is, of course, no need of admitting that, even as we are, we are anything like as stupid as Mr. Fite makes us out. But in so far as the things he says of us are true, one of the strongest arguments for woman suffrage is that it will go far towards making them untrue.

REVIEWING BAD BOOKS.

TO THE EDITOR OF THE NATION:

SIR: Permit me to express the great pleasure and profit with which I read each successive issue of the *Nation*. This journal has set so high a standard in its comprehensiveness, its scholarship, its critical taste, and its literary excellence, that any cavil is absolutely precluded.

But I have had some earnest reflections upon present literary tastes and tendencies, in consequence of which I desire to make a protest and a plea.

The plot of prose fiction has in the main always centred on the theme of human love. This has at once appeared as the dominant interest of the writer, and been accounted the indispensable thread to hold the attention of the reader. Now tradition, as the veriest hind knows, is to-day undergoing severe scrutiny. But it does not follow that certain traditional sanctions of morality have themselves been overthrown, although this very fact seems to be assumed in the treatment of love in much of our current fiction. The subject is no longer approached with respect, but with—anything you please. In the older classic forms there was transgression also in the sex relation, but it was usually depicted in the true setting of its perversion and its enormity of consequence. In current fiction no one is made to feel it a sin; on the contrary, in its overthrow of restraint and convention, in its bold assertion of the primacy of desire, it seeks to become itself a law, to be judged by none higher. The woman blinks and wipes her lips and says, "I have done no wrong."

The relation of the sexes as exploited by our clever literary craftsmen flies into the teeth of that very scientific movement in whose name, tacitly at least, they profess to speak. There has been an "evolution" in the institution of marriage and of the home as we have it. Men have tried other ways, long before it entered the mind of the literary adventurer to try these new ways in modern fiction; but the experience of many millenniums in the rough school of life taught them that it would not work. In the age-long conflict between right and desire men have been cudgelled

into decency. This experience will have to be gone over again if certain types in present-day fiction get out and seriously try to set the fashion in actual life. In your last issue you report Ernest Belford Bax as saying, in a recent book, that what a man and a woman do between themselves is nobody's business, so they themselves are willing. It does seem that, not reason or knowledge, but desire only, could father such a thought or philosophy. Let this be said merely: facts as they have been lived out in life do not substantiate such an assumption. Mr. Bax and men like him ought to know this, or quit writing.

There ought to be some effective way of taking the conceit out of men of this type, for they appear to labor under the delusion that they are giving the world something new and enlightened and progressive. Or, possibly, their philosophy is merely a bid for advertisement. But why advertise it? Why give an analytical review of such books? Why not merely say for the week, So many volumes received—or pounds, which, upon even hasty inspection, showed that they were not up to standard, fit for use? Or if mention must be made, why not say, as your reviewer said of a certain book in your last issue, "This book has its value for the author; it has given him practice in writing"? Or why not say more specifically of such literature something like this: "Such a book as this does harm to the public, but it does more harm to the author. The public may overcome its bad effects, but the injury to the writer is probably irreparable. His book is a mental abortion, which will probably preclude his mind from ever functioning normally again"? AUGUST F. FEHLANDT.

Michigan, N. D., February 15.

AREN'T I?

TO THE EDITOR OF THE NATION:

SIR: It may interest Professor Hart and others to know that the expression *Aren't I* has, within the last year, become not uncommon among *children* of this part of the country. The writer first made its acquaintance from the mouths of his own children, and approves of the expression as filling a "long-felt want." L. M. P.

Massachusetts Institute of Technology, February 10.

A PROTEST.

TO THE EDITOR OF THE NATION:

SIR: Two publishers' advertisements displayed in the same type follow the author's name on the title-page of the new printing of Woodrow Wilson's "George Washington." Immediately after the imposing list of Mr. Wilson's degrees is added "President of the United States," and just below, "Copiously Illustrated." As the 4th of March has not yet arrived and as the copyright of the work dates back to 1896, the accuracy of the title "George Washington, by Woodrow Wilson, Ph.D., Litt.D., LL.D., President of the United States," might be disputed—quite apart from the question of good taste. The name of the highest office in America is here used as a commercial instrument for marketing a new edition. In the name of the first American President, who so nobly and carefully guarded the dignity of that office, a protest should be recorded.

WILLIAM F. PEIRCE.

Kenyon College, February 14.

A GUIDE TO FRENCH FICTION.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for January 2 Mr. Frank R. Arnold draws attention to the *Romans-Revue*, which offers a survey, from the ecclesiastical standpoint, of current French fiction. The moving spirit of the *Romans-Revue* is evidently the talented young abbé, Louis Bethléem. It is perhaps not generally known in this country that the samo person is the author of a guide to French fiction of the past: "Romans à Lire et Romans à Proscrire," Librairie Oscar Masson, Cambrai, 1911. This work has enjoyed such a rapid sale that it is already in the fifth edition. While treating mainly of French fiction, it includes mention of numerous foreign novelists, such as Manzoni, Fogazzaro, Annunzio, Tolstoi, Hoffmann, Sienkiewicz, Sterne, Charlotte Brontë, George Eliot, Scott, Dickens, Thackeray, Meredith, Doyle.

To the philosophically inclined critic of literature or religion, "Romans à Lire" is one of the most valuable hand-books that have appeared in a generation. The reader is admitted immediately to the inner councils of the Church, and has as guide and companion a brilliant and highly trained intellect. Probably no one of the thousands of novels mentioned has the fascination of this volume. As the reader turns over these pages, which are mainly of censure and protest, he has constantly before his mind the parallel struggle of the Church against modernism and higher criticism. One leaves the book with a realization of the tremendous gap that separates the Church from the now-dominant form of literature. The amount of fiction which may be read by all of the faithful is small, as will be seen from the fact that even "Paul et Virginie," in spite of the praise given it, "ne doit pas être mis, sans corrections, à la portée de la jeunesse." Similar reservations are made concerning George Sand's "Mare au Diable," Chateaubriand's "Dernier Abencérage," and many other supposedly innocent stories.

The condemnation of some of these works is, however, not due to the Abbé Bethléem; he naturally feels obliged to condemn all novels which have been placed on the Index (pp. 22-44). No more convenient list of novels thus condemned has been published. One is not surprised to read here, after such names as Sand, Dumas, *père*, and Balzac, the words: *omnes fabulæ amatoriæ*, and, after Zola, the words: *opera omnia*. It is in the part of the volume commencing on page 45 that the author really shows his own personality. His *parti pris* is to be seen, on the one hand, in the censure which he awards to all of the great names in French fiction, and, on the other, in the laudation or complacency with which he speaks of such limited talents as those of Coppée, Huysmans, Bazin, Lemaître, not to mention scores of nonentities. An interesting experiment would consist in making a list of the fifty greatest French novels, according to the supposedly best critics, and then to compare this list with the Abbé's catalogue of fiction. It may be doubted whether more than two or three of the fifty novels would be found "innocuous."

It is of course impossible to enter into any detailed description of the last three hundred and fifty pages of "Romans à Lire et Romans à Proscrire." Attention may be called, however, to a passing fling (p. 88) at Professors Lanson and Croiset. Evidently the critical methods dominant in France—and elsewhere, for that matter—are not to the liking of our good Abbé.

Literature

PRECURSORS OF LIFE ASSURANCE.

An Introduction to the History of Life Assurance. By A. Fingland Jack. New York: E. P. Dutton & Co. $2.50 net.

The history of life insurance has not yet been written. It is to be hoped that when it appears it will be as scholarly and as interesting as Mr. Jack's book on some of the precursors of the institution. Life insurance, as we now know it, dates virtually from the establishment of the Equitable in Great Britain in 1762. Before that the institution had obtained no stronghold. That it was not regarded with general approval is perhaps attested by De Foe's observation: "Insuring of life I cannot admire. I shall say nothing of it, but that in Italy, where stabbing and poisoning is so much in vogue, something may be said for it, and on contingent annuities, and yet I never knew the thing much approved on any account." Possibly this lack of interest was due to the fact that the need which life insurance meets had been met in the past in some other way.

As a matter of fact, death dues are of long standing. Prominent among the divergent purposes of the Roman Collegia was that of providing fitting burial for the members. Under the Empire this was the all-important consideration with the Collegia Tenuiorum, associations of people of the lower classes, including even slaves. Apparently, an unfettered right of association prevailed in the days of the Republic, but under the Emperors restrictive measures are discerned. Both Cæsar and Augustus suppressed those colleges which they regarded as dangerous, and it was decreed that new associations should be formed only by special permission. This was part of a clear-sighted policy. The Emperors distrusted the upper and middle classes, and for this reason deprived them of the right to combine. Their reliance was upon the army and the lower class, and they therefore tolerated the Collegia Tenuiorum; indeed, they went out of their way to encourage such associations.

There exists an inscription of the year 136 A. D. which furnishes some interesting information regarding one of

the Collegia—the Collegium Cultorum Dianæ et Antinoi, at Lanuvium—and which doubtless may be taken as typical. New members had to pay an entrance fee of 100 sestertii (about 14s. 7d.), and provide an amphora of "good wine," and thereafter contribute to the funds 5 asses (about 2 3-16d.) monthly. The capital thus created constituted the provision for the burial of members. On the death of a member, a sum of 300 sestertii was paid out to meet the expenses, 50 sestertii of this amount being distributed among the funeral train.

It is easy to trace a certain resemblance between such associations as this and the modern life insurance company. Methods somewhat analogous to life insurance of to-day existed also in connection with the Roman army. The Emperors, for obvious reasons, were liberal in their largess to the legionaries, and the recipients were bound to deposit with the ensigns half of what befell them on each occasion, the sum being put to their credit and repaid only at the end of their service, save perhaps in exceptional cases. It remains a disputed question how far the Roman colleges may be regarded as societies aiming at mutual assistance. Yet, as Mr. Jack observes, they had only a step to take to become so. But was the step taken? Mommsen supposed that the Collegia Tenuiorum, in addition to the care of burials, devoted themselves to aims of reciprocal support. Others have followed him in this view. The evidence, however, is not yet sufficient to support the theory.

Also, that there is any direct line of development between the Roman colleges and the gilds of a later period has still to be proved. A number of causes contributed to the rise of the gilds. In the days of weak or non-existent central authority, and consequent ill-administration of justice and lack of poor-relief, an amalgamation of private interests was necessary. We must recall, further, that the ideal of the family, which was particularly an inheritance of the Germanic races, began to be lost: as the family tie loosened and failed in the exercise of its function, a substitute had to be found. Another thing was the decay of the mark communities before the incoming régime of land proprietorships and overlords. Briefly, association was recognized as a means of supplying a new bond for purposes of mutual assistance and support in a day when it was difficult for the individual to stand alone. Whatever the various primary objects of the gilds, every species exhibits the same spirit of brotherhood, going out not merely in that one direction, but embracing as well the other needs of life.

The early history of the gilds is involved in obscurity. There is evidence, however, that they existed in England as early as the ninth century. Those which merit most our attention are the Frith Gilds, the Merchant Gilds, the Craft Gilds, and the Social-Religious and Religious Gilds. The frith gilds were sworn brotherhoods, concerning themselves mainly with the attempt to fill the gaps caused by defects in the matter of law and order due to a weak central authority. They did not, however, exclude the idea of brotherly support and assistance in other directions. In very early times we find the frith gilds in the Frankish Empire and the Netherlands, as well as in England, and it is probable that they existed to some considerable extent in Germany. With the growth of law and order a new era of gild-development began; the form and character of the gild were governed by the vocation of the members and the interests depending thereupon.

There is reason to suppose that the merchant gilds originated in the second half of the eleventh century. We find no trace of them in Anglo-Saxon days, and it is impossible to tell whether they came into England with the Conquest or arose there spontaneously after that event. Once started, their growth was rapid. As early as the reign of Henry I the merchant gild is mentioned in municipal charters. Of the hundred and sixty towns represented at one time or another in the Parliaments of Edward I, as many as ninety-two possessed merchant gilds. While the basic idea of associations of this class seems to have been that of a trading monopoly, we find among their ordinances provisions for attendance at the funerals of deceased members and prayers for the dead, side by side with which were arrangements for mutual support: sick gildsmen were to be visited, and assistance was to be rendered from the funds of the society to brethren who had fallen into poverty and distress, either by an absolute grant or by a loan free of interest; and sometimes the daughters of such needy members were to be dowered for marriage or the convent. The merchant gild seems to have lost its *raison d'être* with the rapid growth and specialization of industries, though the name long survived.

While it may be impossible to trace the craft gild back to the Roman Collegia in a continuous line, it is not improbable that some of the artisan corporations in Gaul had a continuous existence from the fifth to the twelfth century, and even that the organizations of servile craftsmen on the lands of the larger manors and monasteries may have been consciously constituted on the model of the Roman colleges. Though the manorial associations were far from being craft gilds, it seems safe to assume that in many instances they were transformed into such. The two institutions differed in one important particular: the manorial associations were brought about from without; whereas, in the case of the craft gilds, the craftsmen doubtless first associated for mutual objects of brotherhood, for mutual support against the ordinary vicissitudes of life, for mutual intercourse, and mutual pursuit of recreative and religious objects, as well as for the protection of property and freedom. It was only natural that the gild should soon begin to busy itself with practical trade matters, until this object became predominant.

We see that the craft gild has two distinct sets of activities, one affecting the members as craftsmen, the other affecting them as members of a social class. The gild system became one of minute control of the craft. On the one hand, great stress was laid upon the quality of the work done, and on the conditions under which it was done, and, on the other hand, upon a careful regulation of the supply of the trade material. Turning to the social side, we find that it was not merely that help was afforded when the member was beyond all self-help. It was recognized that there were times of difficulty and depression in trade, and the gild chest was open to those whose position could be made secure by the loan of a sum of money to tide them over the difficult period; they were thus not only preserved from penury, but their business was by such means retained to them, and with it their self-respect. Cases of distress, other than those of a temporary character, were met by setting down a certain stipend out of the funds. On the death of a poor brother, an honorable burial was provided for him, and the funds of the craft gilds therefore performed the function of sickness and burial clubs. The advantages extended beyond the craftsman himself to members of his family.

The social-religious gild played a large part in the Middle Ages, both in England and on the Continent. In associations of this class, the relief appears to have been measured not by the loss from the contingencies insured against, but by the actual poverty occasioned by the loss. There is, as Mr. Jack points out, a striking contrast between this attitude and the intense specialization in the various branches of insurance to-day. As a rule, the members of the gild seem to have accepted responsibility for the fixed amount for each of their number who might be in misfortune, but there are instances where, in the event of more than one requiring relief at the same time, the sum receivable by each was reduced.

Outside of the gilds we discover unmistakable tendencies towards mutual assistance. The reprobation of usury, and even of the taking of any interest at all, is one of these. On the other hand, there were a number of expedients which cannot be included in the category of mutual assistance, but which

easily possess insurance features. Such, for example, was the purchase of rents or annuities. The *montes* possessed similar characteristics. These were loans, sometimes forced and often voluntary, on which an annual money payment was made. This payment, in order to avoid the incriminating term "interest," was regarded as reimbursement of capital. With the weakening of the doctrine of usury, the activities of the *montes* were in many cases transformed into those of banking houses.

The gambling insurance of the Middle Ages was another precursor of modern insurance. If A pays £10 to B, who in consideration therefor agrees to pay A £100, should C's ship (in which neither has a previous money interest) founder during a certain voyage, the compact is obviously nothing but a piece of gambling. Of course, if A has goods to the value of £100 in C's ship, the contract might, for him at least, be regarded as one of insurance. It was a natural transition from such a situation to one where a person about to take a voyage paid a *premio*, which should insure the payment of ransom in the event of capture by the Turks or Barbary pirates.

The sixteenth century gave birth to Holtzschuher and Obrecht, with their theories of compulsory insurance of children, and the seventeenth to Tonti, whose theories may easily be surmised by those familiar with the modern term "tontine." In the seventeenth century also the illustrious Jan de Wit, then Grand Pensionary, first conceived the idea of applying the doctrine of probabilities to the valuation of human life. Nothing came, however, from his effort. In 1693 Edmund Halley, the astronomer, made a great advance in the science by his paper submitted to the Royal Society under the title, "An Estimate of the Degrees of the Mortality of Mankind, drawn from curious Tables of the births and funerals of the City of Breslau; with an attempt to ascertain the price of annuities upon lives."

Thus the way was paved for modern life insurance, the history of which ninety-nine persons out of a hundred have been content to ignore. In compiling this erudite yet very readable treatise, Mr. Jack has dignified the system which we now know, by forcing us to recognize that it owes its enormous vogue quite as much to the instinct of the human race as to the persistent activities of "the life-insurance man."

CURRENT FICTION.

The Red Hand of Ulster. By George A. Birmingham. New York: Geo. H. Doran Co.

American readers, at least, can hardly help feeling this to be a sad come-down for the author of "Spanish Gold" and "Priscilla's Spies." In place of the light-hearted and spontaneous humor of those delightful narratives, we have here a piece of deliberate and heavy-handed political satire. Anti-Unionism in Ulster, with an elaborate conspiracy ending in a battle in the streets of Belfast, might have given this writer a chance for some admirable fooling. In fact, the "timeliness" of his theme fails to rescue the performance from dulness. An Irish multi-millionaire, that richest man in the world who figures under so many aliases in current fiction, wearies of London society, which he has easily brought to heel, and casts about for some new thing. A chance suggestion by his secretary that an Irish revolution might be amusing takes his fancy. The anti-Unionists are his best hope. He promptly allies himself with one McNeice, a fanatical Orangeman and a born leader. Arms are smuggled into Ulster in Conroy's yacht, and on a day the embattled zealots actually face the King's troops. The event is a fiasco: the soldiers have orders to fire into the air, and the Orangemen are such poor marksmen that they do no damage. Presently the troops, instead of awarding the crown of martyrdom to the ambitious foe, quietly withdraw themselves, to the consternation of the patriots. The affair ends with a naval bombardment, consisting of a single shot, which destroys a statue of Queen Victoria in a Belfast square. "O. Henry" might have made an amusing short story out of these materials. As here spun out and rubbed in by Mr. Birmingham, they seem of little account. But it may be that the eye of the true-born and politics-ridden Briton is needed to discern their hidden meaning.

Prudent Priscilla. By Mary C. E. Wemyss. Boston: Houghton Mifflin Co.

The author of "The Professional Aunt" appeals chiefly, we suppose, to a feminine audience. Her humor is of the sort esteemed by knitters in the sun as "bright" and "cute," and disposed of by brusque male verdict as "fresh." The Priscilla of the chronicle is the young wife of a well-to-do English squire, and has an income of her own, of which she never lets us hear the last. The squire's name is Richard, but she chooses to call him Christopher, which, we somewhat obscurely gather, is an act of piquancy. Life moves smoothly at the Manor House. Christopher's only visible task is to cultivate the red health becoming to his station. Priscilla plays Lady Bountiful among the villagers, never forgetting to be sprightly even when being kind. After some years of marriage there are no children at the Manor House, and Priscilla spends a great many of her pages in assuring her readers and her husband that this doesn't matter at all. Christopher is all she wants; children would be sure to be a nuisance; she is determined not to be treated as a disappointed woman, and so on. Of course, it is plain that it does matter, that this is what the book is about, if it is about anything. Priscilla has an old nurse who may be counted on to put new heart into the topic whenever it might otherwise be in danger of lapsing. In short, this is the record of a long flirtation with the idea of maternity. There is only one possible ending, of course—the happy one. The hour arrives when a secret is to be whispered into the red ear of Christopher; and the rest may as well be silence.

In the Vortex. By Clive Holland. New York: McBride, Nast & Co.

Perhaps the reason why stories of the Latin Quarter continue to be produced in such numbers is that they satisfy the thirst of many half educated readers for Arcadian literature. The story-book Bohemia is bounded on the north by Arcadia, and on the south by the Mohammedan Paradise. Its utter unreality is one secret of its popularity; its comparatively discreet appeal to the baser instincts is another. In the matter of unreality, "In the Vortex" is almost a burlesque. The opening scenes are laid in New England—a New England where at psychological moments the thrushes sing in the elms of the village street, and where, on one occasion, "the roseate dawn of a spring day was about to break in the *western* sky and creeping over the meadows." The author's liberties with Nature are interestingly paralleled by his liberties with language. "If yer are going" is a fair sample of his New England dialect; "Timothy O'Hagan, a journalist, *gen des lettres* and cosmopolitan," will give an idea of his French; and "there was something so charming and disingenuous about Glynn, and his gray eyes were so clear and questioning for a man that she had, as she phrased it, 'let herself go'" illustrates the fine impartiality of his ordinary diction. But details of this sort will not disturb most of Mr. Holland's readers. They will no doubt revel in the "Bohemian atmosphere" gained by highly colored descriptions of restaurants, studios, and balls, and by the liberal sprinkling of more or less French words.

Pride of War. By Gustaf Janson. Translated from the Swedish original "Lögnerna." Boston: Little, Brown & Co.

One looks back to the title-page of this volume to see whether it is not published by some Peace Society. In the form of a series of sketches from the Tripolitan campaign, it is really

a commentary on Sherman's familiar definition of war. War is built upon lies and supported by them; war is anarchy; war is reversion to the brute; war is theft; war is murder.

These are the texts of a series of narratives written picturesquely and strongly. They give us glimpses of Bedouin life and customs; of the skirmish line, the battle-field, the hospital. "A Fantasia" contains an interesting account of a Bedouin festival; "Lies," perhaps the most effective tract in the series, concludes with an impressive bit of dramatic irony. Before the reader has finished the book he grows a little tired of the recurrent moral, which the writer's earnestness has led him to overemphasize.

THE RHYTHM OF PROSE.

A History of English Prose Rhythm. By George Saintsbury. New York: The Macmillan Co. $4.50 net.

In judging this book, as is the case with most of Professor Saintsbury's work, two quite different points of view may be taken, corresponding to two notable traits of the author's mind. No living critic reacts more finely and spontaneously to the individual passage of beauty wherever found; in this sense his *gusto*, to use an old and desirable word, is almost impeccable. On the other hand, not many writers, certainly no living English writer of his eminence, can flounder so helplessly and at times be so wrong-headed as he when he undertakes that reasoned and systematic criticism of beauty which is more properly the function of *taste*.

So in this history. If one reads it as a kind of anthology of English prose, with a running comment concerned largely, but by no means exclusively, with rhythm, it will be found highly interesting and stimulating. As an example of Professor Saintsbury at his best—and his best is very good—we commend his paragraphs on the passage in Isaiah lx, beginning with the words, "Arise, shine; for thy light is come, and the glory of the Lord is risen upon thee," and ending with, "For the Lord shall be thine everlasting light, and the days of thy mourning shall be ended." No reader of the Bible need be told that the language of these verses is beautiful, but there are very few readers, we suspect, who, after hearing Professor Saintsbury's comments, will not admit that they never before felt its full sweetness and marvellous splendor. Nor is it a little thing that the critic makes a fairly elaborate comparison of the English form of these verses with their form in the Septuagint and the Vulgate, and by so doing brings out the magnificent rhetorical resources of our tongue which we sometimes forget. It is significant, however, that the force of the critic's eulogium depends more on his consideration of vowel sounds and grammatical endings than on any specific analysis of the rhythmical scheme.

This same quickness of response to the quality of the individual passage has enabled Professor Saintsbury to give an excellent criticism of the work of Wyclif on the Bible, and of its value relatively to that of Tyndale. Indeed, he is likely to be particularly sound and fine when dealing with details of Scriptural style. Those who have any lingering doubts of the failure of the Revised Version as a devotional book, would do well to ponder the page in which our critic loses his temper gloriously over the Revisers of 1870-1885, "the very Ziim and Ochim and Iim of the fauna of our literature," as he calls them. The passage is so characteristic of Professor Saintsbury and shows so clearly the nonchalance with which he carries the subject of his book, viz., rhythm, that it may be quoted at some length:

> Let us, for another example, take what is perhaps the finest passage, rhythmically, of the New Testament, as "Arise, shine," is not far from being the finest of the Old. The mess which those unfortunate Revisers made of this is notorious. Being utterly ignorant of English literature, they altered "glass" to "mirror," because, I suppose, they were clever enough to know that "glass" was not used for mirrors in the Apostle's days, and not clever enough to have heard of Gascoigne's "Steel *Glass*" in the days of the "Authorized" translators themselves. By recurring to "love," instead of "charity" (an error, even from the strictest "crib" point of view, for it leaves the English reader uncertain whether ἀγάπη or ἔρως is meant), they have at one blow cut the whole rhythm of the passage to pieces, and substituted ugly jolting thuds for undulating spring-work. Because they thought a cymbal did not "tinkle," but did "clang," they spoilt the sound of a whole phrase, and very doubtfully improved its sense, by altering to "clanging" (they had not even the sense to try "clashing," and I wonder why they did not use "bang"). Because of the absurd objection to synonyms which has been, and will be, pilloried, they spoilt the euphony by making both the "prophecies" and the "knowledge" be "done away." They had not even the courage to be literal, where it would have been again in place, by rendering "*through* a mirror," and they deliberately underwent the curse of Mr. Pendennis's schoolmaster by rendering δὲ "and" instead of "but" in the final clause.

It is not to be inferred that the excellence of Professor Saintsbury's work is confined to the minute details of criticism. In dealing with the changes in rhythmical style from age to age and with the various literary currents, he is often shrewd and satisfactory, as he is always enormously literate. As for his literacy, indeed, it becomes a little irksome to find him still insisting on the number of books he has read, and the number of times he has read a particular book. On hearing his own statement that he has now gone through Malory "nearer the fiftieth than the twentieth time," his enemies—and we believe he has such—might grumble that his work would have been better if he read less and reflected more. For if this History displays his sensitiveness to the beauty of individual passages and his familiarity with the changes of literary fashion, it also displays a certain precipitance in his intellectual procedure, which renders his criticism weak constructively and deprives it of authority, even, to some extent, of usefulness.

To be more specific, we must reproduce one of his schematizations, which are interspersed through the book, and which form the basis of his criticism so far as he attends to his nominal subject, rhythm. A famous clause from Sir Thomas Browne, in a passage rightly quoted for its "magnificence," will serve:

ănd quĭĕtlў | rēstĕd | ūndĕr thĕ drūms | ănd trāmplĭngs | ŏf thrēe | cōnquēsts |

As will be seen from this scheme, Professor Saintsbury uses the ordinary metrical signs to denote the quantity of syllables, but in determining feet he never divides in the middle of a word, as is done in verse. Nor, on the other hand, are his feet marked off by those rhetorical pauses which naturally divide prose into short *cola*. His division is purely arbitrary, and, as a consequence, has little significance. The passage quoted above, if divided metrically, would stand thus:

ănd quī- | ĕtlў rēst- | ĕd ūn- | dĕr thĕ drūms | ănd trāmp- | lĭngs ŏf thrēe | cōnquēsts |

We suspect that the only way to arrive at any definite ideas in regard to time values would be a frankly metrical schematization of this sort, though it would be open to grave misunderstanding if supposed to represent precisely the same thing as is represented by similar marks in verse. It is not easy to see how otherwise any unit of measurement can be found which will lead to fruitful comparisons. The only other method which has any relation to the rhythmical facts would give us the following scheme:

ănd quĭĕtlў rēstĕd | ūndĕr thĕ drūms ănd trāmplĭngs | ŏf thrēe cōnquēsts |

Such a system would make the comparison of time values vague and almost meaningless, but it might possibly facilitate the larger comparison of rhetorical cadences, which are really the essential matter in prose rhythm. Professor Saintsbury falls between the metrical and the rhetorical systems, with the result that his schematization, so far as the division into feet goes, has no relation to the facts of prose rhythm, wheth-

er considered in their relation to the prosody of verse or studied as independent phenomena.

But his error, as we see it, is even deeper. On his first page he quotes Aristotle's description of prose as "neither possessing metre nor destitute of rhythm" (neither *emmetric* nor *arrhythmic*), but in his intellectual precipitance quite fails to see the all-important bearing of this principle. Verse is *emmetric* by reason of that moulding rhythmical sense which the Greeks called *plasma*. By this innate sense the quantity of syllables in reading verse is to a certain degree lengthened or shortened beyond the norm of ordinary speaking, so that a line of poetry falls into a regular succession of long and short syllables, in which the long syllables bear a fairly constant ratio of length to the short syllables, and which can be grouped into metrical divisions (feet) corresponding to the bars of music. But in reading prose the force of *plasma* is much less strongly felt, with the result that prose, though it may have its own rhythm, is not properly *emmetric*. As a consequence, this whole process of scanning prose passages by macron and breve is open to grave misapprehension in theory, and in practice is likely to lead nowhere. It would be perfectly easy to find a flatly unrhythmical prose passage which would fall under precisely the same scheme as a passage which is highly rhythmical. Set down one of Professor Saintsbury's successions of macrons and breves, without the corresponding words; you will rarely be able to decide whether it belongs to a rhythmical or unrhythmical passage.

To get at the rhythm of prose it would be necessary to employ some totally different schematization from that which Professor Saintsbury takes over from prosody and only halfway adapts to new conditions. The rhythm in prose will be found to depend mainly on the rhetorical position of phrases and clauses, and on the use of sonorous words in the places of rhetorical emphasis, which cannot be indicated by the bare symbols of prosody—if they can be profitably indicated by any symbols. As a matter of fact, when Professor Saintsbury applies himself to the praise of any passage of notable rhythmic effects, he commonly forgets his system altogether, and deals directly with balance and cadence and sonority with no reference to macrons and breves. And when he does so proceed, he speaks with an authority that cannot be gainsaid. But as a systematic treatise or as a philosophical exposition of prose rhythm his book is almost valueless.

Reminiscences of the South Seas. By John La Farge. With 48 illustrations, 32 in color, by the author. New York: Doubleday, Page & Co. $7.50 net.

In 1890 and the following year John La Farge, with his friend, Henry Adams, made a leisurely progress through the Pacific islands, sojourning especially in Samoa and the Sandwich Islands. They met on friendly terms the deposed monarch and great gentleman, Mataafa; they were adopted into the line of the Shark God. Their nude paddlers took them from village to village. Waterfalls spread into bathing pools whose outgoing current met the lap of the waves in palm-lined channels. As they approached, the official virgin of the village, the *Taupo*, came to them offering hospitality. A part of their entertainment would usually be the sitting *siva* dance, executed now by stalwart boatmen, now by lithe maidens. It involved a ripple of the entire body to the finger tips, a free rhythm and flexible control such as dancers born to the cumbering garments of civilization never attain. The *siva* is less an accomplishment than an instinct. The Samoan girls used to beat its measures as they lay huddled and dozing together in the palm-leaf huts. Mere infants would gravely mimic the fluent, swimming cadences of their elders.

In this rustic Arcadia the genius of the great painter received a kind of renovation. His skilful brush seized the gestures of these racial dances, and recorded the graceful ritual of life in these peaceful communities. He questioned the elders about their beliefs and elicited strange bits of demonology persisting under the veneer of recent Christianity. The whole experience set him to musing on the issues of art and life. These found literary expression in journals and letters home, out of which this book is compiled. The style is gradual, insinuating, unemphatic, and ill adapted to brief quotation. Withal it is of singular ripeness and charm. An impatient reader will make little of it. For him it is not written. Whoever brings to these pages something of the Polynesian and classic mood will be richly rewarded. There are gracious forms of human wisdom that seem best observed and thought-out in the deep Samoan moonlight. All this fascination may be only the result of a rather animal gentleness and moderation, yet it accords with the more reasoned moderation of the Greeks, and raises the same instructive contrast with the futile restlessness of much civilized effort.

It is interesting to note that this bath of aboriginal life only strengthened the classicism of La Farge. He grasps joyously at Homeric parallels, constantly refuses to be blinded by the color, which he thoroughly understood, and sees the human spectacle in terms of line and movement. Under such a sun, a lurch into modern luminism might well have been expected. Nothing of the sort in La Farge's Pacific sketches. And here let us recall that even the brusque talent of Paul Gauguin was reshaped along quite classic and monumental lines during his stay in Hawaii. With the daily spectacle of the nude in open air before him, La Farge's admiration never reverted to the modern specialists on this theme. He is silent about Zorn and Besnard, and all the professional Orientalists, and thinks instead of Millet, Delacroix, and the old masters:

> Of the moderns, Millet and Delacroix *alone* give the look of the nude alive and out of the studio. Also the Venetians and the older men are not out of the facts. And praise be to the Maker of all (art included), I have not seen any *black* except at night—and even then, "si peu, si peu." Rembrandt would be happy here, especially in the evenings, when the cocoanut fire—that is so bright as to look bright in the day—makes a centre of light strong enough to turn the brown skins to silver and to gold; and then passes by every gradation of the prism into nameless depths that black paint will never give. My dear old painters, even to Van Eyck and Memling, how well they "carry" over the globe!

The pleasure of this delightful book is much enhanced by the numerous and fairly successful reproductions of the author's color sketches.

The Cambridge History of English Literature. Edited by A. W. Ward and A. R. Waller. Volume IX: "From Steele and Addison to Pope and Swift." New York: G. P. Putnam's Sons. $2.50 net.

We note among the collaborators in this volume several of those whose contributions in the past have done most to establish the success of the series. For instance, as in previous volumes, A. W. Ward furnishes the chapter on Historical and Political Writers, and W. R. Sorley that on the philosophers of the period—Berkeley, Shaftesbury, the deists and their opponents. The work of Professor Ward is distinguished, as usual, by learning, vigor, and judgment. Especially valuable is his review of Bolingbroke's political writings—doubtless, the best appreciation that has yet appeared of the production of that versatile genius in this particular field. Professor Sorley continues here his lucid expositions of English philosophical thought, and in the chapter on Writers of Burlesque and Translators we meet again with Charles Whibley, whose vivacity and incisive critical gifts are all the more conspicuous from their rarity in these volumes. Professor Saintsbury, to whom the lion's share has so often fallen in previous volumes, has here only a part of the chapter on the Lesser Verse Writers—a varied assemblage, from "knowing" Walsh to Isaac

Watts, and from Blackmore to Savage. In dealing with so unpromising a subject the writer's sense of humor, lively imagery, trick of literary allusion, and sure instinct for what is really fine in literature stand him in good stead.

Among the chapters from new contributors we note especially the admirable one on Defoe—The Newspaper and the Novel—by Prof. W. P. Trent. In the author's estimate, Defoe is not so much the maligned patriot of his early biographers as a brilliant and mercenary journalist, the deterioration of whose character was in a measure due to hard usage—especially in the affair of the pillory (1703). The judgment of Defoe's contemporaries upon his character was almost unanimously unfavorable, and, where such is the case, one need not trouble about the sophistries of later biographers, to whom the genius of their author is a source of intellectual pleasure merely, instead of practical inconvenience. It is to be said, however, that Professor Trent does not regard Defoe even in his later development so much as a shameless and wholesale liar as "a consummate casuist who was often his own chief dupe." The chapter contains some important corrections in the biographies of this writer. So, for instance, Defoe's imprisonment, which began early in 1703, is shown to have ended about November 1 of that year, instead of in August, 1704. Accordingly, his famous journal, the *Review*, was not founded while the editor was in prison. Of especial importance for its bearing on Defoe's character is Professor Trent's account of the affair of his supposed illness at the end of 1714, to which he alludes so pathetically in his "Appeal to Honour and Justice," published in February, 1715. Professor Trent discredits the story of this illness and makes it clear that at no time was his pen more prolific than during this period of his feigned disability. As a writer Professor Trent happily describes Defoe as "the greatest of plebeian geniuses," and he traces convincingly his evolution as a novelist out of his experience as a journalist and miscellaneous author rather than from the influences of previous fiction.

The other great writers of the period hardly fare so well as Defoe in this volume. Most satisfactory, perhaps, is the chapter on Steele and Addison, by Harold Routh, although it should seem to be a narrow definition of genius which would deny the possession of this quality, to Addison at least. We object, too, to Mr. Routh's assumption that the simplification of English prose towards the end of the seventeenth century was due to the more active social intercourse which followed on the institution of coffee-houses. But men's tongues moved just as rapidly at The Mermaid tavern fifty or sixty years before. Nevertheless, this chapter gives an adequate account of the *Tatler* and the *Spectator* as intimate expressions of the spirit of the age and as powerful reforming agencies in contemporary life. The discussion of Swift by G. A. Aitken is clear and accurate in point of scholarship, but even in a work of this kind one would expect some attempt to portray with bolder relief this extraordinary personality, which combines every element of interest—genius, mystery, and tragedy. The chapter on Pope, by Professor Bensly, must be pronounced wholly inadequate. Nothing so commonplace on a writer of the first rank has appeared before in this series. It reads like an average classroom lecture, intended to convey to undergraduates the "needful information." Of a very different quality is the treatment of William Law and the Mystics, by Miss C. F. E. Spurgeon, one of the most interesting contributions to the present volume. The exposition of the mystical teaching of Boehme and Law, which once possessed an influence, even over leading minds, that is now little realized, is apt to engage the attention of many readers who are otherwise unaccustomed to occupy themselves with literature of this kind. Among the remaining chapters we note T. F. Henderson's valuable digest of what is known concerning Scottish popular poetry before Burns, G. A. Aitken's authoritative outline of Arbuthnot's life and work, and the useful summaries of the labors of scholars and antiquaries during this period—mainly, of course, in classical and historical research—by J. D. Duff and H. G. Aldis.

The bibliographies make up about one-fourth of the entire volume, and in some sections have an exceptional value. For example, the list of Defoe's writings, compiled by Professor Trent, is the fullest and most accurate in existence. As regards earlier journalists, it is, perhaps, worth noting that since the publication of this volume an elaborate life of Sir Roger L'Estrange, by G. Kitchin, has appeared. In the bibliography of John Gay we miss the two paraphrases from Ariosto which were first published in the *Archiv für das Studium der neueren Sprachen* for 1909. The pieces are preserved in Gay's handwriting and their authenticity is beyond dispute. This omission is particularly regrettable, as the second of these *contes*, based on the Fiordispina episode of the "Orlando Furioso," is one of the best things that we have from Gay's pen. Accompanying the paraphrases in the above-mentioned article are the variants from an interesting early draft of Gay's charming poem, "Mr. Pope's Welcome from Greece," written to celebrate the completion of his friend's translation of the Iliad and also imitated from Ariosto.

The Stock Exchange from Within. By W. C. Van Antwerp. New York: Doubleday, Page & Co. $1.50 net.

Mr. Van Antwerp's sketch of the origin, nature, and functions of the Stock Exchange is written primarily as a reply to outside attacks on the methods of that institution, especially in the recent Pujo Committee hearings. Since the author is at present a member of the board of governors, it is actually a view "from within." It is not, however, an unqualified panegyric on the methods and practices which surround that interesting institution, for it points out faults as well as virtues. A chapter on the Uses and Abuses of Speculation takes fair and judicious account of existing evils, and it undoubtedly characterizes the worst of them in the comment that "the great evil of speculation consists in the buying of securities or real estate or anything else with borrowed money, by uninformed people who cannot afford to lose." This very essential fact is often left out of account by critics of the Stock Exchange itself.

In the much-discussed matter of "manipulation," Mr. Van Antwerp admits that this imparting artificially of an unreal appearance of activity or strength "at times assumes the proportions of a real evil." He points out fairly the efforts of the governing committee to suppress it. The difficulty of dealing with such offences, when the culprit who gave the simultaneous buying and selling orders was not a member of the Exchange and hence not amenable to its discipline, and when the brokers executing the orders were not aware of their character, is set forth on the general grounds which have become familiar in the recent argument over preventive legislation by the State. Perhaps it would have to be admitted that the recent and stringent rule adopted by the governing committee, that "no Stock Exchange member or member of a Stock Exchange firm shall give, or with knowledge execute, orders for the purchase or sale of securities which would involve no change of ownership," recognizes the fact that past regulation has been somewhat deficient. From another point of view, the frank statement at the Albany hearing, by counsel for the Exchange, that State legislation might properly undertake to deal with the outside culprits in such matters, suggested where the authority of the Exchange itself may have needed outside support.

Mr. Van Antwerp makes interesting comment on the characteristics of the Stock Exchange and its daily business; on the manner of passing on applicants for membership, and on such particular vocations among its members, mysterious to the general outside public, as the "specialist," the "two-dollar broker," the "odd-lot broker," the "arbitrageur," and the "floor trader." The

ethics and economic function of "short selling" are again set forth, and the arguments against incorporation recited. Much of the atmosphere of the Stock Exchange is summed up in the remark that "yesterday is embalmed with the Pharaohs; they never speak here of what *has* happened, but only of what *will* happen—and this is a new day."

For a work written without pretence of scientific investigation, this contains considerable reference and citation to the more formal literature on the topics concerned, and its historical dates and references are generally accurate. Mr. Horace White's report as chairman of the Hughes Committee of 1909 on stock exchanges and speculation is so frequently referred to, that a mistaking of his identity is unfortunate. The book repeatedly speaks of "Governor Horace White." There was such a person; he was chosen Lieutenant-Governor under Mr. Hughes, and filled out that Governor's unexpired term when Mr. Hughes went to the Supreme Court; but he was not the chairman of the Hughes Commission or a writer on finance. Mr. Horace White, of New York city, is surely a sufficiently well-known person not to be confused with Mr. Horace White, of Syracuse.

Memories of Victorian London. By L. B. Walford. New York: Longmans, Green & Co. $3.50 net.

"The twentieth century will revel in the pen-portraiture of the nineteenth," said Coventry Patmore many years ago to Mrs. Walford, in course of a conversation arising out of her own last-published novel, and perhaps there is just a hint of personal feeling in her comment on the remark, "How ironical this sounds now!" The novels of L. B. Walford had a considerable vogue in their day, and if a younger generation is unfamiliar with "Mr. Smith," "Cousins," and "A Mere Child," it is only because the spirit of the times has changed, just as the external appearance of the London streets is very different from what it was when Mrs. Walford first made her curtsey before Queen Victoria And if the author permits herself a sigh of regret that her books no longer make the appeal to the popular taste that they once did, the sigh is a very fleeting one, and she cheerfully applies her practiced pen to a field of literature that never stales.

In the present volume, which records a different series of incidents and impressions from those narrated in the previous "Recollections of a Scottish Novelist," Mrs. Walford gives her reminiscences of life in an eclectic rather than an exclusive circle of London society, from the year 1864 until the Diamond Jubilee of Queen Victoria in 1897. The manner of the book is fragmentary, almost random, preserving no sequence save that of time, and the incidents recorded are only linked together by the personality of "Mary," the charming relative of the author, to whose letters and journals the volume owes much of its inspiration, and whose identity, we confess, piques our curiosity, but eludes us. Principally in the earlier chapters there are a few arid passages and some anecdotes that seem hardly worth recording; but these are amply atoned for by much that fascinates. Mrs. Walford has something to tell of most of the prominent figures in the social, literary, and artistic life of London during the past half-century; and often what she has to say is new, almost always it is interesting.

Of Oscar Wilde she tells a characteristic story. At the time of his marriage, when the young *ménage* was not too affluent, a benevolent aunt presented him with fifty pounds to assist in furnishing the house—the household goods he had acquired up to then consisting of a clock, a table, and three Chippendale chairs. After the honeymoon the young couple appeared before her, and "with great exultation" displayed two Apostle spoons in which they had invested her present. In chapter xxii a charming episode, unfortunately too long for quotation, is recorded in which the names of Leighton, Millais, and Thackeray are linked together; and one short anecdote of Shelley's sisters must be given, which is new, at any rate, to the present reviewer. The elder of the sisters was once asked: "Are you a sister of the poet Shelley?" To which she replied with *hauteur:* "I once had a brother who I believe wrote immoral verses, but I am thankful to say I have never read any of them."

L'Arbitrage international chez les Hellènes. Par A. Raeder. Translation into French by M. Synnestvedt. Imported by G. P. Putnam's Sons.

The Greeks invented international arbitration. It was the natural resource of a group of autonomous states who were constantly disputing their individual rights, especially their boundaries, and concluding treaties and conventions, while they recognized certain legal rights common to them all. It was to the interest of the larger states that the smaller should not embroil the Greek world, and it was besides strongly characteristic of the Greeks in general to seize an opportunity to state both sides of a question and appeal to a third party to decide on the winner. So the shepherds in Theocritus leave it to any chance comer to award the prize for their songs, and the countrymen in the newly-found "Epitrepontes" of Menander entrust a more serious decision, the fate of a deserted child and the jewelry exposed with it, to an old man who is passing in the street. The arbitrator's ability to decide, and the necessity of abiding by his decision, are taken for granted, and even in the cases of international arbitration here collected by Raeder a refusal to trust the good faith of a proposed arbitrator stands out as a striking exception. This was when, in 342 B. C., after occupying the island of Halonnesus which was claimed by Athens, Philip of Macedon proposed to settle the affair by arbitration. Thereupon Demosthenes declared that it would be impossible to find an impartial state to arbitrate, and Hegesippus added that in any case Philip would bribe the judges. Here it may be noted that, in the eyes of the Hellenes, Philip was an outer barbarian, and they allowed no barbarians international rights.

This exclusive attitude of the Hellenes has led some authorities, like Bonfils, to deny that they had achieved international law in the modern sense. But Raeder points out that in this respect the European nations resemble to some extent the Greek states: "Nous n'attribuons le vrai traitement d'égal à égal, au point de vue du droit international, qu'aux peuples européens, sauf en partie à la Turquie, et aux pays colonisés par l'Europe, ainsi qu'au Japon. Le monde Mahométan, la Chine, etc., sont rangés dans une classe inférieure, et pour les autres sociétés on ne peut vraiment pas dire qu'elles aient une situation juridique quelconque à nos yeux." But while the more powerful states imposed arbitration on the smaller, among themselves they usually preferred to dispense with it, and the Athenians thought it merely impertinent of Philip when he exhorted them to refer their differences with him to arbitration on the ground that Athens had obliged Thasos and Maronea to submit their petty claims to arbitration. Athens, however, was always more willing than Sparta to accept arbitration, and the attempt of Pericles to summon a congress to found a permanent court of arbitration, attested by Plutarch in his Life of Pericles, was foiled by Sparta, who compelled the whole Peloponnesus to refuse to participate in any such project. In general, permanent arbitration clauses in treaties, when they were adopted later by the Leagues, virtually never, according to Raeder, prevented war.

The arbitrators agreed upon were sometimes a distinguished individual like Themistocles, sometimes a whole town which would vote *en masse*, or a commission chosen from one or more towns, sometimes, though not as often as one would expect, the oracle of Delphi, and then usually on colonial rights. The decisions were deposited in some safe place, usually a temple such as the sanctuary of Apollo on Delos or of Æsculapius at Epidaurus.

Such a work as Raeder's has only

lately become possible, because the literary evidence for arbitration is relatively scanty, and we rely in the main on inscriptions discovered in recent years. It is appropriate that the first publication of the Nobel Institute should be an exhaustive study by a well-known Danish scholar.

Notes

March 1 will see the publication by Holt of the concluding volume of Romain Rolland's "Jean-Christophe." The book will be entitled "Jean-Christophe: Journey's End," and will contain the last three volumes of the French edition—"Love and Friendship," "The Burning Bush," and "The New Dawn."

A new book by H. G. Wells is announced for immediate publication by B. W. Huebsch. It is entitled "The Discovery of the Future," and is based on an address delivered by Mr. Wells before the Royal Institution.

The same house will issue shortly: "Syndicalism, Industrial Unionism, and Socialism," by John Spargo, and "The Truth About Socialism," by Allan L. Benson.

The following titles are promised by Doran this week: "The Great Acceptance," a story by Guy Thorne; "With the Turks in Thrace," by Ellis Ashmead-Bartlett; "Starving America," by Alfred W. McCann, and "Wesley's World Parish," by George G. Findlay and Mary Grace Findlay.

McBride, Nast & Co. will bring out the first of next month "The Balkan War Drama," by Cyril Campbell.

Among their forthcoming books, Scribners have the following: "Letters of General Meade," edited by George E. Meade; "European Cities at Work," by Frederic C. Howe; "The Life and Letters of John Paul Jones," two volumes, illustrated, by Anna de Koven; "Journals of Danker and Sluyter, 1679-80," by B. B. James; "A Small Boy and Others," the story of his boyhood, by Henry James; "Rose Bertin, the Creator of Fashion at the Court of Marie Antoinette," by Emile Langlade, adapted from the French by Dr. Angelo A. S. Rappoport; "Germany and the Germans, From an American Point of View," by Price Collier; "Monarchical Socialism in Germany," by Elmer Roberts; "Veiled Mysteries of Egypt," by S. H. Leeder; "The Gateway to the Sahara: Observations and Experiences in Tripoli," by Charles W. Furlong; "The Pathos of Distance: A Book of a Thousand and One Moments," by James Huneker; "Enjoyment of Poetry," by Max Eastman; "Helen Redeemed and Other Poems," by Maurice Hewlett; Stanley's "How I Found Livingstone," new popular edition, with an introduction by Robert E. Speer; a popular centenary edition of Stanley's "In Darkest Africa"; "Missionary Explorers Among the American Indians," by Mary Gay Humphreys; "What Is the Truth About Jesus Christ?" by Friedrich Loofs; "The Life and Teachings of Jesus," by Charles F. Kent, and "The Fundamental Christian Faith," by Dr. Charles A. Briggs, D.D.

As a companion volume to "The Girlhood of Queen Elizabeth," Messrs. Constable are about to publish "The Youth of Henry VIII: A Narrative in Contemporary Letters," by Frank A. Mumby.

A "History of the Renaissance," designed for the general reader, by J. D. Symon and S. L. Bensusan, is in the press of Messrs. Jack.

There will shortly come from the press of Paul Elder & Company a volume of essays entitled "Intimations," by John D. Barry, and "The Critic in the Orient," a book of travel impressions by George Hamilton Fitch.

Miscellaneous publications in Little, Brown's spring list include: "The Philippine Problem," by Frederick Chamberlin; "The Empire of India," by Sir J. Bamfylde Fuller, being a new volume in the All Red British Empire series; "Famous Speeches," second series, by Herbert Paul; "The Romance of the Men of Devon," by Francis Gribble; "A Sunny Life: The Biography of Samuel June Barrows," by Isabel C. Barrows; "The Prince Imperial," a biography of the son of Napoleon III, by Augustin Filon; two new volumes in the Continental Legal History series, and a new book in the Modern Criminal Science series.

The Committee on Research Institute is collecting information about bibliographical material and indexes kept in manuscript by libraries and individuals. Those who have such material in their possession or know of the whereabouts of any are requested to communicate with the chairman of the committee, Aksel G. S. Josephson, care of the John Crerar Library, Chicago.

The Oxford edition of Browning's "Ring and the Book," on India paper, has for frontispiece a photogravure of the portrait by Field Talfourd, and several facsimiles from the Yellow Book. An introduction is furnished by Edward Dowden.

In writing the life of "Mary Sidney, Countess of Pembroke" (London: David Nutt), Mrs. Francis Berkeley Young has gone back scrupulously to original documents. Several of these, including letters from the Countess to her relatives and to personages at court, have never before been published. Although Mrs. Young is more concerned as scholar to let the documents speak for themselves than to indulge the inferences of the trained biographer, she contrives to present a fairly clear picture. Born in 1561, seven years the junior of her brother Philip and two years older than Robert, Mary Sidney had the capacity to sustain family traditions as distinguished as any in the realm. Her father, Sir Henry, had been brought up as a child with Prince Edward, and later became Lord Deputy of Ireland and Lord President of Wales, besides, with his wife, Mary Dudley, playing an important part at court. It may be that her marriage with Henry Herbert, Earl of Pembroke, a man twenty-five years her senior, tended to develop certain native resources which in a less disparate match might have lain hidden; namely, her literary side. Both by her own productions and by her influence on others, she ranked as probably the first woman of letters of her day, and more than any one else reflected the activity of certain Italian ladies whose courts were thronged with literary folk.

The countess's home at Wilton was comparable to Urbino in the days of the great duchess and of her brilliant lady-in-waiting, Emilia Pia. Her actual share in the "Arcadia" is not certain, though it is clear that she was equal to the task of patching together the loose ends which Sir Philip had left. With him she also undertook a metrical translation of the Psalms, doing the major part of the work, and, as Mrs. Young believes, showing the greater skill. She seems to have rightly judged her powers as best suited to translating. She published an English version of a work by Philippe Du Plessis Mornay, the friend of Sir Philip, calling it "A Discourse of Life and Death"; a blank-verse translation of Garnier's "Antonie"; and rendered into English *terza rima* (the verse of the original) Petrarch's "Trionfo della Morte." She was also the author of "The Doleful Lay of Clarinda," an elegy first published in Spenser's "Astrophel," and of "Astrea," a pastoral dialogue in praise of Elizabeth, which first appeared in Davison's "Poetical Rhapsody." The rendering of Petrarch, which Mrs. Young prints for the first time, from a manuscript in the library of the Inner Temple, is interesting mainly as a *tour de force*. We quote the opening lines:

That gallant Ladie, glorioushe bright,
The statelie pillar once of worthinesse,
And now a little dust, a naked spright,
Turn'd from hir warres a joyefull conqueresse:
Hir warres, where she had foyl'd the mightie foe,
Whose wylie stratagems the world distresse.
And foyl'd him, not with sword, with speare, or bowe,
But with chaste heart, faire visage, upright thought,
Wise speache, which did with honor linked goe.

Not to give all who sought the countess as their patron, we may mention Nicholas Breton, Samuel Daniel, Abraham Fraunce, Spenser, Nashe, Watson, Drayton. The dedications to the lady by these men and others, which Mrs. Young reprints, in spite of the customary flattery they contain, witness to the solidity of Mary Sidney's intelligence and to the enormous impulse which she gave to literature. Finally, Mrs. Young reviews the controversy over the authorship (variously attributed to William Browne and Ben Jonson) of the countess's noble epitaph:

Underneath this sable Herse
Lyes the subject of all verse, etc.

The Life of James Fenimore Cooper, which Miss Mary E. Phillips has just published through John Lane Company, aims so far as possible to be a personal sketch of the man himself, not a new estimate of his writings. From printed and unprinted documents, the author has brought together a series of interesting pictures of Cooper, especially during his years of residence in France and England and travelling on the Continent, where his reputation made him everywhere a welcome guest. Nobility sought him out, and in France one princess made such demands upon him that Mrs. Cooper writes that she would be jealous if the lady were not a grandmother—though it was admitted that she did not look it. After Sir Walter Scott and Cooper met, for the first time, in Paris, Scott wrote in his diary, "So the Scotch and the American Lions took the field together." Their common publisher in Paris Scott described as "our gosling" (his name was Goselin), and hoped that at least "he laid golden eggs."

It is said that when Cooper, sitting for his portrait by Mme. de Mirabel, was asked to look at the picture of a distinguished statesman, he replied, "No, if I must look at any, it shall be my master," and he raised his eyes to a portrait of Sir Walter Scott. Of Lafayette, Cooper saw much at the old general's country place, not far from Paris. "No one," the American wrote, "can be pleasanter in private, and he is full of historical anecdotes that he tells with great simplicity and frequently with great humor."

After a year and a half of France, 1826-1828, the Coopers moved to England. We hear much of the banker-poet Rogers, who on one occasion spoke slightingly of Washington Irving's "Columbus," saying that "It's rather long." Cooper retorted sharply, "That's a short criticism." With Lady Holland the American had a pleasant passage of wit. When at her table he refused a plate of herring, she remarked that they were Dutch, that they could only be procured through an ambassador. Cooper, unimpressed, replied, "There are too many good things of native production to require a voyage to Holland on my account." Wordsworth he liked very much when he met him once informally. He had previously declined to make his acquaintance at a public function, stating that a man was seldom his true self on such an occasion. Perhaps no one on the Continent inspired the writer more than the Polish poet, Adam Mickiewicz, with whom he rode much over the Campagna. It is pleasant to read anew of the foreign estimates of Cooper's work. Sir Walter, the master, wrote in his journal in 1828, "I have read Cooper's new novel, 'The Red Rover.' The current of it rolls entirely on the ocean. Something too much of nautical language. It is very clever, though." Thackeray thought Leather Stocking "the greatest character created in fiction since the Don Quixote of Cervantes." The death-scene in "The Prairie" surpassed, to his mind, anything he had "met in English literature." Victor Hugo pronounced Cooper the greatest novelist of the century—excepting the authors of France. Balzac's judgment was even more discriminating: "If Cooper had succeeded in the painting of character to the same extent that he did in painting the phenomena of nature, he would have uttered the last word of our art." Hundreds of illustrations, many of them of scenes in Cooper's own day, add greatly to the interest of this book.

In "An Interpretation of Rudolf Eucken's Philosophy" (Putnam), W. Tudor Jones aims to present the essentials of Eucken's teaching "in a form which is as simple as the subject-matter allows." But, if we may make the distinction, clarification rather than simplification is what is chiefly needed, and any attempt to make Eucken clear would require a reconstruction, or possibly some beginning of genuine construction, of the whole point of view. This the *pictas* of the pupil hardly contemplates. Meanwhile Mr. Jones succeeds in giving a faithful impression, and for an impressionistic philosophy this is perhaps enough.

Great credit is due the Bureau of Education at Washington for bringing out "Special Collections in Libraries in the United States," by W. Dawson Johnston and Isadore G. Mudge. This work, small as it is, will prove of inestimable value to all investigators. The first of the previous publications of this sort, noted in the preface, was that compiled by William Coolidge Lane and Charles Knowles Bolton and issued in 1892 as a "Bibliographical Contribution" (No. 45) of Harvard University. The next was embodied in the Report of the Librarian of Congress for 1901. The following year the New York Library Club put out a manual containing a list of all the libraries of Greater New York, with detailed accounts of their history, regulations, and resources. The editors of the pamphlet just issued by the Bureau of Education appear to have been ignorant of this work, which covers quite exhaustively a part of the field upon which they have labored. Last year three other publications of this kind were issued, to all of which the editors call attention. No one who has not been engaged in such a work can appreciate the difficulty of gathering the information. Many to whom circulars of inquiry are sent fail to pay any attention to them; others return but scant replies. Every means has to be exhausted before the facts can be procured. Although the present work is not faultless—for one thing, thicker faced type might have been used to mark important features—it is a great advance beyond previous efforts of the kind, and it is to be hoped that the Government will issue enlarged and revised editions of it at frequent intervals. In a cursory examination we have noted a few omissions. There is no mention of the Long Island Historical Society, which in 1902 reported 2,309 volumes of genealogies or family histories; nor of the Library of the Grand Lodge of the State of New York, at the Masonic Temple, on Twenty-third Street, which contains 5,000 volumes and several hundred pamphlets on Masonic topics. The New Yorker in search of such books, if he followed the present guide, would have to go to Boston, Chicago, or Cedar Rapids. The New York Public Library, in 1902, had 10,000 volumes of Patent Reports of which no account is taken. The Los Angeles Public Library has 1,100 books and pamphlets bearing directly on California and more than 1,200 volumes in Spanish relating to Mexico; neither collection is included. We also look in vain under Domestic Economy for any reference to the unique collection of thousands of menu cards, many of them possessing historic associations, belonging to the New York Public Library. On page 95, among works indicating the location of many of the rarer Americana, the Church Catalogue of Americana might with perfect propriety have received mention. The 3,000 trade catalogues of the Carnegie Library at Pittsburgh are referred to in the index, but not the 6,000 in the Philadelphia Museum Library; nor the latter's 500 directories, three-fourths of which are of foreign cities.

It is a pleasure to read a text-book of the type furnished by Lieut.-Col. G. S. A. Ranking, now lecturer in Persian at the University of Oxford, in his revision of the late John T. Platts's "Grammar of the Persian Language" (Clarendon Press; Frowde), a work which originally appeared in 1894. Col. Ranking has not merely recast portions of the original text, but has entirely rewritten the sections on word-formation and verb-classification (Platts's classification being reprinted in an appendix), as well as portions of the discussion of Arabic grammar which is essential to every student of Persian, and he has furnished a brief but illuminating section on prosody. He adds a capital outline of Persian syntax, which is most important, because, while the syntax of the older Iranian languages—Avesta, Old Persian, and Pahlavi—has already been treated, virtually the only contributions to a knowledge of the modern Iranian syntax have been those of Trumpp for Afghan ("Grammar of the Pasto," pp. 305-362) and of Von Stackelberg for Ossetic ("Beiträge zur Syntax des Ossetischen"). There is only one portion of the work by which the beginner in Persian may be misled. Nearly all the etymologies and other comparative material are drawn from the "Etudes iraniennes" of Darmesteter, which has now been superseded by such studies as Hübschmann's "Persische Studien," Horn's "Neupersische Schriftsprache" in the "Grundriss der iranischen Philologie" of Geiger and Kuhn, and the "Mittelpersisch" of Salemann in the same "Grundriss." None of these appears to have been consulted by Col. Ranking; nor has he employed any of the more recent works on Avesta or Old Persian, between which dialects he does not carefully distinguish.

"In Portugal" (Lane), by Aubrey F. G. Bell, is a series of desultory and disconnected sketches rather than a formal narrative of travel, and is apparently designed to be a companion volume to "The Magic of Spain," published last year by the same author. In the present work no corner of Lusitania has been left unvisited. Mr. Bell has been to many a nook little frequented by tourists and has described sympathetically what he has seen. What otherwise would be pleasant is made difficult by the author's excessive use of Portuguese words and phrases and numerous long quotations from native poets. Portuguese is not a language with which many general readers are familiar. In addition to the travel sketches there is an account of the Portuguese language and a critical estimate of Guerra Junqueiro, Portugal's greatest living poet, now serving his country as Minister to Switzerland.

The Cole Lectures at Vanderbilt University in 1912 were delivered by President William H. P. Faunce, of Brown University, on the topic, "What Does Christianity Mean?" (Revell). Strictly only the first lecture, on The Essence of Christianity, is in answer to the inquiry which gives title to the course. Other chapters deal with The Aim of Education, The Principle of Fellowship, and The Basis and Test of Character. President Faunce finds the meaning of Christianity neither in ritual, nor in creed, nor in a series of historical facts, nor yet in good morals, but in the Christian revelation of the eternal purpose of God and the developing of that purpose in human institutions. This answer does not differ greatly from Harnack's celebrated discussion of the same subject, although it is expressed in more popular form. Dr. Faunce has a happy gift of setting forth a mild form of advanced doctrine in a manner which does not irritate minds disposed to be orthodox, and his pages are marked by persuasive reasonableness. His lectures make no addition to

the body of apologetics, but they declare the fundamentals of spiritual Christianity in a manner to clarify confused conceptions and to reveal the large body of positive truth which remains unshaken by recent discussions.

The recent contention of the German philosopher Drews, based in large measure upon suggestions made in America by B. W. Smith and in England by J. M. Robertson, to the effect that Jesus is not an historical personage but a myth, has stirred up a lively controversy the end of which does not yet appear. Hitherto the replies to Drews have proceeded, naturally enough, mainly from German theologians against whose historical method the philosopher's guns were levelled. America, however, the birthplace of "The pre-Christian Jesus," has not been silent. Quite recently, Professor Case, of Chicago, devoted a small volume to the question at issue the excellence of which is guaranteed by the fact that Smith, in his English edition of "Ecce Deus," found it necessary to make a cutting rejoinder. And now, in the volume just at hand, "Jesus the Christ: Historical or Mythical" (Imported by Scribners), England, the source of "Pagan Christs" and "Christianity and Mythology," speaks in the person of Dr. T. J. Thorburn, a divine favorably known by his contributions to the problem of the narrative of the birth and resurrection of Jesus, who undertakes a specific reply to the positions taken in the first part of Drews's "Die Christusmythe." This reply is to be commended as an impersonal, candid, and painstaking examination of the evidence upon which Drews builds his theory, especially of the mythological elements which Robertson professes to find in the gospels. While insisting that the mythical interpretation of the figure of Jesus has no basis in fact, Dr. Thorburn concedes both that the term "Nazareth" is probably equivalent to Galilee (p. 175) and that much is to be said in favor of Smith's theory that Iscariot means not "the traitor," but simply "the deliverer-up" (p. 253).

Dr. Benjamin Eli Smith, editor of the Century Dictionary and its allied publications, died Monday at his home in New Rochelle, N. Y. He was born at Beirut, Syria, the son of a missionary, in 1857; he graduated from Amherst in 1877, and was made a doctor of letters by that college in 1902. He had been associated with the Century Company since 1883. One of his first literary works was a translation of Schwegler's "History of Philosophy." He also translated Cicero's "De Amicitia," edited Franklin's "Poor Richard's Almanack," and issued selections from Marcus Aurelius, Epictetus, and Pascal, besides supervising the Century Cyclopedia of Names and the Century Atlas.

Harry Langford Wilson, professor of Roman archæology and epigraphy in the Johns Hopkins University and president of the Archæological Institute of America, died suddenly, of pneumonia, February 23. He was born at Wilton, Ontario, October 28, 1867. He was a graduate of Queen's University, Canada (B.A., 1887; M.A., 1888), and of the Johns Hopkins University (Ph.D., 1896). In 1903 he received the honorary degree of Doctor of Laws from Queen's University. In 1906-7 he served as professor in the American School of Classical Studies in Rome. In 1908 he was elected a foreign member of the Imperial German Archæological Institute. In December, 1912, he was elected president of the Archæological Institute of America. He was author of "The Metaphor in the Epic Poems of P. Papinius Statius" (1898), editor of the Satires of Juvenal (1903), and a frequent contributor to various archæological journals.

Paul-Marie-Pierre Thureau-Dangin, since 1908 perpetual secretary of the French Academy, died in Paris on Monday, at the age of seventy-five. He was the author of several works on political and religious history.

Science

Dr. Woods Hutchinson's new book, "Common Diseases," will be issued next week by Houghton Mifflin.

Prof. Nathaniel Lord Britton is publishing, through Scribners, "An Illustrated Flora of the Northern United States, Canada, and the British Possessions."

Little, Brown will bring out this spring "Engineers' Handbook on Patents," by William Macomber.

The larger part of *Bird-Lore* for January-February is devoted to the thirteenth Christmas bird census, which consists of 199 reports from all parts of the country. The largest number of species, 103, and 9,227 individuals, was observed at Santa Barbara, Cal., between the hours of 6:30 A. M. and 5:45 P. M. Attention is directed to the great destruction of the valuable water birds on the Labrador coast, and suitable legislation to check it is asked of the Newfoundland Government.

Prof. Willis I. Milham's "Meteorology" (Macmillan) embodies the results of the author's experience as a teacher of a large course in elementary meteorology during the past eight years at Williams College, supplemented by some months of practical study at the central office of the Weather Bureau in Washington. There has been increasing need of a book of this type for some time past. Davis's "Elementary Meteorology" is now fifteen years old. In that period the advance of meteorology has been very rapid, and Davis's text is naturally somewhat behind the times in several respects, although in clearness of presentation and in logical treatment his book has easily maintained its position. Professor Milham has given us a text which is fully up to date, and which is very strong on the bibliographic side. The present status of the science is well summarized. Marginal headings, questions, and topics for investigation add greatly to the value of the book for teaching purposes. Few books on meteorology really meet the needs of both student and general reader. Professor Milham's volume, like many others, is designed to fulfil this purpose. The chapter on weather forecasting is one of the best, and gives a clear statement of the principles of forecasting in such a way that they can be understood by any intelligent reader.

When the reader closes George Iles's "Leading American Inventors" (Holt), he has a right to the feeling that in this line of endeavor, at least, Americans have justified themselves. Mr. Iles restricts his list to the dozen or so men who, in the course of a century, have conceived and perfected inventions which have profoundly modified our civilization. It would be most interesting to trace the changes in society which Stevens and Fulton wrought by their inventions in transportation, and Morse in communication. One instance of the sort is given at length. Rhodes, in his "History of the United States," shows clearly that slavery was dying out in this country until it received a new and vital impulse from the success in cotton-growing. And this success was absolutely dependent on the development of a machine like Whitney's cotton gin. We can look back to a quiet scene when Mrs. Greene, the widow of Gen. Nathanael Greene, of Revolutionary fame, said to some visitors who were deploring the lack of such a machine, "Gentlemen, apply to my friend, Mr. Whitney; he can make anything." He made the machine, and the Civil War was inevitable. While not many inventions lead to such enormous upheavals, yet the revolution made by Goodyear when he added a new elemental substance, rubber, to the stock of human possessions, was very great. And in their line, Sholes, Tilghman, and Mergenthaler altered civilization by changing printing; Howe modified home-life with the sewing-machine; McCormick revolutionized farming by the reaper; and Ericsson gave a different turn to war by the Monitor. This fascinating aspect of invention Mr. Iles has wisely kept in the foreground. As for the inventors themselves, their struggles, self-absorption, their tardy success, if personal success ever came to them, make a pathetic story. Nor does the attitude of the financier and promoter towards inventions make pleasant reading. In almost every instance they were not intelligent enough to foresee the final success; and after this was attained, in spite of treachery and neglect, their rôle was one of rapacity and greed, the inventor receiving fame as his share and they the profit. Read in this larger way, these short biographies have great interest and value. Mr. Iles also deserves credit for collecting data for his lives which were hitherto little available.

The Instituto Geográfico Militar Argentino has lately issued the first number of an Anuario which indicates the beginning of important cartographical work for farther South America. It appears to be the intention of the Institute to accept its share of the laborious and costly work of triangulating and levelling by which the figure of the earth is coming to be more closely known, and to contribute twenty-one sheets to the 1:1,000,000 map of the world, following the project advocated for some years past by Penck, of Berlin, and according to the scheme adopted by an important international commission assembled in London in 1909.

One of the important products of the recent Sunda-Expedition of the Geographical Society of Frankfort-on-the-Main is a special study of the morphology of the island of Sumbawa, in the Malay Archipelago, by Dr. J. Elbert. The author makes novel application of a detailed study of the stage of dissection which the volcanoes of the island have reached as a means of deciphering their geological succession. The

revelation of changes of level, attested by elevated shore lines and drowned coral reefs, is extraordinary; for in the comparatively brief geological period since the eruption and partial dissection of the Sumbawa volcanoes, the sea margin has left its marks at various levels between 1,200 metres above and 400 metres below the present level.

The steady progress of work under the Geological Survey of Canada—a branch of the Department of Mines—carries it now to the publication of Memoir 13, on Southern Vancouver Island, by Charles H. Clapp (Ottawa). For those who desire only a summary, the first thirty pages on topography and geology will suffice admirably, while the remaining pages contain detailed information for the specialist. A result of general interest is contained in the explanation of the highlands of Vancouver as a formerly worn-down mountainous region, now uplifted and again dissected into mountainous form; thus yet another example is added to the growing list of mountains not in their first, but in at least their second, cycle of erosion.

There is a quality of fresh, agrestic vigor in the late Prof. F. H. King's "Farmers of Forty Centuries" (Madison, Wis.: Mrs. King) which compensates for the absence of literary style. The author made a journey through the accessible portions of the Far East with an eye single to his purpose of observing methods of farming. Neither temples nor politics nor geishas tempted him a moment from the path of his desire. His note-books, crammed with rapidly recorded observations, contain stores of information which, despite some evidences of haste and a rather exasperating lack of arrangement, will be useful to students of agriculture. Like all Western travellers in Asia, he is impressed with the enormous populations supported upon the land. "Nearly 500,000,000 people," he tells us, "are being maintained chiefly upon the products of an area smaller than the improved farm lands of the United States." This estimate, to be accurate, should embrace the region of French Indo-Asia. The cause of their well-being is not wholly, as we in the West incorrectly imagine, their careful tillage, or their great industry and low standards of living. The rainfall of the Asiatic Pacific slope is both larger than in our Atlantic area and falls more exclusively during the summer months, when its efficiency in crop production may be highest. Moreover, "the selection of rice and of the millets as the great staple food crops of these nations, and the systems of agriculture they have evolved to realize the most from them, are to us remarkable and indicate a grasp of essentials and principles which may well cause Western nations to pause and reflect." A considerable factor in this productivity is the extensive system of canalization which, in China alone, would represent forty canals across the United States from east to west and sixty from north to south, a mileage greater than that of all our railways combined. A trip through the vast loess region of northern China, of which he takes no account, would have furnished the author still another source of economic maintenance to credit to China.

In "The Steamship Conquest of the World" (Conquest of Science Series; Lippincott), Frederick A. Talbot gives an excellent survey. From the first rough sketch to the completed floating hotel he takes us through the draughting room, and the tank in which various models are tested in the search for the greatest stability and speed; through the mould loft and the machine shops, where the plates to form the keel and the skin are shaped, and the frames, the vessel's ribs, are bent to form; along the ways on which the structure is erected, and follows the growth until the ship is launched, finished, and fitted out for service. Similarly, we can trace the evolution of the steam engine from simple beginnings to the Mauretania's turbines of 70,000 horsepower. It is to be regretted that more space was not given to the introduction of electricity and internal-combustion engines. There are chapters on safety at sea, ice perils, dangers of the deep, surveying, ocean graveyards, salvage of wrecks, "ship surgery," or the rebuilding of stranded steamers, the fight for the "blue ribbon of the Atlantic," etc., all of which should prove interesting to the ocean traveller. That on The Luxury of the Modern Liner will appeal strongly to the passenger of plethoric purse and make him of more slender means marvel that so much money devoted to mere decoration should be, as it probably is, a profitable investment. The seasoned voyager is usually content with scrupulous cleanliness, an ample cabin, spacious decks, attentive service, a good table, safety, and a speed appropriate to his need. The cover title, "Conquest of the Sea," is more attractive than exact. This conquest has not been achieved by the fast liners he describes at such length, but by the humble tramp steamer which has so displaced the sailing ship, that "white-winged argosy of peace," as to absorb more than 90 per cent. of the world's commerce. To this unlovely but useful craft, her design and internal arrangement, the author devotes scant attention. The book is not wholly free from typographical errors. The word "taffrail," here used in a general sense, applies only to the rail at the stern of a ship. Ivigtut, not "Ivitgut," is the port in Greenland whence kryolite or kryolith, not "kyrolith," is shipped. These are but slight blemishes in a useful and entertaining work.

Drama

The volume of "Plays by Björnsterne Björnson," which Scribners are about to publish, contains "The New System," "The Gauntlet," and "Beyond Human Power," in a translation by Edwin Björkman.

The "Five Little Plays" by the well-known English dramatist, Alfred Sutro, which have just been published (Brentano's), are all characteristic of their author in ingenuity of invention and fluency of dialogue, but none of them suggests the sincerity of purpose and inevitability of consequence which constitute the essence of true drama. They give the impression of imaginative sketches—sometimes very clever sketches—not of transcripts from actual life. In spite of a certain superficial plausibility, the action of the puppets is too clearly governed, not by nature or circumstance, but by managerial preordination. Most of them were written, apparently, for the exploitation of particular players. "The Man in the Stalls," which had some success in London, is a fanciful variation upon the eternal theme of the domestic triangle, with an element of surprise in it, which would be very likely to stir the enthusiasm of the groundlings, but is far too improbable for credence. It shows how a false wife avenges herself upon a recreant lover and hoodwinks a confiding and honorable husband, whose simplicity, it may be added, is almost as phenomenal as her own duplicity. The piece has "situations" and some "smart" dialogue, but is hopelessly tricky and unsympathetic. In "A Marriage Has Been Arranged" a rough multi-millionaire, seeking an aristocratic marriage, first provokes a titled pauper beauty—sold to him by her mother—to bitter recrimination by his cynical self-exposure and then wins her by an unexpected proof of his fundamental nobility and generosity. Few more stage-worn figures are to be found in the theatrical lumber room. The talk, for all the occasional snappy sentences, is as artificial and conventional as the speakers. "The Man on the Kerb," a study of the underworld, in which an unfortunate fellow, unemployed through no fault of his own, is exhibited, with his wife and infant, in the last stages of starvation and despair, has more of dramatic earnestness in it and contains some true and pathetic strokes, but the effect at last is marred by excess of melodramatic agony. But this, well played, would be a moving piece before the footlights. In "The Open Door" the noble Sir Geoffrey and the peerless Lady Tormenster pass the midnight hours in mutual admissions of passionate but sinless love, while the husband of the lady snores unconsciously above. They part before he wakes. This is a pretty scene, handled with delicate adroitness, but the atmosphere that pervades it is of the theatre, not of life. "The Bracelet," which had the honor of production in the Liverpool Repertory Theatre, is a domestic comedietta, of no especial significance, but very well made. It relates the discomfiture of a sentimental stock-broker, who incurs the fury of his formidable wife, for the sake of a pretty governess. This piece has amusing incidents and characters, and also has its moral, though not a particularly fresh one.

Charles Frohman has completed arrangements for John Mason's appearance next season in a new comedy by Augustus Thomas, who will devote his entire time between now and next September to completing the piece.

Sir Herbert Tree is back in London, preparing for the production of a new play at His Majesty's at Easter. He has been studying the methods of the Art Theatre in Moscow, where he saw Gordon Craig's production of "Hamlet." It appears to have left him with the impression that the art of the author had been subordinated to that of the producer. In this respect, the chaste symbolism of Mr. Craig does not seem to be an improvement upon the luxurious and luxuriant spectacle of which Sir Herbert himself is a past master. The sooner stage reformers learn that the play and the acting are the important things in the theatre, [illegible] will be

for the art of which they prate so incessantly.

"The Son and Heir," by Gladys Unger, just produced in the Strand Theatre in London, appears, like most thesis plays, to present extravagant special conditions as fair examples of a general rule. A tyrannical and brutal old baronet, in his blind regard for his son and heir, an intolerable young cub, is supremely indifferent to the happiness of the rest of the family. He separates his eldest daughter from her lover and compels her to marry a dissolute and shameless politician, and when he hears that his younger daughter has listened to the suit of his son's penniless tutor, promptly orders the latter out of the house. Nor will he listen to the older sister's intercession until she tells him that she will endure her matrimonial degradation no longer, but means to elope, next morning, with the man she really loves. In the morning, however, the baronet gives his consent to the younger girl's betrothal to the tutor, whereupon the elder sister dismisses her lover and voluntarily resumes the matrimonial yoke.

"Macbeth" and "A Midsummer Night's Dream" are first among the projected revivals of Granville Barker.

The coming revival of "Diplomacy" at Wyndham's Theatre, in London, is to be followed soon by a reproduction, in the London Vaudeville, of A. W. Pinero's once popular farce, "The Schoolmistress." This piece was produced originally in the spring of 1886. Arthur Cecil made a hit as Vere Queckett, and John Clayton another as Admiral Rankling, while Mrs. John Wood triumphed as Miss Dyott, Rose Norreys was Peggy Hesselrigge, and Fred Kerr the Lieut. Mallory. In the revival, Hilda Trevelyan will be the Bessie, Mr. Gwenn the Admiral, and Dion Boucicault the Vere Queckett. Who will replace Mrs. John Wood has not yet been finally settled.

It does not seem probable that Stanley Houghton will repeat with his latest play, "Trust the People," just produced at the London Garrick, the success which he won with "Hindle Wakes" and "The Younger Generation." A London critic says:

Here is Mr. Stanley Houghton, who knows Lancashire, not content to write about what he knows, but sitting down to write about what he doesn't know, the behavior of Cabinet Ministers *en petit comité*, and a queer hash he, of course, makes of it.

Edmund Tearle, whose death in England was announced a few days ago, was a brother of the late Osmund Tearle, once leading man in Wallack's Theatre. Both brothers acquired honorable reputations in the British Isles as Shakespearean actors. Edmund was born in 1856, was at one time a manager in Leeds, and was popular in modern sensational melodrama, as well as in the legitimate. When Ristori played Lady Macbeth in English, he supported her as the Thane, and accompanied her to the United States. At home he found favor as Virginius and Richard III, and was praised also for his Othello, Ingomar, Hamlet, and Jacques. He revived "Damon and Pythias" and John Howard Payne's "Brutus" with considerable success. In 1892 he produced "Julius Cæsar" at the Olympic Theatre in London, but failed to make much impression. In the provinces, however, he was highly esteemed as a capable and conscientious actor.

Music

"Composers in Love and Marriage," a new book by J. Cuthbert Hadden, will be brought out shortly by Scribners.

There is a general idea prevalent among people interested in musical work that comparatively few institutions of learning offer any definite credit for the study of music. In the great majority of the larger schools courses are offered in harmony, counterpoint, and history and appreciation of music, but in few cases can the student make any extensive advance in the different branches of the art. Oberlin College, however, with the Oberlin Conservatory as one of the affiliated departments of the school, is now offering a course that is interesting musical people throughout the country. At Oberlin music not only receives liberal credit as one of the regular courses of the college, but it is one of the subjects which a student may take as a major. The major system at Oberlin, as at many other colleges, is a comprehensive plan of the entire course of study mapped out by the undergraduate and his faculty adviser. Of the 120 hours required for the Oberlin degree, the major study must comprise not less than fifteen nor more than thirty-two. The regularly required subjects, one of which must be a course in the fine arts or in the appreciation of music, tend to give a well-balanced general education, while the major system provides an opportunity for reasonable specialization. Thus a man who is interested in music, or who contemplates entering the Conservatory after receiving his A.B., may elect music as his major study. The requirement in this major is eighteen hours of theory, which includes a thorough course in harmony, counterpoint, harmonic analysis, and the elements of musical form. The courses in the history and appreciation of music are conducted by Prof. Edward Dickinson, author of several well-known books, including "The Education of a Music Lover."

The "progressives" in politics are old-fogy reactionaries compared with the "progressives" in music. Apparently even Arnold Schönberg, the notorious German cacophonist, has not spoken the last word. The Russian composer, Scriabine, has written an orchestral work called "Prometheus," which seems to mark the limit of the secession movement. In order to understand this music, it is necessary, according to the official commentator, to regard the notes C, D, E, F sharp, A, and B flat as forming a consonant chord; and if that jumble of tones is a consonance, what must a dissonance be! To give the audience a better chance to understand this work, it was played twice in one concert given in London; yet the critics and the audience were mystified. "It is not the musical art we know; it may be another one," wrote the *Times* critic.

The management of the Berlin Opera has made some improvements in the staging of "Rheingold," which are described as "wonderfully realistic and effective." Von Hülsen hit upon the expedient of having three members of the ballet impersonate the Rhine maidens, while the singers were stationed just below them, though out of sight of the audience. The arrangement enabled the Rhine daughters to plunge and swim about by means of a new technical appliance with a freedom that would be quite impossible if they had to do the singing themselves, and the illusion was striking. A few novel and startling effects were also introduced in Nibelheim, while some beautifully picturesque results were obtained in the scene on the mountain heights where Wotan and Fricka lie sleeping.

One of America's foremost musical critics, William Foster Apthorp, died of heart failure on Wednesday at Vevey, Switzerland, which had been his home for some years. He was born in 1848, and when seven years old was taken abroad, to get his schooling in Dresden, Berlin, and Rome. In 1860 he returned to Boston, and nine years later graduated from Harvard. In music, John K. Paine and B. J. Lang were his teachers. In 1872 he began to turn his knowledge to use by teaching harmony, first at Ryan's National College of Music and afterwards at the New England Conservatory. From 1872 to 1877 he had charge of the musical department of the *Atlantic Monthly*, of which at that time W. D. Howells was the editor. His first book was printed in 1879. It contains selections of wise and witty pages from the autobiography, the literary essays, and the letters of Berlioz—a most entertaining book. The skill with which the French idioms are turned into their French equivalents betrayed the exceptional literary gift of Mr. Apthorp—a gift which, beginning with 1881, the readers of the Boston *Transcript* had almost daily occasion to admire for more than twenty years, during which he did much to elevate the tone of American criticism and to help form a taste for the best in music. For a number of years he was also the editor of the programme books of the Boston Symphony Orchestra. Doubtless there was too much "parsing" in some of his analyses, but, as a whole, they gave as good a preliminary idea of a musical work as can be given in words. He undertook the herculean task of editing for the Scribners the "Cyclopedia of Music and Musicians," in three volumes, which are particularly valuable because of their literary references and for the opportunity they give to get information on particular operas, oratorios, and famous songs and instrumental pieces. Full of useful suggestions, as well as most entertaining, are his books, "Musicians and Music Lovers," "By the Way," "The Opera, Past and Present."

Art

Epochs of Chinese and Japanese Art: An Outline of East Asiatic Design. By Ernest Francisco Fenollosa. With 184 full-page illustrations, many colored, two volumes quarto. New York: Frederick A. Stokes Co. $10 net.

By a magnificent effort, as if foreseeing his premature death, Fenollosa precipitated within three months' space this remarkable compend of his dearest tastes and finest wisdom. Out of the pencil copy with the aid of Japanese experts his widow has made this book.

It is the work of an enthusiast at fever heat, and, obviously, since the author was never in a position to substantiate his chronology and attributions, the reader must approach the historical statements in these volumes with a certain skepticism. Fenollosa, as he himself always stoutly maintained, was not in the strict sense a scholar. His knowledge of the Chinese and Japanese languages was insufficient to allow him to control his authorities at first hand. But Fenollosa was something much rarer than a scholar. An adventurous spirit, indefatigably curious in all matters of the mind and heart, trained in philosophy, familiar with the great art of the West before he devoted his life to that of the Far East, his was the profoundest culture and the widest human experience that has been directed to this particular theme. Then he possessed an extraordinary eloquence. His descriptions and appreciations of the masterpieces of Japanese and Chinese design have a passionate rhythm. Constantly rhapsody threatens to lapse into absurdity, but some saving restraint of taste always saves the day. The purple patches in these volumes are in an ultra-romantic fashion very fine literature.

If Fenollosa lacked the mole-like persistency of the born specialist, he had advantages of first-hand contact with the best art of the Far East such as have possibly come to no other student. For years he was Imperial Commissioner to inventory the temple treasures of Japan, where, withal, the finest Chinese paintings are found. Thus he had not merely the boon of encyclopædic experience, but the greater advantage of untrammelled leisure. As he did his work for the Japanese Government he began to collect on his own account, and allying himself with Boston amateurs of taste and means, he thus built up the extraordinary collection of Far Eastern painting now in the Art Museum of Boston. Doubtless certain European scholars are in a position to correct his volumes freely; it is certain that none could give so vivid a sense of the specific beauty of this art or awaken so deep a reverence for the civilization that produced it. Again, the winning personality of Fenollosa brought him unique facilities. As a champion of aristocratic and national art against invading European tendencies in Japan, he had access to the private collections of the old nobles. He was a familiar and valued visitor in the studios of the last of the Kano and Tosa painters, and he came just in time to garner the accumulated art traditions of these ancient schools. In short, if he left undone what an average specialist might readily accomplish, he did what no other man could possibly have done in the way of appraising and actually preserving the ancient glories of the Far East in art. We can touch only in passing upon points of especial interest in these two volumes, and still more lightly on certain defects natural to the man or deriving from the conditions under which his great work was hastened to completion.

One of Fenollosa's most striking theories is that of an underlying Polynesian basis for all of Far Eastern design. From Peru, along the Pacific shores to Siam, he believes certain characteristic motives—the mask, the eye, the frigate bird emblem—may be traced. These reappear on the most primitive Chinese bronzes. Evidently, it is not possible to weigh this generalization here. It is plausible on its face, and corresponds with the fact that the Japanese stubbornly retain racial habits that seem Polynesian. Whatever the future of the Polynesian hypothesis, Chinese art before the Christian era had outgrown these aboriginal beginnings. Fenollosa points out convincingly that the socialistic positivism of Confucius was ever alien to art. The awaking came through contact with the luxurious civilization of the Mesopotamian valley and adjacent Turkestan, through the individualism of Laotse, and the coming of Buddhism from India. And here arises the problem of Hellenistic influence in China, a topic often more vigorously discussed than clearly illuminated. Fenollosa sensibly concludes that, while the slightly Hellenized Buddhist sculpture of India might have counted for something in transmission, what China really got from the second to the seventh century after Christ was a mediated and highly diluted Hellenism, chiefly borrowed from her neighbors and occasional dependents, the Parthians and Scythians of Central Asia. He thinks, too, that the influence was transient and without lasting effects. This cautious and acceptable conclusion brings Greek influence down to very little, and makes the mediation of the Indian Greco-Buddhist style superfluous. It seems reasonable to us to go a step further and ask if Sassanian art of the third and fourth centuries A. D. will not explain every case of so-called Hellenism in India and the Far East. Not the Mausoleum, but the cliff carvings in honor of Chapour II and III seem to be the prototypes for all Hellenized Buddhistic monuments. Earlier infiltrations of Grecian motives after Alexander's time are likely to have been, but these are as yet unproved and presumably were of the most negligible sort. It should not be necessary to add that Sassanian art itself is merely Oriental and realistic, with only the slightest infusion of Greek stylism. It was the luxurious realism of the Mesopotamian art, whose outposts reached beyond Khotan, that for a moment carried abstract Chinese design from its moorings. The perfection of the realistic manner may be studied in those "grape-vine and lion" mirrors filled with the most vivacious high relief which native amateurs ascribe to the late Han dynasty (first and second centuries A. D.). Fenollosa more reasonably sets them four or five centuries later as superb and exceptional expressions of the Tang genius.

The attempt to reconstruct the legendary glories of Tang painting (618-906) from later copies is the most fascinating part of this work, the most debatable and, to your reviewer, the most satisfactory. The undertaking is of enormous difficulty. We presume there are not extant half a dozen sheets or scrolls which the most hopeful expert would assign to this period. But there are thousands of copies, mostly of Japanese workmanship, professing faithfully to convey the glories of Wang-wei, Yen-li-pen and Godoshi, and other half-mythical masters, besides a considerable amount of ancient critical literature. The task of reconstruction, then, is much as if merely from the Greco-Roman copies of the Vatican and the reading of Pausanias and Pliny one should endeavor to infer the qualities of Greek sculpture. Winckelmann actually did that, with results more enticing from a literary than from an archæological point of view. It is here that Fenollosa's fairly clairvoyant sense of quality stood him in good stead. His selection of the trustworthy copies represents the ardor and experience of a lifetime. On the side of hieratic art one may say that he has established for Tang a canon of mingled grandeur and sweetness. Only the finest panels of Ambruogio Lorenzetti seem to match the mood and quality of this half-obscured school. Tang landscape presents a less specific aspect, and one may be prepared to conclude against the elder critics and native experts that the finer development of landscape is a product of the troubled interim of the Five Dynasties (907-959), and of Sung (960-1280). Such a view would comport with the human temper of these respective dynastics. A society, admirably adjusted along lines of military efficiency by the Tang Emperors, in which the dry moralism of Confucius managed to live peaceably both with the eager individualism of Laotse and with Buddhist quietism, had small need of the solace of mountain and river, whereas the world of the Five Dynasties and of Sung, always unquiet, imperilled by dissensions at home and advancing barbarians at the border, may well have betaken itself in the spirit of Rousseau to the calming spectacle of sublime nature.

In treating the historical periods of Chinese and Japanese design Fenollosa follows in the footsteps of Giles, Bushell, Laurence Binyon, Arthur Morrison, Petrucci, Seichi-taki, Okakura Kakuzo, and others. His superiority on the historical side may well be contested, but nobody has brought to the appreciation of this beautiful art an equal vividness

of soul commanding equal stylistic resources. Small grounds of disappointment with the work are the disproportionate space given to hieratic art, and the rather succinct treatment of landscape. Here a long and fine excerpt from the painter-critic Kakki, and the fact that the theme has been treated often and sympathetically, does not compensate for what Fenollosa might have written. We also feel that he rates too low the painting of the Yuan (1280-1368) and Ming (1368-1644) dynasties. Admitting its inferiority to Sung painting, the art of the later dynasties was exquisite in social *genre*, idyllically charming in landscape, and masterly in portraiture. That Fenollosa's ground was deliberately taken, this extract from the Introduction will show:

> Nor do I attempt to treat all forms and phases of art, but only imaginative or creative art. Art may be looked upon as a continuous effort, a solid material manufacture that persists through the ages, and that never languishes, but this sort of art is for the most part classical and uncreative, and will be found to borrow all its motives and all its forms from rare creative epochs. My intention, and one which I believe will render an important historical service, is to treat the creative periods only.

Here is the issue squarely made. We can only say that the idyllic and effeminate temper of Ming does not seem to us in any way derivative or secondary. It surely does represent a lower order of inspiration, but on its lower plane it is as creative as the mood that produced the austere courtly *genre* and sublimated landscape of Sung. To be exquisite in a small way is neither to offend nor to lack sincerity. Our author apparently uses the word creative in some esoteric sense, as he clearly does the word classic when he opposes it to imaginative and creative. Surely, the classic periods are precisely those which posterity perceives to have been highly creative. We do not wish to emphasize unduly these differences of judgment. If Fenollosa has, as we feel, underestimated the art of Yuan and Ming, the exaggeration is a wholesome one, and the practical loss small. In these periods the average Occidental finds himself safely amid his usual predilections, and needs little guidance.

We believe this book will take rank among the few great humane treatises on art. In the widest sense it is both historical and critical. It is based on no isolated study of the monuments, though no man had done this more faithfully, but upon profound knowledge and admiration of Far Eastern civilization as a whole. Of a life-work that was in the highest sense interpretative it is the ultimate fruit. Superficial defects of form are as nothing when compared with the strength of the sustenance and the richness of the flavor.

Finance

PROBLEMS OF FINANCIAL EUROPE.

The rather general consensus here, to the effect that the recent unnatural conditions in financial Europe have had a hand in our own faltering markets, adds to the interest and curiosity concerning what will follow upon the return of peace. That there will be an early end to the war, the European stock exchanges seem to have agreed, even since the rejection of the terms of peace on January 23 and the resumption of hostilities. From Berlin, this is the report to the principal London financial weekly, under a date well on in February:

> The renewal of hostilities has had no considerable effect upon the Boerse; traders still holding firmly to their conviction that the war must soon come to an end, despite the apparently unyielding attitude of both parties.

The Paris correspondent has this to say:

> The denunciation of the armistice exercised but little influence on the Bourse. A final agreement is expected shortly, and quotations have even moved up, owing to the belief that Turkey will find it impossible to continue the war.

Even discouraged and pessimistic Vienna thus reports:

> The disposition of the Bourse is optimistic, and, whilst war is beginning again, it already assumes that peace must speedily follow, and bring all the blessings which protracted uncertainty has withheld so long.

Nevertheless, ever since the "war panic" of October 12 on Europe's stock exchanges, followed by the prolonged money stringency, the question has repeatedly been asked, here and abroad, whether the sequel was not bound to be a period of reaction in Europe's trade. Throughout the active military campaign which was terminated by the armistice of November 20, there was no sign of such reaction. Even the tight money of the period was discussed, not as a necessary cause for a halt in trade expansion, but rather as an effect of further trade expansion.

Now, however, the question of industrial consequences is apparently exciting more concern. There were business troubles last week in several Continental cities—notably in the Hamburg coffee trade and the Amsterdam rubber trade. A letter to the London *Economist* from the Amsterdam Stock Exchange says of the feeling in that market that, "even given a speedy settlement of the war, the after-effects of the economic exhaustion of Eastern Europe are likely to extend far beyond that sphere." The *Economist* itself, though declaring that "the trade boom continues," admits that the business troubles of Southeastern Europe "must eventually hit our export trade and consequently our manufacturers." A cable dispatch to New York from a well-known London financial correspondent, last Saturday, testified that "there are undoubtedly numerous indications, both here and in Germany, of some decline in trade."

If this apprehension were to be realized, what then? The nearest parallel —and, in fact, the most recent occasion when a general reaction in European trade, outside of the world-wide relapse of 1907, has occurred—came under circumstances not unlike those that now exist. The Boer War had broken out in October, 1899, as did the Balkan War in October, 1912. There was a panicky break on Europe's stock exchanges (like that of last autumn) and a similar severe money stringency, reflected by advance in official discount rates at the great European banks. That movement was more serious than last autumn's; the bank rate went to 6 per cent. at London, to 4½ at Paris, and to 7 at Berlin, whereas the highest rates of the past season were, respectively, 5, 4, and 6.

For that unusual tightness there were two special reasons in 1899—the fact that the war had bottled up $70,000,000 per annum in gold which had previously flowed from the Transvaal mines into European bank reserves, and the fact that a boom of huge proportions, on Europe's stock exchanges, in its company promotions, and in general trade, had encountered the war scare at a moment of over-extended credit. That position has this much of counterpart in the present situation—that the Continental hoarders of gold have done in 1912 part of what the Transvaal blockade did in 1899, and that another extended trade and speculative boom—notably in Germany and Austria—had reached a climax in the early months of 1912.

What happened, after the strain of war and stringent money had shaken Europe's markets at the close of 1899, was interesting. Early in 1900 the extended trade position showed signs of weakness. In Russia came a financial and industrial collapse; of France, a contemporary commercial review wrote that "there was a breakdown in industrial enterprise during 1900, and everything was at a standstill throughout the year." Germany, after a few months of renewed activity, was confronted with a severe though temporary commercial crisis at the end of 1900, with great trouble among the country's land-mortgage banks. England entered on a period of reaction, from which it did not really emerge until 1903.

So far as concerned the United States, the story of 1900 was of a temporary and more or less sharp reaction in industries dependent largely on the export trade, a fall on the Stock Exchange, and consequent talk of great apprehension over politics. Then, at the close of the

year, came the extraordinary financial and industrial revival in this country, which economists now attribute partly to the country's previous business economies, partly to its progress in real wealth through abundant harvests, but partly also to the wholesale release of tied-up international capital through the European liquidation. The analogy would be gratifying, if one could always depend on such analogies.

BOOKS OF THE WEEK.

CONSTRUCTIVE RURAL SOCIOLOGY

By JOHN M. GILLETTE

Professor of Sociology, Univ. of North Dakota

This work surveys carefully rural conditions, notes tendencies and deficiencies, seeks to present clearly problems calling for prompt solution, and to point out ways of betterment in accordance with the best ideals of country life. The practical aim of the book is to organize information with a view to improving the present situation. The subject is considered as a whole and in its larger aspects.

Kühnemann's Schiller

Translated from the German by Katharine Royce, with an introduction by Josiah Royce

IN TWO VOLUMES. **The set, $3.00**

A Review:

"The 'Schiller' is a fine achievement, executed with ingenuity and spirit in that difficult and so often thankless art of translating. This is not the conventional remark of the reviewer. I have read the book in both languages, and compared carefully dozens of representative paragraphs. . . . Mrs. Royce has communicated with idiomatic speech the thought, verve, and largeness of the original, and one is never conscious of reading a translation."—*The New York Times.*

CALIFORNIA UNDER SPAIN AND MEXICO
BY
IRVING B. RICHMAN

"What John Fiske and so many others have done for the Eastern Coast States, Mr. Richman has done for California."—*St. Paul Pioneer Press.*

"A valuable and interesting addition to the literature of a little known period of American history, beginning with Cortes's coming, continuing through the rule of the Franciscan and Dominican Missions and the establishment of Mexican Independence in 1821, to the war with the United States in 1847. Much that is romantic, picturesque, and thrilling has been drawn directly from the national archives of Spain and Mexico, and from other hitherto inaccessible sources."—*The A. L. A. Booklist.*

"Mr. Richman's 'California under Spain and Mexico' comes as a much needed light on a subject peculiarly worthy of illumination. . . . Not only is the volume itself of exceptional merit, but it is written in a clear and simple style, and with an attention to narrative that holds the reader."—*Boston Transcript.*

"Nowhere can the history of California be found so well told in compact form as here. . . . The reader may derive from this book a good idea of the international competition which led to the discovery and settlement of California; of the system of administration of a Spanish colony and a Mexican dependency; of the mission and its relation to colonization; of the advent of the Americans and the final conquest of the country by them."—*Annals of the American Academy of Political and Social Seicnce.*

"The book has been written almost entirely from manuscript sources . . . and the product must be adjudged distinctly creditable to American historical scholarship."—*The Dial.*

With maps, charts, and plans.
$4.00 *net. Postpaid,* $4.21.

School Advertising in The Nation

THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes —lawyers, physicians, bankers, and other professional men— and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

SPECIAL RATE—Ten Cents a line net for thirteen times
(Minimum space three lines)

Orders may be forwarded through any responsible advertising agency, or directly to
THE NATION, 20 Vesey Street, N. Y.

The Nation

NEW YORK, THURSDAY, MARCH 6, 1913.

The Week

There is something peculiarly humiliating about the position into which our country has been put by the Panama Toll-Exemption act. The reply just made by the British Government to Secretary Knox's note of January 17 is as courteous as possible in language; any disagreeableness that Americans may feel in perusing it is inherent in the facts. It is not pleasant to be reminded that our Government sought to shove off the duty of making a substantial response to the British Government's objection by setting up the plea that even if the act of Congress is in violation of the treaty, a protest is not in order till the injury contemplated and directed in the act has been physically inflicted in the shape of discriminating tolls actually collected. Since that is what Mr. Knox did, the only reply for the British Government was to say that such a plea is not supported by "international law or usage." It is mortifying to reflect, further, on the absurd contention that toll-exemption does not come under our arbitration treaty with Great Britain, because that treaty excepts questions which affect "the vital interests, the honor, or the independence of the two contracting states." Mr. Knox, to be sure, did not assert this position; but neither did he frankly admit that the question does come under the treaty; and accordingly the reply of the British Government merely holds quietly that the dispute "is clearly one which falls within the meaning" of the treaty.

The defeat of the big-navy zealots in their desire for two battleships is a cause for rejoicing, even though it was only by a small margin of votes. At least, it is the second year in which the Democratic House has stuck to its one-battleship policy, in spite of threats, much newspaper abuse, and all the influence of the ship-builders and the Navy League. Particularly satisfactory was the impatience with Congressman Hobson when he proposed three battleships. Now that this mischievous prophet's predictions of war with Japan in 1912 have shown themselves to be false, he is trying to make trouble by dragging out the good old German bogey from the attic of worn-out war-scares. If that fails him, something else will doubtless occur to him, like the menace of the Mexican navy.

The report of the Senate Interstate Commerce Committee on the operation of the Anti-Trust law reflects Senator Cummins's well-known opinions on that subject. It declares that the law should be made definite by amendments which "specifically prescribe certain conditions upon which persons and corporations shall be permitted to engage in commerce"; and it also recommends the creation of a Commission which shall have supervisory power over corporations and shall take over the work attendant upon the dissolution of such as may prove to be illegal. It uses language of the utmost respect concerning the Supreme Court, but asserts that, "as the anti-Trust statute is now construed," the Court exercises powers that the people cannot be content to leave with any judicial body. The idea, however, that the great anti-Trust decisions made by the Supreme Court within the past two years have caused the meaning of the law to be less definite than before is precisely the reverse of the truth. Of course, if the law could, prior to those decisions, have been understood, in actual practice, to mean the prohibition of every act that might, in any possible meaning of the words, be regarded as partaking of the nature of a "restraint of trade," the law would then have been simpler than the decisions make it out to be; but no such interpretation was ever practically possible, or was ever attempted or proposed by any sober and responsible person. It was always in the "light of reason" that the law had to be actually administered, and the series of decisions beginning with that in the Standard Oil case have served to make incomparably clearer than before the practical application of the law to individual cases.

This idea that you can define the things that may be done, or the things that it is illegal to do, in such a way as to make the application of the law automatic, is a delusion. The kind of distinction that the Supreme Court is making is not that between "good" Trusts and "bad" Trusts. This would involve an exercise of discretion with which no court ought either to be trusted or to be burdened. The question the Court does decide is not whether an alleged restraint of trade is beneficial or the contrary, but whether it is, in any reasonable sense, to be regarded as a restraint of trade; and the same thing is true concerning an alleged attempt to monopolize. And this kind of difficulty is not an anomaly, or a thing peculiar to the Anti-Trust law. Senator Edmunds, who had more to do with the framing of the Sherman act than any other man, has emphatically declared that the broad language of the law was used advisedly, for the very reason that the things intended to be covered by it admitted of no minute description that would serve its purpose. "In fact," he said in a notable interview, shortly after the Standard Oil and Tobacco decisions, "all legislation of a prohibitive character must use general terms, or one-half the offenders would escape." So far, then, from the Supreme Court having assumed extraordinary and unforeseen powers, it has been doing precisely what was originally contemplated by the framers of the law.

Mr. Roddenbery, of Georgia, is a Congressman to be watched. The man who will give his own party such an effective, and at the same time wholly untheatrical, drubbing as Mr. Roddenbery administered last Sunday, ought to have a fine future before him. The most that Speaker Cannon, he said, had ever been able to appropriate for pensions was $150,000,000; "but we Democrats, before we have even got the Senate and before we have inaugurated our President, have appropriated $180,000,000 for pensions. We know how to legislate." Equally remarkable were the achievements of "we Democrats" in the way of public buildings and wastefulness in other things. As for the platform denouncing Republican extravagance, that "was made, like the Republican platform, to get into office on." Mr. Roddenbery, who

has served three years in the House, was reëlected last autumn without opposition. He will have plenty of opportunity, during the next two years, to administer just such faithful wounds to his party as that which he unflinchingly dealt it on Sunday.

It has fallen to the Socialist party first to apply the recall on a national scale. The victim of the referendum is no less notable a person than William D. Haywood, who, by a vote of 22,000 to 11,000, has been removed from office as one of the seven members of the National Executive Committee of the Socialist party. Haywood, as the most prominent leader of the Industrial Workers of the World, and therefore as the leading exponent of the principle of "direct action," as opposed to political action, by the working class, has never made any serious attempt to conceal his contempt for the political programme and tactics of the party, although, whenever the charge was directly brought up, he resorted to a formal denial. The final steps towards his removal were precipitated by a recent speech delivered in New York at a meeting to celebrate the acquittal at Lawrence of the I. W. W. leaders, Ettor and Giovannitti. On this occasion Haywood's militant views were so frankly put that there was no explaining them away. It has always been the contention of Haywood's faction that the rank and file of the Socialist party is in sympathy with his views, but that the leaders have been timid and time-serving. Now, by a vote of two to one, the party has shown that it still attaches prime importance to the campaign for Socialism on the political field as opposed to the anarchistic policies of the I. W. W.

Vermont was one of the two States which were so reactionary as to cast their electoral votes for President Taft. Consequently, it must follow that the Vermont Legislature, which recently adjourned after the longest session on record, is the sponsor for as unprogressive a lot of laws as could be imagined. But what are the facts? A juvenile court has been created; a "blue-sky" investment law has been passed; a reform has been made in the method of railway taxation that is expected to net the State annually twice the cost of the extra length of the session; the railways have been put under regulation with respect to the matter of demurrage; enforcement of uniform standard provisions in accident and health insurance policies has been arranged for; laws have been put upon the statute books to prevent adulteration and misbranding of foods and drugs, and to enforce sanitary conditions in the sale of bread; regulations have been adopted concerning the heating, ventilation, and inspection of factories; the hours of labor for women and children have been limited to fifty-six a week; judges have been empowered to hold inquests for the discovery of evidence in criminal cases. All this looks very much like the carrying out of a programme of social justice, but since it is not labelled Progressive, one can only continue to shake his head over the hopelessly stagnant condition of all Republicans, and those of the Green Mountain State in particular.

Bills submitting the issue of woman suffrage to the voters of New York and New Jersey have gone through their respective Legislatures without a hitch. Only five negative votes were cast in the New Jersey House. They must be repassed next year in order to reach the voters, but there can be no doubt that they will be passed. In Pennsylvania the House has passed a similar bill by a large majority. In Michigan, where suffrage was defeated by about 250 votes, the Legislature has provided for the speediest resubmission of a Constitutional amendment on record—it is to be voted on again in April. In Nevada, the bill has passed the Legislature twice and now goes to the voters. In Missouri and Minnesota one house has acted favorably, and in Massachusetts, according to the Boston *Advertiser*, the Republican leaders have agreed to have the Legislature vote for submission this year. In some cases, this apparent support of suffrage is not friendly; in Massachusetts, for instance, the Republicans are certain that the male voters will kill it as soon as it is submitted to them. So they may in New York in 1915.

By a unanimous decision of the Supreme Court of Indiana, it is still possible for any voter of good moral character to practice law in that State, though his name be Dogberry. This right dates from the Constitution of 1851, which was framed by sturdy Hoosiers who did not propose that any group of men should have the exclusive privilege of addressing a judge or haranguing a jury. In 1910, an attempt was made to amend this provision out of the Constitution. Sixty thousand voters marked their ballots in favor of the plan, and only eighteen thousand opposed it. But 550,000 did not take the trouble to vote either way. As the Constitution requires a majority of all votes cast at the same election to carry an amendment, the matter would seem to have been settled in favor of the "cornfield lawyer." A case came up in Indianapolis, however, which was decided against such a man. The individual concerned testified that he was a job printer by trade, and knew only such law as he read in the newspapers. This was too much for the Circuit Court, but the higher body has confirmed the right of the job-printing, newspaper-reading lawyer to handle all the cases he can get. He belongs to the class of "Constitutional lawyers," with the derisive Indiana slant given to the term.

It is pleasant to be reminded that the age is not wholly given up to the sackcloth of political preachments and the ashes of social and industrial reform. Amidst the welter of new presidencies, new freedoms, new workmen's compensation laws, white slave laws, factory bills, anti-tuberculosis campaigns, graft exposures, subway routes, Mexican complications, and other trivialities of the day, it is delightful to learn that there is still a considerable number of Americans who can rise above the fevers and vexations of the hour to the contemplation and practice of the eternally True, the Beautiful, and the Good—at least at Palm Beach. In that pleasant spot, a crowd of New York's bravest and fairest did their best the other night to show that the Hellenic joy of life has not passed away from us. Prominent people turkey-trotted "in a small hollow square in the centre of many little tables." Messrs. Smith and Jones took turns at the piano, Mr. Robinson beat upon the kettledrum, and Mr. Brown "did such fine clog dancing that he had the floor to himself." Mr. Black felt sorry for the negro chair attendants, and told Mr. White "he believed he would give them $200, which he did." As the bills of large denomination flut-

tered through the air, "a screeching, howling mass of black legs and arms and contorted bodies resulted." And yet solemn foreigners assure us that we are a materialistic people, utterly inaccessible to things of the spirit!

In his farewell interview Professor Bergson expressed regret at the shortness of his stay in this country. "Upon my arrival I found that my occupations and my engagements and my lectures had all been arranged for me, so that I could find no time for seeing any of the things I wanted to see, or for meeting people I should have liked to meet." Yet in that very remark M. Bergson has described us. Our idea of entertaining a visitor, whether he is a distinguished foreigner in New York city or a President of the United States visiting Indianapolis, is to rout the victim out of bed at six in the morning, put him into an automobile, and after an agony of breakfasts, luncheons, dinners, receptions, dedications, and commemorations, bring him back to his hotel in a state of collapse. Mrs. Wharton, in her latest story, cleverly photographs a fussy, galvanic, "social" leader in the following words: "Her only idea of intercourse with her kind was to organize it into bands and subject it to frequent and fatiguing displacements." Organizing our play and our holidays is a national habit. It is true that in that way we get through more play than we could if we went at it in unsystematic fashion, but perhaps it would be just as well if we didn't.

Our unbounded confidence in the schools has been voiced once more at Philadelphia, where the National Council of Education listened to speakers who put the burden of the exodus from the country, and hence a substantial portion of the high cost of living, upon the rural school. The country school, it was agreed, is physically and pedagogically below its task, and a plan of reconstruction and standardization was outlined which, it was hoped, might bring this important part of our educational system nearer to what it ought to be. One educator felt that only the practical interest of a Rockefeller or a Carnegie could solve the problem, but surely this is the counsel of despair. Are we going to substitute the philanthropy of a few multi-millionaires for individual initiative and self-reliance? Neither the rural school nor the American character is so hopeless as that. It is equally clear that the rural school is one of the few concrete elements in the rather vague set of conditions that we recognized, somewhat helplessly, by forming the Country Life Commission.

Another unhappy international affair came to the fore in the closing hours of the past Administration. The negotiations with Colombia were dropped, owing to the refusal of that country to accept the terms of compensation proffered by our Government. It must be admitted that there are difficulties here which, with the best intentions, might prove puzzling to any Administration; yet we should lean to excess rather than defect in satisfying Colombian expectations. For we were put so hopelessly in the wrong when Roosevelt "took Panama" that we may feel glad enough to get that transaction overlooked upon any terms that are not flagrantly unreasonable. And if no settlement can be arrived at by diplomtic negotiation, surely there can be no insuperable obstacle to an arbitration of the matter, if we sincerely desire to make such compensation to Colombia as an impartial tribunal might award. The plea that an arbitration might involve the placing in doubt of the *status quo* on the Isthmus does not strike us as very weighty. What difficulty would there be in so circumscribing the scope of the arbitration as to put the *status quo* quite out of its reach?

Even in England laws are being enacted against public betting. Its evils have grown so great that Parliament is moved to do something to prevent them. A bill has passed the House of Lords, and by now may have been accepted, as it was expected to be, by the House of Commons, forbidding under heavy penalties the publication of advertisements by tipsters and bookmakers. The rage for gambling on horse-races and on football contests has grown to the proportions of a mania. A system of betting by "coupons" which—like lottery tickets—are widely distributed, has been most pernicious in its effects. At a recent trial at Newcastle, it was brought out that a single concern made profits of $100,000 a year in this kind of business. The coupons have been hawked about the street. This is hereafter to be illegal, as it also will be to send these gambling coupons or betting odds through the post. Public betting has been thought of as an English institution almost as firmly established as crown or altar. At the time of the fight against race-track gambling in New York, reference was frequently made to the admirable customs of English bettors. Well, it looks now as if John Bull himself were waking up to the fact that he has been permitting public gambling to carry demoralization and ruin to thousands.

In Mexico, opponents of the new régime have been shot down in appreciable numbers "while attempting to escape." This it is to be a strong man in times of crisis. One or two sharp strokes that horrify and sicken the conscience of mankind, and the foundation has been laid, as the lawyers say, for a permanently peaceful reign of terror. The world is quick to reconcile itself even to the horrible. No news that comes out of Mexico City now is likely to stir public indignation. A minor massacre of suspected Maderistas, a battue of political prisoners, a little war of extermination among the Yaquis—these are the methods by which the strong man works for the cause of peace and order.

Opinions have differed about the wisdom of Gov. Wilson in permitting the compilation of a book, "The New Freedom," out of his campaign speeches. A foreign judgment on the volume may be worth citing. The *Westminster Gazette* declares that Englishmen who go to it for their "first introduction to Dr. Woodrow Wilson as a politician" will indeed find in the work "two or three considered ideas about affairs in business and politics," but will wonder at these ideas being "so surrounded and enmeshed in words." This sober critic concludes by saying that if one comes from reading the book with disappointment, it is not because of "lack of either vision or ideals," but because "there is such reluctance to get down to the cold, hard fact that something quite definite and precise has to be done." Many Americans have expressed a similar criticism. But they should not forget that, in the only political sphere where Wilson has as yet had his opportunity, he passed swiftly from words to deeds.

TAFT'S FOUR YEARS.

There is a great deal of "appealing to history," just now, on the part of President Taft's friends and apologists. They admit the implications of that appeal. Mr. Taft, they concede, is going out of office with the impression both immediate and general that he has been a failure. But time will set all right, they contend. A calmer future judgment will correct the turbulent prejudices of the present. It does not so much matter what his contemporaries think of a President as what the historian will think. And to the latter's serene and patient weighing of the whole of the evidence, with a resulting verdict as impartial as that of all-judging Jove, we are told that Mr. Taft's term in the Presidency may be securely referred.
